##### Output connection

SITRANS TH320, output connection assignment

### Overview

- 2-wire head transmitter with HART communications interface
- Mounting in the connection head of the temperature sensor
- Universal input for virtually any type of temperature sensor
- Connection of two independent input circuits for redundant operation (high input availability)
- Input drift detection
- Configurable via HART 7

### Benefits

- Compact design
- Connection of two independent input circuits for redundant operation (high input availability)
- Flexible mounting and center hole allow you to select your preferred type of installation
- Galvanic isolation
- Test terminals for ammeter
- Diagnostics LED (green/red)
- Input monitoring wire break, short circuit and drift
- Self-monitoring
- Configuration status stored in EEPROM
- SIL2/3 (with order note C20)
- Expanded diagnostic functions, such as slave pointer, operating hours counter, etc.
- Special characteristic
- Electromagnetic compatibility according to DIN EN 61326 and NE21

### Application

The SITRANS TH420 transmitter with two inputs can be used in all sectors. Its compact size means that it can be installed in connection heads of type B or larger. Due to its universal input module, the following sensors and signal sources can be connected in redundant operation (high input availability):

- 2 resistance thermometers (2-wire, 3-wire, 4-wire connection)
- 2 thermocouples
- 2 linear resistors, potentiometer and DC voltage sources

The output signal is a load-independent direct current from 4 to 20 mA in accordance with the input characteristic, superimposed by the digital HART signal.

The dual input mode also supports drift detection of the inputs, whereby maintenance intervals can be more easily planned.

Transmitters of the "intrinsically safe or Zone 2 increased safety" type of protection can be installed in hazardous areas. The device meets the requirements of the EU Directive 2014/34/EU (ATEX), the FM and CSA regulations as well as other national approvals.

## Temperature measurement

Temperature transmitters

Compact and head transmitters

### SITRANS TH420 (HART, universal)

#### Function

The SITRANS TH420 is configured via HART. The configuration can be carried out using a handheld communicator or, more conveniently, with a HART modem and the SIMATIC PDM configuration software. The configuration data are then permanently stored in the non-volatile memory (EEPROM).

After correct connection of input and supply voltage, the transmitter outputs a temperature-linear output signal and the diagnostics LED is green. In case of external errors, e.g. sensor short circuit or interruption, the LED flashes red; an internal error is indicated by a permanent red light.

An ammeter can be connected at any time for checking and plausibility via the test terminals. The output current can be read without any interruption, or even without opening the current loop.

## Technical specifications

### General

Supply voltage <sup>1) 2)</sup>	
• Without explosion protection (non-Ex)	7.5 ... 48 V DC
• with explosion protection (Ex i)	7.5 ... 30 V DC
Additional minimum supply voltage when using test terminals	0.8 V
Maximum power loss	≤ 850 mW
Minimum load resistance at supply voltage > 37 V	$(V_{\text{supply}} - 37 \text{ V})/23 \text{ mA}$
Insulation voltage, test/operation	
• Without explosion protection (non-Ex)	2.5 kV AC/55 V AC
• with explosion protection (Ex i)	2.5 kV AC/42 V AC
Polarity protection	All inputs and outputs
Write protection	Open circuits or software
Warming-up time	< 5 min
Starting time	< 2.75 s
Programming	HART
Signal-to-noise ratio	> 60 dB
Long-term stability	Better than: <ul style="list-style-type: none"> <li>• ± 0.05% of measuring span/year</li> <li>• ± 0.18% of measuring span/5 years</li> </ul>
Response time	≤ 75 ms (typically 70 ms)
Programmable damping	0 ... 60 s
Signal dynamic	
• Input	24 bit
• Output	18 bit
Influence of change in supply voltage	< 0.005% of measuring span/V DC

### Input

#### Resistance thermometer (RTD)

Input type	
• Pt10 ... 10000	<ul style="list-style-type: none"> <li>• IEC 60751</li> <li>• JIS C 1604-8</li> <li>• GOST 6651_2009</li> <li>• Callendar-Van Dusen</li> </ul>
• Ni10 ... 10000	<ul style="list-style-type: none"> <li>• DIN 43760-1987</li> <li>• GOST 6651-2009/OIML R84:2003</li> </ul>
• Cu5 ... 1000	<ul style="list-style-type: none"> <li>• Edison Copper Winding No. 15</li> <li>• GOST 6651-2009/OIML R84:2003</li> </ul>
Type of connection	2-wire, 3-wire or 4-wire
Line resistance per wire	Max. 50 Ω
Input current	< 0.15 mA
Effect of the line resistance (with 3-wire and 4-wire connections)	< 0.002 Ω/Ω
Cable, wire-wire capacity	
• Pt1000, Pt10000 (IEC 60751 and JIS C 1604-8)	Max. 30 nF
• All other input types	Max. 50 nF
Fault detection, programmable	None, short-circuited, defective, short-circuited or defective
	<b>Note</b>
	When the low limit for the configured input type is below the constant detection limit for short-circuited inputs, the detection of short circuits is disabled regardless of the configuration of the fault detection.
Detection limit for short-circuited input	15 Ω
Fault detection time (RTD)	≤ 75 ms (typically 70 ms)
Fault detection time (for 3-wire and 4-wire)	≤ 2 000 ms

### Thermocouples (TC)

Input type	
• B	IEC 60584-1
• E	IEC 60584-1
• J	IEC 60584-1
• K	IEC 60584-1
• L	DIN 43710
• Lr	GOST 3044-84
• N	IEC 60584-1
• R	IEC 60584-1
• S	IEC 60584-1
• T	IEC 60584-1
• U	DIN 43710
• W3	ASTM E988-96
• W5	ASTM E988-96
• LR	GOST 3044-84
Cold junction compensation (CJC)	Constant, internal or external over Pt100 or Ni100 RTD
• Temperature range internal CJC	-50 ... +100 °C (-58 ... +212 °F)
• Connection external CJC	2-wire, 3-wire or 4-wire
• External CJC, line resistance per wire (for 3-wire and 4-wire connections)	50 Ω
• Effect of the line resistance (with 3-wire and 4-wire connections)	< 0.002 Ω/Ω
• Input current external CJC	< 0.15 mA
• Temperature range external CJC	-50 ... +135 °C (-58 ... +275 °F)
• Cable, wire-wire capacity	Max. 50 nF
• Total line resistance	Max. 10 kΩ
• Fault detection, programmable	None, short-circuited, defective, short-circuited or defective
	<b>Note</b>
	The short-circuited fault detection only applies to the CJC input.
• Fault detection time (TC)	≤ 75 ms (typically 70 ms)
• Fault detection time, external CJC (for 3-wire and 4-wire)	≤ 2 000 ms

### Linear resistance

Input range	0 ... 100 kΩ
Minimum measuring span	25 Ω
Type of connection	2-wire, 3-wire or 4-wire
Line resistance per wire	Max. 50 Ω
Input current	< 0.15 mA
Effect of the line resistance (with 3-wire and 4-wire connections)	< 0.002 Ω/Ω
Cable, wire-wire capacity	
• R > 400 Ω	Max. 30 nF
• R ≤ 400 Ω	Max. 50 nF
Fault detection, programmable	None, defective
Potentiometers	
Input range	10 ... 100 kΩ
Minimum measuring span	25 Ω
Type of connection	3-wire, 4-wire or 5-wire
Line resistance per wire	Max. 50 Ω
Input current	< 0.15 mA
Effect of the line resistance (with 4-wire and 5-wire connections)	< 0.002 Ω/Ω
Cable, wire-wire capacity	
• R > 400 Ω	Max. 30 nF
• R ≤ 400 Ω	Max. 50 nF

#### SITRANS TH420 (HART, universal)

Fault detection, programmable	None, short-circuited, defective, short-circuited or defective <b>Note</b> When the configured potentiometer size is below the constant detection limit for short-circuited inputs, the detection of short circuits is disabled regardless of the configuration of the fault detection.
Detection limit for short-circuited input	15 Ω
Fault detection time, wiper arm (no short-circuit detection)	≤ 75 ms (typically 70 ms)
Fault detection time, element	≤ 2 000 ms
Fault detection time (for 4-wire and 5-wire)	≤ 2 000 ms
<b>Voltage input</b>	
Measuring range	
• Unipolar	-100 ... 1700 mV
• Bipolar	-800 ... +800 mV
Minimum measuring span	2.5 mV
Input resistance	10 MΩ
Cable, wire-wire capacity	
• Input range: -100 ... 1700 mV	Max. 30 nF
• Input range: -20 ... 100 mV	Max. 50 nF
Fault detection, programmable	None, defective
Fault detection time	≤ 75 ms (typically 70 ms)
<b>Output and HART communication</b>	
Normal range, programmable	3.8 ... 20.5 mA/20.5 ... 3.8 mA
Extended range (output limits), programmable	3.5 ... 23 mA/23 ... 3.5 mA
Programmable input/output limits	
• Fault current	Enable/disable
• Fault current setting	3.5 ... 23 mA
Update time	10 ms
Load (with current output)	≤ (V <sub>Supply</sub> - 7.5)/0.023 Ω
Load stability	< 0.01% of meas. span/100 Ω (measuring span = currently selected range)
Input fault detection, programmable (detection of input short circuits is ignored with TC and voltage inputs)	3.5 ... 23 mA
NAMUR NE43 Upscale	> 21 mA
NAMUR NE43 Downscale	< 3.6 mA
HART protocol versions	HART 7
<b>Measuring accuracy</b>	
Input accuracy	See "Input accuracy" table
Output accuracy	See "Output accuracy" table
<b>Rated conditions</b>	
Ambient temperature	-50 ... +85 °C (-58 ... +185 °F)
Ambient temperature for devices with functional safety	-40 ... +80 °C (-40 ... +176 °F)
Storage temperature	-50 ... +85 °C (-58 ... +185 °F)
Reference temperature for sensor calibration	24 °C ±1.0 °C (75.2 °F ±1.8 °F)
Relative humidity	< 99% (no condensation)
Degree of protection	
• Transmitter enclosure	IP68
• Terminals	IPO0

<b>Design</b>	
Weight	50 g (0.11 lb)
Maximum core cross-section	1 × 1.5 mm <sup>2</sup> (stranded wire)
Tightening torque for clamping screws	0.4 Nm
Vibrations	IEC 60068-2-6
• 2 ... 25 Hz	± 1.6 mm (0.07 inch)

1) Note that the minimum supply voltage must correspond to the value measured at the terminals of the SITRANS TH420.  
All external voltage drops must be taken into consideration.

2) Protect the device from overvoltage with the help of a suitable power supply or suitable overvoltage protection equipment.

3) Additional available certificates are listed on the Internet at <http://www.siemens.com/processinstrumentation/certificates>

## Overview

### Keep flexible - with the universal SITRANS TR200 transmitter

- 2-wire device for 4 to 20 mA
- Enclosure for rail mounting
- Universal input for virtually any type of temperature sensor
- Configurable over PC

## Benefits

- Compact design
- Galvanic isolation
- Test sockets for multimeters
- Diagnostics LED (green/red)
- Sensor monitoring open circuits and short-circuits
- Self-monitoring
- Configuration status stored in EEPROM
- Expanded diagnostic functions, such as slave pointer, operating hours counter, etc.
- Special characteristic
- Electromagnetic compatibility to EN 61326 and NE21
- SIL2 (with order note C20), SIL2/3 (with C23)

## Application

SITRANS TR200 transmitters can be used in all industrial sectors. Their compact design enables simple mounting on standard DIN rails on-site in protective boxes or in control cabinets. The following sensors/signal sources can be connected over their universal input module:

- Resistance thermometer (2, 3, 4-wire connection)
- Thermocouples
- Resistance-based sensors and DC voltage sources

The output signal is a direct current from 4 to 20 mA in accordance with the sensor characteristic.

Transmitters of the "intrinsically safe" type of protection can be installed within potentially explosive atmospheres. The devices meet the directive 2014/34/EU (ATEX).

## Function

The SITRANS TR200 is configured over a PC. For this purpose, the USB or RS 232 modem is connected to the output terminals. The configuration data can now be edited using the SIPROM T software tool. The configuration data are then permanently stored in the non-volatile memory (EEPROM).

Once the sensors and power supply have been correctly connected, the transmitter outputs a temperature-linear output signal and the diagnostics LED displays a green light. In the case of a sensor break, the LED flashes red, an internal device fault is indicated by a steady red light.

The test socket can be used to connect an ammeter at any time for monitoring purposes and plausibility checks. The output current can be read without any interruption, or even without opening the current loop.

### Technical specifications

#### Input

##### Resistance thermometer

Measured variable	Temperature
Sensor type	Pt25 ... Pt1000
<ul style="list-style-type: none"> <li>According to IEC 60751</li> <li>Acc. to JIS C 1604; <math>a=0.00392 \text{ K}^{-1}</math></li> <li>According to IEC 60751</li> <li>Special type</li> </ul>	Pt25 ... Pt1000 Ni25 ... Ni1000
Sensor factor	Via special characteristic (max. 30 points)
Units	0.25 ... 10 (adaptation of the basic type, e.g. Pt100 to version Pt25 ... 1000)
Connection	°C or °F
<ul style="list-style-type: none"> <li>Standard connection</li> <li>Averaging</li> <li>Differentiation</li> </ul>	1 resistance thermometer (RTD) in 2-wire, 3-wire or 4-wire connection 2 resistance thermometers in 2-wire connection for generation of average temperature 2 resistance thermometers (RTD) in 2-wire connection (RTD 1 – RTD 2 or RTD 2 – RTD 1)
Connection	Line resistance can be configured $\leq 100 \Omega$ (loop resistance)
<ul style="list-style-type: none"> <li>2-wire connection</li> <li>3-wire connection</li> <li>4-wire connection</li> </ul>	No trim necessary No trim necessary
Sensor current	$\leq 0.45 \text{ mA}$
Response time $T_{63}$	$\leq 250 \text{ ms}$ for 1 sensor with break monitoring
Break monitoring	Always active (cannot be switched off)
Short-circuit monitoring	Can be switched on/off (default value: ON)
Measuring range	Assignable (see "Digital measuring error" table)
Min. measuring span	10 °C (18 °F)
Characteristic curve	Temperature-linear or special characteristic

##### Resistance-based sensor

Measured variable	Actual resistance
Sensor type	Resistance-based, potentiometers
Units	$\Omega$
Connection	1 resistance-based sensor (R) in 2-wire, 3-wire or 4-wire connection
<ul style="list-style-type: none"> <li>Standard connection</li> <li>Averaging</li> <li>Differentiation</li> </ul>	2 resistance-based sensors in 2-wire connection for averaging 2 resistance thermometers in 2-wire connection (R1 – R2 or R2 – R1)
Connection	Line resistance can be configured $\leq 100 \Omega$ (loop resistance)
<ul style="list-style-type: none"> <li>2-wire connection</li> <li>3-wire connection</li> <li>4-wire connection</li> </ul>	No trim necessary No trim necessary
Sensor current	$\leq 0.45 \text{ mA}$
Response time $T_{63}$	$\leq 250 \text{ ms}$ for 1 sensor with break monitoring
Break monitoring	Always active (cannot be switched off)
Short-circuit monitoring	Can be switched on/off (default value: OFF)
Measuring range	Assignable max. 0 ... 2200 $\Omega$ (see "Digital measuring error" table)
Min. measuring span	5 ... 25 $\Omega$ (see "Digital measuring error" table)
Characteristic curve	Resistance-linear or special characteristic

#### Thermocouples

Measured variable	Temperature
Sensor type (thermocouples)	Pt30Rh-Pt6Rh acc. to IEC 584 W5%-Re acc. to ASTM 988 W3%-Re acc. to ASTM 988 NiCr-CuNi acc. to IEC 584 Fe-CuNi acc. to IEC 584 NiCr-Ni acc. to IEC 584 Fe-CuNi acc. to DIN 43710 NiCrSi-NiSi acc. to IEC 584 Pt13Rh-Pt acc. to IEC 584 Pt10Rh-Pt acc. to IEC 584 Cu-CuNi acc. to IEC 584 Cu-CuNi acc. to DIN 43710
<ul style="list-style-type: none"> <li>Type B</li> <li>Type C</li> <li>Type D</li> <li>Type E</li> <li>Type J</li> <li>Type K</li> <li>Type L</li> <li>Type N</li> <li>Type R</li> <li>Type S</li> <li>Type T</li> <li>Type U</li> </ul>	
Units	°C or °F
Connection	1 thermocouple (TC) 2 thermocouples (TC) 2 thermocouples (TC) (TC1 – TC2 or TC2 – TC1)
<ul style="list-style-type: none"> <li>Standard connection</li> <li>Averaging</li> <li>Differentiation</li> </ul>	
Response time $T_{63}$	$\leq 250 \text{ ms}$ for 1 sensor with break monitoring
Break monitoring	Can be switched off
Reference junction compensation	With integrated Pt100 resistance thermometer
<ul style="list-style-type: none"> <li>Internal</li> <li>External</li> <li>External fixed</li> </ul>	With external Pt100 IEC 60751 (2-wire or 3-wire connection) Reference junction temperature can be set as fixed value
Measuring range	Assignable (see "Digital measuring error" table)
Min. measuring span	Min. 40 ... 100 °C (72 ... 180 °F) (see "Digital measuring error" table)
Characteristic curve	Temperature-linear or special characteristic

#### mV sensor

Measured variable	DC voltage
Sensor type	DC voltage source (DC voltage source possible over an externally connected resistor)
Units	mV
Response time $T_{63}$	$\leq 250 \text{ ms}$ for 1 sensor with break monitoring
Break monitoring	Can be switched off
Measuring range	Assignable max. -100 ... 1100 mV
Min. measuring span	2 mV or 20 mV
Overload capability of the input	-1.5 ... +3.5 V DC
Input resistance	$\geq 1 \text{ M}\Omega$
Characteristic curve	Voltage-linear or special characteristic

<b>Output</b>	
Output signal	4 ... 20 mA, 2-wire
Auxiliary power	11 ... 35 V DC (to 30 V with Ex i/ic; to 32 V with Ex nA)
Max. load	( $U_{aux} - 11$ V)/0.023 A
Overrange	3.6 ... 23 mA, infinitely adjustable (default range: 3.84 mA ... 20.5 mA)
Error signal (e.g. following sensor fault) (conforming to NE43)	3.6 ... 23 mA, infinitely adjustable (default value: 22.8 mA)
Sample cycle	0.25 s nominal
Damping	Software filter 1st order 0 ... 30 s (parameterizable)
Protection	Against reverse polarity
Galvanic isolation	Input against output 2.12 kV DC (1.5 kV <sub>rms</sub> AC)
<b>Measuring accuracy</b>	
Digital measuring error	See "Digital measuring error" table
Reference conditions	
• Auxiliary power	24 V ± 1 %
• Load	500 Ω
• Ambient temperature	23 °C
• Warming-up time	> 5 min
Error in the analog output (digital/analog converter)	< 0.025 % of measuring span
Error due to internal reference junction	< 0.5 °C (0.9 °F)
Effect of ambient temperature	
• Analog measuring error	0.02 % of meas. span/10 °C (18 °F)
• Digital measuring error	
- With resistance thermometer	0.06 °C (0.11 °F)/10 °C (18 °F)
- With thermocouples	0.6 °C (1.1 °F)/10 °C (18 °F)
Auxiliary power effect	< 0.001 % of meas. span/V
Effect of load impedance	< 0.002 % of meas. span/100 Ω
Long-term drift	
• In the first month	< 0.02 % of measuring span
• After one year	< 0.2 % of measuring span
• After 5 years	< 0.3 % of measuring span
<b>Rated conditions</b>	
<u>Ambient conditions</u>	
Ambient temperature	-40 ... +85 °C (-40 ... +185 °F)
Storage temperature	-40 ... +85 °C (-40 ... +185 °F)
Relative humidity	< 98 %, with condensation
Electromagnetic compatibility	According to EN 61326 and NE21
<b>Design</b>	
Material	Plastic, electronic module potted
Weight	122 g
Dimensions	See "Dimensional drawings"
Cross-section of cables	Max. 2.5 mm <sup>2</sup> (AWG 13)
Degree of protection according to IEC 60529	
• Enclosure	IP20

Type T	-200 ... +400 (-328 ... +752)	40	(72)	1	(1.8)
Type U	-200 ... +600 (-328 ... +1112)	50	(90)	2	(3.6)

<sup>1)</sup> The digital accuracy in the range 100 to 300 °C (212 to 572 °F) is 3 °C (5.4 °F).

<sup>2)</sup> The digital accuracy in the range 1750 to 2300 °C (3182 to 4172 °F) is 2 °C (3.6 °F).

##### mV sensor

Input	Measuring range	Minimum measuring span	Digital accuracy
			μV
mV sensor	-10 ... +70	2	40
mV sensor	-100 ... +1100	20	400

The digital accuracy is the accuracy after the analog/digital conversion including linearization and calculation of the measured value.

An additional error is generated in the output current 4 to 20 mA as a result of the digital/analog conversion of 0.025% of the set measuring span (digital-analog error).

The total error under reference conditions at the analog output is the sum from the digital error and the digital-analog error (poss. with the addition of reference junction errors in the case of thermocouple measurements).

### SITRANS TR300 (4 to 20 mA, HART, universal)

#### Overview

#### Robust and durable HART - the universal SITRANS TR300 transmitter

- 2-wire device for 4 to 20 mA, HART
- Device for rail mounting
- Universal input for virtually any type of temperature sensor
- Configurable over HART

#### Benefits

- Compact design
- Galvanic isolation
- Test sockets for multimeters
- Diagnostics LED (green/red)
- Sensor monitoring open circuits and short-circuits
- Self-monitoring
- Configuration status stored in EEPROM
- Expanded diagnostic functions, such as slave pointer, operating hours counter, etc.
- Special characteristic
- Electromagnetic compatibility to EN 61326 and NE21
- SIL2 (with order note C20), SIL2/3 (with C23)

#### Application

SITRANS TR300 transmitters can be used in all industrial sectors. Their compact design enables simple mounting on standard DIN rails on-site in protective boxes or in control cabinets. The following sensors/signal sources can be connected over their universal input module:

- Resistance thermometer (2, 3, 4-wire connection)
- Thermocouples
- Resistance-based sensors and DC voltage sources

The output signal is a direct current from 4 to 20 mA in accordance with the sensor characteristic, superimposed by the digital HART signal.

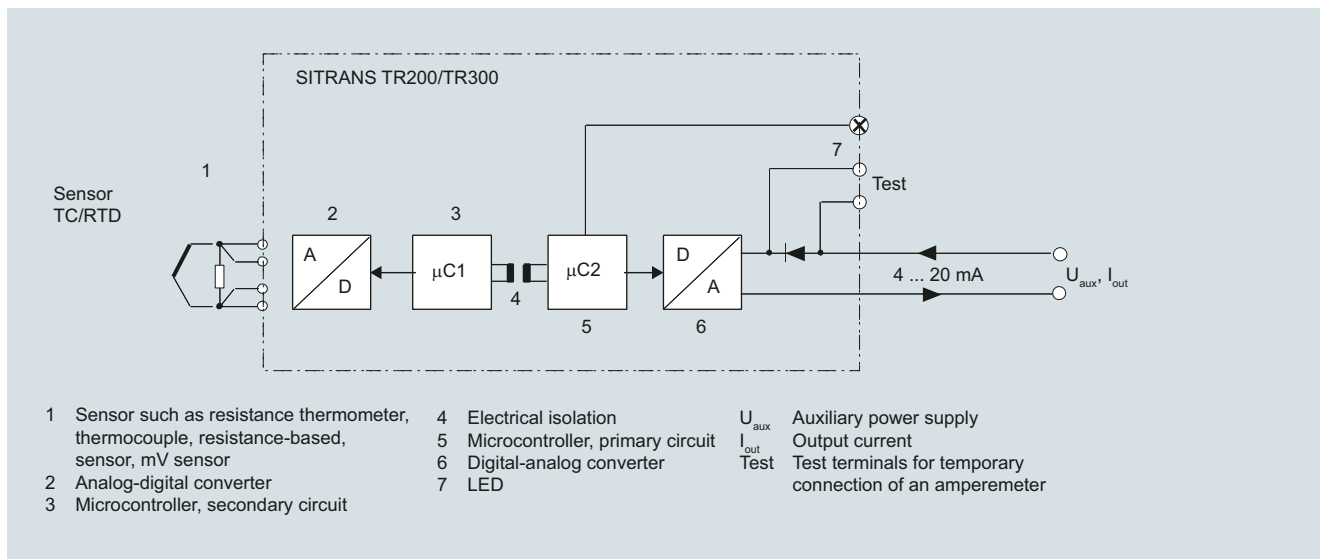

Transmitters of the "intrinsically safe" type of protection can be installed within potentially explosive atmospheres. The devices meet the directive 2014/34/EU (ATEX).

#### Function

The SITRANS TR300 is configured over HART. This can be done using a handheld communicator or even more conveniently with a HART modem and the SIMATIC PDM parameterization software. The configuration data are then permanently stored in the non-volatile memory (EEPROM).

Once the sensors and power supply have been correctly connected, the transmitter outputs a temperature-linear output signal and the diagnostics LED displays a green light. In the case of a sensor break, the LED flashes red, an internal device fault is indicated by a steady red light.

The test socket can be used to connect an ammeter at any time for monitoring purposes and plausibility checks. The output current can be read without any interruption, or even without opening the current loop.

SITRANS TR300 function diagram

## Technical specifications

### Input

#### Resistance thermometer

Measured variable	Temperature
Sensor type	
• According to IEC 60751	Pt25 ... Pt1000
• Acc. to JIS C 1604; $\alpha=0.00392 \text{ K}^{-1}$	Pt25 ... Pt1000
• According to IEC 60751	Ni25 ... Ni1000
• Special type	Via special characteristic (max. 30 points)
Sensor factor	0.25 ... 10 (adaptation of the basic type, e.g. Pt100 to version Pt25 ... 1000)
Units	°C or °F
Connection	
• Standard connection	1 resistance thermometer (RTD) in 2-wire, 3-wire or 4-wire connection
• Averaging	2 identical resistance thermometers in 2-wire connection for generation of average temperature
• Differentiation	2 identical resistance thermometers (RTD) in 2-wire connection (RTD 1 – RTD 2 or RTD 2 – RTD 1)
Connection	
• 2-wire connection	Line resistance can be configured $\leq 100 \Omega$ (loop resistance)
• 3-wire connection	No trim necessary
• 4-wire connection	No trim necessary
Sensor current	$\leq 0.45 \text{ mA}$
Response time $T_{63}$	$\leq 250 \text{ ms}$ for 1 sensor with break monitoring
Break monitoring	Always active (cannot be switched off)
Short-circuit monitoring	Can be switched on/off (default value: ON)
Measuring range	Assignable (see "Digital measuring error" table)
Min. measuring span	10 °C (18 °F)
Characteristic curve	Temperature-linear or special characteristic
<b>Resistance-based sensor</b>	
Measured variable	Actual resistance
Sensor type	Resistance-based, potentiometers
Units	$\Omega$
Connection	
• Standard connection	1 resistance-based sensor (R) in 2-wire, 3-wire or 4-wire connection
• Averaging	2 resistance-based sensors in 2-wire connection for averaging
• Differentiation	2 resistance thermometers in 2-wire connection (R1 – R2 or R2 – R1)
Connection	
• 2-wire connection	Line resistance can be configured $\leq 100 \Omega$ (loop resistance)
• 3-wire connection	No trim necessary
• 4-wire connection	No trim necessary
Sensor current	$\leq 0.45 \text{ mA}$
Response time $T_{63}$	$\leq 250 \text{ ms}$ for 1 sensor with break monitoring
Break monitoring	Always active (cannot be switched off)
Short-circuit monitoring	Can be switched on/off (default value: OFF)
Measuring range	Assignable max. 0 ... 2200 $\Omega$ (see "Digital measuring error" table)
Min. measuring span	5 ... 25 $\Omega$ (see "Digital measuring error" table)
Characteristic curve	Resistance-linear or special characteristic

### Thermocouples

Measured variable	Temperature
Sensor type (thermocouples)	
• Type B	Pt30Rh-Pt6Rh acc. to IEC 584
• Type C	W5%-Re acc. to ASTM 988
• Type D	W3%-Re acc. to ASTM 988
• Type E	NiCr-CuNi acc. to IEC 584
• Type J	Fe-CuNi acc. to IEC 584
• Type K	NiCr-Ni acc. to IEC 584
• Type L	Fe-CuNi acc. to DIN 43710
• Type N	NiCrSi-NiSi acc. to IEC 584
• Type R	Pt13Rh-Pt acc. to IEC 584
• Type S	Pt10Rh-Pt acc. to IEC 584
• Type T	Cu-CuNi acc. to IEC 584
• Type U	Cu-CuNi acc. to DIN 43710
Units	°C or °F
Connection	
• Standard connection	1 thermocouple (TC)
• Averaging	2 thermocouples (TC)
• Differentiation	2 thermocouples (TC) (TC1 – TC2 or TC2 – TC1)
Response time $T_{63}$	$\leq 250 \text{ ms}$ for 1 sensor with break monitoring
Break monitoring	Can be switched off
Reference junction compensation	
• Internal	With integrated Pt100 resistance thermometer
• External	With external Pt100 IEC 60751 (2-wire or 3-wire connection)
• External fixed	Reference junction temperature can be set as fixed value
Measuring range	Assignable (see "Digital measuring error" table)
Min. measuring span	Min. 40 ... 100 °C (72 ... 180 °F) (see "Digital measuring error" table)
Characteristic curve	Temperature-linear or special characteristic
<b>mV sensor</b>	
Measured variable	DC voltage
Sensor type	DC voltage source (DC voltage source possible over an externally connected resistor)
Units	mV
Response time $T_{63}$	$\leq 250 \text{ ms}$ for 1 sensor with break monitoring
Break monitoring	Can be switched off
Measuring range	Assignable max. -100 ... 1100 mV
Min. measuring span	2 mV or 20 mV
Overload capability of the input	-1.5 ... +3.5 V DC
Input resistance	$\geq 1 \text{ M}\Omega$
Characteristic curve	Voltage-linear or special characteristic

### Rail transmitters

#### SITRANS TR300 (4 to 20 mA, HART, universal)

##### Output

Output signal	4 ... 20 mA, 2-wire with communication acc. to HART Rev. 5.9
Auxiliary power	11 ... 35 V DC (to 30 V with Ex i/ic; to 32 V with Ex nA)
Max. load	$(U_{aux} - 11 \text{ V})/0.023 \text{ A}$
Overrange	3.6 ... 23 mA, infinitely adjustable (default range: 3.84 mA ... 20.5 mA)
Error signal (e.g. following sensor fault) (conforming to NE43)	3.6 ... 23 mA, infinitely adjustable (default value: 22.8 mA)
Sample cycle	0.25 s nominal
Damping	Software filter 1st order 0 ... 30 s (parameterizable)
Protection	Against reverse polarity
Galvanic isolation	Input against output 2.12 kV DC (1.5 kV <sub>rms</sub> AC)

##### Measuring accuracy

Digital measuring error	See "Digital measuring error" table
Reference conditions	
• Auxiliary power	24 V ± 1 %
• Load	500 Ω
• Ambient temperature	23 °C
• Warming-up time	> 5 min
Error in the analog output (digital/analog converter)	< 0.025 % of measuring span
Error due to internal reference junction	< 0.5 °C (0.9 °F)
Effect of ambient temperature	
• Analog measuring error of measuring span	< 0.02% of max. meas. span/10 °C (18 °F)
• Digital measuring error	0.06 °C (0.11 °F)/10 °C (18 °F)
- With resistance thermometers	0.6 °C (1.1 °F)/10°C (18 °F)
- With thermocouples	
Auxiliary power effect	< 0.001 % of meas. span/V
Effect of load impedance	< 0.002 % of meas. span/100 Ω
Long-term drift	
• In the first month	< 0.02 % of measuring span
• After one year	< 0.2 % of measuring span
• After 5 years	< 0.3 % of measuring span

##### Rated conditions

###### Ambient conditions

Ambient temperature	-40 ... +85 °C (-40 ... +185 °F)
Storage temperature	-40 ... +85 °C (-40 ... +185 °F)
Relative humidity	< 98 %, with condensation
Electromagnetic compatibility	According to EN 61326 and NE21

##### Design

Material	Plastic, electronic module potted
Weight	122 g
Dimensions	See "Dimensional drawings"
Cross-section of cables	Max. 2.5 mm <sup>2</sup> (AWG 13)
Degree of protection according to IEC 60529	
• Enclosure	IP20

##### Certificates and approvals

Explosion protection ATEX	
EC type-examination certificate	PTB 07 ATEX 2032X
• "Intrinsic safety" type of protection	II 2(1) G Ex ia/ib IIC T6/T4 II 3(1) G Ex ia/ic IIC T6/T4 II 3 G Ex ic IIC T6/T4 II 2(1) D Ex iaD/ibD 20/21 T115 °C II 3 G Ex nA IIC T6/T4
• "Non-sparking equipment" type of protection	
Other certificates	EAC Ex(GOST) and NEPSI

##### Factory setting:

SITRANS TR300, sensor connection assignment

**Overview**

- 2-wire rail transmitter with and without HART communications interface
- Enclosure for rail mounting
- Universal input for virtually any type of temperature sensor
- Can be configured via PC, HART 7 or optional local operation

**Benefits**

- Compact design
- Galvanic isolation
- Test terminals for ammeter
- Diagnostics LED (green/red)
- Input monitoring  
Wire break and short-circuit
- Self-monitoring
- Configuration status stored in EEPROM
- Expanded diagnostic functions, such as slave pointer, operating hours counter, etc.
- Special characteristic
- Electromagnetic compatibility according to DIN EN 61326 and NE21
- SIL2/3 (with order note C20)

**Application**

SITRANS TR320 transmitters can be used in all sectors. Their compact design enables simple mounting on standard DIN rails on-site in protective boxes or in control cabinets. The following sensors/signal sources can be connected over their universal input module:

- Resistance thermometer (2-wire, 3-wire, 4-wire connection)
- Thermocouples
- Linear resistance, potentiometer and DC voltage sources

With HART communication interface:

- The output signal is a load-independent direct current from 4 to 20 mA in accordance with the input characteristic, superimposed by the digital HART signal.

Transmitters of the "intrinsically safe or Zone 2 increased safety" type of protection can be installed in hazardous areas. The device meets the requirements of the EU Directive 2014/34/EU (ATEX), the FM and CSA regulations as well as other national approvals.

## Technical specifications

### General

Supply voltage <sup>1) 2)</sup>	
• Without explosion protection (non-Ex)	7.5 ... 48 V DC
• with explosion protection (Ex i)	7.5 ... 30 V DC
Additional minimum supply voltage when using test terminals	0.8 V
Maximum power loss	≤ 850 mW
Minimum load resistance at supply voltage > 37 V	$(V_{\text{supply}} - 37 \text{ V})/23 \text{ mA}$
Insulation voltage, test/operation	
• Without explosion protection (non-Ex)	2.5 kV AC/55 V AC
• with explosion protection (Ex i)	2.5 kV AC/42 V AC
Polarity protection	All inputs and outputs
Write protection	Open circuits or software
Warming-up time	< 5 min
Starting time	< 2.75 s
Programming	HART
Signal-to-noise ratio	> 60 dB
Long-term stability	Better than: <ul style="list-style-type: none"> <li>± 0.05% of measuring span/year</li> <li>± 0.18% of measuring span/5 years</li> </ul>
Response time	4 ... 20 mA: ≤ 55 ms HART: ≤ 75 ms (typically 70 ms)
Programmable damping	0 ... 60 s
Signal dynamic	
• Input	24 bit
• Output	18 bit
Influence of change in supply voltage	< 0.005% of measuring span/V DC

### Input

#### Resistance thermometer (RTD)

Input type	
• Pt10 ... 10000	<ul style="list-style-type: none"> <li>IEC 60751</li> <li>JIS C 1604-8</li> <li>GOST 6651_2009</li> <li>Callendar-Van Dusen</li> </ul>
• Ni10 ... 10000	<ul style="list-style-type: none"> <li>DIN 43760-1987</li> <li>GOST 6651-2009/OIML R84:2003</li> </ul>
• Cu5 ... 1000	<ul style="list-style-type: none"> <li>Edison Copper Winding No. 15</li> <li>GOST 6651-2009/OIML R84:2003</li> </ul>
Type of connection	2-wire, 3-wire or 4-wire
Line resistance per wire	Max. 50 Ω
Input current	< 0.15 mA
Effect of the line resistance (with 3-wire and 4-wire connections)	< 0.002 Ω/Ω
Cable, wire-wire capacity	
• Pt1000, Pt10000 (IEC 60751 and JIS C 1604-8)	Max. 30 nF
• All other input types	Max. 50 nF
Fault detection, programmable	None, short-circuited, defective, short-circuited or defective
	<b>Note</b>
	When the low limit for the configured input type is below the constant detection limit for short-circuited inputs, the detection of short circuits is disabled regardless of the configuration of the fault detection.
Detection limit for short-circuited input	15 Ω
Fault detection time (RTD)	≤ 75 ms (typically 70 ms)
Fault detection time (for 3-wire and 4-wire)	≤ 2 000 ms

### Thermocouples (TC)

Input type	
• B	IEC 60584-1
• E	IEC 60584-1
• J	IEC 60584-1
• K	IEC 60584-1
• L	DIN 43710
• Lr	GOST 3044-84
• N	IEC 60584-1
• R	IEC 60584-1
• S	IEC 60584-1
• T	IEC 60584-1
• U	DIN 43710
• W3	ASTM E988-96
• W5	ASTM E988-96
• LR	GOST 3044-84
Cold junction compensation (CJC)	Constant, internal or external over Pt100 or Ni100 RTD
• Temperature range internal CJC	-50 ... +100 °C (-58 ... +212 °F)
• Connection external CJC	2-wire or 3-wire
• External CJC, line resistance per wire (for 3-wire and 4-wire connections)	50 Ω
• Effect of the line resistance (with 3-wire and 4-wire connections)	< 0.002 Ω/Ω
• Input current external CJC	< 0.15 mA
• Temperature range external CJC	-50 ... +135 °C (-58 ... +275 °F)
• Cable, wire-wire capacity	Max. 50 nF
• Total line resistance	Max. 10 kΩ
• Fault detection, programmable	None, short-circuited, defective, short-circuited or defective
	<b>Note</b>
	The short-circuited fault detection only applies to the CJC input.
• Fault detection time (TC)	≤ 75 ms (typically 70 ms)
• Fault detection time, external CJC (for 3-wire and 4-wire)	≤ 2 000 ms

### Linear resistance

Input range	0 ... 100 kΩ
Minimum measuring span	25 Ω
Type of connection	2-wire, 3-wire or 4-wire
Line resistance per wire	Max. 50 Ω
Input current	< 0.15 mA
Effect of the line resistance (with 3-wire and 4-wire connections)	< 0.002 Ω/Ω
Cable, wire-wire capacity	
• R > 400 Ω	Max. 30 nF
• R ≤ 400 Ω	Max. 50 nF
Fault detection, programmable	None, defective
	<b>Potentiometers</b>
Input range	10 ... 100 kΩ
Minimum measuring span	25 Ω
Type of connection	3-wire or 4-wire
Line resistance per wire	Max. 50 Ω
Input current	< 0.15 mA
Effect of the line resistance (with 4-wire and 5-wire connections)	< 0.002 Ω/Ω
Cable, wire-wire capacity	
• R > 400 Ω	Max. 30 nF
• R ≤ 400 Ω	Max. 50 nF

#### SITRANS TR320 (HART, universal)

Fault detection, programmable	None, short-circuited, defective, short-circuited or defective <b>Note</b> When the configured potentiometer size is below the constant detection limit for short-circuited inputs, the detection of short circuits is disabled regardless of the configuration of the fault detection.
Detection limit for short-circuited input	15 Ω
Fault detection time, wiper arm (no short-circuit detection)	≤ 75 ms (typically 70 ms)
Fault detection time, element	≤ 2 000 ms
Fault detection time (for 4-wire and 5-wire)	≤ 2 000 ms
<b>Voltage input</b>	
Measuring range	
• Unipolar	-100 ... 1700 mV
• Bipolar	-800 ... +800 mV
Minimum measuring span	2.5 mV
Input resistance	10 MΩ
Cable, wire-wire capacity	
• Input range: -100 ... 1700 mV	Max. 30 nF
• Input range: -20 ... 100 mV	Max. 50 nF
Fault detection, programmable	None, defective
Fault detection time	≤ 75 ms (typically 70 ms)
<b>Output and HART communication</b>	
Normal range, programmable	3.8 ... 20.5 mA/20.5 ... 3.8 mA
Extended range (output limits), programmable	3.5 ... 23 mA/23 ... 3.5 mA
Programmable input/output limits	
• Fault current	Enable/disable
• Fault current setting	3.5 ... 23 mA
Update time	10 ms
Load (with current output)	≤ (V <sub>Supply</sub> - 7.5)/0.023 Ω
Load stability	< 0.01% of meas. span/100 Ω (measuring span = currently selected range)
Input fault detection, programmable (detection of input short circuits is ignored with TC and voltage inputs)	3.5 ... 23 mA
NAMUR NE43 Upscale	> 21 mA
NAMUR NE43 Downscale	< 3.6 mA
HART protocol versions	HART 7
<b>Measuring accuracy</b>	
Input accuracy	See "Input accuracy" table
Output accuracy	See "Output accuracy" table
<b>Rated conditions</b>	
Ambient temperature	-50 ... +85 °C (-58 ... +185 °F)
Ambient temperature for devices with functional safety	-40 ... +80 °C (-40 ... +176 °F)
Storage temperature	-50 ... +85 °C (-58 ... +185 °F)
Reference temperature for sensor calibration	24 °C ±1.0 °C (75.2 °F ±1.8 °F)
Relative humidity	< 99% (no condensation)
Degree of protection	
• Transmitter enclosure	IP20
• Terminals	IP20

<b>Design</b>	
Weight	122 g (0.27 lb)
Maximum core cross-section	2.5 mm <sup>2</sup> (AWG 13)
Tightening torque for clamping screws	0.5 ... 0.6 Nm
Vibrations	IEC 60068-2-6

## Temperature measurement

Temperature transmitters  
Rail transmitters

### SITRANS TR420 (HART, universal)

#### Overview

- 2-wire rail transmitter with HART communications interface
- Device for rail mounting
- Universal input for virtually any type of temperature sensor
- Connection of two independent input circuits for redundant operation (high input availability)
- Input drift detection
- Configurable via HART 7

#### Benefits

- Compact design
- Connection of two independent input circuits for redundant operation (high input availability)
- Galvanic isolation
- Test terminals for ammeter
- Diagnostics LED (green/red)
- Input monitoring  
Wire break and short-circuit
- Self-monitoring
- Configuration status stored in EEPROM
- Expanded diagnostic functions, such as slave pointer, operating hours counter, etc.
- Special characteristic
- Electromagnetic compatibility according to DIN EN 61326 and NE21
- SIL2/3 (with order note C20)

#### Application

SITRANS TR420 transmitters with two inputs can be used in all sectors. Their compact design enables simple mounting on standard DIN rails on-site in protective boxes or in control cabinets. The following sensors/signal sources can be connected over their universal input module:

- 2 resistance thermometers (2-wire, 3-wire, 4-wire connection)
- 2 thermocouples
- 2 linear resistors, potentiometer and DC voltage sources

The output signal is a load-independent direct current from 4 to 20 mA in accordance with the input characteristic, superimposed by the digital HART signal.

The dual input mode also supports drift detection of the inputs, whereby maintenance intervals can be more easily planned.

Transmitters of the "intrinsically safe or Zone 2 increased safety" type of protection can be installed in hazardous areas. The device meets the requirements of the EU Directive 2014/34/EU (ATEX), the FM and CSA regulations as well as other national approvals.

**Function**

The SITRANS TR420 is configured via HART. The configuration can be carried out using a handheld communicator or, more conveniently, with a HART modem and the SIMATIC PDM configuration software. The configuration data are then permanently stored in the non-volatile memory (EEPROM).

After correct connection of input and supply voltage, the transmitter outputs a temperature-linear output signal and the diagnostics LED is green. In case of external errors, e.g. sensor short circuit or interruption, the LED flashes red; an internal error is indicated by a permanent red light.

An ammeter can be connected at any time for checking and plausibility via the test terminals. The output current can be read without any interruption, or even without opening the current loop.

#### SITRANS TR420 (HART, universal)

#### Technical specifications

##### General

Supply voltage <sup>1) 2)</sup>	
• Without explosion protection (non-Ex)	7.5 ... 48 V DC
• with explosion protection (Ex i)	7.5 ... 30 V DC
Additional minimum supply voltage when using test terminals	0.8 V
Maximum power loss	≤ 850 mW
Minimum load resistance at supply voltage > 37 V	$(V_{\text{supply}} - 37 \text{ V})/23 \text{ mA}$
Insulation voltage, test/operation	
• Without explosion protection (non-Ex)	2.5 kV AC/55 V AC
• with explosion protection (Ex i)	2.5 kV AC/42 V AC
Polarity protection	All inputs and outputs
Write protection	Open circuits or software
Warming-up time	< 5 min
Starting time	< 2.75 s
Programming	SIPROM T and HART
Signal-to-noise ratio	> 60 dB
Long-term stability	Better than: <ul style="list-style-type: none"> <li>• ± 0.05% of measuring span/year</li> <li>• ± 0.18% of measuring span/5 years</li> </ul>
Response time	≤ 75 ms (typically 70 ms)
Programmable damping	0 ... 60 s
Signal dynamic	
• Input	24 bit
• Output	18 bit
Influence of change in supply voltage	< 0.005% of measuring span/V DC

##### Input

##### Resistance thermometer (RTD)

Input type	
• Pt10 ... 10000	<ul style="list-style-type: none"> <li>• IEC 60751</li> <li>• JIS C 1604-8</li> <li>• GOST 6651_2009</li> <li>• Callendar-Van Dusen</li> </ul>
• Ni10 ... 10000	<ul style="list-style-type: none"> <li>• DIN 43760-1987</li> <li>• GOST 6651-2009/OIML R84:2003</li> </ul>
• Cu5 ... 1000	<ul style="list-style-type: none"> <li>• Edison Copper Winding No. 15</li> <li>• GOST 6651-2009/OIML R84:2003</li> </ul>
Type of connection	2-wire, 3-wire or 4-wire
Line resistance per wire	Max. 50 Ω
Input current	< 0.15 mA
Effect of the line resistance (with 3-wire and 4-wire connections)	< 0.002 Ω/Ω
Cable, wire-wire capacity	
• Pt1000, Pt10000 (IEC 60751 and JIS C 1604-8)	Max. 30 nF
• All other input types	Max. 50 nF
Fault detection, programmable	None, short-circuited, defective, short-circuited or defective
	<b>Note</b>
	When the low limit for the configured input type is below the constant detection limit for short-circuited inputs, the detection of short circuits is disabled regardless of the configuration of the fault detection.
Detection limit for short-circuited input	15 Ω
Fault detection time (RTD)	≤ 75 ms (typically 70 ms)
Fault detection time (for 3-wire and 4-wire)	≤ 2 000 ms

##### Thermocouples (TC)

Input type	
• B	IEC 60584-1
• E	IEC 60584-1
• J	IEC 60584-1
• K	IEC 60584-1
• L	DIN 43710
• Lr	GOST 3044-84
• N	IEC 60584-1
• R	IEC 60584-1
• S	IEC 60584-1
• T	IEC 60584-1
• U	DIN 43710
• W3	ASTM E988-96
• W5	ASTM E988-96
• LR	GOST 3044-84
Cold junction compensation (CJC)	Constant, internal or external over Pt100 or Ni100 RTD
• Temperature range internal CJC	-50 ... +100 °C (-58 ... +212 °F)
• Connection external CJC	2-wire, 3-wire or 4-wire
• External CJC, line resistance per wire (for 3-wire and 4-wire connections)	50 Ω
• Effect of the line resistance (with 3-wire and 4-wire connections)	< 0.002 Ω/Ω
• Input current external CJC	< 0.15 mA
• Temperature range external CJC	-50 ... +135 °C (-58 ... +275 °F)
• Cable, wire-wire capacity	Max. 50 nF
• Total line resistance	Max. 10 kΩ
• Fault detection, programmable	None, short-circuited, defective, short-circuited or defective
	<b>Note</b>
	The short-circuited fault detection only applies to the CJC input.
• Fault detection time (TC)	≤ 75 ms (typically 70 ms)
• Fault detection time, external CJC (for 3-wire and 4-wire)	≤ 2 000 ms

##### Linear resistance

Input range	0 ... 100 kΩ
Minimum measuring span	25 Ω
Type of connection	2-wire, 3-wire or 4-wire
Line resistance per wire	Max. 50 Ω
Input current	< 0.15 mA
Effect of the line resistance (with 3-wire and 4-wire connections)	< 0.002 Ω/Ω
Cable, wire-wire capacity	
• R > 400 Ω	Max. 30 nF
• R ≤ 400 Ω	Max. 50 nF
Fault detection, programmable	None, defective
Potentiometers	
Input range	10 ... 100 kΩ
Minimum measuring span	25 Ω
Type of connection	3-wire, 4-wire or 5-wire
Line resistance per wire	Max. 50 Ω
Input current	< 0.15 mA
Effect of the line resistance (with 4-wire and 5-wire connections)	< 0.002 Ω/Ω
Cable, wire-wire capacity	
• R > 400 Ω	Max. 30 nF
• R ≤ 400 Ω	Max. 50 nF

Fault detection, programmable	None, short-circuited, defective, short-circuited or defective <b>Note</b> When the configured potentiometer size is below the constant detection limit for short-circuited inputs, the detection of short circuits is disabled regardless of the configuration of the fault detection.
Detection limit for short-circuited input	15 Ω
Fault detection time, wiper arm (no short-circuit detection)	≤ 75 ms (typically 70 ms)
Fault detection time, element	≤ 2 000 ms
Fault detection time (for 4-wire and 5-wire)	≤ 2 000 ms
<b>Voltage input</b>	
Measuring range	
• Unipolar	-100 ... 1700 mV
• Bipolar	-800 ... +800 mV
Minimum measuring span	2.5 mV
Input resistance	10 MΩ
Cable, wire-wire capacity	
• Input range: -100 ... 1700 mV	Max. 30 nF
• Input range: -20 ... 100 mV	Max. 50 nF
Fault detection, programmable	None, defective
Fault detection time	≤ 75 ms (typically 70 ms)
<b>Output and HART communication</b>	
Normal range, programmable	3.8 ... 20.5 mA/20.5 ... 3.8 mA
Extended range (output limits), programmable	3.5 ... 23 mA/23 ... 3.5 mA
Programmable input/output limits	
• Fault current	Enable/disable
• Fault current setting	3.5 ... 23 mA
Update time	10 ms
Load (with current output)	≤ (V <sub>Supply</sub> - 7.5)/0.023 Ω
Load stability	< 0.01% of meas. span/100 Ω (measuring span = currently selected range)
Input fault detection, programmable (detection of input short circuits is ignored with TC and voltage inputs)	3.5 ... 23 mA
NAMUR NE43 Upscale	> 21 mA
NAMUR NE43 Downscale	< 3.6 mA
HART protocol versions	HART 7
<b>Measuring accuracy</b>	
Input accuracy	See "Input accuracy" table
Output accuracy	See "Output accuracy" table
<b>Rated conditions</b>	
Ambient temperature	-50 ... +85 °C (-58 ... +185 °F)
Ambient temperature for devices with functional safety	-40 ... +80 °C (-40 ... +176 °F)
Storage temperature	-50 ... +85 °C (-58 ... +185 °F)
Reference temperature for sensor calibration	24 °C ±1.0 °C (75.2 °F ±1.8 °F)
Relative humidity	< 99% (no condensation)
Degree of protection	
• Transmitter enclosure	IP20
• Terminals	IP20

<b>Design</b>	
Weight	122 g (0.27 lb)

1) Note that the minimum supply voltage must correspond to the value measured at the terminals of the SITRANS TR420.  
All external voltage drops must be taken into consideration.

2) Protect the device from overvoltage with the help of a suitable power supply or suitable overvoltage protection equipment.

3) Additional available certificates are listed on the Internet at <http://www.siemens.com/processinstrumentation/certificates>

## Temperature measurement

Temperature transmitters

Field transmitters/field indicator

### SITRANS TF - Transmitter, 2-wire system and SITRANS TF - Field indicator for 4 to 20 mA

#### Overview

#### Our field devices for heavy industrial use

- HART, Universal
- 4 to 20 mA, universal
- Field indicator for 4 to 20 mA signals

The temperature transmitter SITRANS TF works where others feel uncomfortable.

#### Benefits

- Universal use
  - as transmitter for resistance thermometer, thermocouple element,  $\Omega$  or mV signal
  - as field indicator for any 4 to 20 mA signals
- Local sensing of measured values over digital display
- Rugged two-chamber enclosure in die-cast aluminum or stainless steel
- IP66/67/68 degree of protection
- Test terminals for direct read-out of the output signal without breaking the current loop
- Can be mounted elsewhere if the measuring point
  - is difficult to access
  - has high temperatures
  - experiences vibrations due to the process cell
  - is to avoid long neck pipes and thermowells
- Can be mounted directly on American-design sensors
- Wide range of approvals for use in potentially explosive atmospheres. Types of protection "Intrinsically safe, non-sparking and flameproof", for Europe and the USA.
- SIL2 (with order note C20), SIL2/3 (with C23)

#### Application

SITRANS TF can be used everywhere where temperatures need to be measured under particularly adverse conditions, or where a convenient local display is ideal. Which is why users from all industries have opted for this field device. The rugged enclosure protects the electronics. The stainless steel model is almost completely resistant to sea water and other aggressive substances. The inner workings offer high measuring accuracy, universal input and a wide range of diagnostic options.

#### Function

##### Configuration

The communication capability over the HART protocol V 5.9 of the SITRANS TF with an integrated SITRANS TH300 permits parameterization using a PC or HART communicator (hand-held communicator). The SIMATIC PDM makes it easy.

For the SITRANS TF with integrated programmable SITRANS TH200, parameters are assigned with the PC. Available for this purpose are a special modem and the software tool SIPROM T.

##### Mode of operation

###### Mode of operation of SITRANS TF as temperature transmitter

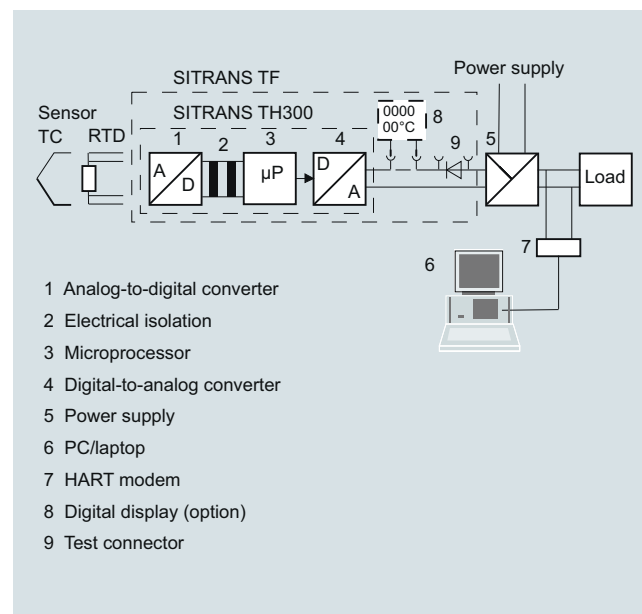

The sensor signal, whether resistance thermometer, thermocouple element or  $\Omega$  or mV signal, is amplified and linearized. Sensor and output side are electrically isolated. An internal cold junction is integrated for measurements with thermocouples.

The device outputs a temperature-linear direct current of 4 to 20 mA. As well as the analog transmission of measured values from 4 to 20 mA, the HART version also supports digital communication for online diagnostics, measured value transmission and configuration.

SITRANS TF automatically detects when a sensor should be interrupted or is indicating a short-circuit. The practical test terminals allow direct measurement of 4 to 20 mA signals over an ammeter without interrupting the output current loop.

###### Mode of operation of SITRANS TF as field indicator

Any 4 to 20 mA signal can be applied to the generous terminal block. As well as a range of predefined measurement units, the adjustable indicator also supports the input of customized units. This means that any 4 to 20 mA signal can be represented in any unit, e.g. pressure, flow rate, level or temperature.

Mode of operation of SITRANS TF with integrated SITRANS TH300 and digital display

## Technical specifications

### Input

#### Resistance thermometer

Measured variable	Temperature
Input type	Pt25 ... Pt1000
• According to IEC 60751	Pt25 ... Pt1000
• Acc. to JIS C 1604; a=0.00392 K-1	Ni25 ... Ni1000
• According to IEC 60751	
Units	°C and °F
Connection	
• Standard connection	1 resistance thermometer (RTD) in 2-wire, 3-wire or 4-wire connection
• Averaging	Series or parallel connection of several resistance thermometers in the 2-wire connection for the generation of average temperatures or for adaptation to other device types
• Differentiation	2 resistance thermometers (RTD) in 2-wire connection (RTD 1 – RTD 2 or RTD 2 – RTD 1)
Connection	
• 2-wire connection	Line resistance can be configured $\leq 100 \Omega$ (loop resistance)
• 3-wire connection	No trim necessary
• 4-wire connection	No trim necessary
Sensor current	$\leq 0.45 \text{ mA}$
Response time	$\leq 250 \text{ ms}$ for 1 sensor with break monitoring
Break monitoring	Always active (cannot be switched off)
Short-circuit monitoring	Can be switched on/off (default value: ON)
Measuring range	Assignable (see "Digital measuring error" table)
Min. measuring span	10 °C (18 °F)
Characteristic curve	Temperature-linear or special characteristic

#### Resistance-based sensor

Measured variable	Actual resistance
Sensor type	Resistance-based, potentiometers
Units	$\Omega$
Connection	
• Standard connection	1 resistance-based sensor (R) in 2-wire, 3-wire or 4-wire connection
• Averaging	2 resistance-based sensors in 2-wire connection for averaging
• Differentiation	2 resistance-based sensors in 2-wire connection (R 1 – R 2 or R 2 – R 1)
Connection	
• 2-wire connection	Line resistance can be configured $\leq 100 \Omega$ (loop resistance)
• 3-wire connection	No trim necessary
• 4-wire connection	No trim necessary
Sensor current	$\leq 0.45 \text{ mA}$
Response time	$\leq 250 \text{ ms}$ for 1 sensor with break monitoring
Break monitoring	Can be switched off
Short-circuit monitoring	Can be switched off (value is adjustable)
Measuring range	Assignable max. 0 ... 2200 $\Omega$ (see "Digital measuring error" table)
Min. measuring span	5 ... 25 $\Omega$ (see "Digital measuring error" table)
Characteristic curve	Resistance-linear or special characteristic

### Thermocouples

Measured variable	Temperature
Sensor type (thermocouples)	Pt30Rh-Pt6Rh acc. to IEC 584
• Type B	W5%-Re acc. to ASTM 988
• Type C	W3%-Re acc. to ASTM 988
• Type D	NiCr-CuNi acc. to IEC 584
• Type E	Fe-CuNi acc. to IEC 584
• Type J	NiCr-Ni acc. to IEC 584
• Type K	Fe-CuNi acc. to DIN 43710
• Type L	NiCrSi-NiSi acc. to IEC 584
• Type N	Pt13Rh-Pt acc. to IEC 584
• Type R	Pt10Rh-Pt acc. to IEC 584
• Type S	Cu-CuNi acc. to IEC 584
• Type T	Cu-CuNi acc. to DIN 43710
• Type U	
Units	°C or °F
Connection	
• Standard connection	1 thermocouple (TC)
• Averaging	2 thermocouples (TC)
• Differentiation	2 thermocouples (TC) (TC 1 – TC 2 or TC 2 – TC 1)
Response time	$\leq 250 \text{ ms}$ for 1 sensor with break monitoring
Break monitoring	Can be switched off
Reference junction compensation	
• Internal	With integrated Pt100 resistance thermometer
• External	With external Pt100 IEC 60751 (2-wire or 3-wire connection)
• External fixed	Reference junction temperature can be set as fixed value
Measuring range	Assignable (see "Digital measuring error" table)
Min. measuring span	Min. 40 ... 100 °C (72 ... 180 °F) (see "Digital measuring error" table)
Characteristic curve	Temperature-linear or special characteristic

### mV sensor

Measured variable	DC voltage
Sensor type	DC voltage source (DC voltage source possible over an externally connected resistor)
Units	mV
Response time	$\leq 250 \text{ ms}$ for 1 sensor with break monitoring
Break monitoring	Can be switched off
Measuring range	-10 ... +70 mV -100 ... +1100 mV
Min. measuring span	2 mV or 20 mV
Overload capability of the input	-1.5 ... +3.5 V DC
Input resistance	$\geq 1 \text{ M}\Omega$
Characteristic curve	Voltage-linear or special characteristic

<sup>1)</sup> The digital accuracy in the range 100 to 300 °C (212 to 572 °F) is 3 °C (5.4 °F).

<sup>2)</sup> The digital accuracy in the range 1750 to 2300 °C (3182 to 4172 °F) is 2 °C (3.6 °F).

##### mV sensor

Input	Measuring range mV	Minimum measuring span mV	Digital accuracy μV
mV sensor	-100 ... +1100	20	400

The digital accuracy is the accuracy after the analog/digital conversion including linearization and calculation of the measured value.

An additional error is generated in the output current 4 to 20 mA as a result of the digital/analog conversion of 0.025% of the set measuring span (digital-analog error).

The total error under reference conditions at the analog output is the sum from the digital error and the digital-analog error (poss. with the addition of reference junction errors in the case of thermocouple measurements).

- FOUNDATION fieldbus
- PROFIBUS PA

The SITRANS TF temperature transmitter works where others can't cope.

#### Benefits

- For universal use as a transmitter for resistance thermometers, thermocouple elements,  $\Omega$  or mV signals
- Rugged two-chamber enclosure in die-cast aluminum or stainless steel
- IP66/67/68 degree of protection
- Can be mounted elsewhere if the measuring point
  - is difficult to access
  - has high temperatures
  - experiences vibrations due to the process cell
  - is to avoid long neck pipes and thermowells

- Can be mounted directly on American-design sensors
- Wide range of approvals for use in potentially explosive atmospheres. "Intrinsically safe, non-sparking and flameproof" type of protection, for Europe and USA

#### Application

The SITRANS TF can be used everywhere where temperatures need to be measured under particularly harsh conditions. Which is why users from all industries have opted for this field device. The rugged enclosure protects the electronics. The stainless steel model is almost completely resistant to sea water and other aggressive substances. The inner workings offer high measuring accuracy, universal input and a wide range of diagnostic options.

#### Function

##### Features

##### General

- Polarity-neutral bus connection
- 24-bit analog-digital converter for high resolution
- Galvanic isolation
- Version for use in hazardous areas
- Special characteristic
- Sensor redundancy

##### Transmitter with PROFIBUS PA communication

- Function blocks: 2 x analog

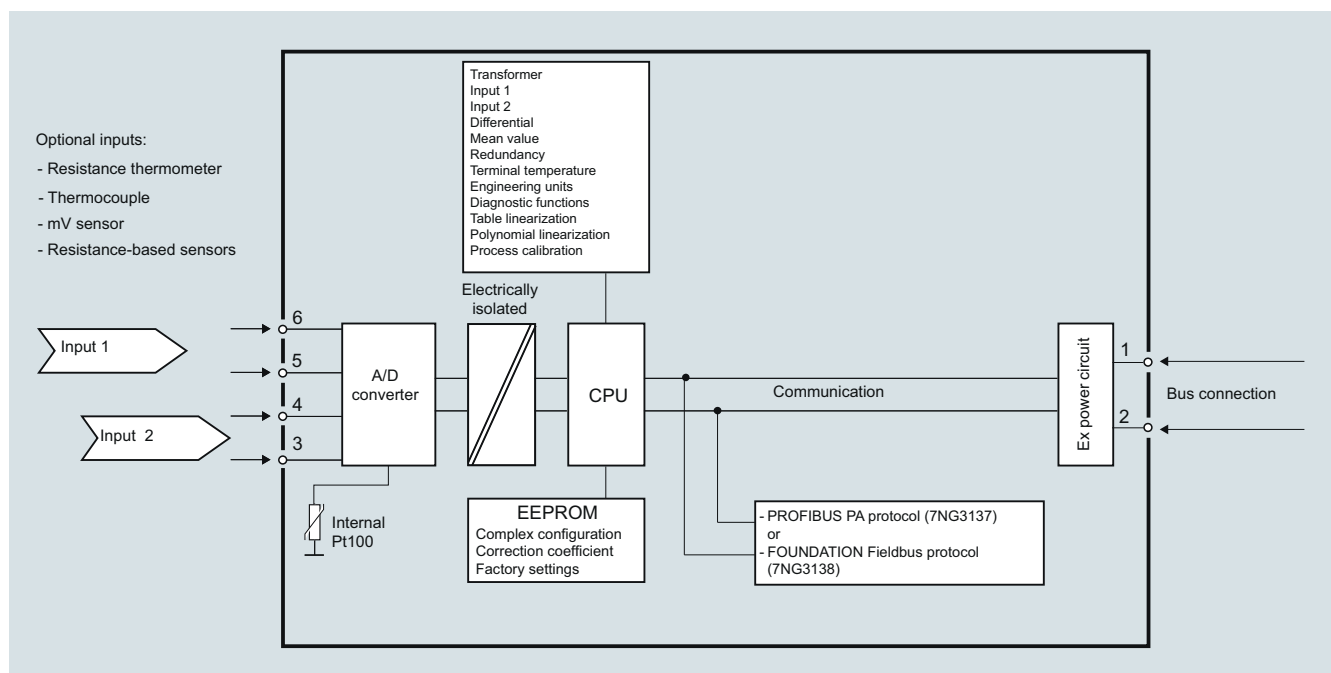

##### Transmitter with FOUNDATION fieldbus communication

- Function blocks: 2 x analog and 1 x PID
- Functionality: Basic or LAS

##### Mode of operation

The following function diagram explains the mode of operation of the transmitter.

The only difference between the two versions of the SITRANS TF (7NG3137-... and 7NG3138-...) is the type of field bus protocol used (PROFIBUS PA or FOUNDATION fieldbus).

SITRANS TF with TH400, function diagram

## Temperature measurement

Temperature transmitters

Field transmitters/field indicator

### SITRANS TF - fieldbus transmitter

#### System communication

SITRANS TF with TH400, communication interface

#### Technical specifications

##### Input

- Analog/digital conversion
- Measurement rate < 50 ms
- Resolution 24-bit

##### Resistance thermometer

- Pt25 ... Pt1000 acc. to IEC 60751/JIS C 1604
- Measuring range -200 ... +850 °C (-328 ... +1562 °F)
- Ni25 ... Ni1000 acc. to DIN 43760
- Measuring range -60 ... +250 °C (-76 ... +482 °F)
- Cu10 ... Cu1000,  $\alpha = 0.00427$
- Measuring range -50 ... +200 °C (-58 ... +392 °F)

Line resistance per sensor cable Max. 50  $\Omega$   
 Sensor current Nominal 0.2 mA

- Sensor fault detection
- Sensor break detection Yes
- Sensor short-circuit detection Yes, < 15  $\Omega$

##### Resistance-based sensor

Measuring range 0 ... 10 k $\Omega$   
 Line resistance per sensor cable Max. 50  $\Omega$   
 Sensor current Nominal 0.2 mA

- Sensor fault detection
- Sensor break detection Yes
- Sensor short-circuit detection Yes, < 15  $\Omega$

##### Thermocouple

According to IEC 584

- Type B
- Type E
- Type J
- Type K
- Type N
- Type R
- Type S
- Type T

According to DIN 43710

- Type L
- Type U

According to ASTM E988-90

- Type W3
- Type W5

External reference junction compensation -40 ... +135 °C (-40 ... +275 °F)

Sensor fault detection

- Sensor break detection Yes
- Sensor short-circuit detection Yes, < 3 mV
- Sensor current in the event of open-circuit monitoring 4  $\mu$ A

##### mV sensor - voltage input

Measuring range -800 ... +800 mV  
 Input resistance 10 M $\Omega$

##### Output

Filter time (programmable) 0 ... 60 s  
 Update time < 400 ms

##### Measuring accuracy

Accuracy is defined as the higher value of general values and basic values.

##### General values

Type of input	Absolute accuracy	Temperature coefficient
All	$\leq \pm 0.05$ % of the measured value	$\leq \pm 0.002$ % of the measured value/°C

##### Basic values

Type of input	Basic accuracy	Temperature coefficient
Pt100 and Pt1000	$\leq \pm 0.1$ °C	$\leq \pm 0.002$ °C/°C
Ni100	$\leq \pm 0.15$ °C	$\leq \pm 0.002$ °C/°C
Cu10	$\leq \pm 1.3$ °C	$\leq \pm 0.02$ °C/°C
Resistance-based sensor	$\leq \pm 0.05$ $\Omega$	$\leq \pm 0.002$ $\Omega$ /°C
Voltage source	$\leq \pm 10$ $\mu$ V	$\leq \pm 0.2$ $\mu$ V/°C
Thermocouple, type: E, J, K, L, N, T, U	$\leq \pm 0.5$ °C	$\leq \pm 0.01$ °C/°C
Thermocouple, type: B, R, S, W3, W5	$\leq \pm 1$ °C	$\leq \pm 0.025$ °C/°C
Reference junction compensation	$\leq \pm 0.5$ °C	

##### Reference conditions

Warming-up time 30 s  
 Signal-to-noise ratio Min. 60 dB

<b>Rated conditions</b>		<b>Communication</b>

### SITRANS TF320 (HART, universal)

#### Overview

SITRANS TF320 in dual chamber enclosure

SITRANS TF320 in single chamber enclosure

- 2-wire temperature transmitter with and without HART communication interface
- Universal input for virtually any type of temperature sensor
- Can be configured via PC, HART 7 or optional local operation

#### Benefits

- Universally applicable as a temperature transmitter with galvanic isolation for:
  - Resistance thermometer (2-wire, 3-wire, 4-wire connection)
  - Thermocouples
  - Linear resistances, potentiometer and DC voltage sources
- Local operation of the temperature transmitter via display (single chamber enclosure) or control keys accessible from outside (dual chamber enclosure)
- Rugged single or dual chamber enclosure made of die-cast aluminum or stainless steel 316L
- Electronic compartment isolated (watertight) from terminal compartment in dual chamber enclosure
- Degree of protection IP66/67/68 (1.5 m/2 h)
- Electromagnetic compatibility according to DIN EN 61326 and NE21
- Test terminals for direct read-out of the output signal without breaking the current loop
- Remote installation option:
  - Measuring point is difficult to access
  - Measuring point is subjected to high temperatures
  - Measuring point is subjected to vibration through plant
  - Long neck pipes and thermowells must be avoided
- Mounted directly on sensors
- Temperature transmitters of the "intrinsically safe protection type, increased safety for zone 2, flameproof and dust-protected" type of protection can be installed in hazardous areas. The transmitter meets the requirements of the EU Directive 2014/34/EU (ATEX), the FM and CSA regulations as well as other national approvals, e.g. EACEx, NEPSI, KCs, Inmetro.
- SIL2/3 (with order note C20)

#### Application

SITRANS TF320 can be used everywhere where temperatures need to be measured under particularly adverse conditions and where a user-friendly local display is ideal. Which is why users from all industries have opted for this field device. The rugged enclosure protects the electronics. The stainless steel model is almost completely resistant to sea water and other aggressive substances. The inner workings offer high measuring accuracy, universal input and a wide range of diagnostic options.

## Function

### Configuration

The communication capability over the HART protocol V 7 permits parameterization using a PC or HART communicator (hand-held communicator). The SIMATIC PDM makes it easy.

For the SITRANS TF320 without HART functionality, parameters are assigned with the PC. A special modem and the software tool SIPROM T are available for this purpose.

The optional local operation on the device gives you the possibility to configure the device's most important functions very quickly.

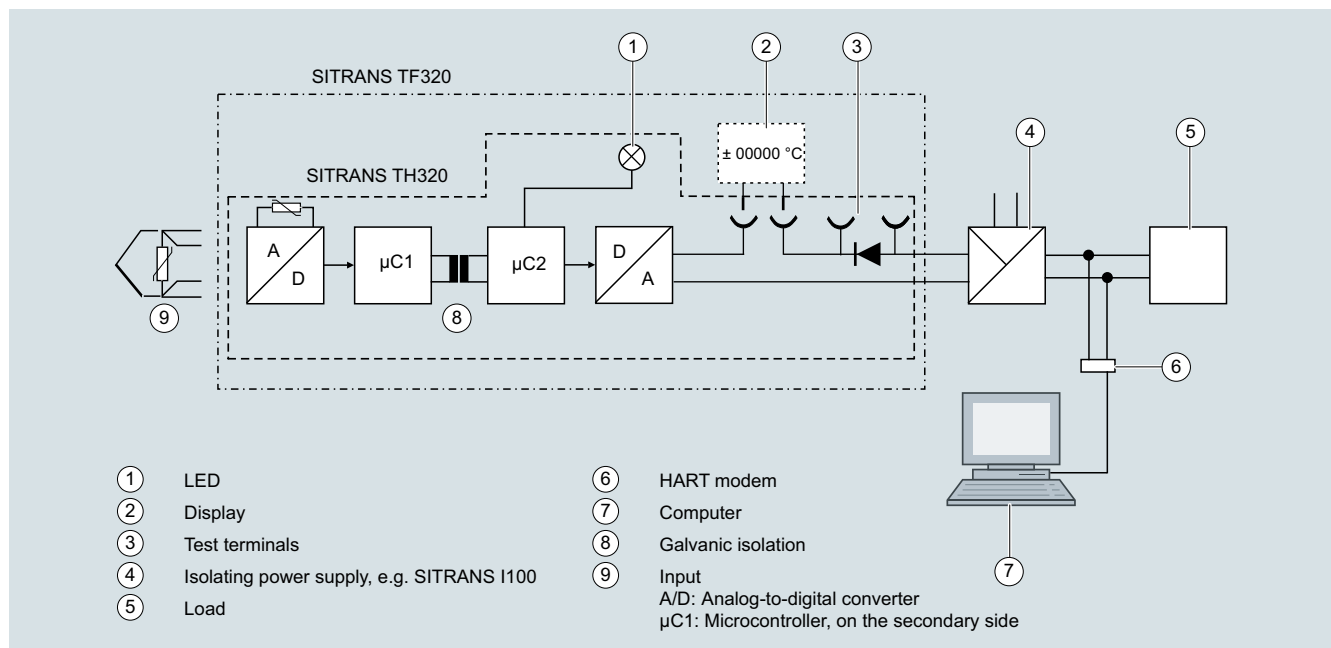

### Principle of operation

#### SITRANS TF320 as temperature transmitter

The input signal, whether resistance thermometer (RTD), thermocouple (TC),  $\Omega$  or mV signal, is amplified and linearized. Input and output side are galvanically isolated. An internal cold junction is integrated for measurements with thermocouples.

The device outputs a temperature-linear direct current from 4 to 20 mA. As well as the analog transmission of measured values from 4 to 20 mA, the HART version also supports digital communication for online diagnostics, measured value transmission, and configuration.

SITRANS TF320 automatically detects when a sensor should be interrupted or is indicating a short-circuit. The practical test terminals allow direct measurement of 4 to 20 mA signals over an ammeter without interrupting the output current loop.

Field transmitters/field indicator

### SITRANS TF320 (HART, universal)

#### Technical specifications

##### General

Supply voltage <sup>1) 2)</sup>	
• Without explosion protection (non-Ex)	10.5 ... 48 V DC
• with explosion protection (Ex i)	10.5 ... 30 V DC
Additional minimum supply voltage when using test terminals	0.8 V
Maximum power loss	≤ 850 mW
Minimum load resistance at supply voltage > 37 V	$(V_{\text{supply}} - 37 \text{ V})/23 \text{ mA}$
Insulation voltage, test/operation	
• Without explosion protection (non-Ex)	2.5 kV AC/55 V AC
• with explosion protection (Ex i)	2.5 kV AC/42 V AC
Polarity protection	All inputs and outputs
Write protection	Wire jumper (transmitter), switch (on display) or software
Warm-up time	< 5 min
Starting time	< 2.75 s
Programming	SIPROM T and HART
Signal-to-noise ratio	> 60 dB
Long-term stability	Better than: • ± 0.05% of measuring span/year • ± 0.18% of measuring span/5 years
Response time	4 ... 20 mA: ≤ 55 ms HART: ≤ 75 ms (typically 70 ms)
Programmable damping	0 ... 60 s
Signal dynamic	
• Input	24 bit
• Output	18 bit
Influence of change in supply voltage	< 0.005% of measuring span/V DC

##### Input

###### Resistance thermometer (RTD)

Input type	
• Pt10 ... 10000	<ul style="list-style-type: none"> <li>• IEC 60751</li> <li>• JIS C 1604-8</li> <li>• GOST 6651_2009</li> <li>• Callendar-Van Dusen</li> </ul>
• Ni10 ... 10000	<ul style="list-style-type: none"> <li>• DIN 43760-1987</li> <li>• GOST 6651-2009/OIML R84:2003</li> </ul>
• Cu5 ... 1000	<ul style="list-style-type: none"> <li>• Edison Copper Winding No. 15</li> <li>• GOST 6651-2009/OIML R84:2003</li> </ul>
Type of connection	2-wire, 3-wire or 4-wire
Line resistance per wire	Max. 50 Ω
Input current	< 0.15 mA
Effect of the line resistance (with 3-wire and 4-wire connections)	< 0.002 Ω/Ω
Cable, wire-wire capacity	
• Pt1000, Pt10000 (IEC 60751 and JIS C 1604-8)	Max. 30 nF
• All other input types	Max. 50 nF
Fault detection, programmable	None, short-circuited, defective, short-circuited or defective

##### Note

When the low limit for the configured input type is below the constant detection limit for short-circuited inputs, the detection of short circuits is disabled regardless of the configuration of the fault detection.

Detection limit for short-circuited input	15 Ω
Fault detection time (RTD)	≤ 75 ms (typically 70 ms)
Fault detection time (for 3-wire and 4-wire)	≤ 2 000 ms
<u>Thermocouples (TC)</u>	
Input type	
• B	IEC 60584-1
• E	IEC 60584-1
• J	IEC 60584-1
• K	IEC 60584-1
• L	DIN 43710
• Lr	GOST 3044-84
• N	IEC 60584-1
• R	IEC 60584-1
• S	IEC 60584-1
• T	IEC 60584-1
• U	DIN 43710
• W3	ASTM E988-96
• W5	ASTM E988-96
• LR	GOST 3044-84
Cold junction compensation (CJC)	Constant, internal or external over Pt100 or Ni100 RTD
• Temperature range internal CJC	-50 ... +100 °C (-58 ... +212 °F)
• Connection external CJC	2-wire or 3-wire
• External CJC, line resistance per wire (for 3-wire and 4-wire connections)	50 Ω
• Effect of the line resistance (with 3-wire and 4-wire connections)	< 0.002 Ω/Ω
• Input current external CJC	< 0.15 mA
• Temperature range external CJC	-50 ... +135 °C (-58 ... +275 °F)
• Cable, wire-wire capacity	Max. 50 nF
• Total line resistance	Max. 10 kΩ
• Fault detection, programmable	None, short-circuited, defective, short-circuited or defective
<b>Note</b>	
The short-circuited fault detection only applies to the CJC input.	
• Fault detection time (TC)	≤ 75 ms (typically 70 ms)
• Fault detection time, external CJC (for 3-wire and 4-wire)	≤ 2 000 ms
<u>Linear resistance</u>	
Input range	0 ... 100 kΩ
Minimum measuring span	25 Ω
Type of connection	2-wire, 3-wire or 4-wire
Line resistance per wire	Max. 50 Ω
Input current	< 0.15 mA
Effect of the line resistance (with 3-wire and 4-wire connections)	< 0.002 Ω/Ω
Cable, wire-wire capacity	
• R > 400 Ω	Max. 30 nF
• R ≤ 400 Ω	Max. 50 nF
Fault detection, programmable	None, defective

<b>Potentiometers</b>		<b>Rated conditions</b>	
Input range	10 Ω ... 100 kΩ	Ambient temperature	-50 ... +85 °C (-58 ... +185 °F)
Minimum measuring span	25 Ω	<ul style="list-style-type: none"> <li>Without local operation in single chamber enclosure</li> </ul>	-40 ... +85 °C (-40 ... +185 °F)

"Dust-protected DIP" type of protection	DIP/ CL II, III / DIV 1 / GP EFG / T6...T4 Zn21 / AEx/Ex tb IIC T100°C Gb

- Note that the minimum supply voltage must correspond to the value measured at the terminals of the SITRANS TF320.  
All external voltage drops must be taken into consideration.
- Protect the device from overvoltage with the help of a suitable power supply or suitable overvoltage protection equipment.
- Additional available certificates are listed on the Internet at <http://www.siemens.com/processinstrumentation/certificates>

#### Ordering example

SITRANS TF320 (single chamber enclosure)

7NG0340-0BA01-0AF2-Z Y01+Y17+P10

Y01: -10 ... +100 °C

Y17: TICA123

#### Factory setting

- Pt100 (IEC 60751) in 3-wire connection
- Measuring range: 0 ... 100 °C (32 ... 212 °F)
- Fault current
  - Input circuit wire break: 22.8 mA
  - Input circuit short circuit: 22.4 mA
  - Input monitoring wire break and short-circuit
- No trimming of input and output (offset)
- Damping 0.0 s

## Overview

SITRANS TF420 in dual chamber enclosure

SITRANS TF420 in single chamber enclosure

- 2-wire temperature transmitter with HART communication interface
- Universal input for virtually any type of temperature sensor
- Connection of two independent input circuits for redundant operation (high input availability)
- Input drift detection
- Can be configured via PC, HART 7 or optional local operation

## Benefits

- Universally applicable as a temperature transmitter with galvanic isolation for:
  - Resistance thermometer (2-wire, 3-wire, 4-wire connection)
  - Thermocouples
  - Linear resistances, potentiometer and DC voltage sources
- Local operation of the temperature transmitter via display (single chamber enclosure) or control keys accessible from outside (dual chamber enclosure)
- Rugged single or dual chamber enclosure made of die-cast aluminum or stainless steel 316/316L
- Electronic compartment isolated (watertight) from terminal compartment in dual chamber enclosure
- Degree of protection IP66/67/68 (1.5 m/2 h)
- Electromagnetic compatibility according to DIN EN 61326 and NE21
- Test terminals for direct read-out of the output signal without breaking the current loop
- Remote installation option:
  - Measuring point is difficult to access
  - Measuring point is subjected to high temperatures
  - Measuring point is subjected to vibration through plant
  - Long neck pipes and thermowells must be avoided
- Mounted directly on sensors
- Temperature transmitters of the "intrinsically safe protection type, increased safety for zone 2, flameproof and dust-protected" type of protection can be installed in hazardous areas. The transmitter meets the requirements of the EU Directive 2014/34/EU (ATEX), the FM and CSA regulations as well as other national approvals, e.g. EACEx, NEPSI, KCs, Inmetro.
- SIL2/3 (with order note C20)

## Application

SITRANS TF420 with its two sensor inputs can be used everywhere where temperatures need to be measured without interruption under particularly adverse conditions and where a convenient local display is ideal. Which is why users from all industries have opted for this field device. The rugged enclosure protects the electronics. The stainless steel model is almost completely resistant to sea water and other aggressive substances. The inner workings offer high measuring accuracy, universal input and a wide range of diagnostic options.

## Temperature measurement

Temperature transmitters

Field transmitters/field indicator

### SITRANS TF420 (HART, universal)

#### Function

##### Configuration

The communication capability over the HART protocol V 7 permits parameterization using a PC or HART communicator (hand-held communicator). The SIMATIC PDM makes it easy.

The optional local operation on the device gives you the possibility to configure the device's most important functions very quickly.

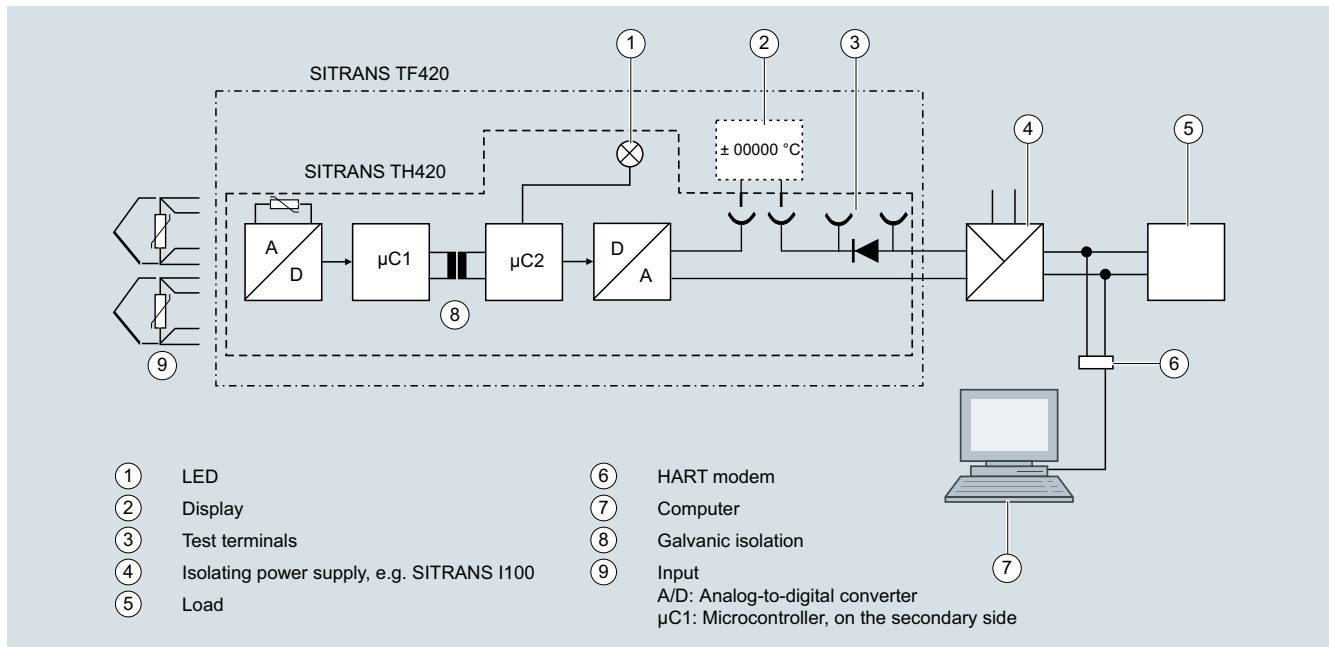

##### Principle of operation

###### SITRANS TF420 as temperature transmitter

Two sensor signals, whether resistance thermometers (RTD), thermocouples (TC),  $\Omega$  or mV signals, are amplified and linearized. Input and output side are galvanically isolated. An internal cold junction is integrated for measurements with thermocouples.

The device outputs a temperature-linear direct current from 4 to 20 mA. As well as the analog transmission of measured values from 4 to 20 mA, the HART version also supports digital communication for online diagnostics, measured value transmission, and configuration.

SITRANS TF420 automatically detects when a sensor should be interrupted or is indicating a short-circuit. If the back-up functionality has been selected in the primary value display, the SITRANS TF420 automatically switches to the 2nd input without interrupting the measured value; e.g. primary value input 1 with input 2 as backup. The practical test terminals allow direct measurement of 4 to 20 mA signals over an ammeter without interrupting the output current loop.

Function block diagram SITRANS TF420 with integrated SITRANS TH420

## Technical specifications

### General

Supply voltage <sup>1) 2)</sup>	
• Without explosion protection (non-Ex)	10.5 ... 48 V DC
• with explosion protection (Ex i)	10.5 ... 30 V DC
Additional minimum supply voltage when using test terminals	0.8 V
Maximum power loss	≤ 850 mW
Minimum load resistance at supply voltage > 37 V	$(V_{\text{supply}} - 37 \text{ V})/23 \text{ mA}$
Insulation voltage, test/operation	
• Without explosion protection (non-Ex)	2.5 kV AC/55 V AC
• with explosion protection (Ex i)	2.5 kV AC/42 V AC
Polarity protection	All inputs and outputs
Write protection	Wire jumper (transmitter), switch (on display) or software
Warm-up time	< 5 min
Starting time	< 2.75 s
Programming	HART
Signal-to-noise ratio	> 60 dB
Long-term stability	Better than: • ± 0.05% of measuring span/year • ± 0.18% of measuring span/5 years
Response time	4 ... 20 mA: ≤ 55 ms HART: ≤ 75 ms (typically 70 ms)
Programmable damping	0 ... 60 s
Signal dynamic	
• Input	24 bit
• Output	18 bit
Influence of change in supply voltage	< 0.005% of measuring span/V DC

### Input

#### Resistance thermometer (RTD)

Input type	
• Pt10 ... 10000	<ul style="list-style-type: none"> <li>• IEC 60751</li> <li>• JIS C 1604-8</li> <li>• GOST 6651_2009</li> <li>• Callendar-Van Dusen</li> </ul>
• Ni10 ... 10000	<ul style="list-style-type: none"> <li>• DIN 43760-1987</li> <li>• GOST 6651-2009/OIML R84:2003</li> </ul>
• Cu5 ... 1000	<ul style="list-style-type: none"> <li>• Edison Copper Winding No. 15</li> <li>• GOST 6651-2009/OIML R84:2003</li> </ul>
Type of connection	2-wire, 3-wire or 4-wire
Line resistance per wire	Max. 50 Ω
Input current	< 0.15 mA
Effect of the line resistance (with 3-wire and 4-wire connections)	< 0.002 Ω/Ω
Cable, wire-wire capacity	
• Pt1000, Pt10000 (IEC 60751 and JIS C 1604-8)	Max. 30 nF
• All other input types	Max. 50 nF
Fault detection, programmable	None, short-circuited, defective, short-circuited or defective

#### Note

When the low limit for the configured input type is below the constant detection limit for short-circuited inputs, the detection of short circuits is disabled regardless of the configuration of the fault detection.

Detection limit for short-circuited input	15 Ω
Fault detection time (RTD)	≤ 75 ms (typically 70 ms)
Fault detection time (for 3-wire and 4-wire)	≤ 2 000 ms
<u>Thermocouples (TC)</u>	
Input type	
• B	IEC 60584-1
• E	IEC 60584-1
• J	IEC 60584-1
• K	IEC 60584-1
• L	DIN 43710

• N	IEC 60584-1
• R	IEC 60584-1
• S	IEC 60584-1
• T	IEC 60584-1
• U	DIN 43710
• W3	ASTM E988-96
• W5	ASTM E988-96
• LR	GOST 3044-84
Cold junction compensation (CJC)	Constant, internal or external over Pt100 or Ni100 RTD
• Temperature range internal CJC	-50 ... +100 °C (-58 ... +212 °F)
• Connection external CJC	2-wire or 3-wire
• External CJC, line resistance per wire (for 3-wire and 4-wire connections)	50 Ω
• Effect of the line resistance (with 3-wire and 4-wire connections)	< 0.002 Ω/Ω
• Input current external CJC	< 0.15 mA
• Temperature range external CJC	-50 ... +135 °C (-58 ... +275 °F)
• Cable, wire-wire capacity	Max. 50 nF
• Total line resistance	Max. 10 kΩ
• Fault detection, programmable	None, short-circuited, defective, short-circuited or defective
<b>Note</b>	
The short-circuited fault detection only applies to the CJC input.	
• Fault detection time (TC)	≤ 75 ms (typically 70 ms)
• Fault detection time, external CJC (for 3-wire and 4-wire)	≤ 2 000 ms
<u>Linear resistance</u>	
Input range	10 Ω ... 100 kΩ
Minimum measuring span	25 Ω
Type of connection	2-wire, 3-wire or 4-wire
Line resistance per wire	Max. 50 Ω
Input current	< 0.15 mA
Effect of the line resistance (with 3-wire and 4-wire connections)	< 0.002 Ω/Ω
Cable, wire-wire capacity	
• R > 400 Ω	Max. 30 nF
• R ≤ 400 Ω	Max. 50 nF
Fault detection, programmable	None, defective

## Temperature measurement

### Temperature transmitters

### Field transmitters/field indicator

#### SITRANS TF420 (HART, universal)

Input type	Basic accuracy	Temperature coefficient <sup>1)</sup>
W3	≤ ±0.6 °C (1.08 °F)	≤ ±0.1 °C/°C (°F/°F)
W5	≤ ±0.4 °C (0.72 °F)	≤ ±0.1 °C/°C (°F/°F)
B <sup>2)</sup>	≤ ±1 °C (1.8 °F)	≤ ±0.1 °C/°C (°F/°F)
B <sup>3)</sup>	≤ ±3 °C (5.4 °F)	≤ ±0.1 °C/°C (°F/°F)
B <sup>4)</sup>	≤ ±8 °C (14.4 °F)	≤ ±0.8 °C/°C (°F/°F)
B <sup>5)</sup>	Not specified	Not specified
CJC (internal)	< ±0.5 °C (0.9 °F)	Included in basic accuracy
CJC (external)	≤ ±0.08 °C (0.144 °F)	≤ ±0.002 °C/°C (°F/°F)

<sup>1)</sup> Temperature coefficients correspond to the specified values or 0.002% of the input span, depending on which value is greater.

<sup>2)</sup> Accuracy of the specification range > 400 °C (752 °F)

<sup>3)</sup> Accuracy of the specification range > 160 °C (320 °F) < 400 °C (752 °F)

<sup>4)</sup> Accuracy of the specification range > 85 °C (185 °F) < 160 °C (320 °F)

<sup>5)</sup> Accuracy of the specification range < 85 °C (185 °F)

#### Output accuracy

Output type	Basic accuracy	Temperature coefficient
Average value measurement	Average of accuracy of input 1 and input 2	Average of temperature coefficient of input 1 and input 2
Differential measurement	Sum of accuracy of input 1 and input 2	Sum of temperature coefficient of input 1 and input 2
Analog output	≤ ±1.6 μA (0.01% of the full output span)	≤ ±0.48 μA/K (≤ ±0.003% of the full output span/K)

## Temperature Measurement

Temperature transmitters

Fiber-optic temperature measurement

### SITRANS TO500, multipoint temperature transmitter

#### Overview

SITRANS TO500 is a multipoint temperature transmitter for measuring temperatures and temperature profiles with fiber-optic multipoint measuring lances.

#### Benefits

- Evaluation of a large number of sensors (Fiber Bragg Grating (FBG)) in one temperature transmitter
- Low space requirements of the multipoint measuring lance
- 4 multipoint measuring lance channels per temperature transmitter
- Easy to install
- PROFIBUS DP - Simple integration into control system
- Fast response to temperature changes
- Exact, no recalibration required due to internal reference
- Also suitable for high process temperatures

#### Application

SITRANS TO500 is used for evaluating a high number of sensors that are arranged on a fiber-optic multipoint measuring lance.

Up to 4 multipoint measuring lances, each with as many as 48 sensors (Fiber Bragg Grating (FBG)), can be simultaneously processed by one SITRANS TO500.

Accurate and fast determination of temperature profiles enables process optimization in terms of service life, quality and output.

Locations of excessive temperature rise are quickly and accurately detected, thereby preventing damage to the process, equipment and environment.

Wherever temperature profiles must be determined and installation space is limited, the SITRANS TO500 with fiber-optic temperature measurement is the right choice.

#### Design

The SITRANS TO500 multipoint temperature transmitter is located in the control cabinet in a compact aluminum enclosure for mounting onto DIN rails.

The connectors are easy to access on the front:

- 4 x connector for multipoint measuring lances
- 1 x connector for power supply
- 1 x connector PROFIBUS DP
- 1 x connector Ethernet

The status displays are also located on the front.

#### Mode of operation

In the SITRANS TO500 multipoint temperature transmitter, light with a wavelength from 1 500 to 1 600 nm is generated with a continuously adjustable laser and decoupled to the multipoint measuring lance. Fiber Bragg Gratings (FBG) are mounted at freely defined points on the multipoint measuring lances. Each FBG reflects light of a defined wavelength. The wavelength reflected by the FBG varies depending on the temperature. The reflection at the FBGs is thus a measurement of the temperature at the corresponding measuring point. A maximum of 48 FBGs per channel can be evaluated, depending on the temperature range.

A gas cell with fixed absorption line serves as a reference in the SITRANS TO500 and the wavelength determination is continuously adjusted by it.

#### Function

The SITRANS TO500 has 4 channels which are evaluated simultaneously. The wavelength reflected at each sensor in the multipoint measuring lance depends on the temperature, and this wavelength is output in the multipoint temperature transmitter. All 4 channels are read at the same time and updated once per second. The temperature can be determined and displayed accurately at up to 48 sensors per channel. The positions of the sensors can be specified by the customer. This leads to a flexible and application-specific solution for the customer.

The measured temperatures are transferred to the control system by PROFIBUS DP. The parameters of the SITRANS TO500 are set via the integrated Ethernet interface.

## Temperature Measurement

Temperature transmitters

Fiber-optic temperature measurement

### SITRANS TO500, multipoint temperature transmitter

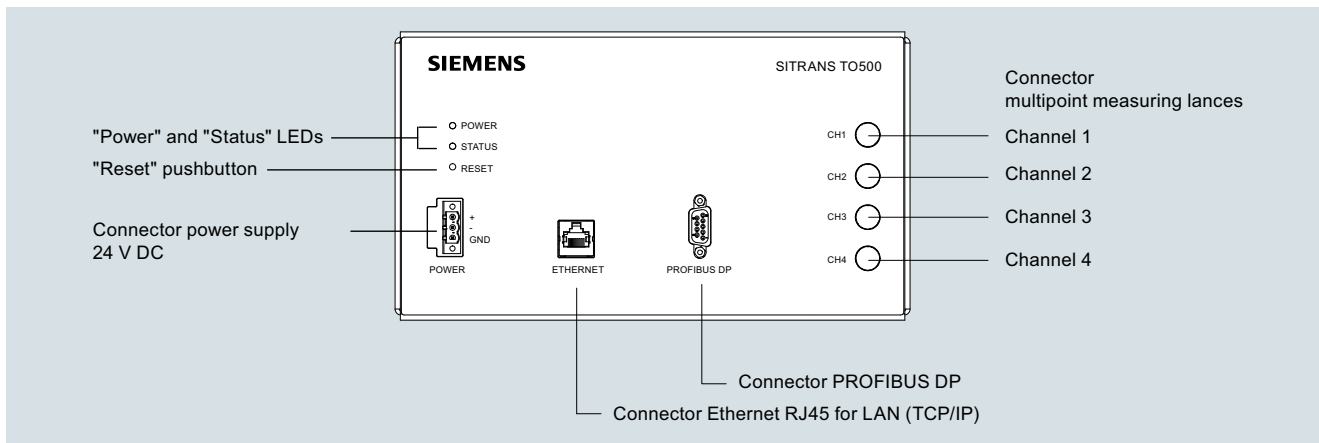

#### Dimensional drawings

2

SITRANS TO500, front, rear and side view; dimensions in mm (inch)

#### Circuit diagrams

SITRANS TO500, connector assignment

#### Overview

The SITRANS TO multipoint measuring lance for measuring temperatures and temperature profiles using fiber-optic Fiber Bragg Grating (FBG).

#### Benefits

- Fast response to temperature changes
- Easy to install
- Low space requirements
- Freely selectable sensor arrangement ( $\leq 20$  sensors per multipoint measuring lance)
- Freely selectable measuring lance length ( $\leq 20$  m/787 inch)
- Also suitable for high process temperatures ( $\leq 450$  °C/842 °F)

#### Application

The SITRANS TO multipoint measuring lance is used for measuring temperatures determined using fiber-optic Fiber Bragg Gratings.

Up to 20 temperature sensors can be arranged on a multipoint measuring lance simultaneously. Depending on the process, the position of the sensor points can be freely selected; minimum distance is 50 mm (2 inch).

#### Design

The SITRANS TO multipoint measuring lance consists of an optical fiber to which the Fiber Bragg Grating has been applied with a laser.

The fiber is surrounded by a stainless steel capillary.

The multipoint measuring lance is inserted into the measurement environment in a thermowell on the process side, e.g. reactor, vessel.

#### Mode of operation

From the supplied light with a wavelength range of 1500 to 1600 nm, each grid in the fiber reflects a value that is specific for the position and the temperature. This specific value is evaluated in the SITRANS TO500 multi-point temperature transmitter.

#### Function

Accurate and fast determination of temperature profiles enables process optimization in terms of service life, quality and output.

Local overheating is detected quickly and precisely located, thereby preventing damage to the process, equipment and environment.

Wherever temperature profiles must be determined and installation space is limited, the SITRANS TO500 and fiber-optic temperature measurement are the right choice.

#### Integration

Connection to SITRANS TO500 is made via single-mode patch cable.

## Temperature Measurement

Temperature transmitters

Fiber-optic temperature measurement

### SITRANS TO, multipoint measuring lance

#### Technical specifications

##### Input

Measured variable	Temperature
Measuring system	FBG sensors
Working area	1 500 ... 1 600 mm
Resolution	0.1 K
Measuring accuracy	< 1 K or 1% of measuring span; the larger value applies
Repeatability	< 0.5 K
Measuring range	-40 ... +450 °C (-40 ... +842 °F), other ranges on request
Number of sensors	1 ... 20; maximum number depending on the measuring range, numbers > 20 on request
Response time (T0.9)	
• Multipoint measuring lance without thermowell	< 2 s
• Multipoint measuring lance with thermowell, stainless steel, wall thickness 1 mm; example:	
- Outer diameter 3 mm	18 s
- Outer diameter 6 mm	43 s

##### Rated conditions

Ambient conditions	
• Ambient temperature	-20 ... +80 °C (-4 ... +176 °F)
• Storage temperature	-40 ... +85 °C (-40 ... +185 °F)
• Operation	Vertically extended or horizontally (+1 K measuring error)
• Relative humidity	5 ... 95 %
• Condensing moisture	Not permitted
Bending radius of the multipoint measuring lance during transportation and installation	> 500 mm (19.7 inch); briefly 250 mm (9.8 inch)
Other conditions	Avoid direct contact of the sensor with aggressive and corroding chemicals such as halogens, NO <sub>x</sub> and SO <sub>x</sub>
IP degree of protection (handpiece and multipoint measuring lance without connectors)	IP67
Pigtail	
• Bending radius	> 60 mm (2.4 inch)
• Tensile force	< 5 N

##### Design

Weight	60 g (0.13 lb) + 2 g/m + 0.0044 lb/m)
Connectors	FC/APC Clean with a suitable cleaning agent before connecting. Close with cap if not in use.
Capillary material	AISI 316L
Dimensions	See "Dimensional drawings"
• Length	0.1 ... 20 m (3.9 ... 787 inch)
• Diameter	0.8 mm (0.031 inch)
Thermowell inside diameter (recommended)	
• Measuring lance < 2 m (79 inch)	≥ 2 mm (0.0787 inch)
• Measuring lance < 5 m (197 inch)	≥ 3 mm (0.118 inch)
• Measuring lance < 10 m (394 inch)	≥ 4 mm (0.157 inch)
• Measuring lance > 10 m (394 inch)	≥ 6 mm (0.236 inch)
Distance from last sensor to tip of multipoint measuring lance	10 mm (0.39 inch)
Length of sensor point	6 mm (0.236 inch)
Positioning accuracy of sensor	±3 mm (0.118 inch)
Distance between 2 sensors	> 50 mm (2 inch); smaller on request
Length FOC connection to the transmitter	10 000 m (39 3701 inch)

##### Displays and control elements

Displays and buttons

- Without

##### Installation instructions

Mechanical shock	Avoid mechanical shocks to the multipoint measuring lance, such as: Falls from heights > 0.5 m (19.7 inch) or whipping and/or snapping of the capillaries.
Concentrated pressure	Avoid concentrated pressure on the capillaries. For example, do not hold with pliers or other similar tools. After several hours at an ambient temperature > 250 °C (482 °F), the steel loses its elasticity.
Removal and reinstallation	Extreme caution must be exercised during transport, storage and installation if removing or reinstalling. The multipoint measuring lance is irreversibly damaged at temperatures > 550 °C (1 022 °F).

CAPRI screw connection, M20 x 1.5 stainless steel; with Ex-d approval	<b>7MF4997-2LB</b>
CAPRI screw connection ½-14 NPT nickel-plated brass; with Ex-d approval	<b>7MF4997-2LC</b>
CAPRI screw connection ½-14 NPT stainless steel; with Ex-d approval	<b>7MF4997-2LD</b>
Threaded adapter M20 x 1.5 (male thread) to ½-14 NPT (female thread)	<b>7MP1990-0BA00</b>
Threaded adapter M20 x 1.5 (male thread) to G½ (female thread)	<b>7MP1990-0BB00</b>

##### **Lightning protection for SITRANS TF (SITRANS TS on request)**

	Article No.
Transient protector M20 x 1.5 (lightning protection)	<b>7MF4997-2DU</b>
Transient protector ½-14 NPT (lightning protection)	<b>7MF4997-2DV</b>

#### Selection and ordering data

##### **Plug for SITRANS TF and SITRANS TS**

	Article No.
Han 7D plug made of plastic	<b>7MF4997-2FB</b>
Han 7D plug made of metal	<b>7MF4997-2FC</b>
M12 socket angled for 4 ... 6 mm cable diameter -25 ... +85 °C (-13 ... 185 °F)	<b>3RK1902-4CA00-4AA0</b>

##### **Indicator for SITRANS TS500**

	Article No.
Digital indicator loop-powered HW05 for SITRANS TS500	<b>A5E33119275</b>

##### **Connection and mounting accessories for SITRANS TH**

	Article No.
Mounting rail adapter for head transmitter (order quantity: 5 units)	<b>7NG3092-8KA</b>
Connecting cable 4-wire, 200 mm (7.87 inch), for input connections when using head transmitters in the high hinged cover (set with 5 units)	<b>7NG3092-8KC</b>

##### **Connection and mounting accessories for field transmitter SITRANS TF**

	Article No.
<b>Mounting bracket and fastening parts</b>	
Made of steel for 7NG313, -.B., and 7MP1110	<b>7MF4997-1AC</b>
Made of steel for 7NG313, -.C.,	<b>7MF4997-1AB</b>
Made of stainless steel 304 for 7NG313, -.B., and 7MP1110	<b>7MF4997-1AJ</b>
Made of stainless steel 304 for 7NG313, -.C.,	<b>7MF4997-1AH</b>
Made of stainless steel 316L for 7NG313, -.B.,	<b>7MF4997-1AQ</b>
Made of stainless steel 316L for 7NG313, -.C.,	<b>7MF4997-1AP</b>
Digital indicator for SITRANS TF <sup>1)</sup>	<b>7MF4997-1BS</b>
Connection board for SITRANS TF	<b>A5E02391790</b>
Lid, die-cast aluminum, without inspection window	<b>7MF4997-1BB</b>
Lid, die-cast aluminum, with inspection window	<b>7MF4997-1BE</b>

<sup>1)</sup> Retrofitting not possible with Ex devices.

## Temperature Measurement Accessories

### Further accessories for assembly, connection and transmitter configuration

#### Selection and ordering data

##### Measuring inserts for SITRANS TS500

For measurement inserts, see SITRANS TSinsert page 2/100.

##### Connection heads type B for SITRANS TS500 (accessory resistance thermometer)

	Article No.
<b>Degree of protection IP54</b> Connection head type: similar to BA0; aluminum; flange cover	<b>7MC1907-1BA</b>
Connection head type: similar to BM0; plastic; screw cover	<b>7MC1907-1BK</b>
<b>Degree of protection IP65</b> Connection head type: similar to BB0; aluminum; small spring flap	<b>7MC1907-1BF</b>
Connection head type: similar to BC0; aluminum; high spring flap	<b>7MC1907-1BL</b>
Connection head type: B-VA, stainless steel	<b>7MC1907-1BV</b>
Quick-release lock for connection heads BB0, BC0, degree of protection of connection head reduced to IP20, weight: 0.02 kg (0.04 lb)	<b>7MC1907-1BS</b>

##### Spare parts/enclosure gaskets for SITRANS TF320/TF420 and SITRANS TS500

	Article No.
Lid gasket SITRANS TF320/TF420 single chamber enclosure as well as for SITRANS TS500 housing AG0, AV0, AU0, AV0	<b>7MF7901-3AB</b>

##### Connection heads type A and accessories for straight thermocouples

Metal thermowells for straight thermocouples according to [EN 50446](#)

	Article No.
<b>X 10 CrAl 24, material no. 1.4762</b> Ø 22 x 2 mm (Ø 0.87 x 0.08 inch), 0.55 ... 1.10 kg (1.21 ... 2.42 lb), dished Nominal length/thermowell length in mm (inch): • 500 (19.7)/520 (20.5) • 710 (28.0)/730 (28.7) • 1 000 (39.4)/1 020 (40.2)	<b>7MC2900-1DA</b> <b>7MC2900-2DA</b> <b>7MC2900-3DA</b>
<b>X 18 CrN28, material no. 1.4749</b> Ø 26 x 4 mm (Ø 1.02 x 0.16 inch), 1.25 ... 2.20 kg (2.76 ... 4.85 lb), dished Nominal length/thermowell length in mm (inch): • 500 (19.7)/520 (20.5) • 710 (28.0)/730 (28.7) • 1 000 (39.4)/1 020 (40.2)	<b>7MC2900-1EC</b> <b>7MC2900-2EC</b> <b>7MC2900-3EC</b>
<b>X 15 CrNiSi 25 20, material no. 1.4841</b> Ø 22 x 2 mm (Ø 0.87 x 0.08 inch), 1.05 kg (2.31 lb), dished Nominal length/thermowell length in mm (inch): • 1 000 (39.4)/1 020 (40.2)	<b>7MC2900-3FA</b>
<b>CrAl 205 (Kantal AF), material no. 1.4767</b> Ø 22 x 2 mm (Ø 0.87 x 0.05 inch), 0.55 ... 1.10 kg (1.21 ... 2.42 lb) Nominal length/thermowell length in mm (inch): • 500 (19.7)/520 (20.5) • 710 (28.0)/730 (28.7) • 1 000 (39.4)/1 020 (40.2)	<b>7MC2900-1HA</b> <b>7MC2900-2HA</b> <b>7MC2900-3HA</b>

Thermocouple elements for straight thermocouples according to [EN 50446](#)

	Article No.
Base thermocouple with isolating pipe Wire diameter 3 mm (0.12 inch) Ni Cr/Ni, up to 1 000 °C (max. 1 300 °C), (up to 1 832 °F (max. 2 372 °F)) 0.55 ... 2.10 kg (1.21 ... 4.63 lb) Nominal length $L_1$ /Thermowell length $L_2$ in mm (inch): • 500 (19.7)/540 (21.3) • 710 (28.0)/750 (29.5) • 1 000 (39.4)/1 040 (40.9)	<b>7MC2903-1CA</b> <b>7MC2903-2CA</b> <b>7MC2903-3CA</b>

##### Connection heads for straight thermocouples

	Article No.
Connection head, type A (without terminal base and terminals), 1 cable entry, degree of protection IP53, 0.35 kg (0.77 lb)	
Light metal casting, screw-on cover, for thermowell diameter in mm (inch) (hole = thermowell diameter +0.5 mm) (0.02 inch) • 22 (0.87) • 26 (1.02)	<b>7MC2905-1AA</b> <b>7MC2905-1BA</b>
Light metal, high spring flap, for thermowell diameter in mm (inch) (hole = thermowell diameter +0.5 mm) (0.02 inch) • 22 (0.87) • 26 (1.02)	<b>7MC2905-4AA</b> <b>7MC2905-4BA</b>

##### Installation accessories for connection heads for straight thermocouples

- Terminal base
- Terminal
- Sealing rings
- Washer
- Stop flange
- Threaded sleeve

	Article No.
Terminal base without terminals for base thermocouples; 0.06 kg (0.13 lb)	<b>7MC2998-1AA</b>
Terminal for base thermocouples; 0.01 kg (0.02 lb)	<b>7MC2998-1BA</b>
Set of sealing rings (100 units) for the lid of the connection head; 0.01 kg (0.02 lb)	<b>7MC2998-1CA</b>
Set of washers (100 units) for the terminal base; 0.01 kg (0.02 lb)	<b>7MC2998-1CB</b>
<b>Stop flange, adjustable, from GTW</b>	
For thermowell outer diameter 22 mm (0.87 inch); 0.35 kg (0.77 lb)	<b>7MC2998-2CB</b>
For thermowell outer diameter 26 mm (1.02 inch); 0.32 kg (0.71 lb)	<b>7MC2998-2CC</b>
<b>Threaded sleeve, gas-tight up to 1 bar (14.5 psi), adjustable, material no. 1.0718, with seal; 0.40 kg (0.88 lb)</b>	
For thermowell outer diameter 22 mm (0.87 inch), <b>G1</b>	<b>7MC2998-2DB</b>
For thermowell outer diameter 26 mm (1.02 inch), <b>G1</b>	<b>7MC2998-2DC</b>

## Flow Measurement

3/31	<u>Transmitters</u>
3/31	- MAG 5000/6000
3/43	- MAG 6000 I/6000 I Ex
3/48	<u>Flow sensors</u>
3/48	- MAG 1100 and MAG 1100 HT
3/56	- MAG 1100 F
3/66	- MAG 3100 and MAG 3100 HT
3/82	- MAG 3100 P
3/91	- MAG 5100 W
3/104	- SITRANS FM100
3/109	- Transmitter TRANSMAG 2 with sensor MAG 911/E
3/119	Battery-operated water meter MAG 8000
3/128	- MAG 8000 for abstraction and distribution network application (7ME6810)
3/133	- MAG 8000 CT for revenue and bulk metering (7ME6820)
3/140	- MAG 8000 3G/UMTS Wireless Communication Module
3/141	- Accessories and spare parts for MAG 8000
3/144	<b>SITRANS FC (Coriolis)</b>
3/144	System information
3/155	<u>Transmitters</u>
3/155	- SITRANS FCT030
3/161	- SITRANS FCT010
3/164	- SITRANS FCT070
3/167	<u>Sensors and Flowmeter systems</u>
3/167	- SITRANS FCS300 flow sensor
3/176	- SITRANS FC330 flowmeter system
3/180	- SITRANS FC310 flowmeter system
3/183	- SITRANS FCS300 with FCT070 transmitter
3/187	- SITRANS FCS400 flow sensor
3/193	- SITRANS FC430 flowmeter for OEM customers
3/197	- SITRANS FC410 flowmeter for OEM customers
3/200	- SITRANS FCS400 with FCT070 transmitter
3/203	- SITRANS FC MASS 2100 and FC300 DN 4 sensors
3/218	- MASS 2100 / FC300 DN 4 with FCT030 transmitter
3/223	- MASS 2100 / FC300 DN 4 with FCT010 transmitter
3/227	- MASS 2100 / FC300 DN 4 with FCT070 transmitter
3/231	<u>Spare parts</u>
3/231	- Digital - Spare parts
3/236	- MASS 6000 Generation - Spare parts
3/240	- SIFLOW FC070

3/244	<b>SITRANS FS (ultrasonic)</b>
3/244	<u>Inline ultrasonic flowmeters</u>
3/245	- System information
3/252	- SITRANS FUS060 transmitter
3/259	- SITRANS FUS080/FUE080 transmitter
3/268	- SONO 3300/FUS060 flowmeter
3/273	- SONO 3100/FUS060 flowmeter
3/282	- SONOKIT flowmeter (with FUS060 or FUS080)
3/292	- SITRANS FUS380 standard flowmeter
3/301	- SITRANS FUE380 flowmeter with CT approval
3/308	- SITRANS FUS380/FUE380 dimensional drawings and circuit diagrams
3/311	- SITRANS FUE950 energy calculator
3/320	- Pt500 temperature sensor pairs
3/322	<u>Clamp-on ultrasonic flowmeters</u>
3/322	- SITRANS FS230 ultrasonic flowmeter
3/324	- SITRANS FSS200 ultrasonic flow sensor
3/329	- SITRANS FST030 transmitter, wall mount housing
3/333	- Selection and ordering data for SITRANS FS230
3/344	- SITRANS FS220 ultrasonic flowmeter
3/353	- SITRANS FST020 transmitter, wall mount housing
3/357	- Thickness gauge
3/358	- Accessories and spare parts
3/361	<b>SITRANS FX (Vortex)</b>
3/361	SITRANS FX300
3/379	SITRANS FX330
3/395	<b>SITRANS FVA</b>
3/395	SITRANS FVA250
3/405	<b>SITRANS FP (differential pressure flow measurement)</b>
3/405	Introduction
3/410	<u>SITRANS FP230/FPS200 primary elements according to ISO 5167</u>
3/413	- Orifice plate with pressure tapings
3/421	- Orifice plate with annular chamber
3/428	- Orifice meter run
3/434	- Orifice plate
3/437	- Orifice plate with orifice flange according to ASME B16.36
3/441	<u>SITRANS FP330/FPS300 averaging pitot tube</u>
3/443	- Averaging pitot tube for gas and liquids
3/450	- Averaging pitot tube for steam
3/455	- Averaging pitot tube with FASTLOK

## Flow Measurement

### Product overview

#### Overview

	Application	Description	Catalog page	Software for parameterization
<b>SITRANS FM electromagnetic flowmeters – Pulsed DC magnetic flowmeter</b>				
	Designed in robust IP67 polyamide enclosures for compact or remote mounting. 19", back of panel and front of panel enclosure program.	<b>Transmitter MAG 5000/6000</b> <ul style="list-style-type: none"> <li>• Superior signal resolution for optimum turn down ratio</li> <li>• Comprehensively self-diagnostic, for error indication and logging</li> <li>• Multi-lingual display and keypad interface</li> <li>• Communication modules: HART, Modbus, PROFIBUS, FOUNDATION Fieldbus, DeviceNet</li> <li>• Custody transfer approval: MI-001, PTB K7.2</li> </ul>	3/31	SIMATIC PDM
	Designed in robust die-cast aluminum enclosure for demanding applications and where explosion proof protection is necessary.	<b>Transmitter MAG 6000 I/6000 I Ex</b> <ul style="list-style-type: none"> <li>• Remote and compact mounting with all sensors</li> <li>• Communication modules: HART, Modbus, PROFIBUS, FOUNDATION Fieldbus, DeviceNet</li> <li>• Ex Approval: ATEX, IECEx, FM, UL, CSA</li> <li>• Multi-lingual display and touchpad keypad</li> <li>• Comprehensively self-diagnostic</li> </ul>	3/43	SIMATIC PDM
	Designed for the general industry environment. The obstructionless performance of the MAG 1100 is unaffected by the suspended solids, viscosity and temperature challenges.	<b>Flow sensors MAG 1100 and MAG 1100 HT</b> <ul style="list-style-type: none"> <li>• Metering tube DN 2 ... 100 (1/12 ... 4") flangeless design.</li> <li>• Corrosion-resistant AISI 316 stainless steel housing.</li> <li>• Highly resistant liner (ceramic or PFA) and electrodes fitting most extreme process media.</li> <li>• Temperature rating up to 200 °C (390 °F)</li> <li>• Ex Approval: ATEX, FM</li> </ul>	3/48	
	Specially designed for the food & beverage and pharmaceutical industry.	 <b>Flow sensor MAG 1100 F</b> <ul style="list-style-type: none"> <li>• AISI 316 stainless steel enclosure</li> <li>• Hygienic seal, 3A and EHEDG</li> <li>• Easy to clean</li> <li>• Supplied with connections according to your specification</li> <li>• Ex Approval: ATEX, FM</li> </ul>	3/56	
	The MAG 3100 series with its flexibility in the choice of liner, electrode and flange material allows the measurement of even the most extreme process media.	<b>Flow sensors MAG 3100 and MAG 3100 HT</b> <ul style="list-style-type: none"> <li>• For a wide range of pipe dimensions: DN 15 ... 2000 (½ ... 78")</li> <li>• Wide range of liner and electrode materials</li> <li>• High-temperature version for application with temperatures up to 180 °C (355 °F)</li> <li>• High-pressure solutions</li> </ul>	3/78	

## Overview (continued)

	Application	Description	Catalog page	Software for parameterization
	The SITRANS FM MAG 3100 P sensor is designed to meet the most common specifications within the chemical and process industries.	<b>Flow sensor MAG 3100 P</b> <ul style="list-style-type: none"> <li>• For pipe dimensions DN 15 ... 300 (½" ... 12")</li> <li>• Fully welded construction that is extremely rugged and can withstand special process conditions using extreme measurement electrodes</li> <li>• Approvals for hazardous areas: ATEX, FM, CSA, IECEx</li> <li>• Comprehensive self-diagnostic for error indication and error logging</li> <li>• Temperature resistant up to 150 °C (302 °F)</li> </ul>	3/82	
	Designed for all water and waste water applications in water plants and industrial applications.	<b>Flow sensor MAG 5100 W</b> <ul style="list-style-type: none"> <li>• Metering tube DN 15 ... 1200 (DN 2000) (½" ... 48" (78"))</li> <li>• Hard Rubber or EPDM lining</li> <li>• Integral grounding electrodes as standard</li> <li>• Increased low flow accuracy for water leak detection</li> <li>• Drinking water approvals and custody transfer approvals, OIML R 49, MI-001 and PTB K7.2</li> </ul>	3/91	
	The SITRANS FM100 is an electromagnetic flow meter for measuring and monitoring small and medium flows.	<b>Flow meter SITRANS FM100 <span style="color: orange;">NEW</span></b> <ul style="list-style-type: none"> <li>• Connection ½", ¾", 1", 2"</li> <li>• Flow- and temperature measurement</li> <li>• IO-Link communication</li> <li>• Dosing function with external control output</li> <li>• Flexible usage in different applications due to two individual configurable outputs</li> <li>• Bidirectional measuring</li> <li>• Robust stainless-steel design</li> </ul>	3/104	
<b>SITRANS FM electromagnetic flowmeters – High-power AC magnetic flowmeter</b>				
	Designed for heavy-duty applications like pulp & paper stock over 3%; heavy mining slurries and mining slurries with magnetic particles.	<b>Transmitter Transmag 2</b> <ul style="list-style-type: none"> <li>• Magnetic flowmeter with a very strong pulsed AC magnetic field</li> <li>• PROFIBUS PA or HART communication</li> <li>• Comprehensive self-test function</li> </ul>	3/109	SIMATIC PDM
	Designed for heavy-duty applications like pulp & paper stock over 3%; heavy mining slurries and mining slurries with magnetic particles.	<b>Flow sensor MAG 911/E</b> <ul style="list-style-type: none"> <li>• Metering tube: DN 15 ... DN 1000 (½" ... 40")</li> <li>• Metering tube liner: Hard Rubber, Linatex, Soft rubber, PTFE and Novolak</li> <li>• Integral smartPLUG for storing of calibration values</li> <li>• Multi-lingual display and touchpad keypad</li> <li>• Only remote version</li> </ul>	3/109	
<b>SITRANS FM electromagnetic flowmeters – Battery-operated magnetic water meter</b>				
	Battery-operated electromagnetic water meter for water applications within abstraction, distribution network and revenue metering.	<b>Water meter MAG 8000</b> <ul style="list-style-type: none"> <li>• Battery- and/or mains power operated water meter</li> <li>• Metering tube DN 25 ... 1200 (1 ... 48")</li> <li>• Remote and compact installation IP68/NEMA 6P enclosure</li> <li>• Custody transfer approval: PTB K7.2, OIML R 49 and MI-001</li> <li>• Drinking water approvals</li> <li>• Communication modules: GSM/GPRS, Modbus, Encoder</li> </ul>	3/119	SIMATIC PDM and Flow Tool

# Flow Measurement

## Product overview

### Overview (continued)

	Application	Description	Catalog page	Software for parameterization
<b>SITRANS FC mass flowmeters</b>				
	<p>Designed for a variety of liquid and gas applications in the process industry.</p> <p>Measurement of mass flow, density, temperature and fraction.</p>	<p><b>Flowmeters FC330 (Dual tube design)</b></p> <ul style="list-style-type: none"> <li>• DN 15, DN 25, DN 50, DN 80, DN 100 and DN 150</li> <li>• Flow from 70 ... 860 000 kg/h - water</li> <li>• Pipe material: AISI 316L or Nickel-Alloy C4</li> <li>• Accuracy, typically: Flow: <math>\leq 0.1\%</math> or 0.2 % version, Density: down to <math>\leq 0.002\text{ g/cm}^3</math></li> <li>• Liquid temperature/pressure: -50 ... +205 °C (-58 ... +400 °F)/ up to 100 bar (1450 psi)</li> <li>• Approvals: ATEX, IECEx, cCSAus, CRN, PED (depending on configuration)</li> </ul>	3/176	
	<p>Designed for a variety of liquid and gas applications</p> <p>Measurement of mass flow, density, temperature</p> <p>Modbus RS 485-RTU communication for direct integration into skids, OEM and pre-assembled plant packages</p>	<p><b>Flowmeters FC310 (Dual tube design)</b></p> <ul style="list-style-type: none"> <li>• DN 15, DN 25, DN 50, DN 80, DN 100 and DN 150</li> <li>• Flow from 70 ... 860 000 kg/h</li> <li>• Pipe material: AISI 316L or Nickel-Alloy C4</li> <li>• Accuracy, typically: Flow: <math>\leq 0.1\%</math> or 0.2 % version, Density: down to <math>\leq 0.002\text{ g/cm}^3</math></li> <li>• Liquid temperature/pressure: -50 ... +205 °C (-58 ... +400 °F)/ up to 100 bar (1450 psi)</li> <li>• Approvals: ATEX, IECEx, cCSAus, Germanischer Lloyd/det Norske Veritas, Bureau Veritas, Lloyds of London, American Bureau of Shipping (depending on configuration)</li> </ul>	3/180

## Overview (continued)

Application	Description	Catalog page	Software for parameterization
<b>SITRANS FS clamp-on ultrasonic flowmeters</b>			
 <p>SITRANS FS clamp-on ultrasonic flowmeters provide highly accurate measurement while minimizing installation time and maintenance expense. These dedicated flowmeters are suitable for a wide variety of liquid applications, including those in the:</p> <ul style="list-style-type: none"> <li>• Water Industry</li> <li>• Wastewater Industry</li> <li>• HVAC Industry</li> <li>• Power Industry</li> <li>• Processing Industry</li> <li>• Hydrocarbon Industry</li> </ul>	<p><b>SITRANS FS230</b></p> <ul style="list-style-type: none"> <li>• Suitable for virtually any liquid, even those with high aeration or suspended solids</li> <li>• Hydrocarbon functions are ideal for applications carrying crude oil, refined petroleum or liquefied gas</li> <li>• Choice of single and dual path versions to suit your operating conditions and requirements.</li> <li>• Easy installation; no need to cut pipe or stop flow</li> <li>• Minimal maintenance; external sensors do not require periodic cleaning</li> <li>• Easy to read display with intuitive menu system</li> <li>• Hazardous area approvals for ATEX Zone 2, IECEx Zone 2 FMc Class I Div. 2</li> </ul>	3/322	
 <p>SITRANS FS220 basic is a fast-to-install clamp-on ultrasonic flowmeter for accurate measurements with minimal maintenance. Based on latest technology, this flow meter is ideal suitable for applications like:</p> <ul style="list-style-type: none"> <li>• Water Industry</li> <li>• Wastewater Industry</li> <li>• HVAC Industry</li> <li>• Power Industry</li> <li>• Process controls</li> </ul>	<p><b>SITRANS FS220</b></p> <ul style="list-style-type: none"> <li>• Easy installation during process condition, no need to cut pipe or stop flow</li> <li>• Minimal maintenance; external sensors do not require periodic cleaning</li> <li>• No media-contacting parts, no wear, no pressure drop, no energy loss</li> <li>• Wide turn-down ratio, very sensitive in low flow condition</li> <li>• Optional WideBeam technology ensures high performance</li> <li>• Compatible with all previously fielded transit time sensors</li> </ul>	3/344	
 <p>The thickness gauge can be used in any field application where there is a need for flow measurement. Including but not limited to:</p> <ul style="list-style-type: none"> <li>• Water and waste water</li> <li>• Energy measurement</li> <li>• Oil and gas industries</li> </ul>	<p><b>Thickness gauge</b></p> <p>The hand-held micro-processor controlled gauge is designed to measure the thickness of various metallic or non-metallic pipes.</p> <ul style="list-style-type: none"> <li>• Materials include steel, aluminum, titanium, plastics and ceramics</li> <li>• Measurements shown in millimeter or inches</li> <li>• Simple-to-read 4-digit LCD display</li> <li>• Weights 150 g (5.3 oz)</li> <li>• Battery operation for 250 h</li> </ul>	3/357	
<b>SITRANS FX Vortex flowmeter</b>			
 <p>Measurement of steam, gases and liquids in:</p> <ul style="list-style-type: none"> <li>• Chemical</li> <li>• HVAC / Power plants</li> <li>• Oil &amp; Gas</li> <li>• Food &amp; Beverage</li> <li>• Pharma</li> </ul>	<p><b>SITRANS FX300</b></p> <ul style="list-style-type: none"> <li>• Flange DN 15 ... DN 300 (½" ... 12")</li> <li>• Sandwich DN 15 ... DN 100 (½" ... 4")</li> <li>• 2-wire device 4 ... 20 mA, with integrated temperature and pressure sensors for compensation</li> <li>• HART communication</li> <li>• Medium temp.: -40 ... +240 °C (-40 ... +464 °F)</li> <li>• Medium pressure: up to 100 bar (1450 psi)</li> <li>• Hazardous area approvals: FM, CSA, ATEX</li> <li>• Compact or remote mounted transmitter</li> </ul>	3/361	

## Flow Measurement

### Product overview

#### Overview (continued)

	Application	Description	Catalog page	Software for parameterization
	<p>Very versatile and flexible for use in many process applications. Flow sensors combines flow, pressure and temperature measurement into one user-friendly, two-wire device.</p> <ul style="list-style-type: none"> <li>• Measurement of saturated steam and superheated steam</li> <li>• Heat metering of steam and hot water</li> <li>• Measurement of consumption in compressed air systems</li> <li>• Evaluation of Free Air Delivery (FAD)</li> <li>• SIP and CIP processes in the food, beverage and pharmaceutical industries</li> <li>• Measurement of conductive and non-conductive liquids</li> <li>• Safety-related measurement in SIL applications (SIL2).</li> </ul>	<p><b>SITRANS FX330</b></p> <ul style="list-style-type: none"> <li>• Integrated pressure and temperature compensation</li> <li>• Temperature compensation for saturated steam included as standard</li> <li>• SIL2 certified according to IEC 61508 Edition 2</li> <li>• Use in hazardous areas</li> <li>• Integrated reduction of nominal diameter for space-saving and economic installation</li> <li>• Exchange of electronics without loss of calibration and configuration data</li> <li>• Gross and net heat calculation to support energy management</li> <li>• Remote version with cable length up to 50 m (164 ft)</li> </ul>	3/379	
<b>SITRANS FVA variable area meters</b>				
	<p>Measurement of flow of liquids and gases, also highly suitable for corrosive media, high temperatures and high pressures.</p>	<p><b>FVA250</b></p> <ul style="list-style-type: none"> <li>• All-metal variable area meter with various float materials</li> <li>• Connections: DN 15 ... <b>SITRANS FP differential pressure flow measurement <span style="color: orange;">NEW</span></b>				
	<p>SITRANS FP product line is suitable for all kinds of applications – liquids, dry or wet gases and steam. Due to the robust though variable design it has been and still is one of the main technologies for flow measurement in various industries.</p> <p>A new digital sizing process ensures minimum effort during presales and full traceability in aftersales. The differential pressure portfolio consists of</p> <ul style="list-style-type: none"> <li>• pitot tube measuring system SITRANS FPS300</li> <li>• differential pressure sensors acc. to ISO 5167 (orifices) SITRANS FPS200</li> </ul>	<ul style="list-style-type: none"> <li>• Suitable for a vast range of different applications</li> <li>• Available as pre-mounted compact system as well as remote parts</li> <li>• Advanced intelligent sizing procedure</li> <li>• Web-based sizing and data storage enables full traceability and easy communication</li> <li>• All benefits of SITRANS P320 available</li> </ul>	3/405	

## Overview

**Criteria for selection of flowmeter**

Each method for measuring flow has specific properties, and each flow measuring point is characterized by specific requirements. The table shown below compares the properties of the various measuring instruments and thus provides assistance in selection of the optimum device.

This section of the field device catalog includes the following instruments for measuring flow:

- Electromagnetic
- Coriolis mass flow
- Ultrasonic
- Vortex volumetric- and mass flow
- Variable area meter
- Orifice plate

Measurement principle	Electromagnetic	Coriolis	Ultrasonic (inline)	Ultrasonic (clamp-on)	Vortex	Variable area meter	Orifice plate
Medium	Liquid (conductive)	Liquid or gas	Liquid	Liquid or gas	Steam/vapor, gases, liquid	Liquid or gas	Liquid, vapor, gas
Nominal size	DN 2 ... 2000 (0.08" ... 78")	1.5 ... 150 mm (0.06" ... 6")	DN 50 ... 3000 (2" ... 120")	6.4 mm ... 9.14 m (0.25" ... 360")	DN 15 ... 300 (½" ... 12")	DN 10 ... 100 (0.4" ... 4") G½" ... G3"	DN 10 ... 1000 (0.4" ... 40")
Temperature range °C (°F)	-40 ... +200 (-40 ... +392)	-50 ... +180 (-58 ... +356)	-20 ... +200 (-4 ... +392)	-40 ... +120 (-40 ... +248)	-40 ... +240 (-40 ... +464)	-20 ... +300 (-4 ... +572)	-200 ... +500 (-328 ... +932)
Max. pressure bar (psi)	160 (2 320), optional higher	Up to 410 (Up to 5 950)	40 (580)	Unlimited	100 (1 450)	100 (1 450)	315 (4 569)
Accuracy %	± 0,25 or ± 0,4	± 0,1 or ± 0,15	± 0,5 ... ± 2	0,5 ... 1,0 % of flow, for velocities greater than 0,3 m/s (1 ft/s)	± 0,75 ... ± 1	± 1,6 ... ± 2,0	± 0,5 ... ± 2
Repeatability %	0,1/0,2	0,05	0,25	0,15% of flow, for velocities greater than 0,3 m/s (1 ft/s)	0,1	0,5	0,5
Dynamic response range	1:100	1:100	1:100	1:100	1:25	1:10	1:6
Start-of-scale value m/s (ft/s)	0 (0)	0 (0)	0,1 (0.33)	0 (0)	0,4 (1.31) 2,0 (6.56)	0,2 (0.66)	Re > 500
Full-scale value				± 36/120			Re < 10 <sup>8</sup>
• For liquids m/s (ft/s)	0,25 ... 10 (0.825 ... 32.8)	10 (32.8)	10 (32.8)	± 12/40	10 (32.8)	3,5 (11.4)	3 (9.8)
• For steam/vapor, gases m/s (ft/s)		Approx. 300 (1000)		± 12/40	80 (262.5)	60 (197)	50/25 (164/82)

### Overview

SITRANS FM electromagnetic flowmeters are designed for measuring the flow of electrically conductive mediums.

The full SITRANS FM program consists of three different types of flowmeters making Siemens unique in that it covers all possible applications where electromagnetic flowmeters are a suitable match:

**Modular pulsed DC flowmeters** cover all ordinary applications within all industries. The wide variety of combinations and versions from the modular system means that ideal adaptation is possible to each measuring task and application.

SITRANS FM products

**Battery-operated water meters** (fully electronic) are the perfect match for drinking water applications like network distribution, revenue metering and irrigation where mains power is not available. In addition, it complies with the MID (EU) and OIML R 49 water meter standards and has the MCERTS certificate.

SITRANS FM MAG 8000

**High-powered flowmeters** are used for difficult applications where other flowmeters cannot stand up to the task. This flowmeter can handle liquids and heavy slurries in industries such as mining, cement and pulp and paper.

TRANSMAG 2

SITRANS FM MAG 911/E

## Flow Measurement

### SITRANS FM (electromagnetic)

#### System information

#### Benefits

##### Greater flexibility

- Wide product program
- Compact or remote installation using the same transmitter and sensor
- USM II communication platform for easy integration with all systems

##### Easier commissioning of MAG 5000, 6000, 6000 I

All SITRANS FM pulsed DC electromagnetic flowmeters feature a unique SENSORPROM memory unit which stores sensor calibration data and transmitter settings for the lifetime of the product.

At commissioning the flowmeter commences measurement without any initial programming.

The factory settings matching the sensor size are stored in the SENSORPROM unit. Also customer specified settings are downloaded to the unit. Should the transmitter be replaced, the new transmitter will upload all previous settings and resume measurement without any need for reprogramming.

Further, the "fingerprint" used in connection with the SITRANS FM Verificator is stored during the initial sensor calibration.

##### Easier service

Transmitter replacement requires no programming. SENSORPROM automatically updates all settings after initialization.

##### Room for growth

USM II the Universal Signal Module with "plug & play" simplicity, makes it easy to access and integrate the flow measurement with almost any system and bus-protocol and it ensures the flowmeter will be easy to upgrade to future communication/bus platforms.

#### Application

Electromagnetic flowmeters are suitable for measuring the flow of almost all electrically conductive liquids, pastes and slurries.

A prerequisite is that the medium must have a minimum conductivity. The temperature, pressure, density and viscosity have no influence on the result.

The main applications of the electromagnetic flowmeters can be found in the following sectors:

- Water and waste water
- Chemical industries
- Pharmaceutical industries
- Food and beverage industry
- Mining, aggregates and cements industries
- Pulp and paper industry
- Steel industry
- Power; utility and chilled water industry

The wide variety of combinations and versions from the modular system means that ideal adaptation is possible to each measuring task.

### Application (continued)

### Application (continued)

#### Practical examples of ordering

##### SITRANS FM compact installation

##### Example

<b>Sensor</b>	<b>7ME6310-3TC11-1JA1</b>
Pipe size	DN 100
Liner	Soft rubber
Electrodes	SS 316
Flanges	EN 1092-1, PN 16
<b>Transmitter</b>	<b>MAG 6000, Polyamide, 115 ... 230 V AC</b>
Accuracy	± 0.2 % ± 1 mm/s
Supply	230 V AC

##### Note:

MAG 5000/6000 transmitters, sensors and communication modules are packed in separate boxes, the final assembly takes place during installation at the customer's place.

##### SITRANS FM remote installation

##### Example

<b>Sensor</b>	<b>7ME6310-3TC11-1AA1</b>
Pipe size	DN 100
Liner	Soft rubber
Electrodes	SS 316
Flanges	EN 1092-1, PN 16
<b>Transmitter</b>	<b>7ME6920-1AA10-0AA0</b>
Accuracy	± 0.2 % ± 1 mm/s
Supply	230 V AC
<b>Wall mounting kit</b>	<b>FDK:085U1018</b>
<b>Cable kit with sensor cable and electrode cable</b>	<b>A5E01181647</b>

## Flow Measurement

### SITRANS FM (electromagnetic)

#### System information

#### Technical specifications

##### Flowmeter Calibration and traceability

To ensure continuous accurate measurement, flowmeters must be calibrated. The calibration is conducted at Siemens facilities with traceable instruments referring directly to the physical unit of measurement according to the International System of Units (SI).

Therefore, the calibration certificate ensures recognition of the test results worldwide, including the US (NIST traceability).

Siemens offers accredited calibrations assured to ISO 17025 in the flow range from 0.0001 m<sup>3</sup>/h to 10 000 m<sup>3</sup>/h.

The calibration follows the ISO 4185 performing calibrations under two methods: Static Weighing and Reference meter. Providing a measurement uncertainty of  $\pm 0.1\%$ .

Siemens accredited laboratories are recognized by ILAC MRA (International Laboratory Accreditation Corporation - Mutual Recognition Arrangement) ensuring international traceability and recognition of the test results worldwide.

A calibration certificate is shipped with every sensor and calibration data are stored in the SENSORPROM memory unit.

##### Flowmeter uncertainty

### Technical specifications (continued)

#### Calibration reference conditions

Reference conditions (ISO 9104 and DIN EN 29104)	
Temperature medium	20 °C ± 10 K (68 °F ± 18 °F)
Temperature ambient	25 °C ± 10 K (77 °F ± 18 °F)
Supply voltage	$U_n \pm 1\%$
Warming-up time	30 minutes
Incorporation in conductive pipe section	
• Inlet section	10 x DN (DN ≤ 1200/48") 5 x DN (DN > 1200/48")
• Outlet section	5 x DN (DN ≤ 1200/48") 3 x DN (DN > 1200/48")
Flow conditions	Developed flow profile
Additions in the event of deviations from reference conditions	
Current output	As pulse output (± 0,1 % of actual flow +0,05 % FSO)
Effect of ambient temperature	
• Display frequency/pulse output	< ± 0,003 %/K act.
• Current output	< ± 0,005 %/K act.
Effect of supply voltage	< 0,005 % of measuring value on 1 % change
Repeatability	± 0,1 % of actual flow for $v \geq 0,5$ m/s (1.5 ft/s) and conductivity > 10 μS/cm
Certificates	
• EN 10204-2.1	Certificate of conformity, stating that the delivered parts are made of the material quality that was ordered. Available as Z option C15.
• EN 10204-2.2	Test report certificate, a non batch specific material analysis of the ordered material. Available as Z option C14.
• EN 10204-3.1	Material analysis certificate, a batch specific analysis of the material issued by an independent inspector. Certification covers all pressure containing and wetted parts. Available as Z option C12.

#### Calibration test point

Test points for default calibration at 25% and 90% of factory  $Q_{max}$ .

Size	$Q_{max}$	90%	25%

## Flow Measurement

### SITRANS FM (electromagnetic)

#### System information

#### Technical specifications (continued)

##### Technical specifications PROFIBUS PA/DP

###### General specifications

PROFIBUS device profile	3.00 Class B
Certified	No
MS0 connections	1
MS1 connections	1
MS2 connections	2

##### Electrical specification DP

###### Physical layer specifications

Applicable standard	IEC 61158/EN 50170
Physical Layer (Transmission technology)	RS 485
Transmission speed	≤ 1.5 Mbits/s
Number of stations	Up to 32 per line segment, (maximum total of 126)

###### Cable specification (Type A)

Cable design	Two-wire twisted pair
Shielding	CU shielding braid or shielding braid and shielding foil
Impedance	35 up to 165 Ω at frequencies from 3 ... 20 MHz
Cable capacity	< 30 pF per meter
Core diameter	> 0,34 mm <sup>2</sup> , corresponds to AWG 22
Resistance	< 110 Ω per km
Signal attenuation	Max. 9 dB over total length of line section
Max. bus length	200 m at 1500 kbit/s, up to 1.2 km at 93.75 kbit/s. Extendable by repeaters

##### Electrical specification PA

###### Physical layer specifications

Applicable standard	IEC 61158/EN 50170
Physical Layer (Transmission technology)	IEC-61158-2
Transmission speed	31.25 Kbits/second
Number of stations	Up to 32 per line segment, (maximum total of 126)
Max. basic current [I <sub>B</sub> ]	14 mA
Fault current [I <sub>FDE</sub> ]	0 mA
Bus voltage	9 ... 32 V (non Ex)

###### Preferred cable specification (Type A)

Cable design	Two wire twisted pair
Conductor area (nominal)	0,8 mm <sup>2</sup> (AWG 18)
Loop resistance	44 Ω/km
Impedance	100 Ω ± 20 %
Wave attenuation at 39 kHz	3 dB/km
Capacitive asymmetry	2 nF/km
Bus termination	Passive line termination at both
Max. bus length	Up to 1,9 km. Extendable by repeaters

###### IS (Intrinsic Safety) data

Required sensor electronics	Compact or remote mounted SITRANS FM MAG 6000 I Ex
FISCO	YES
Max. U <sub>I</sub>	17,5 V
Max. I <sub>I</sub>	380 mA
Max. P <sub>I</sub>	5,32 V
Max. L <sub>I</sub>	0 μH
Max. C <sub>I</sub>	0 nF

###### FISCO cable requirements

Loop resistance R <sub>C</sub>	15 ... 150 Ω/km
Loop inductance L <sub>C</sub>	0,4 ... 1 mH/km
Capacitance C <sub>C</sub>	80 ... 200 nF/km
Max. Spur length in IIC and IIB	30 m
Max. Trunk length in IIC	1 km
Max. Trunk length in IIB	5 km

##### PROFIBUS parameter support

The following parameters are accessible using a MS0 relationship from a Class 1 Master. MS0 specifies cyclic Data Exchange between a Master and a Slave.

###### Cyclic services

### Technical specifications (continued)

#### Flow and speed chart

##### Metric

Sizing table (DN 2 ... DN 2000)

The table shows the relationship between flow velocity  $v$ , flow quantity  $Q$  and sensor dimension  $DN$ .

#### Guidelines for selection of sensor

Min. measuring range: 0 ... 0.25 m/s

Max. measuring range: 0 ... 10 m/s

Normally the sensor size is selected so that nominal flow velocity  $v$  lies within the measuring range 1 to 3 m/s.

#### Example:

Flow quantity of 50 m<sup>3</sup>/h and a sensor dimension of DN 80 gives a flow velocity of 2.7 m/s, which is within the recommended measuring range of 1 to 3 m/s.

#### Flow velocity calculation formula Units

$$v = 1273.24 \cdot Q/DN^2 \text{ or}$$

$v$ : [m/s],  $Q$ : [l/s],  $DN$ : [mm]

$$v = 353.68 \cdot Q/DN^2$$

$v$ : [m/s],  $Q$ : [m<sup>3</sup>/h],  $DN$ : [mm]

# Flow Measurement

SITRANS FM (electromagnetic)

## System information

### Technical specifications (continued)

Imperial

3

Sizing table (1/12" ... 78")

The table shows the relationship between flow velocity  $v$ , flow quantity  $Q$  and sensor dimension size.

**Guidelines for selection of sensor**

Min. measuring range: 0 ... 0.8 ft/s

Max. measuring range: 0 ... 33 ft/s

Normally the sensor size is selected so that nominal flow velocity  $v$  lies within the measuring range 3 to 10 ft/s.

Example:

Flow quantity of 500 GPM and a sensor dimension of 6" gives a flow velocity of 5.6 ft/s, which is within the recommended measuring range of 3 to 10 ft/s.

Flow velocity calculation formula	Units
$v = 0.408 \cdot Q / (\text{Pipe I.D.})^2$ or	$v$ : [ft/s], $Q$ : [GPM], Pipe I.D.: [inch]
$v = 283.67 \cdot Q / (\text{Pipe I.D.})^2$	$v$ : [ft/s], $Q$ : [MGD], Pipe I.D.: [inch]

**Technical specifications** (continued)

**Installation conditions**

Vibrations

Strong vibrations should be avoided.

In applications with strong vibrations, remote mounting of the transmitter is recommended.

The sensor must always be completely filled with liquid.

Install in pipelines which are always full

The sensor must always be completely filled with liquid. Therefore avoid:

- Installation at the highest point in the pipe system
- Installation in vertical pipes with free outlet

Do not install in pipelines which can run empty

For partially filled pipes or pipes with downward flow and free outlet the flowmeter should be located in a U-Tube.

Install in U-tubes when pipe is partially filled

Installation in vertical pipes

Recommended flow direction: upwards. This minimizes the effect on the measurement of any gas/air bubbles in the liquid.

Install in vertical pipes with upward flow direction

Installation in horizontal pipes

The sensor must be mounted as shown in the below figure. Do not mount the sensor as shown in the lower figure. This will position the electrodes at the top where there is possibility for air bubbles and at the bottom where there is possibility for mud, sludge, sand etc.

## Flow Measurement

### SITRANS FM (electromagnetic)

#### System information

#### Technical specifications (continued)

##### Measuring abrasive liquids and liquids containing particles

Recommended installation is in a vertical/inclined pipe to minimize the wear and deposits in the sensor.

Install in vertical pipelines with upward flow direction if measuring abrasive liquids

##### Inlet and outlet conditions

Recommended straight pipe lengths up and downstream for installations between elbows, pumps and valves

To achieve maximum accurate flow measurement it is essential to have straight pipe lengths up and downstream. Practical experience has proved that the MAG 5100 W and MAG 8000 are capable to operate in non-optimal piping arrangements and still provide acceptable accuracy even with zero diameters upstream and downstream of straight run pipe.

It is also important to center the flowmeter in relation to pipe flange and gaskets.

##### Ambient temperature-Installation

Temperature changes can cause expansion or contraction in the pipe system. To avoid damage on the sensor use of proper gasket and torque should be ensured. For more information see sensor instruction.

##### Potential equalization

##### Potential equalization

The electrical potential of the liquid must always be equal to the electrical potential of the sensor. This can be achieved in different ways depending on the application:

- Wire jumper between sensor and adjacent flange (MAG 1100, MAG 3100)
- Direct metallic contact between sensor and fittings (MAG 1100 F)
- Built-in grounding electrodes (MAG 3100, MAG 5100 W)
- Optional grounding/protection flanges/rings (MAG 1100, MAG 3100, MAG 8000)
- Optional graphite gaskets on MAG 1100 (standard for MAG 1100 High Temperature)
- MAG 8000 installed in plastic or coated pipes: two grounding rings to be used.

##### Grounding

MAG 3100 and MAG 5100 W: with grounding electrodes in conductive and non-conductive pipes (no further action necessary)

MAG 1100 and MAG 3100; without grounding electrodes in conductive pipes (MAG 1100 use graphite gasket)

**Technical specifications (continued)**

Without grounding electrodes in non-conductive pipes use grounding ring(MAG 1100 use graphite gasket)

MAG 1100 F grounding via process connections. MAG 8000 grounding see the section about MAG 8000.

Vacuum

In order to prevent damages of liner when operating meters under vacuum please take note of the information "Operating pressure" given in section "Technical specification".

Installation in large pipes

Reduction in nominal pipe diameter

The flowmeter can be installed between two reducers (e.g. DIN 28545). Assuming that at 8° the following pressure drop curve applies. The curves are applicable to water.

Pressure drop as function of diameter reduction between reducers

Example:

Flow velocity (v) of 3 m/s (10 ft/s) in a sensor with a diameter reduction DN 100 (4") to DN 80 (3") ( $d_1/d_2 = 0.8$ ) gives a pressure drop of 2.9 mbar (0.04 psi).

Ambient temperature

Max. ambient temperature as a function of temperature of medium

The transmitter can be installed either compact or remote.

With compact installation the temperature of medium must be according to the graph.

## Flow Measurement

### SITRANS FM (electromagnetic)

#### System information

#### Technical specifications (continued)

##### Sensor cables and conductivity of medium

Compact installation:

Liquids with an electrical conductivity  $\geq 5 \mu\text{S/cm}$ .

##### Note for MAG 1100 sizes DN 2 and DN 3:

- The media conductivity must be  $\geq 30 \mu\text{S/cm}$

##### Note for MAG 8000:

- The media conductivity must be  $\geq 20 \mu\text{S/cm}$

##### Empty pipe detection

The installation has to fulfill the following limitations for usage of the empty pipe detection function:

- Media conductivity  $\geq 20 \mu\text{S/cm}$
- Length of cable at remote installation  $\leq 50 \text{ m}$  (150 ft)
- Special shield cable must be used

##### Note for MAG 1100 sizes DN 2 and DN 3:

- Empty pipe detection is not available

##### Note for MAG 5000/6000 CT:

- Empty pipe detection is not available

Remote installation

Minimum conductivity of medium (using standard electrode cable)

Minimum conductivity of medium (using special electrode cable)

### Function

All electromagnetic flowmeters are based on Faraday's law of induction:

$$U_M = B \cdot v \cdot d \cdot k$$

$U_M$  = Measured voltage induced in the medium perpendicular to the magnetic field and the flow direction. The voltage is tapped at two point electrodes.

$B$  = Magnetic flux density which permeates the flowing medium perpendicular to the flow direction.

$v$  = flow velocity of medium

$d$  = internal diameter of metering tube

$k$  = proportionality factor or sensor constant

Function and measuring principle of electromagnetic measurement

An electromagnetic flowmeter generally consists of a magnetically non-conducting metering tube with an internal electrically non-conducting surface, magnet coils connected in series and mounted diametrically on the tube, and at least two electrodes which are inserted through the pipe wall and are in contact with the measured medium. The magnet field coils through which the current passes generate a pulsed electromagnetic field with the magnetic flux density  $B$  perpendicular to the pipe axis.

This magnetic field penetrates the magnetically non-conducting metering tube and the medium flowing through it, which must have a minimum electrical conductivity.

According to Faraday's law of induction, a voltage  $U_M$  is generated in an electrically conducting medium, and is proportional to the flow velocity  $v$  of the medium, the magnetic flux density  $B$ , and the distance between the electrodes  $d$  (internal diameter of pipe).

The signal voltage  $U_M$  is tapped by the electrodes which are in contact with the medium, and passed through the insulating pipe wall. The signal voltage  $U_M$  which is proportional to the flow velocity is converted by an associated transmitter into appropriate standard signals such as 4 to 20 mA.

### SITRANS FM diagnostics

The diagnostic functions are all internal tools in the meter:

- Identification in clear text and error log
- Error categories: function; warning; permanent and fatal errors
- Transmitter self-check including all outputs and the accuracy
- Sensor check: coil and electrode circuit test
- Overflow
- Empty pipe: partial filling; low conductivity; electrode fouling

### SITRANS FM Verificator (MAG 5000 and 6000)

The SITRANS FM Verificator is an external tool designed for MAG 5000 and MAG 6000 with MAG 1100, MAG 1100 F, MAG 3100, MAG 3100 P or MAG 5100 W sensors to verify the entire product, the installation and the application.

The goal is to improve operation, reduce downtime and maintain measurement accuracy as long as possible.

The SITRANS FM Verificator is highly advanced and carries out the complex verification and performance check of the entire flowmeter system, according to unique SIEMENS patented principles. The whole verification test is automated and easy to operate so there is no opportunity for human error or influence. The system is traceable to international standards and tested by WRc (Water Research Council).

SITRANS FM Verificator

- Stand alone Verificator to measure a number of selected parameters in the flow sensor and a transmitter which affects the integrity of the flow measurement.
- Up to 20 measurements can be stored in the Verificator.
- The Verificator can be connected via a serial cable to a PC enabling download of the data. A Windows program enables printing and management of verificator reports.

### Verification - Steps

Verification of a SITRANS FM flowmeter consists of the following test routines:

1. Transmitter test
2. Flowmeter and cable insulation test
3. Sensor magnetism test

## Flow Measurement

### SITRANS FM (electromagnetic)

#### SITRANS FM Verificator

##### Function (continued)

###### 1. Transmitter test

The transmitter test is the traditional way of on-site testing on the market and checks the complete electronic system from signal input to output.

Transmitter test

Using the excitation power output, which is generated to drive the magnetic field of the sensor, the verificator simulates flow signal to the transmitter input. By measuring the transmitter outputs the verificator calculates its accuracy against defined values. Test includes:

- Excitation power to drive the magnetic field
- Signal function from signal input to output
- Signal processing – gain, offset and linearity
- Test of analogue and frequency output

###### 2. Insulation test

Flowmeter insulation test

The verification test of the flowmeter insulation is a “cross-talk” test of the entire flowmeter which ensures that the flow signal generated in the sensor is not affected by any external influences.

In the “cross-talk” test the verificator generates a high voltage disturbance within the coil circuit and then looks for any “cross-talk” induced in the flow signal circuit. By generating dynamic disturbances close-coupled to the flow signal, the flowmeter is tested for noise immunity to a maximum level:

- EMC influence on the flow signal
- Moisture in sensor, connection and terminal box
- Non-conductive deposit coating the electrodes within the sensor
- Missing or poor grounding, shielding and cable connection

###### 3. Sensor magnetism test

Sensor magnetism test

The verification of the sensor magnetism is a “boost” test of the magnetic field coil. The test ensures that the magnetism behaviour is like the first time, by comparing the current sensor magnetism with the “fingerprint” which was determined during initial calibration and stored in the SENSORPROM memory unit.

In the “boost” test the verificator changes the magnetic field in certain pattern and with high voltage to get quick stable magnetic condition. This unique test is fulfilled without any interference or compensation of surrounding temperature or interconnecting cabling.

- Changes in dynamic magnetic behaviour
- Magnetic influence inside and outside the sensor
- Missing or poor coil wire and cable connection

##### Certificate

The test certificate generated by a PC contains:

- Test result with passed or failed
- Installation specification
- Flowmeter specification and configuration
- Verificator specification with date of calibration ensuring traceability to international standards.

##### Note:

It is mandatory to have the Verificator returned to the factory once a year for check and re-verification.

### Overview

Transmitter MAG 5000/6000 compact version (left) and 19" insert version (right)

The MAG 5000 and 6000 are transmitters engineered for high performance, easy installation, commissioning and maintenance. The transmitters evaluate the signals from the SITRANS FM sensors type MAG 1100, MAG 1100 F, MAG 3100, MAG 3100 P and MAG 5100 W.

Transmitter types:

- MAG 5000: Max. measuring error  $\pm 0.4\% \pm 1$  mm/s (incl. sensor)
- MAG 6000: Max. measuring error  $\pm 0.2\% \pm 1$  mm/s (incl. sensor, see also sensor specifications) and with additional features such as: "plug & play" add-on bus modules; integrated batch functions.

### Benefits

- Superior signal resolution for optimum turn down ratio
- Digital signal processing with many possibilities
- Automatic reading of SENSORPROM data for easy commissioning
- User configurable operation menu with password protection
- 3 lines, 20 characters display in 11 languages
- Flow rate in various units
- Totalizer for forward, reverse and net flow as well as additional information available
- Multiple functional outputs for process control, minimum configuration with analogue, pulse/frequency and relay output (status, flow direction, limits)
- Comprehensive self-diagnostic for error indication and error logging (see SITRANS FM diagnostics)
- Batch control (MAG 6000 only)
- Custody transfer approval: MI-001 for cold water, PTB K 7.2 and OE12/C 040 for chilled water
- MAG 6000 with add-on bus modules for HART, FOUNDATION Fieldbus H1, DeviceNet, Modbus RTU/RS485, PROFIBUS PA and DP

### Application

The SITRANS FM flowmeters are suitable for measuring the flow of almost all electrically conductive liquids, pastes and slurries. The main applications can be found in:

- Water and waste water
- Chemical and pharmaceutical industries
- Food and beverage industries
- Power generation and utility

### Design

The transmitter is designed as either IP67 NEMA 4X/6 enclosure for compact or wall mounting or 19" version as a 19" insert as a base to be used in:

- 19" rack systems
- Front panel mounting IP65/NEMA 2
- Panel mounting IP20/NEMA 1
- Wall mounting IP66/NEMA 4X

Several options on 19" versions are available such as:

- Transmitters mounted in safe area for Ex ATEX approved flow sensors (incl. barriers)
- Transmitters with electrode cleaning unit on request

## Flow Measurement

### SITRANS FM (electromagnetic) Transmitters

#### MAG 5000/6000

#### Function

The MAG 5000/6000 are transmitters with a built-in alphanumeric display in several languages. The transmitters evaluate the signals from the associated electromagnetic sensors and also fulfil the task of a power supply unit which provides the magnet coils with a constant current.

Further information on connection, mode of operation and installation can be found in the data sheets for the sensors.

#### Displays and controls

Operation of the transmitter can be carried out using:

- Control and display unit
- HART communicator
- PC/laptop and SIMATIC PDM software via HART communication
- PC/laptop and SIMATIC PDM software using PROFIBUS or Modbus communication

HART communication

PROFIBUS PA communication

### Technical specifications

<b>Mode of operation and design</b>	
Measuring principle	Electromagnetic with pulsed constant field
Empty pipe	Detection of empty pipe (special cable required in remote mounted installation)
Excitation frequency	Depend on sensor size
Electrode input impedance	$> 1 \times 10^{14} \Omega$
<b>Input</b>	
Digital input	11 ... 30 V DC, $R_i = 4.4 \text{ k}\Omega$
• Activation time	50 ms
• Current	$I_{11 \text{ V DC}} = 2.5 \text{ mA}$ , $I_{30 \text{ V DC}} = 7 \text{ mA}$
<b>Output</b>	
Current output	
• Signal range	0 ... 20 mA or 4 ... 20 mA
• Load	$< 800 \Omega$
• Time constant	0.1 ... 30 s, adjustable
Digital output	
• Frequency	0 ... 10 kHz, 50 % duty cycle (uni/bidirectional)
• Pulse (active)	24 V DC, 30 mA, $1 \text{ k}\Omega \leq R_i \leq 10 \text{ k}\Omega$ , short-circuit-protected (power supplied from flowmeter)
• Pulse (passive)	3 ... 30 V DC, max. 110 mA, $200 \Omega \leq R_i \leq 10 \text{ k}\Omega$ powered from connected equipment
• Time constant	0.1 ... 30 s, adjustable
Relay output	
• Time constant	Changeover relay, same as current output
• Load	42 V AC/2 A, 24 V DC/1 A
<b>Low flow cut off</b>	0 ... 9.9 % of maximum flow
<b>Galvanic isolation</b>	All inputs and outputs are galvanically isolated
<b>Max. measuring error (incl. sensor and zero point) (for detailed accuracy specifications see "System information")</b>	
• MAG 5000	$\pm 0.4 \% \pm 1 \text{ mm/s}$
• MAG 6000	$\pm 0.2 \% \pm 1 \text{ mm/s}$

Ambient temperature	
• Operation	<ul style="list-style-type: none"> <li>Display version: -20 ... +60 °C (-4 ... +140 °F)</li> <li>Blind version: -20 ... +60 °C (-4 ... +140 °F)</li> <li>Custody transfer (CT) version: -20 ... +50 °C (-4 ... +122 °F)</li> </ul>
• Storage	-40 ... +70 °C (-40 ... +158 °F)
<b>Mechanical load (vibration)</b>	
Compact version	18 ... 1000 Hz, 3.17 g RMS, sinusoidal in all directions to IEC 68-2-36
19" insert	1 ... 800 Hz, 1 G, sinusoidal in all directions to IEC 68-2-36
<b>Degree of protection</b>	
Compact version	IP67/NEMA 4X/6 to IEC 529 and DIN 40050 (1 mH <sub>2</sub> O 30 min.)
19" insert	IP20/NEMA 1 to IEC 529 and DIN 40050
<b>EMC performance</b>	
	IEC/EN 61326-1 (all environments) IEC/EN 61326-2-5
<b>Display and keypad</b>	
Totalizer	Two eight-digit counters for forward, net or reverse flow

<b>Display</b>	
	Background illumination with alpha-numeric text, 3 x 20 characters to indicate flow rate, totalized values, settings and faults; Reverse flow indicated by negative sign
Time constant	Time constant as current output time constant
<b>Design</b>	
Enclosure material	Fiber glass reinforced polyamide; stainless steel AISI 316/1.4436 (IP65)
• Compact version	Standard 19" insert of aluminium/steel (DIN 41494), width: 21 TE, height: 3 HE
• 19"-insert	IP20/NEMA 1; Aluminium
• Back of panel	IP20/NEMA 1 (prepared for IP65/NEMA 2 display side); ABS plastic
• Panel mounting	IP66/NEMA 4X; ABS plastic
• Wall mounting	
<b>Dimensions</b>	
• Compact version	See dimensional drawings
• 19" insert	See dimensional drawings
<b>Weight</b>	
• Compact version	0.75 kg (2 lbs)
• 19" insert	See dimensional drawings

Description	Article No.	
Transmitter MAG 5000 Blind for compact and wall mounting; IP67/NEMA 4X/6, fibre glass reinforced polyamide		
• 11 ... 30 V DC/11 ... 24 V AC	<b>7ME6910-1AA30-0AA0</b>	
• 115 ... 230 V AC, 50/60 Hz	<b>7ME6910-1AA10-0AA0</b>	
Transmitter MAG 5000 Display for compact and wall mounting; IP67/NEMA 4X, fibre glass reinforced polyamide		
• 11 ... 30 V DC/11 ... 24 V AC	<b>7ME6910-1AA30-1AA0</b>	
• 115 ... 230 V AC, 50/60 Hz	<b>7ME6910-1AA10-1AA0</b>	
• 115 ... 230 V AC, 50/60 Hz, with HART	<b>7ME6910-1AA10-1BA0</b>	
Transmitter MAG 5000 CT for compact and wall mounting, approved for custody transfer, without verification (no approval marks - only a complete flowmeter can be verified, i.e. sensor together with the transmitter); IP67/NEMA 4X/6, fibre glass reinforced polyamide		
• 11 ... 30 V DC/11 ... 24 V AC	<b>7ME6910-1AA30-1AD0</b>	
• 115 ... 230 V AC, 50/60 Hz	<b>7ME6910-1AA10-1AD0</b>	
Transmitter MAG 5000 for 19" rack and wall mounting		
• 11 ... 30 V DC/11 ... 24 V AC	<b>7ME6910-2CA30-1AA0</b>	
• 115 ... 230 V AC, 50/60 Hz	<b>7ME6910-2CA10-1AA0</b>	

##### Transmitter MAG 6000

Description	Article No.	
Transmitter MAG 6000 Blind for compact and wall mounting; IP67/NEMA 4X/6, fibre glass reinforced polyamide		
• 11 ... 30 V DC/11 ... 24 V AC	<b>7ME6920-1AA30-0AA0</b>	
• 115 ... 230 V AC, 50/60 Hz	<b>7ME6920-1AA10-0AA0</b>	
Transmitter MAG 6000 Display for compact and wall mounting; IP67/NEMA 4X, fibre glass reinforced polyamide		
• 11 ... 30 V DC/11 ... 24 V AC	<b>7ME6920-1AA30-1AA0</b>	
• 115 ... 230 V AC, 50/60 Hz	<b>7ME6920-1AA10-1AA0</b>	
Transmitter MAG 6000 for compact and wall mounting; IP65/NEMA 4, stainless steel AISI 316/1.4436 (only for sensor with stainless steel terminal box) (for remote version order stainless steel terminal box separately)		
• 11 ... 30 V DC/11 ... 24 V AC	<b>7ME6920-1QA30-1AA0</b>	
• 115 ... 230 V AC, 50/60 Hz	<b>7ME6920-1QA10-1AA0</b>

### Overview

The SITRANS FM MAG 6000 I/MAG 6000 I Ex de transmitter is designed for the demands in the process industry. The robust die cast aluminum housing provides superb protection, even in the most harsh industrial environments. Full input and output functionality is given even in the Ex version.

### Benefits

- Full range of Ex-rated flowmeters with intrinsically safe rated input and outputs
- For compact or remote installation
- HART, FOUNDATION Fieldbus H1, DeviceNet, PROFIBUS PA and DP, Modbus RTU/RS485 add-on communication modules available
- Superior signal resolution for optimum turn down ratio
- Digital signal processing with many possibilities
- Automatic reading of SENSORPROM data for easy commissioning
- User configurable operation menu with password protection
  - 3 lines, 20 characters display in 11 languages
  - Flow rate in various units
  - Totalizer for forward, reverse and net flow as well as much more information available
- Multiple functional outputs for process control, minimum configuration with analogue, pulse/frequency and relay output (status, flow direction, limits)
- Comprehensive self-diagnostic for error indication and error logging
- Batch control
- MAG 6000 I NAMUR: compliant with NAMUR NE 21, NE 32, NE 43, NE 53 and NE 70

### Design

The transmitter is designed for either compact or remote installation in non-hazardous or hazardous areas (compact mounted transmitter to be ordered together with the sensor).

### Function

The following functions are available:

- Flow rate
- 2 measuring ranges
- 2 totalizers
- Low flow cut-off
- Flow direction
- Error system
- Operating time
- Uni-/bidirectional flow
- Limit switches and pulse output
- Batch control

The MAG 6000 I/6000 I Ex de is a microprocessor-based transmitter with a built-in alphanumeric display in several languages. The transmitters evaluate the signals from the associated electromagnetic sensors and also fulfil the task of a power supply unit which provides the magnet coils with a constant current.

Further information on connection, mode of operation and installation can be found in the data sheets for the sensors.

### Displays and keypads

Operation of the transmitter can be carried out using:

- Keypad and display unit
- HART communicator
- PC/laptop and SIMATIC PDM software via HART communication
- PC/laptop and SIMATIC PDM software using PROFIBUS or Modbus communication

## Flow Measurement

### SITRANS FM (electromagnetic)

#### Transmitters

#### MAG 6000 I/6000 I Ex

#### Technical specifications

##### Mode of operation and design

Measuring principle	Electromagnetic with pulsed constant field
Empty pipe	Detection of empty pipe (special cable required in remote mounted installation)
Excitation frequency	Depend on sensor size
Electrode input impedance	$> 1 \times 10^{14} \Omega$

##### Input

Digital input	11 ... 30 V DC, $R_i = 4.4 \text{ k}\Omega$
• Activation time	50 ms
• Current	$I_{11 \text{ V DC}} = 2.5 \text{ mA}$ , $I_{30 \text{ V DC}} = 7 \text{ mA}$

##### Output

Current output	
• Signal range	4 ... 20 mA (active/passive)
• Load	$< 560 \Omega$
• Time constant	0.1 ... 30 s, adjustable
Digital output	
• Frequency	0 ... 10 kHz, 50 % duty cycle (uni-/bidirectional)
• Time constant	0.1 ... 30 s, adjustable
• Pulse (passive)	3 ... 30 V DC, max. 110 mA (30 mA Ex version), $200 \Omega \leq R_i \leq 10 \text{ k}\Omega$ (powered from connected equipment)
• Time constant	0.1 ... 30 s, adjustable
Relay output	
• Time constant	Changeover relay, same as current output
• Load	42 V AC/2 A, 24 V DC/1 A

<b>Low flow cut off</b>	0 ... 9.9 % of maximum flow
-------------------------	-----------------------------

<b>Galvanic isolation</b>	All inputs and outputs are galvanic isolated.
---------------------------	---

##### Max. measuring error

MAG 6000 I/MAG 6000 I Ex (incl. sensor)	$\pm 0.2 \% \pm 1 \text{ mm/s}$
---	---------------------------------

##### Rated operation conditions

Ambient temperature	
• Operation	-25 ... +60 °C (-13 ... +140 °F)
- MAG 6000 I	-25 ... +60 °C (-13 ... 140 °F)
- MAG 6000 I Ex	-40 ... +70 °C (-40 ... +158 °F)
• Storage	-40 ... +70 °C (-40 ... +158 °F)
Mechanical load	18 ... 1000 Hz random in x, y, z, directions for 2 hours according to EN 60068-2-36

Transmitter: 1.14 g RMS

Degree of protection	IP67/NEMA 4X to IEC 529 and DIN 40050 (1 mH <sub>2</sub> O 30 min.)
----------------------	---

EMC performance	IEC/EN 61326-1 (all environments) IEC/EN 61326-2-5 NAMUR NE 21
-----------------	--

##### Display and keypad

Totalizer	Two eight-digit counters for forward, net or reverse flow
Display	Background illumination with alpha-numeric text, 3 x 20 characters to indicate flow rate, totalized values, settings and faults; Reverse flow indicated by negative sign
Keypad	Capacitive touch keypad with LED light for feedback indication
Time constant	Time constant as current output time constant

##### Design

Enclosure material	Die cast aluminum, with corrosion resistant Basic Polyester powder coating (min. 60 μm)
• Wall mounting	Wall mounting bracket enclosed for remote version
Dimensions	See dimensional drawings
Weight	See dimensional drawings

##### Power supply

Standard transmitter:	18 ... 90 V DC; 115 ... 230 V AC; 50 ... 60 Hz
• Ex transmitter:	18 ... 30 V DC
• Ex transmitter:	115 ... 230 V AC; 50 ... 60 Hz
• Ex transmitter NAMUR:	18 ... 30 V DC; 115 ... 230 V AC; 50 ... 60 Hz
Power consumption	• 230 V AC: 20 VA • 24 V DC: 9.6 W, $I_N = 0.4 \text{ A}$ , $I_{ST} = 1 \text{ A}$ (3 ms)

##### Certificates and approvals

General purpose	• CE (LVD, EMC, PED, RoHS)
Hazardous areas	• ATEX, IECEx, FM, CSA, EAC Ex, NEPSI - Zone 1 Ex d e [ia] ia IIC T6 Gb • ATEX, IECEx, CSA - Zone 21 Ex tD A21 IP67 T85 °C • FM - XP IS Class I Div. 1 Groups A, B, C, D - DIP Class II+III Div. 1 Groups E, F, G
Others	• CPA (China) • EAC (Russia, Belarus, Kazakhstan) • KCs (South Korea)

##### Cable entries

MAG 6000 I	
• Power supply and outputs	2 x M20 (HART)/M25 (PROFIBUS) or 2 x 1/2" NPT (HART)
• Sensor connection	2 x M16 or 2 x 1/2" NPT
MAG 6000 I Ex ATEX 2GD	
• Power supply and outputs	2 x M20
• Sensor connection	2 x M16

##### Communication

Standard versions	HART, Modbus RTU/RS 485, FOUNDATION Fieldbus H1, DeviceNet, PROFIBUS PA, PROFIBUS DP add-on modules
Ex versions	HART, PROFIBUS PA (not for Ex version)

<sup>1)</sup> Applicable for: Compact mounted MAG 6000 I Ex on MAG 3100 (sizes DN 15 ... DN 300 (1/2" ... 12")).

## Flow Measurement

### SITRANS FM (electromagnetic)

#### Flow sensors

#### MAG 1100 and MAG 1100 HT

#### Overview

The SITRANS FM MAG 1100 is an electromagnetic flow sensor in a compact wafer design designed for flow applications in the process industry.

#### Benefits

- Sensor sizes: DN 2 ... 100 ( $\frac{1}{12}$ " ... 4")
- Compact wafer design meets EN 1092, DIN and ANSI flange standards
- Corrosion resistant AISI 316 stainless steel sensor housing
- Highly resistant liner and electrodes fitting most extreme process media
- Temperature rating up to 200 °C (392 °F)
- Hose proof IP67/NEMA 4X enclosure rating
- Designed that patented in-situ verification can be conducted. Using SENSORPROM fingerprints.

#### Application

The main applications of the SITRANS FM electromagnetic flow sensors can be found in the following fields:

- Process industry
- Chemical industry
- Pharmaceutical industry
- Water treatment like e.g. chemical dosing

#### Design

- Compact or remote mounting possible
- Easy "plug & play" field changeability of transmitter
- Simple on site upgrade to IP68/NEMA 6P terminal box
- ATEX 2G D version
- FM Class I Div 2

#### Mode of operation

The flow measuring principle is based on Faraday's law of electromagnetic induction according to which the sensor converts the flow into an electrical voltage proportional to the velocity of the flow.

#### Integration

The complete flowmeter consists of a flow sensor and an associated transmitter SITRANS FM MAG 5000, 6000 or 6000 I. The flexible communication concept USM II simplifies integration and update to a variety of fieldbus systems such as HART, FOUNDATION Fieldbus H1, DeviceNet, PROFIBUS DP and PA, Modbus RTU/RS 485.

### Technical specifications

Version	MAG 1100	MAG 1100 HT (High temperature)

### Selection and ordering data

#### Accessories for MAG 1100 sensor

##### Pipe connection 1/2" external thread

For DN 2 ... 10 (1/12" ... 3/8") sensor, material: Stainless steel AISI 316L 2 pcs. pipe connections, 2 pcs. EPDM gaskets, 12 pcs. M4x12 screws

- R $\frac{1}{2}$ " ISO 7-1 tapered thread
- 1/2" NPT thread

For DN 2 ... 10 (1/12" ... 3/8") sensor, material: Hastelloy C, 2 pcs. pipe connections, 2 pcs. PTFE gaskets, 12 pcs. M4x12 screws

- R $\frac{1}{2}$ " ISO 7-1 tapered thread
- 1/2" NPT thread

For DN 2 ... 10 (1/12" ... 3/8") sensor, material PVDF (Kynar 1000) 2 pcs. pipe connections (max. 70 °C, PN 8 bar/max 158 °F, 116 PSI), 1 pc. grounding ring 1), 1 pc. grounding wire, 3 pcs. PTFE gaskets, 2 pcs. space rings, 6 pcs. M4x12 and 6 pcs. M4x20 screws

- R $\frac{1}{2}$ " ISO 7-1 tapered thread incl. grounding ring
- 1/2" NPT thread incl. grounding ring

##### EPDM gaskets

Material: EPDM; each set includes: 2 pcs. EPDM gaskets, 1 pc. grounding wire, 1 pc. M6 screw, 1 pc. nut, 1 pc. washer, 1 pc. bolt grounding plate

- DN 2 ... 10 (1/12" ... 3/8")
- DN 15 (1/2")
- DN 25 (1")
- DN 40 (1 1/2")
- DN 50 (2")
- DN 65 (2 1/2")
- DN 80 (3")
- DN 100 (4")

##### PTFE gaskets

Material: PTFE; each set includes: 2 pcs. gaskets, 2 pcs. grounding wires, 3 pcs. M6 screws (DN 2 ... DN 10: 12 pcs. M4x14)

- DN 2 ... 10 (1/12" ... 3/8")
- DN 15 (1/2")
- DN 25 (1")
- DN 40 (1 1/2")
- DN 50 (2")
- DN 65 (2 1/2")
- DN 80 (3")
- DN 100 (4")

##### Graphite gaskets

Material: Graphite; conductive, each set includes: 2 pcs. gaskets (can also be used as grounding ring)

- DN 2 ... 10 (1/12" ... 3/8")
- DN 15 (1/2")
- DN 25 (1")
- DN 40 (1 1/2")
- DN 50 (2")
- DN 65 (2 1/2")
- DN 80 (3")
- DN 100 (4")

##### Grounding ring (stainless steel)

Material: AISI 316/1.4436; each set includes: 1 pc. grounding ring<sup>1)</sup>, 3 pcs. PTFE gaskets, 1 pc. earth wire, 1 pc. M6 screw

- DN 2 ... 10 (1/12" ... 3/8")
- DN 15 (1/2")
- DN 25 (1")
- DN 40 (1 1/2")
- DN 50 (2")
- DN 65 (2 1/2")
- DN 80 (3")
- DN 100 (4")

##### Grounding ring (Hastelloy C)

Material: Hastelloy C22/2.4602; each set includes: 1 pc. grounding ring<sup>1)</sup>, 3 pcs. PTFE gaskets, 1 pc. earth wire, 1 pc. M6 screw

- DN 2 ... 10 (1/12" ... 3/8")
- DN 15 (1/2")
- DN 25 (1")
- DN 40 (1 1/2")
- DN 50 (2")
- DN 65 (2 1/2")
- DN 80 (3")
- DN 100 (4")

##### Grounding ring (Tantalum)

Material: Tantalum; each set includes: 1 pc. grounding ring<sup>1)</sup>, 3 pcs. PTFE gaskets, 1 pc. earth wire, 1 pc. M6 screw

- DN 2 ... 10 (1/12" ... 3/8")

- DN 15 (1/2")
- DN 25 (1")
- DN 40 (1 1/2")
- DN 50 (2")
- DN 65 (2 1/2")
- DN 80 (3")
- DN 100 (4")

##### Studs and nuts

for DN 100 PN 25/40, 8 pcs. M20 studs, 16 pcs. M20 nuts

Material: AISI 304/1.4305

- DN 100 (4")

##### Mounting kit

Material: Stainless steel 300 series, each kit includes: 1 pc. clamp block, 1 pc. clamp, 1 pc. bracket, 4 pcs. M8x20 screw, 2 pcs. M8 nut, 6 pcs. M8 split lockwasher, 2 pcs. M6 U-bolts

- DN 2 ... 100 (1/12" ... 4")

<sup>1)</sup> Mounting between two flanges

### Sensor MAG 1100 DN 2 ... 10 (1/12" ... 3/8") with adapters

The MAG 1100 DN 2, 3, 6 and 10 (1/12", 1/8", 1/4" and 3/8") are prepared for assembly with the 1/2" pipe connections. Dimensions in mm (inch)  
The length "L" varies dependent on the gasket choice.

Stainless steel and Hastelloy pipe connections								PVDF pipe connections	
Without gasket		EPDM		Graphite		PTFE		PTFE	
[mm]	[inch]	[mm]	[inch]	[mm]	[inch]	[mm]	[inch]	[mm]	[inch]
150	5.9	150	5.9	152	6.0	156	6.1	133	5.2

### Important note:

For compact installation with the MAG 6000 I, transmitter to be supported to avoid tension on sensor part.

## Flow Measurement

SITRANS FM (electromagnetic)

Flow sensors

### MAG 1100 F

#### Overview

The electromagnetic sensor SITRANS FM MAG 1100 F is designed to meet applications in the food and beverage industry.

#### Benefits

- Sensor sizes: DN 10 to DN 100 (3/8" to 4")
- AISI 316 stainless steel enclosure
- Sensor: Hygienic connection, 3A approval and EHEDG certified
- Sanitary design for CIP/SIP cleaning
- Easy commissioning, the SENSORPROM unit automatically updates settings
- Hose proof IP67/NEMA 4X enclosure rating
- Designed that patented in-situ verification can be conducted. Using SENSORPROM fingerprints.

#### Application

The main applications of the SITRANS FM electromagnetic sensors can be found in the following fields:

- Food industry
- Beverage industry
- Pharmaceutical industry

#### Design

- Unique mechanical design with a wide range of customer specified sanitary connection
- Compact or remote mounting possible easy "plug & play" field changeable
- Simple on site upgrade to IP68/NEMA 6P terminal box
- ATEX 2G D version for hazardous areas (ceramic liner)

#### Mode of operation

The flow measuring principle is based on Faraday's law of electromagnetic induction according to which the sensor converts the flow into an electrical voltage proportional to the velocity of the flow.

#### Integration

The complete flowmeter consists of a sensor and an associated transmitter SITRANS FM MAG 5000, 6000 and 6000 I. The flexible communication concept USM II simplifies integration and update to a variety of fieldbus systems such as PROFIBUS DP and PA, Modbus RTU/RS 485, HART, FOUNDATION Fieldbus H1, DeviceNet.

#### Pressure/temperature curve; material AISI 316L/1.4404

#### Pressure/temperature curve; material AISI 316L/1.4404

## Flow Measurement

### SITRANS FM (electromagnetic)

#### Flow sensors

#### MAG 1100 F

#### Technical specifications (continued)

##### Accessories

##### Weld-in adapter

Adapter for welding onto dairy pipe, stainless steel 1.4404	Tri-Weld ISO 2037, DIN 11850, SMS 3008, BS 4825-1
• DN 10, 15, 25, 40, 50 and 65 (3/8", 1/2", 1", 1 1/2", 2" and 2 1/2")	PN 40 (600 psi)
• DN 8 and DN 100 (3" and 4")	PN 25 (350 psi)

##### Clamp adapter

	Tri-Clamp, ISO 2852, DIN 32676, SMS 3016, BS 4825-3
DN 10, 15, 25, 40 and 50 (3/8", 1/2", 1", 1 1/2" and 2")	PN 16 (200 psi)
DN 65, 80 and 100 (2 1/2", 3" and 4")	PN 10 (150 psi)

##### Thread adapter

DIN 11851	
• DN 10, 15, 25, and 40 (3/8", 1/2", 1", and 1 1/2")	PN 40 (600 psi)
• DN 50, 65, 80 and 100 (2", 2 1/2", 3" and 4")	PN 25 (350 psi)
ISO 2853, BS 4825-4	
• DN 10, 15, 25, 40, 50, 65 and 80 (3/8", 1/2", 1", 1 1/2", 2", 2 1/2" and 3")	PN 16 (200 psi)
SMS 1145	
• DN 25, 40, 50, 65 and 80 (1", 1 1/2", 2", 2 1/2" and 3")	PN 6 (80 psi)

##### Design

##### Material

Adapter	Stainless steel AISI 316/1.4436
Gasket	
• MAG 1100 F (Ceramic)	FKM/FPM with stainless steel insert (AISI 304/1.4301) (-20 ... +150 °C (-4 ... +302 °F))
	EPDM (-20 ... +150 °C (-4 ... +302 °F))
• MAG 1100 F (PFA)	EPDM (-20 ... +150 °C (-4 ... +302 °F))
	NBR (-20 ... +100 °C (-4 ... +212 °F))

##### Note:

When combined sensor and adapter, the operating pressure is the lower rated of the pair.

<sup>1)</sup> The total built-in length "L" is independent of the adapter type selected.

## Flow Measurement

### SITRANS FM (electromagnetic)

#### Flow sensors

#### MAG 3100 and MAG 3100 HT

#### Overview

The SITRANS FM MAG 3100 is an electromagnetic flow sensor in a large variety that meets the demands of almost every flow application.

#### Benefits

- Wide range of sizes: DN 15 to DN 2000 (½" to 78")
- The flexible design is for all applications not covered by the standard industry-specific sensors: MAG 1100, MAG 1100 F, MAG 3100 P and MAG 5100 W
- Wide pressure range: PN 6 to PN 100
- ANSI Class 150/300, AS 2129, AS 4087, JIS K10 and K20. On request up to 690 bar (10 000 psi)
- Wide range of electrode and liner material to fit even the most extreme process media
- Fully welded construction provides a ruggedness that suits the toughest applications and environments.
- Easy commissioning, the SENSORPROM unit automatically updates settings.
- Designed to allow patented SITRANS FM in-situ verification using the SENSORPROM fingerprints.

#### Application

The main applications of the SITRANS FM electromagnetic flow sensors can be found in the following fields:

- Process industry
- Chemical industry
- Steel industry
- Mining
- Utility
- Power generation and distribution
- Oil and gas/HPI
- Water and waste water

#### Design

- Compact or remote mounting possible
- Easy "plug & play" field changeability of transmitter
- ATEX and FM/CSA versions
- High temperature sensor for applications with temperatures up to 180 °C (356 °F)
- Meets EEC directives: PED, 2014/68/EU pressure directive for EN 1092-1 flanges
- Built-in length according to ISO 20456, the standard includes sizes up to DN 400
- Onsite or factory upgrade to IP68/NEMA 6P of a standard sensor.

#### Mode of operation

The flow measuring principle is based on Faraday's law of electromagnetic induction according to which the sensor converts the flow into an electrical voltage proportional to the velocity of the flow.

#### Integration

The complete flowmeter consists of a flow sensor and an associated transmitter MAG 5000, 6000 and 6000 I.

The flexible communication concept USM II simplifies integration and update to a variety of fieldbus systems such as HART, FOUNDATION Fieldbus H1, DeviceNet, PROFIBUS DP and PA, Modbus RTU/RS485.

**Integration** (continued)

**Pressure/temperature curve;**  
**material AISI 316L/1.4404 AS 2129, Class E**

**Pressure/temperature curve - JIS 2200**

**Pressure/temperature curve to EN (DIN) flanges,**  
**material A 105 carbon steel**

**Pressure/temperature curve to EN (DIN) flanges AISI 304**

**Pressure/temperature curve to EN (DIN) flanges AISI 316**

**Pressure/temperature curve to ANSI B16.5 flanges**

**Note:** The pressure-temperature curves only assist in the selection of a system. No responsibility is taken for the correctness of the information. For further information on PED standard see Pressure Equipment Directive in Appendix (chapter 10).

Technical specification for transmitter - please see section about transmitters.

<sup>1)</sup> PN 6-40: DN ≤ 600 type 01 (SORF); DN > 600 type 11 (WNRF); PN 63-100: type 11 (WNRF)

<sup>2)</sup> Not for sensors with 300 µm coating.

<sup>3)</sup> For sizes larger than 600 mm (24") in PN 16 PED conformity is available as a cost-added option. The basic unit will carry the LVD (Low Voltage Directive) and EMC approval. All products sold outside of EU and EFTA are excluded from the Pressure Equipment directive, also products sold into certain market sectors are excluded. These include

a) Meters used in networks for the supply, distribution and discharge of water.

b) Meters used in pipelines for the conveyance of any fluid from offshore to onshore.

c) Meters used in the extraction of petroleum or gas, including christmas tree and manifold equipment.

d) Any meter mounted on a ship or mobile offshore platform. For further information on the PED standard and requirements see Pressure Equipment Directive in Appendix (chapter 10).

<sup>4)</sup> In remote version with sensor size DN 15 ... DN 300 (½" ... 12")

<sup>5)</sup> In remote version with sensor size DN 350 ... DN 2000 (14" ... 48")

<sup>6)</sup> In compact version with sensor size DN 15 ... DN 300 (½" ... 12")

<sup>7)</sup> Has to be ordered with the meter. It is not possible to order the certificate afterwards.

## Flow Measurement

### SITRANS FM (electromagnetic)

#### Flow sensors

#### MAG 3100 and MAG 3100 HT

#### Selection and ordering data

#### Article No.

Sensor SITRANS FM MAG 3100	7ME6310-	Ord. code
<b>Cable glands/terminal box</b>		
Metric: Polyamide terminal box or MAG 6000 I compact		1
½" NPT: Polyamide terminal box or MAG 6000 I compact		2
Metric: Stainless steel terminal box		3
½" NPT: Stainless terminal box		4

#### Additional information

Please add "-Z" to Article No. and specify Order code(s) and plain text.

#### Order code

#### Certificates

- Pressure test certificate according to EN 10204-3.1 **C01**
- Material certificate according to EN 10204-3.1 **C12**
- Factory certificate according to EN 10204-2.2 **C14**
- Factory certificate according to EN 10204-2.1 **C15**

#### Special calibration

- 5-point calibration for DN 15 ... DN 200<sup>1)</sup> **D01**
- 5-point calibration for DN 250 ... DN 600<sup>1)</sup> **D02**
- 5-point calibration for DN 700 ... DN 1200<sup>1)</sup> **D03**
- 10-point calibration for DN 15 ... DN 200<sup>2)</sup> **D06**
- 10-point calibration for DN 250 ... DN 600<sup>2)</sup> **D07**
- 10-point calibration for DN 700 ... DN 1200<sup>2)</sup> **D08**
- Default (2 × 25 % and 2 × 90 %) match-pair calibration for DN 15 ... DN 200 **D11**
- Default (2 × 25 % and 2 × 90 %) match-pair calibration for DN 250 ... DN 600 **D12**
- Default (2 × 25 % and 2 × 90 %) match-pair calibration for DN 700 ... DN 1200 **D13**
- 5-point, matched-pair calibration for DN 15 ... DN 200<sup>1)</sup> **D15**
- 5-point, matched-pair calibration for DN 250 ... DN 600<sup>1)</sup> **D16**
- 5-point, matched-pair calibration for DN 700 ... DN 1200<sup>1)</sup> **D17**
- 10-point, matched-pair calibration for DN 15 ... DN 200<sup>2)</sup> **D18**
- 10-point, matched-pair calibration for DN 250 ... DN 600<sup>2)</sup> **D19**
- 10-point, matched-pair calibration for DN 700 ... DN 1200<sup>2)</sup> **D20**

#### Terminal blocks

- Factory mounted terminal blocks **N02**

#### Country specific label

- CRN (Canadian Registration Number) **H25**
- Tag name plate, stainless steel (specify in plain text) **Y17**
- Tag name plate, plastic (self adhesive) **Y18**
- Customer-specific transmitter setting **Y20**

#### Factory mounted sensor cables

- Sensor cables wired (specify Article No. for sensor cables and order cables separately) **Y40**
- Sensor cables wired and IP68 sealing (specify Article No. for sensor cables and order cables separately) **Y41**

#### Additional calibrations

- Accredited matched-pair calibration acc. to ISO/IEC 17025: 2005 **On request<sup>3)</sup>**
- Customer-specified calibration up to 10 points **On request<sup>3)</sup>**
- Customer-witnessed calibration **On request<sup>3)</sup>**
- Any of above calibration

<sup>1)</sup> 20 %, 40 %, 60 %, 80 %, 100 % of factory  $Q_{max}$

<sup>2)</sup> Ascending and descending at 20 %, 40 %, 60 %, 80 %, 100 % of factory  $Q_{max}$

<sup>3)</sup> Product Variation Request (PVR)

#### Operating instructions for SITRANS FM MAG 3100

Description	Article No.

#### Selection and ordering data (continued)

##### Grinding and protection ring - Type E (Stainless steel)

- Material: AISI 316
- For all PTFE liners
- 1 pc. incl. straps and screws

##### Note:

For MAG 3100 HT High temperature version 7ME6320... for PTFE 180 °C (356 °C) versions - grounding ring type E is included and factory mounted.

#### Selection and ordering data (continued)

##### Grounding ring - Type Flat ring (Hastelloy)

- Material: Hastelloy C276
- For all liners (PTFE max. 150 °C (302 °F))
- 1 pc. incl. straps and screws

1) When grounding rings are used, the thickness of the grounding ring must be added to the built-in length.

2) Tolerances on built-in length (PN 6, PN 10, PN 16, PN 25 and PN 40):  
 ½" to 8": +0/-0.12", 10" to 16": +0/-0.20", 18" to 24": +0.2/-0.2", 28" to 78": +0.39/-0.39"  
 Tolerances on built-in length (PN 63 and PN 100): All sizes +0.31"/-0.31"

3) T<sub>C</sub> = Protection ring type C, T<sub>E</sub> = Grounding ring type E (included and factory mounted for 180 °C PTFE liner), T<sub>F</sub> = Grounding ring Type Flat ring

4) Weights are for ANSI 150 without transmitter.

5) PN 35 DN 80 = 10.07 inch

6) PN 35 DN 500 = 26.77 inch

7) PN 35 DN 600 = 2.53 inch

8) Not AS 4087 PN 21 or PN 35

9) Not according to ISO 20456

D = Outside diameter of flange, see flange tables

## Flow Measurement

### SITRANS FM (electromagnetic)

#### Flow sensors

#### MAG 3100 P

#### Overview

The SITRANS FM MAG 3100 P is designed to meet the most common specifications within chemical and process industries.

#### Benefits

- DN 15 to DN 300 (½" to 12")
- Included in Quick Ship Program (delivery time see PIA LCP)
- Most used flowmeter in the chemical and process industries with PTFE/PFA liner and Hastelloy electrodes
- Excellent chemical resistance
- Full scope of global approvals for hazardous areas:
  - ATEX, FM, CSA, IECEx
  - 24 V and 115/230 V Ex compact and remote
  - intrinsically safe ia analog output
- Comprehensive self-diagnostic for error indication and error logging
- Fully welded construction provides a ruggedness that suits the toughest applications and environments.
- Easy commissioning, the SENSORPROM unit automatically updates settings.
- MAG 6000 I full NAMUR compliance
  - compliant with NE 21, NE 32, NE 43, NE 53 and NE70

#### Application

The main applications of the SITRANS FM electromagnetic flow sensors can be found in the following fields:

- Chemical industry
- Process industry
- Pulp and paper
- Industrial waste water

#### Design

- Compact or remote mounting possible
- Easy "plug & play" field changeability of transmitter
- High temperature sensor for applications with temperatures up to 150 °C (302 °F)
- Meets EEC directives: PED, 2014/68/EU pressure directive for EN 1092-1 flanges
- Build-in length according to ISO 20456
- Onsite or factory upgrade to IP68/NEMA 6P of a standard sensor.

#### Mode of operation

The flow measuring principle is based on Faraday's law of electromagnetic induction according to which the sensor converts the flow into an electrical voltage proportional to the velocity of the flow.

## Integration

The complete flowmeter consists of a flow sensor and an associated transmitter MAG 5000, 6000 and 6000 I.

The flexible communication concept USM II simplifies integration and update to a variety of fieldbus systems such as HART, FOUNDATION Fieldbus H1, DeviceNet, PROFIBUS DP and PA, Modbus RTU/RS 485.

### **Pressure-temperature curve to EN (DIN) flanges, material A 105 carbon steel**

### **Pressure-temperature curve to ANSI B16.5 flanges**

**Note:** The pressure-temperature curves only assist in the selection of a system. No responsibility is taken for the correctness of the information. For exact data please refer to the PED requirements. For further information on the PED standard and requirements, see Pressure Equipment Directive in Appendix (chapter 10).

## Overview

The SITRANS FM MAG 5100 W is an electromagnetic flow sensor designed to meet ground water, drinking water, waste water, sewage or sludge applications.

## Benefits

- DN 15 to DN 1200/2000 (½" to 48"/78")
- Stock program of MAG 5100 W secures short delivery time
- Connection flanges EN 1092-1 (DIN 2501), ANSI, AWWA, AS and JIS
- NBR Hard Rubber and Ebonite Hard Rubber liner for all water applications
- EPDM liner with drinking water approvals
- Hastelloy integrated grounding and measuring electrodes
- Increased low flow accuracy for water leak detection, due to coned liner design.
- Drinking water approvals
- Suitable for direct burial and constant flooding
- Custody transfer approvals
- Built-in length according to ISO 20456; the standard includes sizes up to DN 400.
- Easy commissioning, SENSORPROM unit automatically uploads calibration values and settings.
- Designed so patented in-situ verification can be conducted. Using SENSORPROM fingerprint.
- Custody transfer option for water billing, with type approval after OIML R 49 and verified according to MI-001 - 0D inlet/0D outlet installation
  - Pattern approval OIML R 49
  - Conform to ISO 4064 and EN 14154 for mechanical flowmeters
  - PTB K7.2
  - Kiwa water approval
- FM Fire Service Meter (Class Number 1044) for automatic fire protection systems.
- Meets EEC directives: PED 2014/68/EU pressure directive for EN 1092-1 flanges
- Simple onsite or factory upgrade to IP68/NEMA 6P of a standard sensor
- Type approval of marine equipment (ABS, Bureau Veritas, DNV-GL, Lloyd's Register)

## Application

The main applications of the SITRANS FM electromagnetic flow sensors can be found in the following fields:

- Water abstraction
- Water treatment
- Water distribution network (leak detection management)
- Custody transfer water meters
- Irrigation
- Waste water treatment
- Filtration plant (e.g. reverse osmosis and ultra filtration)
- Industrial water applications

## Mode of operation

The flow measuring principle is based on Faradays law of electromagnetic induction according to which the sensor converts the flow into an electrical voltage proportional to the velocity of the flow.

## Integration

The complete flow meter consists of a flow sensor and an associated transmitter SITRANS FM MAG 5000, MAG 6000 or MAG 6000 I.

The flexible communication concept USM II simplifies integration and update to a variety of fieldbus systems, e.g. HART, DeviceNet, PROFIBUS DP and PA, FOUNDATION Fieldbus H1 or Modbus RTU/RS 485.

<sup>7)</sup> In remote version with sensor size DN 50 ... DN 300 (2" ... 12")

<sup>8)</sup> For sizes larger than 600 mm (24") in PN 16 PED conformity is available as a cost-added option. The basic unit will only carry the LVD (Low Voltage Directive) and EMC approval. All products sold outside of EU and EFTA are excluded from the directive, also products sold into certain market sectors are excluded. These include:

a) Meters used in networks for the supply, distribution and discharge of water.

b) Meters used in pipelines for the conveyance of any fluid from offshore to onshore.

c) Meters used in the extraction of petroleum or gas, including Christmas tree and manifold equipment.

d) Any meter mounted on a ship or mobile offshore platform. For further information on the PED standard and requirements see Pressure Equipment Directive in Appendix (chapter 10).

<sup>9)</sup> Not for sensors with 300 µm coating.

## Flow Measurement

SITRANS FM (electromagnetic)

Flow sensors

### MAG 5100 W

#### Technical specifications (continued)

##### **MAG 5100 W (7ME6520) with MAG 6000 CT (Revenue program) MI-001**

MAG 5100 W CT program is type approved according to international water meter standard OIML R 49. Since the first November 2006 the MI-001 water meter directive is in force, which means that all water meters can be sold across the EU borders if the water meters contain a MI-001 label.

The MAG 5100 W MI-001 verified and labeled products are a Class II approval according to Directive 2014/32/EU of the European Parliament and Council of 26 February, 2014 on measuring instruments, Annex III Water meters (MI-001) in the sizes from DN 50 to DN 1200 (Article No. 7ME6520).

The MID certification is obtained as a modul B + D module approval according to the above mentioned directive.

Module B: Type approval according to OIML R 49

Module D: Quality insurance approval of production

##### **MAG 5100 W (7ME6520) with MAG 5000/MAG 6000 or MAG 6000 CT for Fire Service applications**

MAG 5100 W (7ME6520) is FM Fire Service approved for automatic fire protection systems. The approval is applicable for the sizes DN 50, DN 80, DN 100, DN 150, DN 200, DN 250 and DN 300 (2", 3", 4", 6", 8", 10" and 12") with ANSI B16.5 Class 150 flanges. The FM Fire Service approved product can be ordered via the Z-options P20, P21 and P22.

#### Technical specifications (continued)

MAG 5100 W (7ME6520) MI-001 verified and labeled products at a given Q3 and Q3/Q4 = 1.25 and Q2/Q1 = 1.6 measuring ranges see table below:

The label is placed on the transmitter housing. An example of the product label is shown below:

OIML R 49/MI-001 approvals valid for:

- DN 50 to 1200 mm (2" to 48")
- Horizontal and vertical installation
- Compact or remote with max. 500 m cable
- Power supply 115 to 230 V AC, 12 to 24 V AC/DC
- With or without communication module

Other restrictions may apply (see certificate)

Special OIML / MI-001 settings:

- Unit: m³
- Qmax: Q3
- Low flow cut-off: 0.1 %
- Digital output: Frequency

For other factory settings, see Operating Instructions.

Potting kit for IP68/NEMA 6P sealing of sensor junction box

**FDK:085U0220**

MAG 5000/6000 transmitters and sensors are packed in separate boxes, the final assembly takes place during installation at the customer's place. MAG 6000 I transmitters and sensors are delivered compact mounted from factory. Communication module will be pre-mounted in the transmitter.

With transmitter MAG 5000 and MAG 6000 compact, weight is increased by approximately 0.8 kg (1.8 lbs), with MAG 6000 I, weight is increased by 5.5 kg (12.1 lb).

## Flow Measurement

### SITRANS FM (electromagnetic)

#### Flow sensors

## SITRANS FM100

### Overview

The SITRANS FM100 is an electromagnetic flow sensor in a compact design for basic applications in the process and OEM industry.

### Benefits

- Connection ½", ¾", 1", 2"
- Flow- and temperature measurement
- IO-Link communication
- Dosing function with external control output
- Colored, multi-parameter configurable TFT display, rotatable 90°
- Bidirectional measuring
- Intuitive setup menu via 4 optical touch keys
- 2 freely configurable outputs
- All-metal design: stainless steel
- Included in Quick Ship Program (delivery time see PIA LCP)

### Application

The main applications of the SITRANS FM electromagnetic flow sensors can be found in the following fields:

- OEM industry
- Process industry
- Small water cycles: e.g. cooling water, water leakage
- Dosing e.g. in chemical industry

### Design

The SITRANS FM100 is designed to measure small- and medium sized flow of conductive liquids. The small build in length of 108 mm allows to fit the device in almost any space. The robust stainless-steel housing protects the device in changing surroundings.

The measurement is displayed on the local screen as well as accessible via 2 freely configurable outputs (pulse-/frequency-/alarm- and analogue).

### Mode of operation

The flow measuring principle is based on Faraday's law of electromagnetic induction according to which the sensor converts the flow into an electrical voltage proportional to the velocity of the flow.

### Integration

#### Pressure loss

### Technical specifications

<b>Product characteristic</b>	FM100
Measuring principle	Electromagnetic induction
Media	Conductive liquid with $\geq 20 \mu\text{S/cm}$
Accuracy	$< \pm(0,8 \% \text{ of reading} + 0,5 \% \text{ of full scale})^1$
Repeatability	$\pm 0,2 \% \text{ of full scale}$
Response time flow $t_{90}$	
• Alarm/pulse/frequency output	$< 100 \text{ ms}$
• Current output	$< 1 \text{ s}$
<b>Temperature measurement</b>	
Sensor	PT1000
Accuracy	$\leq \pm 2 \text{ }^\circ\text{C}$ (flow $> 0,2 \text{ m/s}$ )
Measuring range	Temperature range of media
Response time temperature $t_{90}$ (signal output)	$< 20 \text{ s}$
<b>Process connection</b>	
Nominal size	G $\frac{1}{2}$ " ... G 2" Compatible NPT adapter available ( $\frac{1}{4}$ " ... 2")
Process connection	Threaded fitting
<b>Rated operation conditions</b>	
Mounting position	In all directions, bidirectional measuring
In-/outlet	$3 \times \text{diameter} / 2 \times \text{diameter}$
Ambient temperature	
• Standard compact sensor	$-20 \dots +70 \text{ }^\circ\text{C}$ ( $-4 \dots +158 \text{ }^\circ\text{F}$ )
• Remote version with ETFE-Cable	$-20 \dots +140 \text{ }^\circ\text{C}$ ( $-4 \dots +284 \text{ }^\circ\text{F}$ )
• Remote version with PVC-Cable	$-20 \dots +85 \text{ }^\circ\text{C}$ ( $-4 \dots +185 \text{ }^\circ\text{F}$ )
Enclosure rating	IP67
Operating pressure	Max. 16 bar
Pressure drop	See pressure loss diagram
Mechanical load	
• Shock resistance	DIN EN 60068-2-27:2010: 20 g (11 ms)
• Vibration resistance	DIN EN 60068-2-6:2008: 5 g (10 ... 2 000 Hz)
• Environmental testing	DIN EN 60068-2-30:2006: severity level b
EMC	2014/30/EU
<b>Design</b>	
Weight	See dimensional drawings
Housing material	Stainless steel 1.4404
Electrode material	Stainless steel 1.4404
Connection fitting	Stainless steel 1.4404
Insulation parts	PEEK
Seals	FKM (Option: EPDM)
Display	PMMA
	Operation via 4 optical touch sensors (operation with hand gloves)
	TFT display, $128 \times 128$ pixels, 1.4" display, orientation in $90^\circ$ steps adjustable, repetition rate adjustable 0.5 ... 10 s
Cable entries	M12x1 4-pin connection
Dimensions	See dimensional drawings

<b>Electrical data</b>	
Power supply	19 ... 30 V DC
Power consumption	Max. 200 mA
Outputs	
• Frequency	Push-Pull, freely scalable, 2kHz @ overflow $f_{\text{min}} @ \text{FS} = 50 \text{ Hz}$ $f_{\text{max}} @ \text{FS} = 1\,000 \text{ Hz}$
• Pulse	Push-Pull, freely scalable, configurable for partial and accumulated totalizer
• Alarm	NPN, PNP, Push-Pull, configurable max. 30 V DC, max. 200 mA short-circuit proof
• Current	0(4) ... 20 mA (active) or 0(2) ... 10 V DC Max. load 500 $\Omega$
Input	
• Control	Active signal $U_{\text{high}}$ max. 30 V DC $0 < \text{Low} < 10 \text{ V DC}$ $15 \text{ V DC} < \text{High} < V_{\text{s}}$
Dosing function	Dosing output OUT2: Push-Pull, High active Control input OUT1: START/STOP $0,5 \text{ s} < t_{\text{high}} < 4 \text{ s}$ RESET $t_{\text{high}} > 5 \text{ s}$
<b>Communication</b>	<b>IO-Link</b>
• Manufacturer ID	42 (decimal), 0x002A (hex)
• Manufacturer name	Siemens AG
• Version	V1.1
• Bitrate	COM3
• Minimal cycle time	1.1 ms
• SIO-Mode	Yes (OUT1 in configuration IO-Link)
• Block parameterization	Yes
• Operational readiness	10 s
• Max. cable length	20 m
1) Under reference conditions:	
- Media temperature:	15 ... 30 $^\circ\text{C}$
- Ambient temperature:	15 ... 30 $^\circ\text{C}$
- 1 cST	
- 500 $\mu\text{S/cm}$	
- 1 bar

### Overview

SITRANS FM TRANSMAG 2 with the SITRANS FM MAG 911/E sensor is a pulsed alternating field magnetic flowmeter where the magnetic field strength is much higher than conventional DC pulsed magnetic flowmeters.

### Benefits

- Wide range of sizes DN 15 to DN 1000 (½" to 40")
- Broad range of liner and electrode materials for extreme process medias
- Fully welded construction provides a ruggedness that suits the toughest applications and environments.
- Automatic reading of SmartPLUG for easy commissioning
- Simple menu operation with two-line display
- Comprehensive self-diagnostic with selfmonitoring and internal simulation

### Application

The main applications of the SITRANS FM transmitter TRANSMAG 2 can be found in the following sectors:

- Pulp and Paper industry
- Mining industry

The patented pulse alternating field technology is ideal for difficult applications like:

- High concentrated paper stock > 3 %
- Heavy mining slurries up to 70 % solid concentration
- Mining slurries with magnetic particles.
- Low conductive medias  $\geq 1 \mu\text{S}/\text{cm}$  ( $0.1 \mu\text{S}/\text{cm}$  depending on medium)

### Design

- Available for remote mounting
- PROFIBUS PA (profile 2.0) / HART communication
- Analog output and digital outputs for pulses, device status, limits, flow direction, frequency output 110

### Mode of operation

The flow measuring principle is based on Faraday's law of electromagnetic induction according to which the sensor converts the flow into an electrical voltage proportional to the velocity of the flow.

## Flow Measurement

### SITRANS FM (electromagnetic)

#### Flow sensors

#### Transmitter TRANSMAG 2 with sensor MAG 911/E

#### Function

The TRANSMAG 2 is a microprocessor-based transmitter with a built-in alphanumeric display in several languages. The transmitters evaluate the signals from the associated electromagnetic sensors and also fulfill the task of a power supply unit which provides the magnet coils with a constant current.

The magnetic flux density in the sensor is additionally monitored by reference coils.

Further information on connection, mode of operation and installation can be found in the data sheets for the sensors.

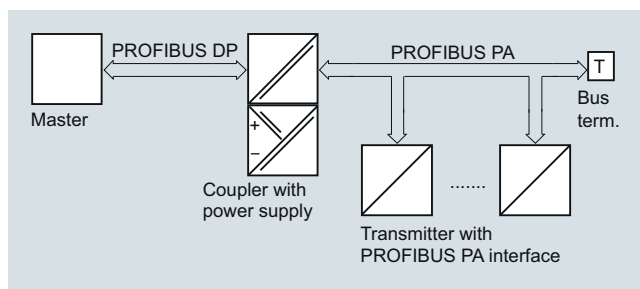

#### Displays and keypads

Operation of the transmitter can be carried out using:

- Keypad and display unit
- HART communicator
- PC/laptop and SIMATIC PDM software via HART communication
- PC/laptop and SIMATIC PDM software using PROFIBUS PA communication

HART communication

PROFIBUS PA communication

## Technical specifications

### Transmitter TRANSMAG 2

<b>Mode of operation and design</b>	
Measuring principle	Electromagnetic with pulsed alternating field (PAC)
Magnetic field excitation	Automatic power supply synchronization
• 50 Hz AC power supply	Bipolar (16.7 Hz) Bipolar with prepulse (10 Hz) Unipolar (8.33 Hz)
• 60 Hz AC power supply	Bipolar (20 Hz) Bipolar with prepulse (12 Hz) Unipolar (10 Hz)
<b>Accuracy under reference conditions</b>	
Measuring tolerance of pulse output	$\leq \pm 0.5\%$ of measured value
• With $v > 0.25$ m/s (0.82 ft/s)	$\pm 1.2$ mm/s (0.05 inch/s)
• With $v < 0.25$ m/s (0.82 ft/s)	$\pm 2.5$ mm/s (0.1 inch/s)
Measuring tolerance of analog output	As pulse output plus $\pm 0.1\%$ conversion error $\pm 20$ $\mu$ A
Repeatability	0.2 % of measured value
<b>Reference conditions</b>	
• Process temperature	25 °C $\pm$ 5 °C (77 °F $\pm$ 9 °F)
• Ambient temperature	25 °C $\pm$ 5 °C (77 °F $\pm$ 9 °F)
• Warm-up time	Min. 30 min
• Installation conditions	Inlet pipe section $\geq 10 \times$ DN Outlet pipe section $\geq 5 \times$ DN
• Medium	Installed centered in pipe Water without gaseous or solid components
<b>Calibration</b>	
Default calibration, calibration report shipped with sensor	2 $\times$ 20 %, 2 $\times$ 50 % and 2 $\times$ 100 %
<b>Outputs</b>	
Electrical isolation	Outputs electrically isolated from one another and from the power supply, max. 60 V permissible against PE/equipotential bonding
<b>Current output</b>	
	0/4 ... 20 mA (7ME5034-0... or 7ME5034-2...)
• Signal	
- Upper limit	0/4 ... 20 mA, selectable
- Failure	20 ... 22.5 mA, optional 3.6; 20 or 24 mA
• Load	
- Output	max. 600 $\Omega$ , max. load voltage 15 V DC
- For HART communication	$\geq 250$ $\Omega$
Communication	Via analog output with PC coupling module or HART communicator
• Protocol	HART, version 5.1
<b>Digital output</b>	
<b>Signal</b>	
• Output	Configurable as active or passive signals
- Active signal	24 V DC, $\leq 24$ mA, $R_i = 170$ $\Omega$
- Passive signal	Open collector, max. 30 V DC, 200 mA
Output configuration	
• Pulse	
- Pulse significance	$\leq 5000$ pulses/s
- Pulse width	$\geq 0.1$ ms
• Limit frequency	$\leq 10000$ Hz
• Limits	Limits for flow and quantity, flow direction, alarm
<b>Digital output 2 (relay)</b>	
(only 7ME5034-0...)	
<b>Relay</b>	
• Rating	NC or NO function Max. 5 W, max. 50 V AC/DC, max. 200 mA
• Output configuration	Limits for flow and quantity, flow direction, alarm

### Transmitter TRANSMAG 2

<b>Digital input</b> (optional to digital output 2) (only 7ME5034-2...)	Non-intrinsically-safe
• Input function configurable as high-active or low-active	Set measured value to zero or reset totalizer
• Signal voltage	Max. 30 V DC, $R_i = 3$ k $\Omega$ High level: +11 ... +30 V DC Low level: -30 ... +5 V DC
<b>For PROFIBUS devices</b>	
PROFIBUS PA (for PROFIBUS-devices 7ME5034-1...)	Layer 1 and 2 according to PROFIBUS PA
• Communication	Transmission according to IEC 1158-2
	Layer 7 (protocol layer) according to PROFIBUS PA and DP V1 (EN 50170)
	Device Class B, device profile 2.0
	Max. 4 simultaneous C2 connections
• Bus voltage	9 ... 32 V DC permissible
• Current consumption from bus	10 mA; limited to $\leq 15$ mA in event of fault by electrical current limitation
<b>Rated operating conditions</b>	
Ambient temperature	
• Operation	-20 ... +60 °C (-4 ... +140 °F)
• Storage	-25 ... +80 °C (-13 ... +176 °F)
Degree of protection	IP67/NEMA 4X
Electromagnetic compatibility (EMC)	
• Emitted interference	To IEC/EN 61326 for use in industrial areas
• Noise immunity	To IEC/EN 61326 for use in industrial areas
<b>Design</b>	
Weight of transmitter	4.4 kg (9.7 lb)
Remote version	Transmitter must be connected to sensor using shielded cable
Maximum cable length	100 m (328 ft)
Housing	Die-cast aluminum, painted
<b>Cables entries</b>	
• Power supply and outputs	Remote installations 2 $\times$ M20 (HART)/M25 (PROFIBUS) or 2 $\times$ 1/2" NPT (HART)
• Sensor connections	2 $\times$ M16 (HART) or 2 $\times$ 1/2" NPT
<b>Displays and keypad</b>	
General display	LCD, backlid, two lines with 16 characters each
Multi-display for Keypad	Flow, totalizer, flow velocity
Keypad	4 keys for entering parameters
<b>Power supply</b>	
corresponding to rating plate	
• AC supply	100 ... 250 V AC $\pm 15\%$ , 47 ... 63 Hz
• Power consumption	Approx. 120 ... 630 VA, depending on sensor
Line fuse	100 ... 230 V AC: T1.6A
Magnet current fuse	F5A/250 V

## Flow Measurement

### SITRANS FM (electromagnetic)

#### Flow sensors

#### Transmitter TRANSMAG 2 with sensor MAG 911/E

#### Technical specifications (continued)

##### Sensor cables between sensor and transmitter

Sufficient shielding must be provided, as well as fixed routing of the signal cables (electrode and coil cable).

Signal cables must be routed free of vibration, and protected against strong magnetic and stray fields. In case of doubt, the sensor cables must be routed in grounded steel conduit. The cable length between the sensor and transmitter must not exceed 100 m (328 ft).

#### MAG 911/E sensor

##### Process connection

###### Flanges

- EN 1092-1, raised face (EN 1092-1, DIN 2501 and BS 4504 have the same mating dimensions)
  - DN 200 ... 1000 (8" ... 40"): PN 10 (145 psi)
  - DN 65 ... 1000 (2½" ... 40"): PN 16 (232 psi)
  - DN 200 ... 1000 (8" ... 40"): PN 25 (362 psi)
  - DN 15 ... 1000 (½" ... 40"): PN 40 (580 psi)
- ANSI B16.5 (BS 1560), raised face
  - ½" ... 40": Class 150 (20 bar (290 psi))
  - ½" ... 24": Class 300 (50 bar (725 psi))
- AWWA C-207, raised face
- JIS B 2220:2004
  - 28" ... 40": Class D (10 bar)
  - ½" ... 24": K10

##### Media conductivity

Minimum conductivity  $\geq 1 \mu\text{S}/\text{cm}$

##### Rated operating conditions

###### Enclosure rating

IP67/NEMA 4X  
Optional IP68/NEMA 6

###### Temperature of medium

- Soft rubber
  - 0 ... +70 °C (32 ... 158 °F)
- Hard rubber
  - 0 ... +90 °C (32 ... 194 °F)
- PTFE
  - Option: 100°C (212°F)
  - 20 ... +150 °C (-4 ... +302 °F) at 25 bar (363 psi)
  - 20 ... +100 °C (-4 ... +212 °F) at 40 bar (580 psi)
- Linatex
  - 40 ... +70 °C (-40 ... +158 °F) (for temperatures below -20 °C (-4 °F) AISI 316L/1.4404 flanges must be used)
- Novolac
  - 130 °C (266 °F) at 40 bar (580 psi)

##### Design

Weight	See dimensional drawings
Flange and housing material	Carbon steel ASTM A 105, with corrosion resistant coating Corrosivity category C3 acc. to ISO 12944-2, or AISI 316L/1.4404 flanges and carbon steel housing ASTM A 105, with corrosion resistant coating Corrosivity category C3 according to ISO 12944-2
Measuring pipe material	Stainless steel AISI 304 or higher
Electrode material	<ul style="list-style-type: none"> <li>• AISI 316/1.4571</li> <li>• Hastelloy C276/2.4819</li> <li>• Platinum</li> <li>• Titanium</li> <li>• Tantalum</li> </ul>
Grounding electrode material	Defined via the order code
Terminal box (remote version only)	<ul style="list-style-type: none"> <li>• Standard: Fibre glass reinforced polyamide</li> <li>• Option: Stainless steel AISI 316/1.4436</li> </ul>
Cable entries	• 2 x M20 or 2 x ½" NPT

#### Protection ring

Function	To protect the edges of liners from abrasion (e.g. gravel, sand etc.). Used mainly with soft rubber liners and for PTFE liners at high temperatures from 100 to 150 °C (212 to 302 °F).
Contact with medium	Yes, please always check resistance to measured medium.
Material	Stainless steel AISI 316/1.4571, optionally Hastelloy C276/2.4819
Material thickness	The overall length of the sensor is increased by 6 mm for DN 15 to DN 150 (0.24" for ½" to 6") or 10 mm for DN 200 to DN 600 (0.4" for 8" to 24")
Standard	Optional for all liners. Must be ordered separately.
Order No.	7ME5942-...

#### Grounding ring

Function	Electrical reference and grounding of the medium. Required if the pipelines are not electrically conducting or are lined (plastic pipelines, concrete pipelines etc.). All grounding rings must be connected to the grounding screw present on the sensor.
Contact with medium	Yes, please always check resistance to measured medium.
Material	Stainless steel AISI 316/1.4571 or Hastelloy C4/2.4610
Material thickness	The overall length of the sensor is increased by 2 mm (0.08") per grounding ring.
Standard	Optional for all liners. Required between the medium and sensor for equipotential bonding between non-conducting pipelines or lined pipelines.
Order No.	7ME5943-...

#### Important:

The rings must be ordered together with the sensor. Gaskets are not included. In case of replacement please include the sensor MLFB code on the order.

### Technical specifications (continued)

#### Classification according to pressure equipment directive (PED 2014/68/EU)

Nominal size		Nominal pressure		Permissible media	Category
DN	(inches)	PN	(MWP psi)		
15 ... 25	(½" ... 1")	40	580	Gases fluid group 1 and liquids fluid group 1	Article 4.3
200 ... 300	(8" ... 12")	10	(145)	Gases fluid group 1 and liquids fluid group 1	II
65 ... 250	(2½" ... 10")	16	(232)	Gases fluid group 1 and liquids fluid group 1	II
40 ... 100	(1½" ... 4")	40	(580)	Gases fluid group 1 and liquids fluid group 1	II
350 ... 1000	(14" ... 40")	10	(145)	Gases fluid group 1 and liquids fluid group 1	III
300 ... 1000	(12" ... 40")	16	(232)	Gases fluid group 1 and liquids fluid group 1	III
200 ... 600	(8" ... 24")	25	(363)	Gases fluid group 1 and liquids fluid group 1	III
125 ... 600	(5" ... 24")	40	(580)	Gases fluid group 1 and liquids fluid group 1	III

#### Notes on pressure equipment directive

The devices are designed for liquids of danger group "Gases of fluid group 1". The categories differ according to the version, and are listed in the table below.

###### Flange material

Mid steel flanges 1.0460/1.0570

Stainless steel flanges, AISI 316L/1.4404

###### Liner material

Soft rubber (DN 25 to DN 1000)

PTFE (DN 15 to DN 600)

Hardrubber (DN 15 to DN 1000)

Linatex (DN 25 to DN 1000)

Novolak (sealing material FFKM) (DN 50 to DN 1000)

###### Electrode material

AISI 316Ti/1.4571

Hastelloy C276/2.4819

Platinum

Titanium

Tantalum

###### Cable glands/terminal box

Metric: Polyamide terminal box

½" NPT: Polyamide terminal box

Metric: Stainless steel terminal box

½" NPT: Stainless steel terminal box

<sup>1)</sup> 20 °C (68 °F), max. 19.6 bar (285 psi) for steel flanges and max. 15.9 bar (231 psi) for stainless steel flanges

<sup>2)</sup> 20 °C (68 °F), max. 51.1 bar (741 psi) for steel flanges and max. 41.4 bar (600 psi) for stainless steel flanges

###### Additional information

Please add "-Z" to Article No. and specify Order code(s) and plain text.

Two grounding electrodes made of stainless steel AISI 316Ti/1.4571

Two grounding electrodes made of Hastelloy C276/2.4819

Two grounding electrodes made of Platinum

Two grounding electrodes made of Titanium

Two grounding electrodes made of Tantalum

Factory certificate to EN 10204-2.2

Material certificate according to EN 10204-3.1

Power supply 110 V/60 Hz

Flow range setting: Specify upper flow range value

Pulse output setting: Specify pulse value (1 pulse/unit)

Silicon-free version

Tag name plate, stainless steel (specify in plain text)

Special version (specify in plain text)

### Overview

MAG 8000 is a comprehensive meter which intelligent information and high performance measurement as well as the easy to install concept take cost of ownership and customer service to a new level for water meter.

### Benefits

#### Easy to install

- Compact or remote solution with factory mounted cable and customer setting from factory
- IP68/NEMA 6P enclosure. Sensor can be buried.
- Flexible power supply - internal or external battery pack or mains power supply with battery back-up possibilities
- Superior measurement
- Down to 0.2 % maximum uncertainty
- OIML R 49 type approval
- FM Fire Service Approval
- Bi-directional measurement

#### Long lasting performance/Low cost of Ownership

- No moving parts means less wear and tear.
- Up to 6 to 10 years maintenance-free operation in typical revenue application
- Robust construction built for the application

#### Intelligent information, easy to access

- Embedded self-testing and alarm/fault detection feature
- Internal data logger
- Advanced statistics and diagnostics
- Various Add-on communication modules

### Application

The following MAG 8000 versions are available as stand-alone water meters:

- MAG 8000 (7ME6810) for abstraction and distribution network
- MAG 8000 CT (7ME6820) for revenue and bulk metering

### Design

MAG 8000 is designed to minimize power consumption.

The product program consists of

- Basic and advanced version
- Sensor sizes from DN 25 to 1200 (1" to 48")
- Compact and remote installation in IP68/NEMA 6P enclosure and factory-mounted cable
- SIMATIC PDM and Flow Tool PC configuration softwares

Modbus/Encoder module

## Flow Measurement

SITRANS FM (electromagnetic)

Flow sensors

### Battery-operated water meter MAG 8000

#### Function

MAG 8000 is a microprocessor-based water meter with graphical display and key for optimum customer operation and information on site. The transmitter drives the magnetic field in the sensor, evaluates the flow signal from the sensor and calculates the volume passing through. It delivers the required information via the integrated pulse output or communication interfaces as part of a system solution. Its intelligent functionality, information and diagnostic ensure optimum meter performance and information to optimize water supply and billing.

The SIMATIC PDM tool gives the possibility of testing and verifying the flowmeter on site and creating a printed "Qualification Certificate" with all specific data that define the quality status of the measurement.

The Qualification Certificate consists of two pages with information about the actual status of the sensor:

Part 1 provides general settings, sensor and battery info, totalizer values and pulse output settings.

Part 2 provides detailed information about electronic and sensor functionality and a main parameter list for evaluating the functionality of the MAG 8000 water meter.

MAG 8000 can be ordered as a Basic or an Advanced version.

#### SIMATIC PDM

For more details about SIMATIC PDF please go to chapter 8 "Digitalization and Communication".

Features/Version	MAG 8000 Basic	MAG 8000 Advanced
Measuring frequency in battery power mode (Manually selected) <sup>1)</sup>	1/15 or 1/30 or 1/60 Hz	from 6.25 to 1/60 Hz depending of sensor size
Output MAG 8000	2 FW/RV/AI/CA	2 FW/RV/AI/CA
Communication	Add-on	Add-on
Data logger	Yes	Yes
Insulation test	Yes	Yes
Leakage detection	No	Yes
Meter utilization	No	Yes
Statistics	No	Yes
Tariff	No	Yes
Settle date (Revenue)	No	Yes

<sup>1)</sup> Excitation frequency settings with mains power supply, see technical specifications for each version:

Some information is accessible via the display whereas all information is accessible via the IrDA communication interface with the PDM software. Data and parameters are registered in a EEPROM. They can all be read, but changing the information demands a software password or a hardware key attached to the printed circuit board.

### Technical specifications

Transmitter	
<b>Installation</b>	Compact (integral) Remote with factory-mounted cable 5, 10, 20 or 30 m (16.4, 32.8, 65.6 or 98.4 ft)
<b>Enclosure</b>	Stainless steel top housing (AISI 316) and coated brass bottom. Remote wall mount bracket in stainless steel (AISI 304).
<b>Cable entries</b>	2 × M20 (one gland for one cable of size 6 ... 8 mm (0.02 ... 0.026 ft) is included in the standard delivery)
<b>Display</b>	Display with 8 digits for main information Index, menu and status symbols for dedicated information
Resolution	Totalized information can be displayed with 1, 2 or 3 decimals or automatic adjustment (default)
<b>Flow unit</b>	
Europe	Volume in m <sup>3</sup> and flow rate in m <sup>3</sup> /h
US	Volume in Gallon and flow rate in GPM
Australia	Volume in Mi and flow rate as MI/d
<b>Optional display units</b>	Volume: m <sup>3</sup> × 100, l × 100, G × 100, G × 1000, MG, CF × 100, CF × 1000, AF, Al, kl, BBL42 Flow: m <sup>3</sup> /min, m <sup>3</sup> /d, l/s, l/min, GPS, GPH, GPD, MGD, CFS, CFM, CFH, BBL42/s, BBL42/min, BBL42/h, BBL42/d
<b>Digital output</b>	2 passive outputs (MOS), individual galvanically isolated Maximum load ± 35 V DC, 50 mA short circuit protected
Output A function	Programmable as pulse volume – forward – reverse – forward/net – reverse/net
Output B function	Programmable as pulse volume (like output A), alarm
Output	Max. pulse rate of 50 Hz (pulse B) and 100 Hz (pulse A), pulse width of 5, 10, 50, 100, 500 ms

Transmitter	
<b>Communication</b>	IrDA: Standard integrated infrared communication interface with Modbus RTU protocol
Add-on modules	<ul style="list-style-type: none"> <li>RS 232 serial interface with Modbus RTU (Rx/Tx/GND), point to point with max. 15 m cable</li> <li>RS 485 serial interface with Modbus RTU (+/-/GND), multidrop with up to 32 devices with max. 1000 m cable</li> <li>Encoder interface module (for Itron 200WP) "Sensus protocol"</li> <li>3G/UMTS module with or without analog input cable</li> </ul>
<b>Power supply</b>	Auto detection of power source with display symbol for operation power
Internal battery pack	1 D-Cell 3.6 V/16.5 Ah 2 D-Cell 3.6 V/33 Ah
External battery pack	4 D-Cell 3.6 V/66 Ah
<b>Mains power supply</b>	12 ... 24 V AC/DC (10 ... 32 V) 2 VA 115 ... 230 V AC (85 ... 264 V) 2 VA Both mains power supply systems are upgradable for battery backup via internal D-Cell (3.6 V 16.5 Ah) or external battery pack.
Cable	3 m (9.8 ft) for external connection to mains supply (without cable plug)

## Flow Measurement

### SITRANS FM (electromagnetic)

#### Flow sensors

#### Battery-operated water meter MAG 8000

#### Technical specifications (continued)

Features	
<b>Application identification</b>	Tag number up to 15 characters
<b>Time and date</b>	Device embedded Real Time Clock (Synchronization with NTP server if 3G/UMTS module connected)
<b>Totalizer</b>	
MAG 8000	Totalizer 1 and Totalizer 2: Configurable to Forward, Reverse and Bidirectional netflow  Totalizer 3: (following totalizer 1 setting) resettable via display key
<b>Measurement</b>	
Low flow cut-off	Cut-off at 15 mm/s <sup>1)</sup>
• 7ME6810	Cut-off at 15 mm/s <sup>1)</sup>
• 7ME6820	
Empty pipe detection	Symbolised in display
Data logger	Logging of 26 records: selectable as daily, weekly or monthly logging
<b>Alarm</b>	Active alarm is indicated on the display.
<b>Data protection</b>	All data stored in an EEPROM. Totalizers 1 and 2 are backed up every 10 min, statistic every hour and power consumption and temperature measurement every 4 hours.  Password protection of all parameters and hardware protection of calibration and revenue parameters.
<b>Battery power management</b>	Optimal battery information on remaining capacity.  Calculated capacity includes all consuming elements and available battery capacity is adjusted related to change in ambient temperature.  Numbers of power-ups  Date and time registered for first and last time power alarm.
<b>Diagnostic</b>	
Continuous self test including	Coil current to drive the magnetic field  Signal input circuit  Data calculation, handling and storing
Alarm statistics and logging for fault analyzing	Electrode impedance to check actual media contact  Flow simulation to check pulse and communication signal chain for correct scaling  Number of sensor measurements (excitations)  Transmitter temperature (battery capacity calculation)  Low impedance alarm for change in media  Flow alarm when defined high flow exceeds  Verification mode for fast measure performance check
<b>Insulation test</b>	Test of signal immunity against disturbance and bad installation. Test interval is selectable and measurement is interrupted during the test period of 4 min.

Features	
<b>Leakage detection</b> (only Advanced version)	Monitoring the lowest flow or volume during selected time window within 24 hours. Leakage is detected over a selectable period where monitored value exceed the possible leakage level. Min. and max. values are stored with date registration. Last store value visible on the display.
<b>Meter Utilization</b> (only Advanced version)	6 registers for monitoring total time the meter has operated in different flow intervals. Registered intervals are free selectable as % of Q <sub>n</sub> (Q3).
<b>Tariff</b> (only Advanced version)	6 tariff registers count the volume delivered within the selected tariff windows, based on time of day or flow rates or a combination.  Tariff can also be used for consumption profile where consumption is related to different time intervals or flow rates.  Tariff values visible on the display.
<b>Settling date</b> (only Advanced version)	On a predefined date the totalizer 1 index value is stored. Old values are stored to show the latest two totalized 1 index values.  Settling values visible on the display.
<b>Statistic</b> (only Advanced version)	Min. flow rate with time and date registration  Max. flow rate with time and date registration  Min. daily consumption with date registration  Max. daily consumption with date registration  Latest 7 days total and daily consumption  Actual month consumption  Latest month consumption

<sup>1)</sup> Siemens warrants the measurement accuracy down to a flow velocity of 15 mm/s. For a flow velocity below 15 mm/s, we don't warrant the measurement accuracy.

### Technical specifications (continued)

#### MAG 8000 water meter uncertainty

To ensure continuous accurate measurement, flowmeters must be calibrated. The calibration is conducted at Siemens flow facilities with traceable instruments referring directly to the physical unit of measurement according to the International System of Units (SI).

Therefore, the calibration certificate ensures recognition of the test results worldwide, including the US (NIST traceability).

Siemens offers accredited calibrations assured to ISO 17025 in the flow range from 0.0001 m<sup>3</sup>/h to 10 000 m<sup>3</sup>/h. Siemens Flow Instruments accredited laboratories are recognized by ILAC MRA (International Laboratory Accreditation Corporation - Mutual Recognition Arrangement) ensuring international traceability and recognition of the test results worldwide.

The selected calibration determines the accuracy of the meter. A standard calibration results in max.  $\pm 0.4\%$  uncertainty and an extended calibration  $\pm 0.2\%$ . A calibration certificate follows every sensor and calibration data are stored in the meter unit.

#### MAG 8000 (7ME6810) for Fire Service applications

MAG 8000 (7ME6810) is FM Fire Service approved for automatic fire protection systems according to the Fire Service Meters Standard, Class Number 1044. The approval is applicable for the sizes DN 50, DN 80, DN 100, DN 150, DN 200, DN 250, and DN 300 (2", 3", 4", 6", 8", 10", and 12") with ANSI B16.5 Class 150 flanges. The FM Fire Service approved product can be ordered via the Z-options P20, P21 and P22.

#### Grounding

The sensor body must be grounded using grounding straps and/or grounding rings to protect the flow signal against stray electrical noise. This ensures that the noise is carried through the sensor body and a noise-free measuring area within the sensor body. For MAG 8000 Irrigation grounding rings on both sides are factory-mounted.

#### Metal pipes

On metal pipes, connect the straps to both flanges.

#### Plastic pipes

On plastic pipes and lined metal pipes, optional grounding rings must be used at both ends.

Grounding rings has to be ordered separately see "grounding ring kit"

#### Combination of metal and plastic pipes

A combination of metal and plastic requires straps for metal pipe and grounding rings for plastic pipe.

## Flow Measurement

### SITRANS FM (electromagnetic)

#### Flow sensors

## Battery-operated water meter MAG 8000

### Technical specifications (continued)

#### Battery operation time and calculation

The battery operation time depends on the connected battery pack as well as the operation condition of the meter.

MAG 8000 calculates the remaining capacity every 4 hours and includes all consuming elements. Calculation compensates for temperature influence on battery capacity.

The graphic shows the effect from other temperatures. A variation in temperature from 15 °C to 55 °C (59 to 131 °F) reduces the capacity by 17 % in the table from 15 Ah to 12.5 Ah.

At typical revenue scenario of expected battery operation time can be seen in the table below.

The measurement for calculating the rest capacity of the battery life time is only completed if the system has no active fatal faults or the empty pipe is active. Maximum battery specification is 10 years operation.

#### Scenario - Revenue application

Output A	Pulse rate max. 10 Hz
Output B	Alarm or call-up
Meter dialog	1 hour per month
Add-com	None
Temperature profile	<ul style="list-style-type: none"> <li>• 5 % at 0 °C (32 °F)</li> <li>• 80 % at 15 °C (59 °F)</li> <li>• 15 % at 50 °C (122 °F)</li> </ul>

### Battery lifetime (subject to the assumptions mentioned above)

#### MAG 8000 for abstraction and distribution network applications (7ME6810) and MAG 8000 CT for revenue and bulk metering (7ME6820)

Excitation frequency (24 h operation)	1/60 Hz	1/30 Hz	1/15 Hz	1/5 Hz	1.5625 Hz	3.125 Hz	6.25 Hz	
2 D-Cell battery 33 Ah Internal battery pack	DN 25 ... 150 (1" ... 6")	9 years	9 years	7 years	43 months	8 months	3 months	2 months
	DN 200 ... 600 (8" ... 24")	9 years	6 years	4 years	22 months	3 months	1 month	N/A
	DN 700 ... 1200 (28" ... 48")	7 years	4 years	2 years	12 months	1 months	N/A	N/A
4 D-Cell battery 66 Ah External battery pack	DN 25 ... 150 (1" ... 68")	15 years	15 years	14 years	86 months	16 months	7 months	4 months
	DN 200 ... 600 (8" ... 24")	15 years	13 years	8 years	44 months	7 months	3 months	N/A
	DN 700 ... 1200 (28" ... 48")	14 years	9 years	5 years	24 months	3 months	N/A	N/A

#### Typical battery lifetime scenario for MAG 8000 with 3G module

Transmission once a day and MAG 8000 factory settings

2 D-Cell battery 33 Ah Internal battery pack	3 ... 4 years
4 D-Cell battery 66 Ah External battery pack	7 ... 8 years

External battery pack can be used as battery backup for mains power supply (if two cable entries in one cable gland are needed, order cable glands with two entries, see accessories on page 3/141)

Serial RS 232/RS 485 add-on communication modules are designed for mains powered systems as the battery operation time will be reduced. At 1 hour communication per month (all meter data collected 2 times per day) and the module is connected, the operation time is reduced to:

- RS 232:
  - Switched on constantly:
    - 6.4 months for 2 D-cell internal battery pack / 12.8 months for 4 D-cell ext. battery pack
  - Switched on 2 s/day:
    - 39 months for 2 D-cell internal battery pack / 78 months for 4 D-cell ext. battery pack
- RS 485:
  - With the termination resistor on:
    - 2.3 months for 2 D-cell internal battery pack / 4.6 months for 4 D-cell ext. battery pack
  - With the termination resistor off:
    - 39 months for 2 D-cell internal battery pack / 78 months for 4 D-cell ext. battery pack, in case the entire communication time is less than 4 hours/day

DN 300	295	374	449

## Circuit diagrams

### Electrical installation and pulse output – Connection diagram

HL = Hardware lock key connection  
V = Push button for verification mode

### Pulse wire connection

The pulse output can be configured as volume, alarm or call-up.  
The output can be connected as positive or negative logic.  
R = pull up/down is selected in relation to the  $V_x$  power supply and with a max. current  $I$  of 50 mA.

Use shielded cable to avoid EMC problems. Make sure the shield is correctly mounted under the cable clamp (no pig tail).

## Flow Measurement

SITRANS FM (electromagnetic)

Flow sensors

MAG 8000 for abstraction and distribution network application (7ME6810)

### Overview

### Benefits

#### **Easy to install**

- Compact or remote solution with factory mounted cable
- IP68/NEMA 6P enclosure. Sensor can be buried.
- Flexible power supply - internal or external battery pack or mains power supply with battery back-up possibilities

#### **Long-term stability/Low cost of ownership**

- No moving parts in a robust construction means less wear and tear
- Basic and advanced transmitter versions with different optional add-on communication modules fulfil various customer requirements for high cost efficiency
- Up to 0.2 % maximum uncertainty
- Bi-directional measurement with an outstanding low flow performance
- Up to 10 years maintenance-free operation in typical applications

#### **Intelligent information, easy to access**

- Advanced information on site
- Advanced statistics and diagnostics
- Optional high-performance 3G/UMTS module offers an efficient solution for remote measurement and monitor via wireless networks.

## Overview

## Benefits

### **Approvals**

- MI-001, OIML R 49/OIML R 49 MAA
- FM Fire Service

### **Easy to install**

- Compact or remote solution with factory mounted cable and customer setting from factory
- IP68/NEMA 6P enclosure. Sensor can be buried.
- Flexible power supply - internal or external battery pack or mains power supply with battery back-up possibilities

### **Long-term stability/Low cost of ownership**

- No moving parts in a robust construction means less wear and tear
- Basic and advanced transmitter versions with different optional add-on communication modules fulfil various customer requirements for high cost efficiency
- Bi-directional measurement with an outstanding low flow performance
- Up to 10 years maintenance-free operation in typical applications
- Insignificant pressure drop

### **Intelligent information, easy to access**

- Advanced information on site
- Advanced statistics and diagnostics
- Connectable to common AMR systems

## Flow Measurement

SITRANS FM (electromagnetic)

Flow sensors

### MAG 8000 CT for revenue and bulk metering (7ME6820)

#### Technical specifications (continued)

##### MAG 8000 CT (Revenue program) MI-001

MAG 8000 CT program is type approved according to international water meter standard OIML R 49. Since the first November 2006 the MI-001 water meter directive is in force, which means that all water meters can be sold across the EU borders if the water meters contain a MI-001 label.

The MAG 8000 CT MI-001 verified and labeled products are a Class II approval according to Directive 2014/32/EU of the European Parliament and Council of 26 February, 2014 on measuring instruments, Annex III Water meters (MI-001) in the sizes from DN 50 to DN 600.

The MID certification is obtained as a B + D module approval according to the above mentioned directive.

Module B: Type approval according to OIML R 49

Module D: Quality insurance approval of production

**MAG 8000 CT MI-001** verified and labeled products at a given  $Q3$  and  $Q4/Q3 = 1.25$  and  $Q2/Q1 = 1.6$  measuring ranges see below table:

Made in France		

#### Installation conditions

Please refer to "System information SITRANS FM electromagnetic flowmeters".

#### Battery operation time and calculation

The battery operation time depends on the connected battery pack as well as the operation condition of the meter.

MAG 8000 calculates the remaining capacity every 4 hours and includes all consuming elements. Calculation compensates for temperature influence on battery capacity (drawing).

#### MAG 8000 CT (7ME6820) for Fire Service applications

MAG 8000 CT (7ME6820) is FM Fire Service approved for automatic fire protection systems according to the Fire Service Meters Standard, Class Number 1044. The approval is applicable for the sizes 50, DN 80, DN 100, DN 150, DN 200, DN 250, and DN 300 (2", 3", 4", 6", 8", 10", and 12") with ANSI B16.5 Class 150 flanges. The FM Fire Service approved product can be ordered via the Z-options P20, P21 and P22.

Advanced version, remote cables mounted on sensor with IP68/NEMA 6P plugs

5 m (16.4 ft)

10 m (32.8 ft)

20 m (65.6 ft)

30 m (98.4 ft)

#### Communication interface

No additional "add-on" communication module installed

Serial RS 485 with Modbus RTU (Terminated as end device)

Serial RS 232 with Modbus RTU

Encoder interface for ITRON 200WP radio with "Sensus" protocol"

3G/UMTS communication module with remote antenna; 5 m (16.4 ft) cable

3G/UMTS communication module with analog inputs and remote antenna; 5 m (16.4 ft) cable

#### Power supply

Internal battery (no battery included)

Internal battery pack installed<sup>1)</sup>

Power cable (1.5 m (4.9 ft)) with IP68/NEMA 6P plugs for external battery (no battery included)

12/24 V AC/DC power supply with battery backup and 3 m (9.8 ft) power cable for external connection (no battery included)

115 ... 230 V AC power supply with battery backup and 3 m (9.8 ft) power cable for external connection (no battery included)

- Lithium batteries are subject to special transportation regulations according to United Nations "Regulation of Dangerous Goods, UN 3090 and UN 3091". Special transport documentation is required to observe these regulations. This may influence both transport time and costs.
- For more details and references of the ranges please see the tables on the previous pages.
- Standard calibration or according to FM Fire Service requirements if P20, P21 or P22 is selected as Z option.

### MAG 8000 3G/UMTS Wireless Communication Module

#### Overview

3G/UMTS communication module

PC-IrDA connection

#### **MAG 8000 3G/UMTS Wireless Communication Module**

The 3G/UMTS wireless communication module is a compact built-in solution which can be installed in the existing MAG 8000 with SW version 3.02 and higher, supporting HSDPA cat. 8/HSUPA Cat.6 at 5 UMTS bands, with the ability to fall back to GSM/GPRS network in case there is no 3G signal.

The 3G/UMTS module collects comprehensive measurement data from MAG 8000 at an interval down to 1 minute, allows for data transmission via numerous protocols including SMS, email via SMTP, email via SMTPS (TLS/SSL-based encryption), FTP, and FTPS (TLS/SSL-based encryption, implicit), with a customer configurable transmission interval (down to 1 hour). This provides customers with the flexibility to receive data via email, FTP or text message for the monitoring and control systems anywhere in the world.

TLS/SSL based data encryption provides a high level information security to protect customers data privacy.

The 3G/UMTS module offers

- Remote Qualification Certificate feature to enable the offsite diagnostic and audit on devices installed anywhere in the world
- 2-channel analog input measurement for external ratiometric pressure transmitter, transmission together with flow measurement (2-in-1 solution)
- 4-20 mA alarm signal detection and realtime SMS alarm for tamper protection and flooding situations
- Real-time clock synchronization with internet NTP server, ensuring that all measurement data is accurately time-stamped
- Data transmission at customer-specified points in time, allowing for synchronization of information from multiple MAG 8000 devices

The OPC server specifically designed for the MAG 8000 3G/UMTS module is offered free of charge. With this value-added package, the opportunity for measurement data collection and further processing/analyzing for system integration and automation is offered.

The package of information retrieved via the csv file includes:

- Time stamp
- Flow rate
- Tot 1
- Tot 2
- Tot 3
- Analog 1 (mA)
- Analog 2 (V)
- Battery lifetime
- Alarm list (as decimal format)

Description	Article No.	
Service adaptor for 3G/UMTS module	<b>A5E03436699</b>	
Alkaline battery for MAG 8000 demo transmitter (3 V 13 Ah) (No dangerous goods limitations)	<b>FDK:087L4142</b>	

<sup>1)</sup> Lithium batteries are subject to special transportation regulations according to United Nations "Regulation of Dangerous Goods, UN 3090 and UN 3091". Special transport documentation is required to observe these regulations. This may influence both transport time and costs.

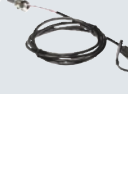

<sup>2)</sup> For cable connection through MAG 8000 transmitter bottom part.

When MAG 8000 (7ME6810 and 7ME6820) is installed in PVC or coated pipelines, grounding rings must be installed additionally.

Grounding rings, type C must be used for the 7ME6810 and 7ME6820 routes (sizes > DN 300). Please see grounding rings in the section MAG 3100 Grounding rings and be aware that the mentioned MLFB codes include only 1 grounding ring. Grounding rings DN 25 to DN 300 in stainless steel are packed in pairs and sold as a "grounding ring kit".

## Flow Measurement

### SITRANS FC (Coriolis)

#### System information

#### Overview

SITRANS FC Coriolis mass flowmeters are designed for measurement of a variety of liquids and gases. The meter offers accurate measurement of mass flow, volume flow, density, temperature and fraction.

#### Compatibility between transmitters and sensors

### Benefits

#### Greater flexibility

- Wide product program
- High performance and top-end flowmeters
- Compact or remote installation using the same transmitters and sensors within their flowmeter series
- Full integration in SIMATIC solutions

#### Easier commissioning

All SITRANS FC Coriolis flowmeters feature a sensor related memory unit SensorFlash which stores calibration data and transmitter settings for the lifetime of the product as well as all product documentation and certificates.

At commissioning the flowmeter commences measurement without any initial programming.

#### Easier service

- Comprehensive self-diagnosis and service menu enhances troubleshooting and meter verification.
- Transmitter replacement requires no programming. SensorFlash data updates all settings after initialization.

#### Room for growth

- FC330/FC310: Digital platform allows for any sensor in the range DN 15 to DN 150 to be matched in compact or remote installation.
- FC430/FC410: Robust and compact sensor dedicated for OEM and skid manufacturer in sizes DN 15 to DN 50. Also available in a true sanitary version.
- MASS 2100/FC300 DN 4 sensors with FCT digital platform transmitters allows all sensors from DI 1.5 to DI 15 to be matched with the FCT010, FCT030 and FCT070 transmitters.
- FCT070 transmitter solution as a fully integrated technology module in SIMATIC ET 200SP. Seamless communicating with all SIMATIC solutions by very fast PROFINET communication. Advanced batch function blocks are available.

### Application

Coriolis flowmeters are generally suitable for measuring liquids and gases. The flow measurement is to a large extent independent of changes in process conditions/parameters such as temperature, density, pressure, viscosity, conductivity and flow profile.

Due to this versatility the meter is easy to install and use. The Coriolis flowmeter is recognized for its high accuracy over a wide turn-down ratio and its ability to be a true multi parameter device.

#### The main applications of the Coriolis flowmeter can be found in all industries, such as:

<b>Chemical</b>	Detergents, bulk chemicals, pharmaceuticals, acids, alkalis, filling and dosing
<b>Food and beverage</b>	Dairy products, beer, wine, softdrinks, °Plato/°Brix, fruit juices and pulps, bottling, CO2 dosing, CIP liquids
<b>Automotive</b>	Fuel injection nozzle and pump testing, filling of AC units, engine consumption measurement, paint robots
<b>Oil and gas</b>	Filling of gas bottles, furnace control, test separators, LPG, well-head water-cut monitoring. All hydrocarbon fluids in refineries
<b>Marine</b>	Fuel consumption management, boiler control, bunkering management
<b>Water &amp; waste water</b>	Dosing of chemicals for water treatment

- 1) Sensor pressure and temperature limited to ANSI class 600 rating.
- 2) See technical specifications.
- 3) Increased error for gas mass flow measurement.
- 4) Only DI 6 is CRN.
- 5) Max. 100 bar.
- 6) Also for dust zone 21.

## Flow Measurement

### SITRANS FC (Coriolis)

#### System information

#### Function

The SITRANS FC flow measuring principle is based on the Coriolis effect. The flowmeter consists of a sensor and a transmitter. The sensor can be digital with an integrated frontend DSL or for low flow sensors also analogue sensors directly connected to the transmitter.

There are following sensors available:

- SITRANS FC MASS 2100 DI 1.5 to DI 15 mm in a single loop design
- SITRANS FC300 DN 4 in a single loop design
- SITRANS FCS300 DN 15 to DN 150 mm in bended dual tube design
- SITRANS FCS400 DN 15 to DN 50 mm in a compact bended dual tube design for OEM and other specific applications.

All sensors can be freely combined with three different transmitters in various configurations and protection style.

- SITRANS FCT010 transmitter: single channel Modbus
- SITRANS FCT030 transmitter: multi channel transmitter with full graphical display and full feature loaded.
- FCT070 transmitter: for full integration in the Siemens SIMATIC TIA and PCS7 world by the ET 200SP ST & HF. Full functionality including advanced functions blocks for easy integration. Functions block in TIA and APL library.

The SITRANS FC sensors are energized by an electro-mechanical driver circuit which oscillates the pipe at its resonant frequency.

Two pick-ups, 1 and 2 are placed symmetrically on both sides of the driver. When liquid or gas flows through the sensor, Coriolis force will act on the measuring pipe and cause a pipe deflection which can be measured as a phase shift on pick-up 1 and 2. The phase shift is proportional to the mass flow rate.

The amplitude of the driver is automatically regulated to ensure a stable output from the 2 pick-ups. The temperature of the tubes is measured by a Pt1000. The flow-proportional signal from the 2 pick-ups, the temperature measurement and the driver frequency are fed into the SITRANS FC transmitter for calculations of mass, volume, fraction, temperature and density. The signal transfer function is based on a DFT technology (Discrete Fourier Transformation).

The transmitter has built-in noise filters, which can be used to improve the meter's performance if the installation and application conditions are not ideal. Typically influence from process noise such as pump pulsations, mechanical vibrations, oscillating valves and aerated flow conditions can be reduced considerably.

SensorFlash flow memory units

FCT010 flow transmitters communicate via Modbus RTU and FCT030 via HART/Modbus/PROFIBUS DP / PROFIBUS PA beside up to 4 individual I/O free programmable as analogue, frequency, pulse or relay outputs. As well as static inputs can be set up.

The FCT070 transmitter is a technology module for the SIMATIC ET 200SP ST & HF system with directly connection from the digital sensor. Full transmitter functionality available to be set up directly in the SIMATIC system. The ET 200SP is very often connected to other SIMATIC systems like PCS7; S7 1200 and S7 1500 via the direct connection by PROFINET. Fast and simple signal transfer and controlling.

## Integration

### General installation requirements / System design information

The SITRANS FC mass flowmeter is suitable for in- and outdoor installations. The standard instrument meets the requirements of Protection Class IP67/NEMA 4x or IP65. The flowmeter is bidirectional and can be installed in almost any orientation, however, the sensor is not self-emptying in all positions.

It is important to ensure that the meter tubes are always completely filled with homogeneous fluid. Otherwise measuring errors may occur. Suitable fluids are clean liquids, pastes, light slurries or gases. Condensing vapors, aerated liquids or slush are not recommended.

The corrosion and erosion resistance of the fluid-wetted materials must be evaluated to secure long lifetime of the sensor. The pressure drop through the sensor is a function of the properties of the fluid and the flow rate. The Sizing Program (download from <https://www.siemens.com>) can be used to calculate the pressure drop and the accuracy over the full flowrange in use for the application.

#### Sizing

**Liquids:** The correct sensor size is determined by the allowable pressure drop at the maximum flowrate the meter is used with. After selecting the sensor size the accuracy throughout the flowrate range for the application can be checked by using the Sizing Program.

**Gases:** The correct size is very often determined by the calculation of the Mach number at maximum flowrate for the application. After that the accuracy throughout the flowrange should be checked.

The preferred flow direction is indicated by the arrow on the flowmeter. Flow in this direction will be indicated as positive.

**Note:** For some sensor types, specific installation requirement has been taken into account. Please also see under the specific sensor type chapter.

#### General installation orientation

- FCS300 and FCS400 – sensors.  
The optimal installation orientation is vertical with flow upwards (liquids). This ensures that suspended solids or bubbles are completely pushed through the sensor. A drain valve below the sensor will allow the pipe and sensor to drain. To secure selfdraining a up to 10° off vertical installation could be required.
- MASS 2100/FC300 DN4 – sensors.  
The optimal installation orientation is horizontal.

#### Supports

- In order to support the weight of the flowmeter and to ensure reliable measurements when external effects exist (e.g. vibrations), the sensor should be installed in well-supported pipelines. Supports or hangers should be installed symmetrically and stress-free in close proximity to the process connections.

#### Shut-off devices

- To conduct a system zero adjustment, shut-off devices are ideally required in the pipeline before and after the sensor:
- A bypass valve is recommended where regular zero adjustment is planned to avoid disruption of the flowing system.

#### Installation: straight run requirements

- The mass flowmeter does not require any flow condition or straight inlet sections. Care should be exercised to ensure that any valves, gates, sight glasses etc. do not cavitate and are not set into vibration by the flowmeter.

#### System design information

- The presence of gas bubbles in the fluid may result in erroneous measurements, particularly in the density measurement. Therefore, the flowmeter should not be installed at the highest point in the system where bubbles are possibly largest.
- Long drop lines downstream from the flowmeter should be avoided to prevent the meter tube from draining during operation.
- The flowmeter should not come into contact with any other objects. Avoid attachments to the housing.
- When the cross-section of the connecting pipeline is larger than the sensor size, suitable standard reducers may be installed.
- If strong vibrations exist in the pipeline, they should be damped using elastic pipeline elements. The damping devices must be installed outside the supported flowmeter section and outside the section between the shut-off devices.
- Make sure that any dissolved gases, which are present in many liquids, do not outgas. The back pressure at the outlet should be at least 0.2 bar (3 psi).
- Assure that operation below the vapor pressure cannot occur when a vacuum exists in the meter tube or for fluids which boil readily.
- The sensor should not be installed in the vicinity of strong electromagnetic fields, e.g. near motors, pumps, transformers etc.
- When operating more than one meter in one or multiple interconnected pipelines, the sensors should be spaced distant from each other or the pipelines should be decoupled to prevent cross talk.

#### Zero adjustment

- In order to adjust the zero under operating conditions it must be possible to reduce the flow rate to „ZERO“ while the meter tube is completely filled. It is important for accurate measurements that during the zero adjustment there are no gas bubbles in the flowmeter. It is also important that the pressure and temperature in the meter tube be the same as that which exists during operation.

## Flow Measurement

### SITRANS FC (Coriolis)

#### System information

#### Technical specifications

##### Flowmeter uncertainty/specifications

To ensure continuous accurate measurement, flowmeters must be calibrated.

The Siemens flowmeter calibration process is ISO 9001-certified, ensuring the entire calibration procedure is controlled to the highest quality standards. All primary measuring instrumentation used by the Flow Laboratory during the performance of its calibrations, has been calibrated with international standards traceability referring directly to the physical unit of measurement according to the International System of Units (SI). Therefore the calibration certificate ensures recognition of the test results worldwide, including the US (NIST traceability).

A calibration certificate is shipped with every sensor and calibration data are stored in the SD Memory card. The sensors has the calibration data written to the frontend section DSL.

A backup of all calibrations and PDF copies of all certificates are stored in the SensorFlash.

##### Sensor flow capacity

FCS300 sensors for liquids:

<sup>1)</sup>  $Q_{\text{nom}} = \Delta$  1 barg @ water 20 °C.

<sup>2)</sup>  $Q_{\text{max}} = 10$  m/sec @ water 20 °C at inlet (up to 25 m/s in the flowtubes).

<sup>3)</sup> For 0.1% sensor.

For gas applications the massflow rate is depending on the gas type. The max. flowrate is calculated with the Mach-Number to be  $Ma = 0.3$ .

- For flow > 5% of the sensors max. flow rate, the error can be read directly from the curve below.
- For flow < 5% of the sensors max. flow rate, use the formula to calculate the error.

The error curve is plotted from the formula:

$$E = \pm \sqrt{(\text{Cal.})^2 + \left(\frac{z \times 100}{q_m}\right)^2}$$

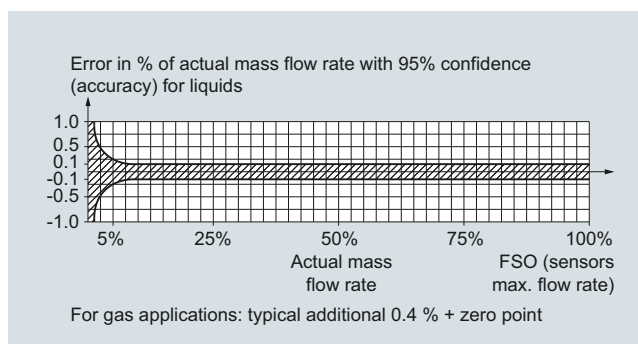

E Error

Z Zero point error [kg/h]<sup>1)</sup>

qm Mass flow [kg/h]

Cal. Calibrated flow accuracy: 0.10, 0.15 or 0.20

<sup>1)</sup> Zero point error for each sensor is shown in the tables below.

##### Reference conditions for flow calibration

Flow conditions	Fully developed flow profile
Temperature, medium	25 °C (77 °F) ± 5 K
Temperature, ambient	25 °C (77 °F) +10/-5 K
Liquid pressure	2 ± 1 bar
Density	0.997 g/cm <sup>3</sup>
Brix	40 °Brix
Supply voltage	$U_n \pm 1\%$
Warming-up time	30 min.
Cable length	5 m between transmitter and sensor

##### Additions in the event of deviations from reference conditions

Current output	As pulse output ± (0.1 % of actual flow +0.05 % FSO)
Effect of ambient temperature	<ul style="list-style-type: none"> <li>• Display/frequency/pulse output: &lt; ± 0.003 % / K act.</li> <li>• Current output: &lt; ± 0.005 % / K act.</li> </ul>
Effect of supply voltage	< 0.005 % of measuring value on 1 % alteration

## SITRANS FC (Coriolis)

### System information

#### Technical specifications (continued)

##### PROFIBUS PA/DP for FCT030

###### General specifications

PROFIBUS device profile      Profile V 4.0 and compatible to V 3.x

###### Electrical specification DP

###### Physical layer specifications

Applicable standard      IEC 61158/EN 50170  
 Physical Layer (transmission technology)      RS 485  
 Transmission speed      ≤ 12 Mbits/s  
 Number of stations      Up to 32 per line segment (maximum total of 126)

###### Cable specification (Type A)

Cable design      Two wire twisted pair  
 Shielding      CU shielding braid or shielding braid and shielding foil  
 Impedance      35 up to 165 Ω at frequencies from 3 ... 20 MHz  
 Cable capacity      < 30 pF per meter  
 Core diameter      > 0.34 mm<sup>2</sup>, corresponds to AWG 22  
 Resistance      < 110 Ω per km  
 Signal attenuation      Max. 9 dB over total length of line section  
 Max. bus length      100 m at 12 Mbit/s, up to 1.2 km at 93.75 kbit/s. Extendable by repeaters

###### Electrical specification PA

###### Physical layer specifications

Applicable standard      IEC 61158/EN 50170  
 Physical Layer (transmission technology)      IEC 61158-2  
 Transmission speed      31.25 Kbits/s  
 Number of stations      Up to 32 per line segment (maximum total of 126)  
 Max. basic current [I<sub>B</sub>]      14 mA  
 Fault current [I<sub>FDE</sub>]      0 mA  
 Bus voltage      9 ... 32 V (non Ex)

###### Preferred cable specification (Type A)

Cable design      Two wire twisted pair  
 Conductor area (nominal)      0.8 mm<sup>2</sup> (AWG 18)  
 Loop resistance      44 Ω/km  
 Impedance      100 Ω ± 20 %  
 Wave attenuation at 39 kHz      3 dB/km  
 Capacitive asymmetry      2 nF/km  
 Bus termination      Passive line terminated on both ends  
 Max. bus length      Up to 1.9 km. Extendable by repeaters

###### IS (Intrinsic Safety) data

Required sensor electronics      Compact mounted SITRANS FCT030  
 FISCO      Yes  
 Max. U<sub>I</sub>      17.5 V  
 Max. I<sub>I</sub>      380 mA  
 Max. P<sub>I</sub>      5.32 V  
 Max. L<sub>I</sub>      10 μH  
 Max. C<sub>I</sub>      5 nF  
 Max. U<sub>O</sub>      1.3 V  
 Max. I<sub>O</sub>      50 μA

###### FISCO cable requirements

Loop resistance R<sub>C</sub>      15 ... 150 Ω/km  
 Loop inductance L<sub>C</sub>      0.4 ... 1 mH/km  
 Capacitance C<sub>C</sub>      80 ... 200 nF/km  
 Max. Spur length in IIC and IIB      30 m  
 Max. Trunk length in IIC      1 km  
 Max. Trunk length in IIB      5 km

###### PROFIBUS parameter support

The following parameters are accessible using a Class 1 Master.

<sup>1)</sup> Requires a flowmeter ordered with fraction option.

### Overview

FCT030 is based on the latest developments within digital signal processing technology – engineered for high measuring performance, fast response to step changes in flow, fast dosing applications, high immunity against process noise, easy to install commission and maintain.

The FCT030 transmitter delivers true multi-parameter measurements i.e. massflow, volumeflow, standard volumeflow, density, temperature and fraction.

The FCT030 IP67 transmitter can be remote connected or compact mounted with all sensors of type FCS300 sizes DN 15 to DN 150, FCS400 sizes DN 15 to DN 50, MASS 2100 DI 1.5, DI 3, DI 6, DI 15 and FC300 DN 4.

### Fraction

The transmitter FCT030 can be set up at works to measure and report various fraction concentrations of two-part mixtures or solutions. Where a discrete relationship exists between concentration and density at particular temperatures a calculation is performed and the percentage concentration by volume or mass of Part A or Part B (100 % minus Part A) is measured. For solutions and some mixtures the total mass, or dry weight, is also available.

In some industries, a selection of standard density scales has been adopted to represent the density or relative density of the process fluid.

If "Standard fractions" option is chosen at ordering, the following fraction or standard density scales can be selected in the setup menu:

- |                    |   |
|--------------------|---|
| • API number       | • Twaddell  |
| • Balling          | • %HFCS42   |
| • °Baumé light     | • %HFCS55   |
| • °Baumé heavy     | • %HFCS90   |
| • °Brix            | • Ethanol-Water (ABM) <sup>1)</sup> 0 % to 20 %   |
| • °Oeschlé         | • Ethanol-Water (ABM) <sup>1)</sup> 15 % to 35 %  |
| • Plato            | • Ethanol-Water (ABM) <sup>1)</sup> 30 % to 55 %  |
| • Specific Gravity | • Ethanol-Water (ABM) <sup>1)</sup> 50 % to 100 % |

<sup>1)</sup> ABM: Alcohol by Mass  
ABV: Alcohol by volume on request

### Benefits

#### Flow calculation and measurement

- Dedicated mass flow calculation with DSP technology
- Fast dosing and flow step response with maximum 10 ms response time
- 100 Hz update rate to all outputs
- Maximum data age from pickup to output is 20 ms (two update cycles)
- Independent low flow cut-off settings for mass and volume flowrates
- Automatic zero-point adjustment on command from discrete input or host system
- Empty pipe monitoring

#### Operation and display

- User-configurable operation display
  - Full graphical display 240 × 160 pixels with up to 6 programmable views
  - Self-explaining alarm handling/log in clear text
  - Help text for all parameters appears automatically in the configuration menu
  - Keypad can be used for controlling dosing as start/stop/hold/reset
- SensorFlash technology stores production specific system documentation and provides removable memory of all flowmeter setups and functions
  - Calibration certificates
  - Pressure and material test certificates (as ordered)
  - Non-volatile memory backup of operational data
  - Transfer of user configuration to other flowmeters
  - Alarm history log
  - Parameter change log
  - Logging of min and max process values
  - Data logging of process values and parameter (including diagnostic parameters)

#### Alarms and safety

- Advanced diagnosis and service menu enhances troubleshooting and meter validation
- Configurable upper and lower alarm and warning limits for all process values
- Alarm handling can be selected between Siemens and NAMUR standard configurations

#### Outputs and control

- Built-in dosing controller with compensation and monitoring comprising 3 built-in totalizers
- Multi-parameter outputs, individually configurable for mass-flow, volumeflow, standard volumeflow, density, temperature or fraction flow such as °Brix or °Plato

Up to four I/O channels are configured as follows:

#### Channel 1

Channel 1 is 4 to 20 mA analog output with HART 7.5, PROFIBUS PA, PROFIBUS DP or Modbus RS 485 RTU. The current signal can be configured for massflow, volumeflow or density, standard volume flow, medium temperature, Fraction A and B and Fraction A% and B%.

#### Channel 2

Channel 2 is a signal output which can be freely configured for any process variable.

## Flow Measurement

### SITRANS FC (Coriolis)

#### Transmitters

#### SITRANS FCT030

##### Benefits (continued)

- Analog current (0/4 to 20 mA)
- 3 stage analog valve dosing control
- Frequency or pulse
- Digital one or two-valve dosing control in combination with channel 3 or 4
- Operational and alarm status

##### Channels 3 and 4

Channels 3 and 4 can be ordered with signal (freely configured for any process variable) or relay outputs, or signal input.

##### Signal

Signal output can be user configured to:

- Analog current (0/4 to 20 mA)
- 3 stage analog valve dosing control
- Frequency or pulse
- Redundant frequency or pulse (linked to Channel 2)
- Digital one or two-valve dosing control
- Operational and alarm status

##### Relay

Relay output(s) can be user configured to:

- Digital one or two-valve dosing control
- Operation status including flow direction
- Alarm status

##### Signal input

Signal input can be user configured for

- Dosing control
- Totalizer reset functions
- Force or freeze output(s)
- Initiate automatic zero point adjustment

Signal outputs and inputs for non hazardous areas can be changed for active or passive operations by dip switch.

For hazardous areas Signal outputs and inputs can't be changed by dip switch, and has to be selected individually by ordering.

During service and maintenance all outputs can be forced to a preset value for simulation, verification or calibration purposes.

##### Approvals and certificates

The FCT030 coriolis flowmeter program was designed from the ground up to comply with or exceed the requirements of international standards and regulations.

##### Application

SITRANS FCT030 transmitters are suitable for applications within the entire process industry where there is a demand for accurate flow measurement. The meter is capable of measuring both liquid and gas flow.

Coriolis flowmeters can be applied in all industries, such as:

- Chemical & Pharma: detergents, bulk chemicals, acids, alkalis, paint mixing systems, solvents and resins, pharmaceuticals, blood products, vaccines, insulin production
- Food & Beverage: dairy products, beer, wine, soft drinks, °Brix/°Plato, fruit juices and pulps, bottling, CO<sub>2</sub> dosing, CIP/SIP-liquids, mixture recipe control

- Automotive: fuel injection nozzle & pump testing, filling of AC units, engine consumption
- Oil & Gas: filling of gas bottles, furnace control, test separators
- Hydrocarbon processing: oil refining, derivatives manufacturing, polymerisation
- Water & Waste Water: dosing of chemicals for water treatment

The multiple outputs and bus communication mean that all of the process information can be read either instantaneously (10 ms update) or periodically as plant operation requires.

##### Design

The transmitter SITRANS FCT030 is designed in an IP67/NEMA 4X aluminum enclosure with corrosion resistant coating. It can be remote connected or compact mounted with the following sensors:

- FCS300 DN 15, DN 25, DN 50, DN 80, DN 100, DN 150
- FCS400 DN 15, DN 25 and DN 50
- MASS 2100 DI 1.5, DI 3, DI 6, DI 15
- FC300 DN 4

FCT030 is available with current output HART 7.5, Modbus RS 485 RTU, PROFIBUS DP or PROFIBUS PA as standard on Channel 1.

The transmitter has a modular design with discrete, replaceable electronic modules and connection boards to maintain separation between functions and facilitate field service. All modules are fully traceable and their provenance is included in the transmitter setup.

##### SensorFlash

SensorFlash is a standard, 4 GByte micro SD card with the ability to be updated by PC. It is supplied with each sensor with the complete set of certification documents including calibration report. Material, pressure test, factory conformance certificates are optional at ordering.

The Siemens SensorFlash memory unit offers the following features and benefits:

- Automatically program any similar transmitter in seconds to the operation standard
- Transmitter replacement in less than 5 minutes
- True "plug & play" provided by integrated cross-checking data consistency and HW/SW version verification
- Permanent memory of operational and functional information from the moment that the flowmeter is switched on
- New firmware updates can be downloaded from the Siemens internet portal for Product Support and placed onto SensorFlash (unmounted from the transmitter and inserted into a PC's SD card slot). The firmware is then inserted into the existing flowmeter and the complete system upgraded.
- Storing of alarm history log
- Storing of parameter change log
- Storing of process peak values log

##### Datalogging on SensorFlash

The following functions are available:

- Logging of process values and diagnostic values simultaneous
- Logging of parameter settings
- Selectable logging interval

### Function

The following functions are available:

- Mass flowrate, volume flowrate, density, process temperature, frame temperature, fraction flow
- Up to four output/input channels selected at ordering
- Outputs can be individually configured with mass, volume, density etc.
- Three built-in totalizers which can count forward, backward or forward and backward
- Low flow cut-off, adjustable
- Density cut-off or empty pipe cut-off, adjustable
- Flow direction adjustable
- Alarm system consisting of alarm-log, alarm pending menu
- Internal data logger is updated each 10 minutes with operational data such as system health, totalizer values, all configurations and data needed for custody transfer requirements to OIML R 117 and NTEP
- Display of operating time with real-time clock. Daylight saving time is not implemented
- Uni/bidirectional flow measurement
- Flowrate outputs are freely configurable between maximum negative and maximum positive flows according to the sensor capacity
- Limit switches programmable for flow, density, temperature or fraction process values. Limit points can be graded as warning and alarm for values both above and below nominal process conditions
- Process noise filter for optimization of measurement performance under non-ideal application conditions. 5-stage pumping filter compensates for flow fluctuations caused by e.g. single acting piston pumps
- Full dosing controller with 5 user-configurable recipes
- Automatic zero adjustment menu, with zero point evaluation display
- Full service menu for effective and straight forward application and meter troubleshooting
- Precise temperature measurement ensures optimum accuracy on massflow, density and fraction flow.
- Fraction flow computation is based on a 5th-order algorithm matching known applications.
- Audit trail information, stores parameters changes with time stamp information
- Simulation of process values, status information and alarms
- Aerated flow filtering system, for advanced filtering of fluids with gas or air bubbles
- Datalogging of process values and parameter changes on SensorFlash

### Technical specifications

## SITRANS FC (Coriolis)

### Transmitters

#### SITRANS FCT030

#### Dimensional drawings (continued)

SITRANS FCT030, wall mount version, dimensions in mm (inch)

### Overview

FCT010 is based on the latest developments within digital signal processing technology – engineered for high measuring performance, fast response to step changes in flow, fast dosing applications, high immunity against process noise, easy to install commission and maintain.

The FCT010 transmitter delivers true multi-parameter measurements i.e. massflow, volumeflow, standard volumeflow, density, temperature . All with a single Modbus connection.

The FCT010 IP67 transmitter is compact mounted with all sensors of type FCS300, FCS400 , MASS 2100 DI 3, DI 6, DI 15.

For MASS 2100 DI 1.5 to DI 15 and FC300 DN 4 an analogue connection is available for a remote FCT010 solution.

### Benefits

#### Flow calculation and measurement

Dedicated mass flow calculation with DSP technology

- Fast dosing and flow step response with maximum 10 ms response time
- 100 Hz update rate to all outputs
- Independent low flow cut-off settings for mass and volume flowrates
- Automatic zero-point adjustment on command from discrete input or host system

#### Operation

- User-configurable settings over SIMATIC PDM

#### Alarms and safety

- Advanced diagnosis and service menu enhances troubleshooting and meter validation
- Configurable upper and lower alarm and warning limits for all process values
- Alarm handling can be selected between Siemens and NAMUR standard configurations

#### Outputs and control

- Single channel Modbus RTU output
- Individually configurable for massflow, volumeflow, standard volumeflow, density, temperature
- One Totalizer (data not secured by power failure )

#### Approvals and certificates

The FCT010 coriolis flowmeter program was designed from the ground up to comply with or exceed the requirements of international standards and regulations.

### Application

SITRANS FCT010 transmitters are suitable for applications within the entire process industry where there is a demand for accurate flow measurement. The meter is capable of measuring both liquid and gas flow.

Coriolis flowmeters can be applied in all industries, such as:

- Chemical & Pharma: detergents, bulk chemicals, acids, alkalis, paint mixing systems, solvents and resins, pharmaceuticals, blood products, vaccines, insulin production
- Food & Beverage: dairy products, beer, wine, soft drinks, CO2 dosing, CIP/SIP-liquids, mixture recipe control
- Automotive: fuel injection nozzle & pump testing, filling of AC units, engine consumption
- Oil & Gas applications e.g. test separators
- Hydrocarbon processing: oil refining, derivatives manufacturing, polymerisation
- Water & Waste Water: dosing of chemicals for water treatment

The Modbus communication mean that all of the process information can be read either instantaneously (10 ms update) or periodically as plant operation requires.

### Design

The transmitter SITRANS FCT010 is designed in an IP67/NEMA 4X aluminum enclosure with corrosion resistant coating.

It is compact mounted with the following sensors:

- FCS300 DN 15, DN 25, DN 50, DN 80, DN 100, DN 150
- FCS400 DN 15, DN 25 and DN 50
- MASS 2100 DI 3, DI 6, DI 15

It can be remote mounted with the following sensors:

- MASS 2100 DI 1.5, DI 3, DI 6, DI 15
- FC300 DN 4

FCT010 is available with Modbus RS 485 RTU as standard.

#### SensorFlash

SensorFlash is a standard, 4 GByte micro SD card with the ability to be updated by PC. It is supplied with each sensor with the complete set of certification documents including calibration report. Material, pressure test, factory conformance certificates are optional at ordering.

The Siemens SensorFlash memory unit for the FCT010 only has the function of documentation including a parameter backup and a FW bundle. The Sensor Flash is not mounted into the FCT010 and will not have the extra features as the FCT030 transmitter has.

- Storing of alarm history log
- Storing of parameter change log

# Flow Measurement

## SITRANS FC (Coriolis)

### Transmitters

#### SITRANS FCT010

#### Function

The following functions are available:

- Mass flowrate, volume flowrate, density, process temperature
- Single Modbus RTU I/O
- Low flow cut-off, adjustable
- Density cut-off or empty pipe cut-off, adjustable
- Flow direction adjustable
- Alarm system consisting of alarm-log, alarm pending menu
- Uni/bidirectional flow measurement
- Flowrate outputs are freely configurable between maximum negative and maximum positive flows according to the sensor capacity
- Process noise filter for optimization of measurement performance under non-ideal application conditions. 5-stage pumping filter compensates for flow fluctuations caused by e.g. single acting piston pumps
- Full service menu for effective and straight forward application and meter troubleshooting
- Aerated flow filtering system, for advanced filtering of fluids with gas or air bubbles

### SITRANS FC (Coriolis) Transmitters

#### SITRANS FCT070

#### Overview

SITRANS FCT070 transmitter

Mounting on the SIMATIC ET 200SP ST & HF

The technology module SITRANS FCT070 is a Coriolis flow meter transmitter for the SIMATIC ET 200SP ST & HF.

The TM SITRANS FCT070 flow transmitter can be operated directly in the SIMATIC PCS7 or in TIA Portal with the FCT070 Faceplates.

TM FCT070 offers real-time data processing and the display of all measuring and status data of the Coriolis flowmeter.

The TM FCT070 can work with all Siemens Coriolis flow meters. It can be directly connected to the SITRANS FCS300, SITRANS FCS400 and SITRANS FC MASS 2100 FC300 DN 4.

#### Benefits

- Easy integration into automation process control as TIA portal and PCS7
- Easy selection and integration of flow meters via TIA-Selector
- No transmitter between automation and flow meter required
- Cost effective integration of Coriolis flow meters for PLC controlled machines

- SITRANS FCT070 is a ET 200SP technology module and can be combined with all other SIMATIC ET 200S SP ST & HF modules
- Fast and trouble-free communication between the flow meter and the PLC through digital data communication with up to 10 ms update rate
- SITRANS FCT070 and ET 200SP have the ATEX Zone 2 Class 1 Div 2 approvals. With the barrier SITRANS I300 the flowmeters sensor can be used in Ex Zone 1 & Class 1 Div 1 approval.
- Included advanced batch functionality without additional modules. I/Os are onboard
- Included the 17 standard fraction tables.

#### Application

SITRANS FCT070 can be used for machine builders and in the process industry plants. The meters are suitable for measuring on liquid and gas. With ET 200SP ST & HF the SITRANS FCT070 can be installed decentralized in small stations, with fast communication to the control room.

The faceplates for TIA-Portal and PCS 7 offer the direct full remote access to the flow meter.

The main industries for the SITRANS FCT070 transmitter:

- Chemical
- Food and beverage
- Pharmaceutical
- Automotive
- Oil and gas
- Power generation and utility
- Water and waste water

#### Design

The SITRANS FCT070 is designed as ET 200SP ST & HF module and can directly installed with other ET 200SP modules.

The sensor DSL cable is directly mounted to the ET 200SP ST & HF base unit is providing the supply voltage and the data communication. The SITRANS FC sensors with DSL can be connected directly to the SITRANS FCT070.

For sensors in ATEX Zone 1, the SITRANS I300 barrier must be installed between FCT070 and the FC DSL.

#### Function

The following key functionalities are available:

- Mass flow rate, volume flow rate, density, temperature and fraction flow
- Three built-in totalizers which can freely be set for counting mass flow, volume flow, standard volume flow and fraction
- Two-stage batch controller
- Two digital inputs
- Two digital outputs
- Low flow cut-off
- Zero point adjustment
- Configurable upper and lower alarm and warning limits for all process values
- Comprehensive status and error reporting

#### Overview

The SITRANS FCS300 sensor is available in DN 15 to DN 150 mm sizes in stainless steel AISI 316 L or nickel alloy wetted material. The sensor design consists of process connections, inlet and outlet manifolds mounted in a stiff frame and two parallel tubes equally sharing the process medium flow.

The sensing tubes are curved in the CompactCurve shape which gives high sensitivity and low pressure loss. The CompactCurve shape was selected to ensure that the smallest flows are measured with optimal signal to noise ratio.

The compact sensor design with a split flow dual tube design with high driver frequency is suitable for high end applications in all industry segments e.g. Chemical, Oil & Gas, Refineries, F&B and Power.

A variety of process connections available to cover all common process connections and pressure ratings.

The sensor has a solid stainless steel fully welded enclosure to protect the measuring tubes from any harsh environments. For hazardous area applications the FCS300 comes in a number of common hazardous area approved like ATEX, IECEx, cCSAus, EAC, and NEPSI.

#### Integration

The SITRANS FCS300 sensor is suitable for both indoor and outdoor installation and meets the requirements of Protection Class IP67/NEMA 4X. Optionally the sensor can be ordered with hazardous certification to Zone 1 and Div 1 (ATEX, IECEx, cCSAus, EAC Ex, NEPSI).

The flowmeter is bidirectional and can be installed in any orientation. The sensor is self-draining in many positions, with vertical mounting preferred.

It is important to ensure that the sensor tubes are always completely filled with homogeneous fluid; otherwise measuring errors may occur. Suitable fluids are clean liquids, pastes, light slurries or gases. Condensing vapours, aerated liquids or slush are not recommended.

The materials in contact with the process medium must be evaluated for corrosion and erosion resistances for long sensor life.

The pressure drop through the sensor is a function of the properties of the fluid and the flow rate. A pressure loss and accuracy calculator can be found on the Siemens internet site <https://www.siemens.com>.

The preferred flow direction is indicated by an arrow on the sensor. Flow in the direction of the arrow will be measured as positive. The flow direction can be adjusted at the transmitter to compensate for reverse installation.

#### Installation orientation

The optimal installation orientation is vertical with the flow upwards. This ensures that suspended solids or bubbles are completely pushed through the sensor. A drain valve below the sensor will allow the pipe and sensor to drain completely.

#### Supports

In order to support the weight of the flowmeter and to ensure reliable measurements when external effects exist (e.g. plant vibrations), the sensor should be installed in rigidly supported pipelines.

Supports or hangers should be installed symmetrically and stress-free in close proximity to both of the process connections.

#### Shut-off devices

To conduct a system zero adjustment, secure shut-off devices are required in the pipeline.

Where possible, shut-off devices should be installed both upstream and downstream of the flowmeter.

## Flow Measurement

### SITRANS FC (Coriolis)

#### Sensors and Flowmeter systems

#### SITRANS FCS300 flow sensor

### Configuration

#### Installation guidelines

- The mass flowmeter does not require any flow conditioning or straight inlet pipe sections. Care should be exercised however to ensure that any upstream valves, gates, sight glasses etc. do not cavitate and are not set into vibration by the flow.
- It is always preferred to place the flowmeter upstream of any control valve or other pipeline component which may cause flashing, cavitation or vibrations.
- The presence of gas bubbles in the fluid may result in erroneous measurements, particularly in the density measurement. Therefore the flowmeter should not be installed at the lowest pressure point in the liquid piping system or where vapour can collect. Install the meter in pipeline sections with high pressure to maintain system pressure and compress any bubbles.
- Drop lines downstream from the flow sensor should be avoided to prevent the meter tube from draining during flowing conditions. A back-pressure device or orifice is recommended to ensure that flow does not separate within the flow sensor but the metering section remains at positive pressure at all times while there is flow.
- The flowmeter should not come into contact with any other objects. Avoid making attachments to the housing except for the pressure guard components (if required).
- When the connecting pipeline is larger than the sensor size, suitable standard reducers may be installed. A selection of oversize and undersize connections can be ordered - refer to the sizes tables below.
- The flow sensor may be supported at the junction between process connection and the manifold, but should not be used to support adjacent piping. Ensure that the piping is also supported on both sides so that connection stresses are neutral.
- If strong vibrations exist in the pipeline, they should be damped using elastic pipeline elements. The damping devices must be installed outside the supported flowmeter section. Direct connection of flexible elements to the sensor should be avoided.
- Make sure that any dissolved gases, which are present in many liquids, do not outgas. The back pressure at the outlet should be at least 0.2 bar (3 psi) above the vapour pressure of the process fluid.
- Assure that operation below the vapour pressure cannot occur particularly for fluids with low latent heat of vaporisation.
- The sensor should not be installed in the vicinity of strong electromagnetic fields, e.g. near motors, pumps, variable frequency drives, transformers etc.
- When operating meters on a common mounting base the sensors should be mounted and spaced separate from each other to avoid cross-talk and other vibration interferences.
- When operating meters in interconnected pipelines the pipes should be decoupled to prevent cross talk.

#### Remote system cabling

The system is designed so that standard instrumentation cable with four cores and overall screen or two screened pairs can be used, or cable sets can be ordered with the flowmeter. The cable can be ordered in various set lengths and terminated in the field.

Be aware of maximum sensor length cable depending on product selection, currently 75 m. Data transmission speed and process variable update rates may be affected by the cable characteristics. For best results, choose a cable with the following electrical characteristics:

Property	Unit	Value
Resistance	[ $\Omega$ /km]	59
Characteristic impedance	[ $\Omega$ ]	100 @ 1 MHz
Insulation resistance	[M $\Omega$ /km]	200
Maximum voltage	[V]	300

The flowmeter system applies maximum 15 V DC in operation and is certified intrinsically safe. The complete system is insulation tested to 1 500 V in production.

Cabling solutions which can be ordered with the flowmeter are as follows:

1. High performance plugged cable using M12 connectors into prepared sockets
2. Cable glands for either metric or NPT threaded terminal housings
3. Plain cable in set lengths to be passed through flexible and rigid conduit (not supplied) for metric or NPT threaded terminal housings

Cable for items 1, 2 and 3 are available either gray for standard applications or light blue for Ex applications to identify the circuit as intrinsically safe.

#### Insulation and heating

For applications where pipeline insulation is required for personnel protection or process temperature maintenance, the SITRANS FCS300 flow sensor may also be insulated. The form and material of insulation is not prescribed and entirely depends on the practices at the application location or plant.

Insulation must not be crowded around the sensor pedestal but shaped at a 45° cone to allow the pedestal to radiate excess heat and maintain a suitable working temperature within the front-end transmitter housing.

## SITRANS FC (Coriolis)

### Sensors and Flowmeter systems

#### SITRANS FCS300 flow sensor

#### Technical specifications (continued)

##### Pressure/temperature curves

With two major exceptions, the pressure rating of the flow sensors is independent of the process medium temperature. Design rules for flange connections in both the EN 1092-1 and ASME B16.5 standards dictate pressure derating with increasing temperature. The charts below show the effect of process medium temperature on the pressure ratings for the flanges within the FCS300 product program.

<sup>1)</sup> Apply class 600 p and t ratings for class 900 and class 1500 flanges.

##### Hygienic sensor variants

The hygienic sensors will have to be ordered with stainless steel tubes 316L/1.4435/1.4404 (polished). Hygienic sensors are offered with process connection conforming to various international quick-connect clamps or threaded connectors. Pressure ratings are according to the relevant standard and the sensor size.

##### NAMUR sensor variants

The NAMUR variants have built-in lengths according to NAMUR recommendation NE 132. The recommendations of NE 132 are stated for sensors with flanges the same size as the sensor nominal size, and for flanges to EN 1092-1 PN 40 with B1 flange facing. For DN 100 and DN 150 flanges to PN 16.

## Flow Measurement

### SITRANS FC (Coriolis)

#### Sensors and Flowmeter systems

#### SITRANS FC330 flowmeter system

##### Overview

The complete flowmeter system SITRANS FC330 can be ordered for standard, hygienic or NAMUR service. The flowmeter is based on the latest developments within digital signal processing technology – engineered for high measuring performance:

- Fast response to rapid changes in flow
- Fast dosing applications
- High immunity against process noise
- High turndown ratio of flowrates
- Suitable for liquid and gas service
- Easy to install, commission and maintain

With all global marine approvals the FC330 is ideal for integration in ship fuel efficiency and environmental measurement systems as well as bunkering solutions.

FC330 is available with current output HART 7.5, Modbus RS 485 RTU, PROFIBUS DP or PROFIBUS PA as standard on Channel 1. Additional functions can be freely configured for analog, pulse, frequency, relay or status output or binary input.

The transmitter comes with a user-configurable graphical display and SensorFlash, a micro SD card for configuration backup, firmware update and data storage.

The SITRANS FC330 flowmeter system consists of a SITRANS FCS300 sensor and a SITRANS FCT030 transmitter.

##### Benefits

- It is compact and light, fitting neatly into dense piping arrangements
- Easy maintenance because modules can be exchanged rapidly
- Effective separation of measurement from plant vibration
- Highly secure operation in safety critical applications
- Non-volatile memory of all setup and operation data
- Reliable measurements due to high signal to noise ratio
- Secure, digital transfer of measurement data from the sensor
- Short overall length; easy drop-in replacement into most existing installations

#### Technical specifications

### SITRANS FC310 flowmeter system

#### Overview

The compact flowmeter SITRANS FC310 can be ordered for industrial, hygienic or NAMUR service.

Intended for integration into OEM skids, machines or pre-assembled plant systems, the flowmeter is based on the latest developments within digital signal processing technology - engineered for high measuring performance:

- Fast response to rapid changes in flow
- Fast dosing applications with control in host system
- High immunity against process noise
- High turndown ratio of flowrates
- Suitable for liquid and gas service
- Easy to install, commission and maintain

With all global marine approvals the FC310 is ideal for integration in ship fuel efficiency and environmental measurement systems as well as bunkering solutions.

The FCT010 transmitter delivers true multi-parameter measurements i.e. massflow, density, temperature.

FC310 is available with Modbus RTU (RS 485) multi-drop serial communication.

The flowmeter is supplied with SensorFlash, a micro SD card containing all relevant certificates. The SITRANS FC310 flowmeter system consists of a SITRANS FCS300 sensor and a SITRANS FCT010 transmitter always compact mounted.

#### Benefits

- It is compact and light, fitting neatly into dense piping arrangements
- Effective separation of measurement from plant vibration
- Reliable measurements due to high signal to noise ratio
- Short overall length; easy drop-in replacement into most existing installations
- Direct connection to host with high-speed Modbus simplifies machine or skid construction and set-up
- Modbus RS 485 RTU allows simple and easy integration with all Modbus masters with fast update rate of process values.

**SITRANS I300  
Isolating power supply – Ex barrier**

**A5E39832532**

#### Overview

Full integration in the Siemens SIMATIC systems PCS7 or in TIA portal with FCT070 faceplates with the ET 200SP ST & HF powerful IO system for compact control cabinets. The complete flowmeter system consists of a SITRANS FCS300 sensor and a SIMATIC ET 200SP Coriolis module FCT070 transmitter.

The transmitter FCT070 offers real-time data processing and the display of all measuring and status data of the Coriolis flowmeter.

For hazardous area the FCS300 sensor can be placed in Ex Zone 1 or Class 1 Div 1 locations. Together with the SITRANS I300 power/barrier module the FCT070 transmitter can be placed in Zone 2 or Div 2 areas.

#### Benefits

- FCS300 sensor in sizes from DN 15 to 150 mm in a large variety of process connections and wetted materials
- Short overall length; easy drop-in replacement into most existing installations
- Full hazardous area solutions
- Easy integration into automation process control as TIA portal and PCS7
- Easy selection and integration of flowmeters via TIA selector
- Cost effective integration of Coriolis flowmeters for PLC controlled machines
- SITRANS FCT070 ET 200SP technology module and can combined with all other SIMATIC ET200 ST & HF modules
- The FCT070 has all high-end transmitter functionality integrated including the advanced fraction tables on board
- Fast and trouble-free communication between the flow meter and the PLC through digital data communication with up to 10 ms update rate
- Integrated advanced two-stage batch controller functionality without additional modules. I/Os are onboard

#### Overview

The SITRANS FCS400 sensor is available in DN 15; DN 25 and DN 50 mm sizes in stainless steel AISI 316 L. The sensor design consists of process connections, inlet and outlet manifolds mounted in a stiff frame and two parallel tubes equally sharing the process medium flow.

The sensing tubes are curved in the CompactCurve shape which gives high sensitivity and low pressure loss. The CompactCurve shape was selected to ensure that the smallest flows are measured with optimal signal to noise ratio.

The super compact sensor design with a split flow dual tube design with very high driver frequency is suitable for high end applications in all industry segments e.g. Chemical, F&B, O&G and Power.

A variety of process connections available to cover all common process connections and pressure ratings.

The sensor has a solid stainless steel fully welded enclosure to protect the measuring tubes from any harsh environments. For hazardous area applications the FCS400 comes in a number of common hazardous area approved like ATEX, IECEx, cCSAus, EAC, and NEPSI.

For sanitary applications the sensor is available with polished inside wetted parts and carry the EHEDG and 3A sanitary certifications (in preparation).

For the chemical industry the FCS400 sensors are available with standardized NAMUR inbuilding length (in preparation).

#### Integration

The SITRANS FCS400 Massflow sensor is suitable for both indoor and outdoor installation and meets the requirements of Protection Class IP67/NEMA 4X. Optionally the sensor can be ordered with hazardous certification to Zone 1 + 21 (ATEX, IECEx, cCSAus, EAC Ex, NEPSI) or Class I + II + III Div. 1 (cCSAus).

The flowmeter is bidirectional and can be installed in any orientation. The sensor is self-draining in many positions, with vertical mounting preferred.

It is important to ensure that the sensor tubes are always completely filled with homogeneous fluid; otherwise measuring errors may occur. Suitable fluids are clean liquids, pastes, light slurries or gases. Condensing vapours, aerated liquids or slush are not recommended.

The materials in contact with the process medium must be evaluated for corrosion and erosion resistances for long sensor life.

The pressure drop through the sensor is a function of the properties of the fluid and the flow rate. A pressure loss and accuracy calculator can be found on the Siemens Internet site <https://www.siemens.com/fc430/sizer>

The preferred flow direction is indicated by an arrow on the sensor. Flow in the direction of the arrow will be measured as positive. The flow direction can be adjusted at the transmitter to compensate for reverse installation.

#### Installation orientation

The optimal installation orientation is vertical with the flow upwards. This ensures that suspended solids or bubbles are completely pushed through the sensor. A drain valve below the sensor will allow the pipe and sensor to drain completely.

#### Supports

In order to support the weight of the flowmeter and to ensure reliable measurements when external effects exist (e.g. plant vibrations), the sensor should be installed in rigidly supported pipelines.

Supports or hangers should be installed symmetrically and stress-free in close proximity to both of the process connections.

#### Shut-off devices

To conduct a system zero adjustment, secure shut-off devices are required in the pipeline.

Where possible, shut-off devices should be installed both upstream and downstream of the flowmeter.

## Flow Measurement

### SITRANS FC (Coriolis)

#### Sensors and Flowmeter systems

#### SITRANS FCS400 flow sensor

### Configuration

#### Installation guidelines

- The mass flowmeter does not require any flow conditioning or straight inlet pipe sections. Care should be exercised however to ensure that any upstream valves, gates, sight glasses etc. do not cavitate and are not set into vibration by the flow.
- It is always preferred to place the flowmeter upstream of any control valve or other pipeline component which may cause flashing, cavitation or vibrations.
- The presence of gas bubbles in the fluid may result in erroneous measurements, particularly in the density measurement. Therefore the flowmeter should not be installed at the lowest pressure point in the liquid piping system or where vapour can collect. Install the meter in pipeline sections with high pressure to maintain system pressure and compress any bubbles.
- Drop lines downstream from the flow sensor should be avoided to prevent the meter tube from draining during flowing conditions. A back-pressure device or orifice is recommended to ensure that flow does not separate within the flow sensor but the metering section remains at positive pressure at all times while there is flow.
- The flowmeter should not come into contact with any other objects. Avoid making attachments to the housing except for the pressure guard components (if required).
- When the connecting pipeline is larger than the sensor size, suitable standard reducers may be installed. A selection of oversize and undersize connections can be ordered - refer to the sizes tables below.
- The flow sensor may be supported at the junction between process connection and the manifold, but should not be used to support adjacent piping. Ensure that the piping is also supported on both sides so that connection stresses are neutral.
- If strong vibrations exist in the pipeline, they should be damped using elastic pipeline elements. The damping devices must be installed outside the supported flowmeter section. Direct connection of flexible elements to the sensor should be avoided.
- Make sure that any dissolved gases, which are present in many liquids, do not outgas. The back pressure at the outlet should be at least 0.2 bar (3 psi) above the vapour pressure of the process fluid.
- Assure that operation below the vapour pressure cannot occur particularly for fluids with low latent heat of vaporisation.
- The sensor should not be installed in the vicinity of strong electromagnetic fields, e.g. near motors, pumps, variable frequency drives, transformers etc.
- When operating meters on a common mounting base the sensors should be mounted and spaced separate from each other to avoid cross-talk and other vibration interferences.
- When operating meters in interconnected pipelines the pipes should be decoupled to prevent cross talk.

#### Remote system cabling

The system is designed so that standard instrumentation cable with four cores and overall screen or two screened pairs can be used, or cable sets can be ordered with the flowmeter. The cable can be ordered in various set lengths and terminated in the field.

Be aware of maximum sensor length cable depending on product selection, currently 75 m. Data transmission speed and process variable update rates may be affected by the cable characteristics. For best results, choose a cable with the following electrical characteristics:

Property	Unit	Value
Resistance	[Ω/km]	59
Characteristic impedance	[Ω]	100 @ 1 MHz
Insulation resistance	[MΩ/km]	200
Maximum voltage	[V]	300

The flowmeter system applies maximum 15 V DC in operation and is certified intrinsically safe. The complete system is insulation tested to 1 500 V in production.

Cabling solutions which can be ordered with the flowmeter are as follows:

1. High performance plugged cable using M12 connectors into prepared sockets
2. Cable glands for either metric or NPT threaded terminal housings.
3. Plain cable in set lengths to be passed through flexible and rigid conduit (not supplied) for metric or NPT threaded terminal housings

Cable for items 1, 2 and 3 are available either gray for standard applications or light blue for Ex applications to identify the circuit as intrinsically safe.

#### Insulation and heating

For applications where pipeline insulation is required for personnel protection or process temperature maintenance, the SITRANS FCS400 flow sensor may also be insulated. The form and material of insulation is not prescribed and entirely depends on the practices at the application location or plant.

Insulation must not be crowded around the sensor pedestal but shaped at a 45° cone to allow the pedestal to radiate excess heat and maintain a suitable working temperature within the front-end housing.

Where trace heating is employed, an electric heating jacket can be ordered as an accessory. It is shaped to the sensor body and controlled from a weatherproof setpoint device.

The jacket can heat the sensor enclosure up to 200 °C (392 °F). However the maximum temperature increase is limited to 70 °C. Further insulation is also recommended for personnel protection or low loss temperature maintenance.

### Technical specifications

Flow sensor FCS400		
Parameter	Unit	Value

<sup>1)</sup> For gas applications the max. flowrate is calculated at Mach-Number = 0.3.

<sup>2)</sup> Increased error can be expected for gas mass flow measurement.

<sup>3)</sup> Liquid only.

### Pressure/temperature curves

With two major exceptions, the pressure rating of the flow sensors is independent of the process medium temperature. Design rules for flange connections in both the EN 1092-1 and ASME B16.5 standards dictate pressure derating with increasing temperature. The charts below show the effect of process medium temperature on the pressure ratings for the flanges within the FCS400.

EN 1092-1 flanged sensors

ASME B16.5 flanged sensors

<sup>1)</sup> Apply class 600 p and t ratings for class 900 and class 1500 flanges.

<sup>2)</sup> P and T rating as PN 100.

##### Hygienic sensor variants (in preparation)

The hygienic sensors all have polished internal wetted material and a maximum internal surface roughness Ra < 0.8 µm and are EHEDG and 3A approved.

##### Aseptic flanged process connections

The aseptic flanges offered for FCS400 conform with the standard DIN 11864-2A BF-A. The flange fitted to the sensor is therefore the back flange and the seal is an O-ring.

The flange dimensions in the FCS400 program are as follows:

Size DN	Pipe	Bore d <sub>1</sub>	Ring OD d <sub>11</sub>	Bolt circle d <sub>5</sub>	Bolt holes	Flange diameter d <sub>10</sub>
10	13 × 1.5	10	22.4	37	4 × Ø9	54
15	19 × 1.5	16	28.4	42	4 × Ø9	59
20	23 × 1.5	20	32.4	47	4 × Ø9	64

SITRANS FCS400, overall length (D), dimensions in mm.

## Overview

The complete flowmeter system SITRANS FC consist of a new FCS400 sensor in sizes DN 15 to DN 50 mm and a FCT030 multichannel/multifunctional in compact or remote versions. The flowmeter is based on the latest developments within digital signal processing technology – engineered for high measuring performance:

- Fast response to rapid changes in flow
- Fast dosing applications
- High immunity against process noise
- High turndown ratio of flowrates
- Suitable for liquid and gas service
- Easy to install, commission and maintain
- Aerated flow filtering system, for advanced filtering of fluids with gas or air bubbles
- Build in Data logger for all process variables and status messages (FCT030)
- Build in Batch functionality (FCT030)

The SITRANS FC430 is available with current output HART 7.5, Modbus RS 485 RTU, PROFIBUS DP or PROFIBUS PA as standard on Channel 1. Additional I/O functions can be freely configured for analog, pulse, frequency, relay or status output, or binary input.

The transmitter comes with a user configurable graphical display and SensorFlash, a micro SD card for configuration backup, firmware update and data storage.

## Benefits

- It is truly compact and light, fitting neatly into dense piping arrangements
- Easy maintenance because modules can be exchanged rapidly
- Effective separation of measurement from plant vibration
- Highly secure operation in safety critical applications
- Non-volatile memory of all setup and operation data
- Reliable measurements due to high signal to noise ratio
- Secure, digital transfer of measurement data from the sensor
- Shortest overall length; easy drop-in replacement into most existing installations
- Marine Application: fuel management & consumption; bunkering solutions; boiler control

## Overview

The compact flowmeter SITRANS FC410 is available in sizes DN 15, DN 25 and DN 50 for standard and hygienic applications.

Intended for integration into OEM skids, machines or pre-assembled plant systems. The sensor design is the marked leader in compact design which makes it easy to integrate in the compact skids. The flowmeter is based on the latest developments within digital signal processing technology - engineered for high measuring performance:

- Fast response to rapid changes in flow
- Markeds most compact sensor design
- Sensor with sanitary EHEDG and 3 A certification (in preparation)
- Fast dosing applications with control in host system
- High immunity against process noise
- High turndown ratio of flowrates
- Suitable for liquid and gas service
- Easy to install, commission and maintain

With all global marine approvals the FC410 is ideal for integration in ship fuel efficiency and environmental measurement systems. The FCT010 transmitter delivers true multi-parameter measurements i.e. massflow, density, temperature.

FC410 is available with Modbus RTU (RS 485) multi-drop serial communication. The flowmeter is supplied with SensorFlash, a micro SD card containing all relevant certificates. The SITRANS FC410 flowmeter system consists of a SITRANS FCS400 sensor and a SITRANS FCT010 transmitter always compact mounted.

## Benefits

- It is truly compact and light, fitting neatly into dense piping arrangements
- Easy maintenance because modules can be exchanged rapidly
- Effective separation of measurement from plant vibration
- Reliable measurements due to high signal to noise ratio
- Shortest overall length; easy drop-in replacement into most existing installations
- Direct connection to host with high-speed Modbus simplifies machine or skid construction and set-up
- Modbus RS 485 RTU allows simple and easy integration with all Modbus masters with fast update rate of process values

## Flow Measurement

SITRANS FC (Coriolis)

Sensors and Flowmeter systems

### SITRANS FCS400 with FCT070 transmitter

#### Overview

Full integration in the Siemens SIMATIC systems PCS7 or in TIA portal with FCT070 Faceplates with the ET 200SP ST & HF powerful IO system for compact control cabinets. The complete flowmeter system consists of a SITRANS FCS400 sensor and a SIMATIC ET200 SP Coriolis module FCT070 transmitter.

TM FCT070 offers real-time data processing and the display of all measuring and status data of the Coriolis flowmeter.

For hazardous area the FCS400 sensor can be placed in Ex Zone 1/21 or Class1 Div 1 locations. Together with the Sitrans I300 power/barrier module the FCT070 transmitter can be placed in Zone 2 or Div 2 areas.

#### Benefits

- FCS400 sensor in sizes from DN 15 to DN 50 mm in a large variety of process connections and wetted materials
- Marked most compact sensor design
- Sensor with sanitary EHEDG and 3A certification
- Full hazardous area solutions
- Easy integration into automation process control as TIA portal and PCS7
- Easy selection and integration of flow meters via TIA-Selector
- Cost effective integration of Coriolis flow meters for PLC controlled machines
- SITRANS FCT070 ET 200SP technology module and can be combined with all other SIMATIC ET200 ST & HF modules.
- The FCT070 has all high-end transmitter functionality integrated including the advanced fraction tables on board
- Fast and trouble-free communication between the flow meter and the PLC through digital data communication with up to 10 ms update rate
- Integrated advanced Two-stage batch controller functionality without additional modules. I/Os are onboard.

#### Technical specifications

SITRANS FCS400 with FCT070 transmitter	
<b>Sizes</b>	DN 15 (½") DN 25 (1") DN 50 (2")

#### Overview

MASS 2100 DI 1.5 to DI 15 and the FC300 DN4 is suitable for low flow measurement applications of a variety of liquids and gases.

The sensor is designed with a single bended tube in corrosion resistant stainless steel AISI316L or Hastelloy C22 and a solid stainless steel fully welded enclosure to protect the measuring tubes from any harsh environments. For hazardous area applications the MASS 2100 / FC300 DN4 sensor comes in a number of common hazardous area approved variants like ATEX, IECEx, cCSAus, EAC, and NEPSI.

The sensor offers superior performance in terms of flow accuracy, turn-down ratio and density accuracy and delivers true multi-parameter measurements i.e.: mass flow, volume flow, density, temperature and fraction.

With the large variety of process connections and the ability for high pressure solutions up to 1 000 bar, the compact single tube design is especially suitable for high end applications in all industry segments e.g. Automotive, Painting, Chemical, Oil & Gas and F&B. Accurate dosing and mixing down to drops are widely used applications.

#### The main applications for the MASS 2100 / FC300 DN 4 sensor can be found in:

Chemical industry	Liquid and gas measurement within Miniplant and R&D, dosing of additives and catalysts
Cosmetic industry	Dosing of essence and fragrances
Pharmaceutical industry	High-speed dosing and coating of pills, filling of ampuls/injectors
Food and beverage industry	Dosing of flavourings, colours and additives, density measurement, inline Measurement of liquid or gaseous CO <sub>2</sub>
Automotive industry	Fuel injection nozzle and pump testing, filling of AC units, engine consumption, paint robots, ABS test-beds

#### Integration

The SITRANS MASS 2100/FC300 DN4 sensor are suitable for both indoor and outdoor installation and meets the requirements of Protection Class IP67/NEMA 4X. Optionally the sensor can be ordered with hazardous certification to Zone 1 (ATEX, IECEx, cCSAus, EAC Ex, NEPSI).

It is important to ensure that the sensor tubes are always completely filled with homogeneous fluid; otherwise measuring errors may occur. Suitable fluids are clean liquids, pastes, light slurries or gases. Condensing vapours, aerated liquids or slush are not recommended.

The materials in contact with the process medium must be evaluated for corrosion and erosion resistances for long sensor life.

The pressure drop through the sensor is a function of the properties of the fluid and the flow rate. A pressure loss and accuracy calculator can be found on the Siemens Internet site <https://www.siemens.com>

The preferred flow direction is indicated by an arrow on the sensor. Flow in the direction of the arrow will be measured as positive. The flow direction can be adjusted at the transmitter to compensate for reverse installation.

#### Shut-off devices

To conduct a system zero adjustment, secure shut-off devices are required in the pipeline.

Where possible, shut-off devices should be installed both upstream and downstream of the flowmeter.

## Flow Measurement

### SITRANS FC (Coriolis)

#### Sensors and Flowmeter systems

#### SITRANS FC MASS 2100 and FC300 DN 4 sensors

#### Integration (continued)

#### Installation guidelines MASS 2100 DI 3 ... DI 15 (1/8" ... 1/2")

In order to perform according to given specifications for flow and density accuracy, the sensor must be installed using rigid mounting brackets as shown in the installation examples.

If the liquid is volatile or contains solid particles, vertical mounting is not recommended.

#### Vibration

Always locate the flowmeter as far away as possible from components that generate mechanical vibration in the piping. Avoid vibration. If necessary use flexible pipes.

#### Cross talk

Cross talk between sensors mounted close to each other may disturb the measurement. To avoid cross talk never mount more than one meter on each frame and mount flexible hose connections between the sensors as shown.

#### Integration (continued)

##### Zero point adjustment

To facilitate zero point adjustment a shut-off valve should always be mounted in connection with the sensor as a proper zero point setting is essential for a good accuracy.

##### Installation guidelines MASS 2100 DI 1.5 (1/16")

- The optimal installation is horizontal. If vertical mounting is necessary, upward flow is recommended to facilitate the removal of air bubbles. To remove the air from the sensor the flow speed in the sensor must be at least 1 m/s. If there are solid particles in the liquid, especially in connection with low flow, it is recommended that the sensor be mounted horizontally with inlet flange uppermost so that particles are more easily flushed out. To ensure that the sensor does not become partially empty, there must be sufficient counter-pressure on the unit min. 0.2 bar (2.9 psi).
- Mount the sensor on a vibration-free wall or steel frame.
- Locate the sensor low in the system in order to avoid an under-pressure in the sensor separating air/gas in the liquid.
- Ensure that the sensor is not emptied of liquid (during normal operation) otherwise incorrect measurement will occur.

##### Horizontal

Liquid and gas application

##### Vertical

Liquid application (left), gas application (right)

##### Installation guidelines for SITRANS FC300 sensor

Horizontal installation as shown in figure A is recommended with gas or liquid applications.

This installation is also recommended when the flow velocity is low ( $< 1$  m/s) or the liquid contains solid particles or air bubbles.

Vertical installation as shown in figure B can be used for liquid or gas applications.

For liquid applications upwards flow is recommended to facilitate the removal of air bubbles and to avoid partly emptying of the sensor.

For gas applications we recommend to place the flow inlet on the sensor high and the outlet low to remove impurities and oil films.

- To ensure that the sensor does not become partly empty, there must be a sufficient counter-pressure on the unit min. 0.2 bar (2.9 psi)
- Mount the sensor on a vibration-free and plane wall or steel frame
- Locate the sensor low in the system in order to avoid under-pressure in the sensor separating air/gas in the liquid
- Ensure that the sensor is not emptied of liquid (during normal operation) otherwise incorrect measurement will occur

##### Horizontal mounting (recommended)

Liquid or gas (low to high flow)

##### Vertical mounting

Liquid or gas (medium to high flow)

## Flow Measurement

### SITRANS FC (Coriolis)

#### Sensors and Flowmeter systems

#### MASS 2100 / FC300 DN 4 with FCT030 transmitter

##### Overview

Sensors MASS 2100 and FC300 DN 4 with FCT010 / FCT030 transmitters

The SITRANS MASS 2100 and FC300 DN 4 system consists of a SITRANS sensor and a SITRANS FCT030 transmitter.

The flowmeter comes in a compact and remote design depending for all MASS 2100 DI 3 to DI 15.

MASS 2100 DI 1.5 and FC300 DN4 are only available with analogue connection of the FCT030 transmitter.

The flowmeter is based on the latest developments within digital signal processing technology – engineered for high measuring performance:

- Fast response to rapid changes in flow
- Fast dosing applications
- High immunity against process noise
- High turndown ratio of flowrates
- Suitable for liquid and gas service
- Easy to install, commission and maintain

FCT030 is available with current output HART 7.5, Modbus RS 485 RTU, PROFIBUS DP or PROFIBUS PA as standard on Channel 1. Additional functions can be freely configured for analog, pulse, frequency, relay or status output or binary input.

The transmitter comes with a user-configurable graphical display and SensorFlash, a microSD card for configuration backup, firmware update and data storage.

##### Benefits

- High accuracy better than 0.1 % of mass flow rate
- Large dynamic turn-down ratio better than 500:1
- Densitometer performance available through density accuracy (depending upon sensor size) ranging from 0.0005 to 0.0015 g/cm<sup>3</sup> with a typical repeatability better than 0.0001 to 0.0002 g/cm<sup>3</sup>
- Single continuous tube design, with no internal welds, reductions or flow splitters offers optimal hygiene, safety and CIP cleanability for food and beverage and pharmaceutical applications
- Markets biggest wall thickness, ensuring optimal life-time and corrosion resistance and high-pressure durability
- Balanced pipe design with little mechanical energy-loss, ensures optimal performance and stability under non-ideal and unstable process conditions (pressure, temperature, density-changes etc.)
- Full bore design provides lower pressure loss due to same internal diameter throughout the entire sensor
- 4-wire Pt1000 temperature measurement ensures optimum accuracy on mass flow, density and fraction flow
- Multi-plug electrical connector enables true “plug & play”
- Sensor pipe available in high-quality stainless steel AISI 316L/1.4435 or Hastelloy C22/2.4602 offering optimum corrosion resistance
- Centre-block design decouples process noise from the environment such as vibrations, pulsations, pressure shocks etc. making installation flexible and versatile
- Rugged and space-saving sensor design in stainless steel matching all environments
- High-pressure program as standard

### Technical specifications

Sensors MASS 2100 / FC300 DN 4 with FCT030 transmitter

<b>Flow range Q norm (liquids)</b> (water @ 1 bar pressure loss) (Q <sub>nom</sub> )	
• DI 1.5	19 kg/h (42 lb/h)
• DI 3	90 kg/h (198 lb/h)
• DI 6	500 kg/h (1 102 lb/h)
• DI 15	3 800 kg/h (8 370 lb/h)
• DN 4	140 kg/h (308 lb/h)
<b>Architecture</b>	Compact: DI 3, DI 6, DI 15 Remote digital: DI 3, DI 6, DI 15 Remote analogue: DI 1.5, DI 3, DI 6, DI 15, DN 4
Display	Full graphical display, 240 × 160 pixels with selection of 6 languages
Power supply	20 ... 90 V DC ± 10 %; 100 ... 240 V AC ± 10 %, 47 ... 63 Hz ± 10 %
<b>Material</b>	
• Sensor	
- Wetted parts	316L stainless steel or Hastelloy C 22
- Enclosure	316L stainless steel
• Transmitter	Aluminum with corrosion-resistant coating Class C4
<b>Enclosure rating</b>	IP67 <sup>1)</sup>
<b>Pressure ratings</b>	
• Measuring tubes	
- 316L	Up to 265 bar (3 844 psi), depending on size and process connection
- Nickel Alloy C4	Up to 410 bar (5 945 psi), depending on size and process connection
• Sensor enclosure	No pressure containment
Temperature ratings	
• Process medium	-50 ... +180 °C (-58 ... +356 °F)
• Ambient	-20 ... +50 °C (-4 ... +122 °F) <sup>1)</sup>

Sensors MASS 2100 / FC300 DN 4 with FCT030 transmitter	
<b>Process connections (depending on size and pressure rating)</b>	
• Flanges	EN 1092-1 B1, ANSI/ASME B16.5
• Pipe threads	ASME B1.20 (NPT), ISO 228
• Hygienic threads	DIN 11851, ISO 2853/BS 4825 part 4 (SS3016)
• Hygienic clamps	ISO Clamp 2852
<b>Approvals</b>	
• Hazardous area	ATEX, IECEx, EAC Ex, CSA, cCSAus, EAC
• Pressure equipment	PED
<b>NAMUR</b>	NAMUR-compliant (e.g. NE 21, NE 41, NE 107 and NE 132)
<b>I/O</b>	Up to 4 channels combining analog, relay or digital outputs and binary input
<b>Communication</b>	HART PROFIBUS PA PROFIBUS DP Modbus RTU (RS 485)
<b>EMC performance</b>	
• Emission	EN 55011/CISPR-11 (Class A)
• Immunity	EN/IEC 61326-1 (Industry)
<b>Mechanical load</b>	18 ... 1 000 Hz random The flow meter will mechanically tolerate 3.17 g RMS in all directions. Flow accuracy cannot be guaranteed under all conditions.

<sup>1)</sup> If operating outdoors, avoid direct sunlight, particularly in warm climatic regions.

Mounting bracket for FC300 DN 4 in AISI 304	<b>A5E02590439</b>	

### Overview

Sensors MASS 2100 and FC300 DN 4 with FCT010 / FCT030 transmitters

The SITRANS MASS 2100 and FC300 DN 4 system consists of a SITRANS sensor and a SITRANS FCT010 transmitter. The flowmeter comes in a compact design for all MASS 2100 DI 3 to DI 15.

MASS 2100 DI 1.5 to DI 15 and FC300 DN4 are available as remote FCT010 transmitter with analogue connection. Intended for integration into OEM skids, machines or pre-assembled plant systems, the flowmeter is based on the latest developments within digital signal processing technology - engineered for high measuring performance:

- Fast response to rapid changes in flow
- Fast dosing applications with control in host system
- High immunity against process noise
- High turndown ratio of flowrates
- Suitable for liquid and gas service
- Easy to install, commission and maintain

The FCT010 transmitter delivers true multi-parameter measurements i.e. massflow, density, temperature.

FCT010 is available with Modbus RTU (RS 485) multi-drop serial communication. The flowmeter is supplied with SensorFlash, a microSD card containing all relevant certificates.

### Benefits

- High accuracy better than 0.1 % of mass flow rate
- Large dynamic turn-down ratio better than 500:1
- Densitometer performance available through density accuracy (depending upon sensor size) ranging from 0.0005 to 0.0015 g/cm<sup>3</sup> with a typical repeatability better than 0.0001 to 0.0002 g/cm<sup>3</sup>
- Single continuous tube design, with no internal welds, reductions or flow splitters offers optimal hygiene, safety and CIP cleanability for food and beverage and pharmaceutical applications
- Markets biggest wall thickness, ensuring optimal life-time and corrosion resistance and high-pressure durability
- Balanced pipe design with little mechanical energy-loss, ensures optimal performance and stability under non-ideal and unstable process conditions (pressure, temperature, density-changes etc.)
- Full bore design provides lower pressure loss due to same internal diameter throughout the entire sensor
- 4-wire Pt1000 temperature measurement ensures optimum accuracy on mass flow, density and fraction flow
- Multi-plug electrical connector enables true "plug & play"
- Sensor pipe available in high-quality stainless steel AISI 316L/1.4435 or Hastelloy C22/2.4602 offering optimum corrosion resistance
- Centre-block design decouples process noise from the environment such as vibrations, pulsations, pressure shocks etc. making installation flexible and versatile
- Rugged and space-saving sensor design in stainless steel matching all environments
- High-pressure program as standard

Mounting bracket for flow sensor MASS 2100 DI 1.5

A5E02590427

Mounting bracket for FC300 DN 4 in AISI 304

A5E02590439

#### Overview

Sensors MASS 2100 and FC300 DN 4 (left) with FCT070 transmitter (right)

Full integration in the Siemens SIMATIC systems PCS7 or in TIA portal with FCT070 Faceplates with the ET 200SP ST & HF powerful IO system for compact control cabinets.

The SITRANS MASS 2100 and FC300 DN 4 system consists of a SITRANS sensor and a SITRANS FCT070 transmitter.

The flowmeter comes in a compact design for all MASS 2100 DI 3 to DI 15.

MASS 2100 DI and FC300 DN 4 the DSL is remote mounted with a analogue connection.

The complete flowmeter system consists of a sensor and a SIMATIC ET 200SP ST & HF Coriolis module FCT070 transmitter.

TM FCT070 offers real-time data processing and the display of all measuring and status data of the Coriolis flowmeter.

For hazardous area the MASS 2100 and the FSC300 sensor can be placed in Ex Zone 1 or Class 1 Div 1 locations. Together with the SITRANS I300 power/barrier module the FCT070 transmitter can be place in Zone 2 or Div 2 areas.

#### Benefits

- High accuracy better than 0.1 % of mass flow rate
- Large dynamic turn-down ratio better than 500:1
- Densitometer performance available through density accuracy (depending upon sensor size) ranging from 0.0005 to 0.0015 g/cm<sup>3</sup> with a typical repeatability better than 0.0001 to 0.0002 g/cm<sup>3</sup>
- Single continuous tube design, with no internal welds, reductions or flow splitters offers optimal hygiene, safety and CIP cleanability for food and beverage and pharmaceutical applications
- Markets biggest wall thickness, ensuring optimal life-time and corrosion resistance and high-pressure durability
- Balanced pipe design with little mechanical energy-loss, ensures optimal performance and stability under non-ideal and unstable process conditions (pressure, temperature, density-changes etc.)
- Full bore design provides lower pressure loss due to same internal diameter throughout the entire sensor
- 4-wire Pt1000 temperature measurement ensures optimum accuracy on mass flow, density and fraction flow
- Multi-plug electrical connector enables true "plug & play"
- Sensor pipe available in high-quality stainless steel AISI 316L/1.4435 or Hastelloy C22/2.4602 offering optimum corrosion resistance
- Centre-block design decouples process noise from the environment such as vibrations, pulsations, pressure shocks etc. making installation flexible and versatile
- Rugged and space-saving sensor design in stainless steel matching all environments
- High-pressure program as standard
- Full hazardous area solutions
- Easy integration into automation process control as TIA portal and PCS7
- Easy selection and integration of flow meters via TIA-Selector
- Cost effective integration of Coriolis flow meters for PLC controlled machines
- SITRANS FCT070 ET 200SP technology module and can combined with all other SIMATIC ET200 ST & HF modules
- The FCT070 has all high -end transmitter functionality integrated including the advanced fraction tables on board
- Fast and trouble-free communication between the flow meter and the PLC through digital data communication with up to 10 ms update rate
- Integrated advanced Two-stage batch controller functionality without additional modules. I/Os are onboard

## Flow Measurement

### SITRANS FC (Coriolis)

#### Sensors and Flowmeter systems

#### MASS 2100 / FC300 DN 4 with FCT070 transmitter

#### Technical specifications

Sensors MASS 2100 / FC300 DN 4 with FCT070 transmitter	
<b>Sizes mm (inch)</b>	MASS 2100 DI 1.5 (1/16) MASS 2100 DI 3 (1/8") MASS 2100 DI 6 (1/4") MASS 2100 DI 15 (1/2") FC300 DN 4 (1/6")
<b>Accuracy</b>	± 0.10 % for liquids additional ±0.40 for gases
<b>Repeatability</b>	± 0.05 %
<b>Flow range Q norm (liquids)</b> (water @ 1 bar pressure loss) (Q <sub>nom</sub> )	
• DI 1.5	19 kg/h (42 lb/h)
• DI 3	90 kg/h (198 lb/h)
• DI 6	500 kg/h (1 102 lb/h)
• DI 15	3 800 kg/h (8 370 lb/h)
• DN 4	140 kg/h (308 lb/h)
<b>Architecture</b>	Remote configuration
<b>System integration</b>	PCS7 and TIA portal with faceplates
<b>Power supply</b>	24 V DC; 19.2 ... 28.8 V
<b>Material</b>	
• Sensor	
- Wetted parts	316L stainless steel or Hastelloy C 22
- Enclosure	316L stainless steel
• Transmitter	Aluminum with corrosion-resistant coating Class C4
<b>Enclosure rating</b>	Sensor: IP67 FCT070 transmitter: IP20
<b>Pressure ratings</b>	
• Measuring tubes	
- 316L	Up to 265 bar (3 844 psi), depending on size and process connection
- Nickel Alloy C4	Up to 410 bar (5 945 psi), depending on size and process connection
• Sensor enclosure	No pressure containment
<b>Temperature ratings</b>	
• Process medium	-50 ... +180 °C (-58 ... +356 °F)
• Ambient	-40 ... +60 °C (-4 ... +122 °F) <sup>1)</sup>

Sensors MASS 2100 / FC300 DN 4 with FCT070 transmitter	
<b>Process connections (depending on size and pressure rating)</b>	
• Flanges	EN 1092-1 B1, ANSI/ASME B16.5
• Pipe threads	ASME B1.20 (NPT), ISO 228
• Hygienic threads	DIN 11851, ISO 2853/BS 4825 part 4 (SS3016)
• Hygienic clamps	ISO Clamp 2852
<b>Approvals</b>	
• Hazardous area	Sensor : ATEX, IECEx, EAC Ex, CSA, cCSAus, EAC FCT070 transmitter: Zone 2 & Class 1 Div 2 ATEX, IECEx, EAC Ex, CSA, cCSAus, FM; NEPSI, EAC PED
• Pressure equipment	
<b>NAMUR</b>	NAMUR-compliant (e.g. NE 21, NE 41, NE 107 and NE 132)
<b>I/O</b>	2 digital Input and 2 digital output Single and 2 stage batch function
<b>Communication</b>	Integrated PROFINET for SIMATIC integration and other PROFINET Controllers
<b>Totalizer</b>	3 totalizer
<b>EMC performance</b>	
• Emission	EN 55011/CISPR-11 (Class A)
• Immunity	EN/IEC 61326-1 (Industry)
<b>Mechanical load</b>	18 ... 1 000 Hz random The flow meter will mechanically tolerate 3.17 g RMS in all directions. Flow accuracy cannot be guaranteed under all conditions.

<sup>1)</sup> If operating outdoors, avoid direct sunlight, particularly in warm climatic regions.

#### Spare parts

## MASS 6000 Generation - Spare parts

### Overview

MASS 6000 is based on digital signal processing technology – engineered for high performance, fast flow step response, fast batching applications, high immunity against process noise, easy to install, commission and maintain.

This product is not longer available. Repair and spare parts for MASS 6000 (all models and variants) can still be ordered. See spare part list.

## Flow Measurement

### SITRANS FC (Coriolis)

#### Spare parts

#### SIFLOW FC070

#### Overview

SIFLOW FC070 is based on the SIMATIC S7-300 and the MASS 6000 technology.

The SIFLOW FC070 transmitter can be analogue connected with the Sitrans FC MASS 2100 DI 1.5, DI 3, DI 6, DI 15 and the FC300 DN4.

SIFLOW FC070 is available in two versions:

- SIFLOW FC070 Standard
- SIFLOW FC070 Ex & CT

The SIFLOW FC070 transmitter delivers true multi-parameter measurements i.e. mass flow, volume flow, density, temperature and fraction.

SIFLOW FC070 is designed for integration in a variety of automation systems, i.e.:

- Central mounted in S7-300, C7
- Decentralized in ET 200M for use with S7-300 and S7-400 as PROFIBUS DP/PROFINET masters
- Decentralized in ET 200M for use with any automation system using standardized PROFIBUS DP/PROFINET masters
- Stand-alone via a Modbus RTU master, i.e. SIMATIC PDM

#### Benefits

- Easy integration in SIMATIC S7 and PCS 7
- Support of SIMATIC PDM configuration tool via Modbus
- Dedicated mass flow chip with high-performance ASIC technology
- True 30 Hz update rate securing fast batching and step response
- Superior noise immunity due to a DFT (Discrete Fourier Transformation) algorithm
- Front end resolution better than 0.35 ns improves zero point stability and enhances dynamic turn-down ratio on flow and density accuracy
- Built-in batch controller with two-stage control and compensation
- Digital outputs for direct batch control, frequency/pulse
- Modbus RTU RS 232/485 interface for connection to SIMATIC PDM or any other Modbus master
- Digital input for batch control, zero adjust
- Multiple LED's for easy indication of flow, error and I/O state
- SENSORPROM technology automatically configures the transmitter during start-up providing:

- Factory pre-programming with calibration data, pipe size, sensor type and I/O settings
- Any values or settings changed by the user is stored automatically
- Automatically re-programming of a new transmitter, without loss of settings and accuracy
- Transmitter replacement in less than 30 seconds
- Four-wire Pt1000 measurement ensuring optimum accuracy mass flow, density and fraction flow
- Fraction flow computation based on 3rd-order algorithm matching all applications

#### Application

SIFLOW FC070 mass flowmeters are suitable for all applications within the entire process industry, where there is a demand for accurate flow measurement. The meters are suitable for measuring on liquid and gas.

The main applications for the SIFLOW FC070 transmitter can be found in the following industries:

- Food and beverage
- Pharmaceutical
- Automotive
- Oil and gas
- Power generation and utility
- Water and waste water

#### Design

SIFLOW FC070 is designed in an IP20 SIMATIC S7-300 enclosure and for use in central and de-central cabinets where sensors: FCS200, FC300 and MASS 2100 are remotely mounted.

#### Function

The following key functionalities are available:

- Mass flow rate, volume flow rate, density, temperature and fraction flow
- Two built-in totalizers which can freely be set for counting mass, volume or fraction
- 1 frequency/pulse output
- 1 phase shifted 90°/180° frequency/pulse output
- Two-stage batch controller
- 1 digital input
- Low flow cut-off
- Empty pipe detection
- Noise filter settings for different applications
- Simulation
- Automatic zero point adjustment with zero point evaluation feed back
- Configurable upper and lower alarm and warning limits for all process values
- Comprehensive status and error reporting

### Technical specifications

<b>Measurement of</b>	Mass flow, volume flow, density, sensor temperature, fraction A flow, fraction B flow, fraction A in %	<b>Galvanic isolation</b>	All inputs, outputs and communication interfaces are galvanically isolated. Isolation voltage: 500 V
<b>Measurement functions</b>		<b>Power</b>	
• Totalizer 1	Totalization of mass flow, volume flow, fraction A, fraction B	Supply	24 V DC nominal
• Totalizer 2	Totalization of mass flow, volume flow, fraction A, fraction B	Tolerance	20.4 V DC ... 28.8 V DC
• Single and 2-stage batch function	Batching function with the use of one or two outputs for dosing in high and low speed	Consumption	Max. 7.2 W
• 4 programmable limits	4 programmable high/low limits for mass flow, volume flow, density, sensor temperature, fraction A flow, fraction B flow, fraction A in %. Limits will generate an alarm if reached	Fuse	T1 A/125 V, not replaceable by operator
<b>Digital input</b>		<b>Environment</b>	
Functions	Start batch, stop batch, start/stop batch, hold/continue batch, reset totalizer 1, reset totalizer 2, reset totalizer 1 and 2, zero adjust, force frequency output, freeze frequency output	Ambient temperature	Storage: -40 °C ... +70 °C (-40 °F ... +158 °F)
High signal	<ul style="list-style-type: none"> <li>Nominal voltage: 24 V DC</li> <li>Lower limit: 15 V DC</li> <li>Upper limit: 30 V DC</li> <li>Current: 2 ... 15 mA</li> </ul>	Operation conditions	Horizontally mounted rail: <ul style="list-style-type: none"> <li>SIFLOW FC070 Standard: 0 ... +60 °C (32 ... +140 °F)</li> <li>SIFLOW FC070 Ex CT: -40 ... +60 °C (-40 ... +140 °F)</li> </ul> Vertically mounted rail: <ul style="list-style-type: none"> <li>SIFLOW FC070 Standard: 0 ... 45 °C (32 ... 113 °F)</li> <li>SIFLOW FC070 Ex CT: -40 ... +45 °C (-40 ... +113 °F)</li> </ul>
Low signal	<ul style="list-style-type: none"> <li>Nominal voltage: 0 V DC</li> <li>Lower limit: -3 V DC</li> <li>Upper limit: 5 V DC</li> <li>Current: -15 ... +15 mA</li> </ul>	Altitude	Operation: -1 000 ... 2 000 m (pressure 795 ... 1 080 hPa)
Input	Approx. 10 kΩ	<b>Enclosure</b>	
Switching	Max. 100 Hz	Material	Noryl, color: anthracite
<b>Digital output 1 and 2</b>		Rating	IP20/NEMA 2 according to IEC 60529
Functions	<ul style="list-style-type: none"> <li>Output 1: Pulse, frequency, redundancy pulse, redundancy frequency 2-stage batch, batch</li> <li>Output 2: Redundancy pulse, redundancy frequency, 2-stage batch</li> </ul>	Mechanical load	According to SIMATIC standards (S7-300 devices)
Voltage supply	3 ... 30 V DC (passive output)	<b>Ex approvals</b>	
Switching current	Max. 30 mA at 30 V DC	• SIFLOW FC070 Standard	ATEX: II 3G Ex nA II T4
Voltage drop	≤ 3 V DC at max. current	• SIFLOW FC070 Ex CT	ATEX, IECEx, EAC Ex, FM, CSA, INMETRO - Zone 2: Ex nA [ia] IIC T4
Leakage current	≤ 0.4 mA at max. voltage 30 V DC		FM - Class I, Div. 2: Grp. A, B, C, D (interface to Class I+II+III, Div. 1)
Load resistance	1 ... 10 kΩ	<b>Custody transfer approvals</b>	
Switching frequency	0 ... 12 kHz 50 % duty cycle	SIFLOW FC070 Ex CT	Compressed gaseous fuel measuring systems for vehicles NTEP for USA and Canada, approval no: 97-111A3
Functions	Pulse, frequency, redundancy pulse, redundancy frequency 2-stage batch, batch	<b>EMC performance</b>	
<b>Communication</b>		Emission	EN 55011/CISPR-11
Modbus RS 232C	<ul style="list-style-type: none"> <li>Max. baud rate: 115 200 baud</li> <li>Max. line length: 15 m at 115 200 baud</li> <li>Signal level: according to EIA-RS 232C</li> </ul>	Immunity	EN/IEC 61326-1
Modbus RS 485	<ul style="list-style-type: none"> <li>Max. baud rate: 115 200 baud</li> <li>Max. line length: 1 200 m at 115 200 baud</li> <li>Signal level: according to EIA-RS 485</li> <li>Bus termination: Integrated. Can be enabled by inserting wire jumpers.</li> </ul>	<b>Certification</b>	
		CE mark	Low voltage directive RoHS
		<b>NAMUR</b>	Within the limits according to "General recommendations" with error criteria A in accordance with NE 21
		<b>Programming tools</b>

## Flow Measurement

### SITRANS FS (ultrasonic)

#### Inline ultrasonic flowmeters

## Introduction

### Overview

Siemens offers two types of ultrasonic flowmeters, inline flowmeters and clamp-on flowmeters. This offers the end user the maximum flexibility to choose the technology that best fits his needs. This following chapter shows the inline versions.

SITRANS FS inline ultrasonic flowmeters measure flow of electrically conductive and non-conductive liquids.

### Benefits

- Greater flexibility:
  - Sensor sizes from DN 50 to 1200 mm (2" to 48")
  - Inline retrofit as 1-path and 2-path up to DN 1200 mm (2" to 48")
  - Compact and remote transmitter installation
  - HART and PROFIBUS PA communication
  - Mains or battery powered solutions
  - Dedicated transmitter portfolio for HVAC, power generation, utility and general industry as well as more demanding applications
- Easier service:
  - Exchange of the transducers without interrupting operation
  - Battery lifetime of up to 6 years
- Approvals/certificates:
  - Custody transfer approvals within district heating
  - ATEX
  - Standard with calibration certificate

### Application

Inline ultrasonic flowmeters are suitable for measuring the flow of liquids with good acoustic permeability, independent of conductivity, viscosity, temperature, density and pressure.

- max. 3 % solids
- max. 3 % air and gas
- max. 350 cSt

The main applications can be found in the following sectors:

- Raw water intake for water treatment plants
- Treated waste water
- Power generation and utility
- Irrigation systems
- Cooling water plants within the industry and in power stations
- Plants transporting non-conductive liquids
- Custody transfer - district heating (MID-004)
- HART/4 to 20 mA output
- PROFIBUS PA
- ATEX

## Application

## Function

### Physical principle (single path)

Velocity distribution along sound path

A sound wave traveling in the same direction as the liquid flow arrives at point B from point A in a shorter time than the sound wave traveling against the direction of flow (from point B to A). The difference in sound transit time indicates the flow velocity in the pipe.

Since delay time is measured at short intervals both in and against flow direction, viscosity and temperature have no influence on measurement accuracy.

### Measuring principle

In SITRANS F US flowmeters the two ultrasonic transducers are placed at an angle  $\theta$  in relation to the pipe axis. The transducers function as transmitters and receivers of the ultrasonic signals. Measurement is performed by determining the time the ultrasonic signal takes to travel with and against the flow. The principle can be expressed as follows:

$$v = K \cdot (t_{B,A} - t_{A,B}) / (t_{A,B} + t_{B,A}) = K \cdot \Delta t / t^2$$

$v$  = Average flow velocity

$t$  = Transit time

$K$  = Proportional pipe geometry factor

This measuring principle offers the advantage that it is independent of variations in the actual sound velocity of the liquid, i.e. independent of the temperature.

Proportional factor  $K$  is determined by wet calibration.

### Direct signal processing

The ultrasonic signal is sent directly between the transducers. The advantage gained sending signals from point to point is an extremely good signal strength.

### 2-path solution

Ultrasonic 2-path flow meter with 4 transducers. In the upper path transducers 1A/1B and in the lower path 2A / 2B are displayed.

The accuracy of ultrasonic flowmeters depends on the pipe geometry before and after the flowmeter and the number of ultrasonic measuring paths.

When water flows through a pipe, it has a tendency to swirl and/or flow with different velocities inside the pipe, depending on the pipe design.

A 2-path ultrasonic flowmeter offers:

- less sensitivity to upstream obstruction like bends, pumps or valves.
- high security in the measurements as the meter continues to measure even if, for some reason, one path stops working.

Typical straight inlet requirements are upstream  $10 \times D_1$  ( $D_1$  = diameter of the flowmeter) and downstream  $3 \times D_1$ .

Typical accuracy that can be reached with 2-path ultrasonic flowmetering is  $\pm 0.5\%$  with installations according to above demands.

# Flow Measurement

SITRANS FS (ultrasonic)

Inline ultrasonic flowmeters

## System information

## Technical specifications

3

Nominal size and flow

#### Technical specifications (continued)

##### Guidelines for selection of sensor

- Min. measuring range: 0 ... 1 m/s
- Max. measuring range: 0 ... 10 m/s

Nominal flow velocity:

- Normal: 1 ... 3 m/s
- Minimum: not permanently below 0.5 m/s
- Maximum: up to 8 m/s

Flow velocity calculation formula:

- $v = (4 \times Q_{\max}) / (\pi \times D_i^2 \times 3600)$
- $v$  in m/s,  $Q_{\max}$  in m<sup>3</sup>/h,  $D_i$  in m

Additional to the flow velocity check it is recommended to observe the Reynolds number (Re):

The optimal performance of the flowmeter is with a Re above 10 000, which is typical for flow velocities (water) above 0.5 m/s. Avoid an Re value between 2000 and 5000. In order to observe this and to be above the recommended 0.5 m/s flow velocity limit the sensor size must be reduced.

Re formula:  $Re = V \times D_i / \text{Viscosity}$

$V$  in m/s,  $D_i$  in m, Viscosity in cSt ( $X \times E^{-6} \text{ m}^2/\text{s}$ )

Example: Viscosity for water at 20 °C =  $1 \times E^{-6} \text{ m}^2/\text{s}$

##### Inlet and outlet conditions

Recommended inlets and outlets

To maximize performance inlet and outlet must be straight. There must be a certain distance between flowmeter and bends, pumps and valves. It is also important to centre the flowmeter in relation to pipe flanges and gaskets.

Valves must always be installed after the flowmeter. The only exception is installation of the sensor in a vertical pipe. In this case a valve below the sensor is necessary to allow zero point adjustment. It is important to select a valve which does not alter the flow when fully open.

Recommended inlet/outlet	SONO 3300, SONO 3100, SONOKIT 2-path	FUS380/ FUE380 <sup>1)</sup>	SONOKIT 1-path
	90° bend	10 x $D_i$	10 x $D_i$
Fully opened valve	10 x $D_i$	10 x $D_i$	20 x $D_i$
Partially opened valve	40 x $D_i$	40 x $D_i$	40 x $D_i$
2 x 90° bends in same plane	15 x $D_i$	15 x $D_i$	25 x $D_i$
2 x 90° bends in two planes	20 x $D_i$	20 x $D_i$	40 x $D_i$
Reductions (Outlet 0 x $D_i$ )	10 x $D_i$	10 x $D_i$	20 x $D_i$
Pumps	20 x $D_i$	20 x $D_i$	40 x $D_i$
Outlet	3 x $D_i$	3 x $D_i$	3 x $D_i$

<sup>1)</sup> Inlet for FUE380 approved systems: Minimum straight inlet pipe: 1.5 m, but note further recommendations above.

##### Reductions

The flowmeter can be installed between two reducers (e.g. DIN 28545). At 8° the pressure drop curve below applies.

##### Example:

A flow velocity of 3 m/s ( $V$ ) in a sensor with a diameter reduction from DN 250 to DN 200 ( $d_1/d_2 = 0.8$ ) gives a pressure drop of 3 mbar.

# Flow Measurement

## SITRANS FS (ultrasonic)

### Inline ultrasonic flowmeters

#### System information

#### Technical specifications (continued)

The sensor must always be completely filled with liquid:

The following installations must be avoided:

- Installation at the highest point of the pipe system
- Installation in vertical pipes with free outlet

With partially full pipes or pipes with free outlet the flowmeter should be located in a U-shaped tube:

Installing the transducers in horizontal position is recommended:

#### Technical specifications (continued)

##### Pressure/temperature curve to EN (DIN) flanges

##### Pressure/temperature curve to ANSI B16.5 flanges

**Note:** The pressure/temperature curves only assist in the selection of a system. No responsibility is taken for the correctness of the information. For exact data please refer to the PED requirements.

##### Reference conditions

To ensure continuous accurate measurement, flowmeters must be calibrated. The calibration is conducted at Siemens flow facilities with traceable instruments referring directly to the physical unit of measurement according to the International System of Units (SI).

Therefore the calibration certificate ensures recognition of the test results worldwide, including the US (NIST traceability).

Siemens offer accredited calibrations assured to ISO 17025. Siemens Flow Instruments accredited laboratories are recognized by ILAC MRA (International Laboratory Accreditation Corporation - Mutual Recognition Arrangement) ensuring international traceability and recognition of the test results worldwide.

Flowmeter calibration data are stored in the internal EEPROM of the transmitter FUS060 or FUS080.

The system accuracy refers to the following systems:

SONO 3300/FUS060, SONO 3100/FUS060<sup>1)</sup> which are typically calibrated on the frequency output.

##### Typical calibration reference conditions:

Fluid	Water
Fluid temperature	$22 \pm 5 \text{ }^\circ\text{C}$
Ambient temperature	$22 \pm 5 \text{ }^\circ\text{C}$
Supply voltage	115/230 V AC $\pm 10 \dots -15 \%$ DC 24 V $\pm 25 \dots -15 \%$ , AC 24 V $\pm 15 \%$
Straight inlet length	$20 \times D_i$
Outlet	$3 \times D_i$
Rangeability	0 ... 1 m/s to 0 ... 10 m/s
Repeatability	Better than 0.25 % in the range 0.5 ... 10 m/s
Linearity (for water)	
• Reynolds number $1000 < Re < 5000$	Better than 1 %
• Reynolds number $> 5000$	Better than 0.5 %

<sup>1)</sup> Only systems with transmitter FUS060. For systems with transmitter FUS080 see the sections FUS380 and FUE380.

##### Additional effects of deviations from reference conditions

- Current output: As frequency output ( $\pm 0.1 \%$  of actual flow  $+0.05 \%$  FSO)
- Effect of ambient temperature: Frequency/pulse output:  $< 0.005 \%$  SPAN/K; Current output:  $< \pm 0.0075 \%$  SPAN/K
- Effect of supply voltage: 0.005 % of measuring value at 1 % change

## Flow Measurement

SITRANS FS (ultrasonic)

Inline ultrasonic flowmeters

### SITRANS FUS060 transmitter

#### Overview

SITRANS FUS060 is a transit time based transmitter designed for ultrasonic flowmetering with dedicated sensors in the FUS inline series up to DN 500. SITRANS FUS060 is engineered for high performance and is suitable for 1- and 2-path flowmeters.

#### Benefits

- Superior signal resolution for optimum turn down ratio
- Simple menu-based local operation with two-line display and four optical input elements, for unlimited use in potentially explosive atmospheres
- Self-monitoring and diagnostic
- Operate up to 2 paths
- ATEX II G Ex dem [ia/ib] IIC T6/T4/T3 Gb
- Remote installation up to 120 m from sensor
- 1 analog output (4 to 20 mA) standard with HART-protocol, 1 digital frequency or pulse output, 1 relay output for limit, alarms, flow direction
- PROFIBUS PA Profile 2, 1 digital frequency or pulse output

#### Application

The main application for flowmeters with the transmitter SITRANS FUS060 is measurement volume of water and waste water.

#### Design

The transmitter type FUS060 is designed for remote installation in non-hazardous or hazardous areas.

The transmitter is designed for use in a flowmeter system together with sensors type SONOKIT, SONO 3300 and SONO 3100.

The FUS060 is ordered as part of a complete flowmeter system. It can be ordered separately as spare part and manually programmed with the sensor data.

#### Function

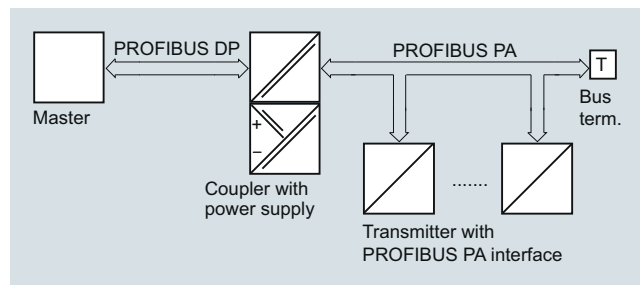

##### Displays and keypad

Operation of the SITRANS FUS060 transmitter can be carried out using:

- Keypad and display unit
- HART communicator
- PC/laptop and SIMATIC PDM software via HART communication
- PC/laptop and SIMATIC PDM software using PROFIBUS PA communication

HART communication

PROFIBUS PA communication

The operating and display panel permits simple operation without supplementary equipment. It is not necessary to open the housing. All changes to a setting can therefore also be carried out in the potentially explosive atmosphere.

Operating and display panel

### Function (continued)

The individual functions and parameters are selected using a hierarchical, multi-language input menu and four infrared keys. The parameters can be specifically selected and modified using codes, e.g.:

- Operating parameters such as measuring range, physical dimensions, device information
- Limits for flow, totalizer, ultrasonic velocity or ultrasonic amplitude
- Noise suppression using damping, error stages and hysteresis
- Display parameters (freely-configurable display)
- Display in volume or mass dimensions
- Density as constant input value for conversion of volume into mass dimensions
- Forward/backward measurement
- Flow direction
- Diagnostics functions and control values
- Functions of the PROFIBUS PA output: flow, net quantity (volume or mass), ultrasonic velocity, ultrasonic amplitude, forward quantity (volume or mass), backward quantity (volume or mass)
- Functions of the analog output: flow, ultrasonic velocity or ultrasonic amplitude
- Functions of digital output 1: pulse output, frequency output, limit, flow direction or device status
- Functions of digital output 2: limit, flow direction or device status
- Simulation of output signal via analog output, digital output 1 and digital output 2

The HART protocol is implemented via the analog output (current output). Using this communication facility, the device can be parameterized with a PC/laptop and SIMATIC PDM software in addition to local operation.

In the version with PROFIBUS PA, the analog output is replaced by the digital PROFIBUS PA output. The device can then be parameterized via PROFIBUS communication and with SIMATIC PDM in addition to local operation.

### Integration

The transmitter output is often used as input for an automation system or as input for systems of remote reading.

The SITRANS FUS060 transmitter offers current, pulse and relay outputs as standard output functions and supports HART or Profibus PA communication.

The settings of the transmitter output functions are individually programmed via keypad and display menu.

## Flow Measurement

### SITRANS FS (ultrasonic)

#### Inline ultrasonic flowmeters

#### SITRANS FUS060 transmitter

#### Technical specifications

##### Input

Measurement	Flow by measuring the transit time difference of ultrasonic signals through ultrasonic transducers in DN 100 ... 500 (4 ... 20") 2-path sensor pipes: 1-path or 2-path
Nominal sizes and number of paths	2-path DN 100 ... 500 (4 ... 20")
Max. cable length	20 m (395 ft) (shielded coaxial cable). For Ex version the transducer cable length is restricted to 3 m (9.84 ft) in order to meet requirements for electrical immunity.

##### Analog output

Function	Current output programmable for flow, sound velocity or amplitude level. Active current output (13.2 V < open loop voltage < 15.8 V)
• Signal range	4 ... 20 mA
• Upper limit	20 ... 22.5 mA, adjustable
• Signal on alarm	3.6 mA, 22 mA, or 24 mA
• Load	Max. 600 Ω; for non Ex version ≤ 230 Ω for HART communication ≤ 330 Ω for Ex-version
• Only PROFIBUS PA version:	Analog output omitted, is replaced by digital PROFIBUS PA interface

##### Digital output 1

Function	Pulse, frequency or status output - programmable for pulses, frequency, alarm, limit or status.
• Active or passive signal, can be configured with positive or negative logic	Active: 24 V DC, ≤ 24 mA, $R_i = 300 \Omega$ Passive: open collector, 30 V DC, ≤ 200 mA
• For explosion protection (ATEX version) and PROFIBUS PA version	Only passive: open collector 30 V DC, ≤ 100 mA
• Output function, configurable	Pulse output <ul style="list-style-type: none"> <li>Adjustable pulse significance ≤ 5 000 pulses/s</li> <li>Adjustable pulse width ≥ 0.1 ms</li> </ul> Frequency response <ul style="list-style-type: none"> <li><math>f_{END}</math> selectable up to 10 kHz</li> </ul> Limit for flow, totalizers, ultrasonic velocity or ultrasonic amplitude device status, flow direction

##### Digital output 2

Function	Relay output - programmable for alarm, limit or status indication.
• Relay, NC or NO contact	Switching capacity max. 5 W Max. 50 V DC, max. 200 mA DC Self-resetting fuse, $R_i = 9 \Omega$
• For explosion protection (ATEX version)	Max. 30 V DC, max. 100 mA DC, 50 mA AC (cf. EC-Type Examination certificate)
• Output function, configurable	Limit for flow, ultrasonic velocity or ultrasonic amplitude flow direction device status
• Only PROFIBUS PA version:	Digital output 2 omitted

##### Communication via analog output 4 ... 20 mA

• PC/laptop or HART communicator with SITRANS F flowmeter	
- Load with connection of coupling module	min. 230 Ω (max. 330 Ω for Ex-version)
- Load with connection of HART communicator	min. 230 Ω
- Cable	2-wire shielded ≤ 3 km (≤ 1.86 miles) Multi-core shielded ≤ 1.5 km (≤ 0.93 miles)
- Protocol	HART, version 5.1

##### Communication via PROFIBUS PA interface

Layers 1 + 2 according to PROFIBUS PA	Communication system according to IEC 61158/EN 50170
• Power supply	Separate supply, four-wire device Permissible bus voltage 9 ... 32 V See certificates and approvals
• Current consumption from bus	10 mA; ≤ 15 mA in event of error with electronic current limiting

##### Electrical isolation

Outputs electrically isolated from power supply and from another

##### Accuracy

Error in measurement (at reference conditions)	
• Pulse output	≤ ± 0,5 % of measured value at 0,5 ... 10 m/s or ≤ ± 0,25/V[m/s]% of measured value at flow < 0,5 m/s
• Analog output 4 ... 20 mA	As pulse output plus ± 0.1 % of measured value, ± 20 μA
• Repeatability	≤ ± 0,25 % of measured value at 0,5 ... 10 m/s
Reference conditions (water)	
• Process temperature in the connected sensor	25 °C ± 5 °C (77 °F ± 9 °F)
• Ambient temperature at the transmitter	25 °C ± 5 °C (77 °F ± 9 °F)
• Transmitter warming-up time	30 min.

#### Technical specifications (continued)

##### Rated operation conditions

###### Ambient conditions

Ambient temperature

- Operation -20 ... +50 °C (-4 ... +122 °F)
  - In potentially explosive atmospheres Observe temperature classes
  - Storage -25 ... +80 °C (-13 ... +176 °F)
- Enclosure rating IP65 (NEMA 4)
- Electromagnetic compatibility For use in industrial environments
- Emitted interference To EN 55011 / CISPR-11
  - Noise immunity To EN/IEC 61326-1 (Industry)

###### Medium conditions

The measuring media must be ultrasonic signal compatible. It must be homogeneous and not two-phased to transfer the acoustic ultrasonic signals.

- Process temperature -200 ... +250 °C (-328 ... +482 °F) (not directly influenced by medium temperature)
- Gases/solids Influence accuracy of measurement (approx. max. 3 % gases or solids)

##### Design

Separate version Transmitter is connected to the transducers via 3 ... 120 m (9.8 ft ... 395 ft) long specially shielded cables (coaxial cable)

For ATEX versions mounted in the Ex area only with 3 m (9.8 ft) long cables.

Enclosure material Die-cast aluminium, painted

Wall mounting bracket (standard and special) Stainless steel (standard: always incl.)

Weight of transmitter 4.4 kg (9.7 lb)

Electrical connection Cable glands (always incl.)

- Power supply and outputs
  - 2 x M20 (HART)/M25 (PROFIBUS) or
  - 2 x ½"-NPT (HART)
- Transducers/sensor
  - 2/4 x M16 or
  - 2/4 x ½"-NPT

##### Display and controls

Display LCD, two lines with 16 characters each

- Multi-display: 2 freely-selectable values are displayed simultaneously in two lines
- Flow, volume, mass flow, mass, flow velocity, speed of sound, ultrasonic signal information, current, frequency, alarm information

Operation 4 infrared keys, hierarchical menu shown with codes

##### Power supply

Supply voltage

- Standard version 120 ... 230 V AC ± 15 % (50/60 Hz) or 19 ... 30 V DC/21 ... 26 V AC

- Ex version 19 ... 30 V DC/21 ... 26 V AC

Power failure No effect for at least 1 period (> 20 ms)

Power consumption Approx. 10 VA/10 W

##### Certificates and approvals

Explosion protection ATEX II 2  
G Ex dem [ia/ib] IIC T6/T4/T3 Gb

T6 for media < 85 °C (185 °F)  
T5 for media < 100 °C (212 °F)  
T4 for media < 135 °C (275 °F)  
T3 for media < 200 °C (392 °F)

##### Coaxial cable

###### Standard Coaxial cable (75 Ω)

Coaxial cable with SMB straight plug on one end for connection to the FUS060

Pre-terminated, can be shortened on sensor side

Outside diameter Ø 5.8 mm

Length 3, 15, 30, 60, 90, 120 m (9.84, 49.21, 98.43, 196.85, 295.28, 393.70 ft) between sensor and transmitter

Material (outside jacket) black PE

Ambient temperature -10 ... +70 °C (14 ... 158 °F)

###### High temperature Coaxial cable (75 Ω)

Coaxial cable with SMB straight plug on one end for connection to the FUS060

Outside diameter Ø 5.13 mm (first 0.3 m (0.98 ft) part to the transducer), Ø 5.8 mm (for remaining cable to the transmitter – with SMB plug at the end) and between these is a black hot melt junction Ø 16 mm (length 70 mm)

Fix terminated, can NOT be shortened

Length 3, 15, 30 m (9.84, 49.21, 98.43 t) between sensor and transmitter (max. 3 m (9.84 ft)) transducer cable length for Ex area mounted transmitters)

Material (outside jacket) Brown PTFE (0.3 m (0.98 ft) part) and black PE (for remaining cable)

Ambient temperature -200 ... +200 °C (-328 ... +392 °F) (brown PTFE transducer part) and -10 ... +70 °C (14 ... 158 °F) (black PE for remaining transmitter cable part)

#### Circuit diagrams

Electrical connection SITRANS FUS060

#### Overview

SITRANS FUS080 is a transit time based transmitter designed for ultrasonic flow metering with any sensor in the FUS inline series SONOKIT, FUS380 and FUE380 up to DN 1200.

The ultrasonic flowmeter transmitter SITRANS FUS080 comes as battery or mains powered version. The SITRANS FUS080 is designed to measure flow water applications.

The SONOKIT retrofit flowmeter series are shown from page 3/282. The standard flowmeter series SITRANS FUS380 is described from page 3/292. The type approved flowmeter series for flow metering in energy meter custody transfer systems are named SITRANS FUE380.

#### Benefits

- Battery-powered up to 6 years
- 115/230 V mains-powered with back-up battery option in case of mains power failure
- Fast measuring frequency 15 Hz/0.5 Hz (230 V AC/Battery)
- Easy one button straight forward display
- IrDA optical interface for local communication
- 2-path measuring principle for optimum accuracy
- Compact or remote mounting
- Measures on all district water qualities and water conductivities
- No pressure drop
- Long-term stability
- 2 galvanic isolated digital outputs for easy connection to a calculator (potential free)
- 1 analog 4 to 20 mA output
- Bidirectional measurement, with 2 totalizers and outputs
- Dynamic range  $Q_i$  (min) :  $Q_s$  (max) up to 1:400
- Compact version with triax cables for highest EMC-protection

#### Application

The main application for flowmeters with the transmitter SITRANS FUS080 is measurement of water flow in district heating plants, local networks, boiler stations, substations, chiller plants, irrigations plants and other general water applications.

#### Design

The transmitter type SITRANS FUS080 is designed with fiber-glass reinforced polyamide enclosure for remote or compact installation in normal areas. The remote versions are available with up to 30 meter distance from flowmeter to transmitter. When ordering as a compact version in the series FUS380 and FUE380 the transducer cables are pre-mounted at the sensor.

The transmitter is available in an IP67/NEMA 4X/6 enclosure and is designed for use in the flowmeters series:

- SONOKIT (1-path or 2-path)
- FUS380 (2-path)
- FUE380 (2-path)

The transmitter FUS080 is always ordered as part of a complete flowmeter system.

It can be manually ordered separately as spare part pre-programmed with the given sensor data.

#### Integration

The flowmeter pulse output is often used as input for an energy meter or as input for digital systems for remote reading.

SITRANS FUS380 has two pulse outputs, with functions that can be individually selected.

The settings of the transmitter, e. g. flow and pulse output rate, are defined when ordering the complete flowmeter.

If the flowmeter forms part of an energy meter system for custody transfer, no further approvals are needed, except eventually local approvals on the flowmeter.

## Flow Measurement

### SITRANS FS (ultrasonic)

#### Inline ultrasonic flowmeters

#### SITRANS FUS080/FUE080 transmitter

#### Technical specifications

##### Input

Measurement	Flow by measuring the transit time difference of ultrasonic signals through ultrasonic transducers in the sensor pipes. Supporting of 1-path or 2-path sensors in sizes DN 50 ... 1200 measuring on water
Measuring rate	0.5 Hz
<ul style="list-style-type: none"> <li>Battery mode</li> <li>Mains supply</li> <li>Back-up mode</li> </ul>	Up to 15 Hz 0.5 Hz (at mains supply drop)
Flow rate	0.02 ... 9 m/s (0.065 ... 29.5 ft/s), bidirectional flow metering

##### Output

	2 pulse or status outputs (A and B), individual galvanically isolated MOS relay outputs, passive mode, max. $\pm 35$ V AC/DC, max. 50 mA
Max. pulse frequency	100 Hz at $Q_s$ ( $Q_{max}$ )
Pulse value and length	Selectable with the ordering of the flowmeter
Output A function	Pulse: forward, reverse, forward net, reverse net (preset: forward)
Output B function	Pulse: forward, reverse, forward net, reverse net (preset: forward) or alarm indication or call-up indication (preset: alarm)
Pulse value A and B	0.1 l/p, 0.25 l/p, 0.5 l/p, 1 l/p, 2.5 l/p, 10 l/p, 25 l/p, 50 l/p, 100 l/p, 250 l/p, 500 l/p, 1 m <sup>3</sup> /p, 2.5 m <sup>3</sup> /p, 5 m <sup>3</sup> /p, 10 m <sup>3</sup> /p, 25 m <sup>3</sup> /p, 50 m <sup>3</sup> /p, 100 m <sup>3</sup> /p, 250 m <sup>3</sup> /p, 500 m <sup>3</sup> /p, 1 000 m <sup>3</sup> /p
Pulse length (depending on $Q_{max}$ by DN selection)	5, 10, 20, 50, 100, 200, 500 ms (standard 5 ms)
Alarm indication	Path 1 (F1), path 2 (F2) internal, failure (F3, F4), powers supply warning or low battery indication (F5), $Q_{max}$ overflow (F6), pulse overflow (F7, F8), internal data logger warning (F9)
Analog output	Passive current output 4 ... 20 mA Data span pre-selectable depending on pipe size

##### Rated operation conditions

<u>Ambient conditions</u>	
Ambient temperature	-10 ... +60 °C (14 ... 140 °F) (MID version: max. +55 °C (131 °F))
<ul style="list-style-type: none"> <li>Operation</li> <li>Storage</li> </ul>	-40 ... +85 °C (-40 ... +185 °F) (battery included)
Enclosure rating	IP67/NEMA 4X/6 to EN 60529 and DIN 40050
Electromagnetic compatibility	To EN 55011/CISPR-11
<ul style="list-style-type: none"> <li>Emitted interference</li> <li>Immunity</li> <li>MID approved (FUE380 series)</li> </ul>	To EN/IEC 61326-1 (Industry) Environment class E2 and M1
Mechanical vibration	2 g, 1 ... 800 Hz sinusoidal in all directions according to IEC 68-2-6
Weight of transmitter	Approx. 1.5 kg (3.3 lb)

##### Design

Enclosure material	Fibre-glass reinforced polyamide, light gray color
Wall mounting kit	IP67/NEMA 4X/6 terminal box for the wall mounting of the transmitter, fiber-glass reinforced polyamide with stainless steel bracket, cable glands entries: 2 x 2 M20 or PG 13.5 for power supply and outputs and 2 x M20 or PG 13.5 for the sensor cables, glands (supply and outputs and double cable entries for sensor cables) are included.
Sensor cable	Coaxial cable sets for remote transmitter up to 30 m (98.4 ft) long transducer cable, 75 $\Omega$ impedance, cables sets are prepared for the connection to the sensors Triax cables or integral version

##### Display and controls

Display	LCD, 8 digits, additional 2 digits and symbols for status information
Resolution	Totalized information can be displayed with 1, 2 or 3 decimals or automatic adjustment (default)
Display setting	Flow unit: Preset: m <sup>3</sup> /h Volume unit: Preset: m <sup>3</sup>
Push button	One push button for menu selection and display information
Communication (IrDA optical eye)	IrDA – optical communication and control interface with Modbus RTU protocol for read or write transmitter settings and data via PC and PDM tool

##### Power supply

Battery	D-cell battery pack, 3.6 V LiSOCl (Lithium Thionyl Chloride, 34 Ah), replaceable, life- and working-time up to 6 years
Mains	87 ... 265 V AC (50 ... 60 Hz) or 87 ... 265 V AC (50 ... 60 Hz) with D-cell single battery backup, 2.6 V LiSOCl (Lithium Thionyl Chloride, 17 Ah), replaceable, life time up to 8 years

##### Power consumption

Mains version	Approx. 2.5 VA
---------------	----------------

**Technical specifications (continued)**

**SONOKIT, FUS380, FUE380**

The flow values and settings are predefined according to dimension selection.

The transmitter settings are changeable by using the SW tool PDM (for FUE380 series some of the setting are only readable, restriction of the approval requirements).

**Accuracy/Error in measurement:**

(at reference conditions for FUS380 and FUE380 series, SONOKIT series will differ in the accuracy)

- Pulse output
  - $\leq \pm 0.5\%$  of measured value at 0.5 ... 10 m/s or
  - $\leq \pm 0.25/V$  [m/s] % of measured value at flow < 0.5 m/s
- Repeatability  $\leq 0.25\%$  of measured value at 0.5 ... 10 m/s
- Reference conditions
  - Process temperature and ambient temperature:  $25\text{ °C} \pm 5\text{ °C}$  ( $77\text{ °F} \pm 9\text{ F}$ )
  - Transmitter Warming-up time 30 min.
  - Installation conditions of the sensor: Upstream section > 10 x DN and downstream section > 5 DN

**Output configuration**

Pulse volume: output A/B configured as volume per pulse, calculated on forward/reverse or net forward/reverse flow. The volume per pulse is free scaleable (via PDM software).

Pulse output B can be used as stated above or as alarm or call-up function.

Call-up: the call-up output is active until manually reset by use of PDM tool. The call-up function is activated when an alarm is activated.

Inline ultrasonic flowmeters

### SONO 3300/FUS060 flowmeter

#### Overview

The combination of SONO 3300 sensor and FUS060 transmitter is ideal for applications within the general industry. Measurements are independent of liquid temperature, density, pressure and conductivity. Transducers cannot be replaced.

#### Benefits

- Robust remote transmitter FUS060
- Robust design for industrial applications
- Measures all liquids less than 350 cSt, conductive or non-conductive
- No pressure drop
- Reliable and accurate flow measurements
- Long-time stability
- ATEX approval

#### Application

The main application for SONO 3300/FUS060 ultrasonic flowmeter is measurement of volume.

SONO 3300/FUS060 can be used for water and treated waste water.

#### Design

The SONO 3300/FUS060 consists of a casted sensor (DN 50 to 80 (2" to 3")), welded pipes (DN 100 to 300 (4" to 12")) and a transmitter FUS060.

The transmitter can only be mounted separately.

The internal signal cables from transducers to sensor connection box are protected from an aggressive environment by stainless steel pipes.

#### Sensor installation

See system information.

### Technical specifications

The transmitter related to this system is the SITRANS FUS060. Technical specifications to the FUS060 see page 3/254.

2-path sensor with flanges and inline transducers	
<b>Error in measurement</b>	
Error in measurement at reference conditions	$V > 0.5 \dots 10 \text{ m/s}$ , $\pm 0.5 \%$ of rate ( $v = \text{flow speed}$ )
Max. flow velocity	10 m/s (32 ft/s)
Nominal size	DN 50, DN 65, DN 80, DN 100, DN 125, DN 150, DN 200, DN 250, DN 300 (2" ... 12")
Media temperature	Separate version: $-10 \dots +160 \text{ }^\circ\text{C}$ (14 ... 320 $^\circ\text{F}$ )
Ambient temperature (sensor)	Separate version: $-20 \dots +60 \text{ }^\circ\text{C}$ (-4 ... +140 $^\circ\text{F}$ ) Storage: $-40 \dots +85 \text{ }^\circ\text{C}$ (-40 ... +185 $^\circ\text{F}$ )
Enclosure	Standard version: IP67 (NEMA 4X/NEMA 6) ATEX version: As standard, but with ATEX approval (see below)
<b>Process connections</b>	
PN designated EN 1092-1 type 11 (B)	<ul style="list-style-type: none"> <li>• DN 50 ... 300 (2" ... 12"), PN 40</li> <li>• DN 100 ... 300 (4" ... 12"), PN 16</li> <li>• DN 200 ... 300 (8" ... 12"), PN 10</li> </ul>
Class designated EN 1759-1	<ul style="list-style-type: none"> <li>• DN 50 ... 300 (2" ... 12"), class 150</li> <li>• DN 50 ... 300 (2" ... 12"), class 300</li> </ul>
Transducer	Inline version welded into pipe
<b>Materials</b>	
Pipe	<ul style="list-style-type: none"> <li>• DN 50 ... DN 80 (2" ... 3"): Cast steel EN 1.1131-GS-15Mn5</li> <li>• DN 100 ... DN 300 (4" ... 12"): Carbon steel EN 1.0345-P235GH</li> </ul>
Flange	• DN 50 ... DN 300 (2" ... 12"): EN 1.0025-S235JRG2
Class	ASTM A105
Transducer	Stainless steel AISI 316 or similar
<b>Certificates and approvals</b>	
Conformity certificate	The devices are supplied as standard with a Siemens Certificate of Conformity on DVD.
Material certificate	Material certificate according to EN 10204-3.1 available
NDT examination report	Extended material certificate is optionally available on special request (PVR)
Calibration report	A standard calibration report is shipped with each flowmeter.
Extended accredited ISO/IEC 17025 calibration certificates	Optionally available
Approvals	No custody transfer approvals
Ex approval	System ATEX approval for SONO 3300 with remote transmitter FUS060-Ex (ATEX II 2 G Ex dem [ia/ib] IIC T6/T4/T3 Gb)  For Ex version the transducer cable length is restricted to 3 m (9.84 ft), in order to meet requirements.

The sensors are approved according to EU directive 2014/68/EU regarding fluid group 1, classified in category III. Design according to EN 13480 (PED Directive).

### Coax cable between sensor SONO 3300 and transmitter FUS060

Standard Coax cable (75 Ω)	Coax cable with SMB straight plug on one end for the FUS060 connector	
Outside diameter	Ø 5.8 mm	
Length	3, 15, 30, 60, 90, 120 m (9.84, 49.21, 98.43, 196.85, 295.28, 393.70 ft) between sensor and transmitter	
Material (outside jacket)	black PE	
Ambient temperature	$-10 \dots +70 \text{ }^\circ\text{C}$ (14 ... 158 $^\circ\text{F}$ )	
<b>High temperature Coax cable (75 Ω)</b>		
Outside diameter	Ø 5.13 mm (first 0.3 m (9.84 ft) part to the transducer), Ø 5.8 mm (for remaining cable to the transmitter – with SMB plug at the end) and between these is a black hot melt junction Ø 16 mm (length 70 mm)	
Length	3, 15, 30, 60, 90, 120 m (9.84, 49.21, 98.43, 196.85, 295.28, 393.70 ft) between sensor and transmitter (max. 3 m (9.84 ft)) transducer cable length for Ex area mounted transmitters	
Material (outside jacket)	Brown PTFE (0.3 m (9.84 ft) part) and black PE (for remaining cable)	
Ambient temperature	$-200 \dots +200 \text{ }^\circ\text{C}$ (-328 ... +392 $^\circ\text{F}$ ) (brown PTFE transducer part) and $-10 \dots +70 \text{ }^\circ\text{C}$ (14 ... 158 $^\circ\text{F}$ ) (black PE for remaining transmitter cable part)

#### Circuit diagrams

Electrical connection of SITRANS FUS060 and SONO 3300

## Overview

SONO3100/FUS060

The combination of the SONO 3100 sensor and the FUS060 transmitter is ideal for applications where process shut-down is impossible during service and where there is a need for extreme high/low temperatures and pressures.

Transducers can be changed without interrupting operation. SONO 3100 can optionally be delivered as a 1-path or 2-path solution.

## Benefits

- Transducers can be replaced under pressure
- Measurement of all liquids less than 350 Cst, conductive or non-conductive
- No pressure drop
- Reliable and accurate flow measurements
- Long-time stability
- On request as special versions:
  - Special sensor material, e.g. Duplex, stainless steel
  - High/low temperature sensor version: +250 °C (+482 °F)/-200 °C (-328 °F) sensors
  - Pressure rating 430 bar (6235 psi)
  - Special sensor sizes down to DN 25
  - 1-path or 2-path sensor technology

## Application

The main application for SONO 3100 in combination with transmitter type FUS060 is to measure volume flow within:

- Water and waste water

## Design

The SONO 3100 in combination with FUS060 consists of a SONO 3100 sensor, SONO 3200 transducers with O-rings or flanges depending on selection - and a FUS060 transmitter.

SONO 3100 is basically supplied in a 2-path solution with flanges in sizes from DN 100 to DN 500 and without flanges in sizes from DN 100 to DN 300.

2-path standard, 1-path special versions available on request, depending on size (DN 25 to DN 500).

SONO 3100 is as standard available in carbon steel from DN 100 to DN 500.

FUS060 is designed for remote wall mounting only.

## Technical specifications

The transmitter related to this system is the SITRANS FUS060. The technical specifications to the FUS060 see page 3/254.

### 2-paths sensor fitted with four SONO 3200 transducers

#### Error in measurement

Error in measurement at reference conditions	$V > 0.5 \dots 10 \text{ m/s}$ , $< \pm 0.5 \%$ of rate ( $v$ = flow velocity)
Max. flow velocity	10 m/s (32 ft)
Nominal size	DN 100 ... 500 (4 ... 20")
Media temperature	
• Standard	-10 ... +200 °C (14 ... 392 °F)
• ATEX Ex d version	-20 ... +180 °C (-4 ... +356 °F)
• ATEX Ex i version	-10 ... +190 °C (14 ... 374 °F)
• Specials	-200 °C (-328 °F) or up to 250 °C (482 °F)
Ambient temperature	
• Standard and Ex-i version	-20 ... +60 °C (-4 ... +140 °F)
• Ex d version	-20 ... +180 °C (-4 ... +356 °F)
Enclosure	IP67 (NEMA 4X/6)/IP68 (NEMA 6P) and ATEX (see below)

## Flow Measurement

### SITRANS FS (ultrasonic)

#### Inline ultrasonic flowmeters

#### SONO 3100/FUS060 flowmeter

#### Technical specifications (continued)

##### Certificates and approvals

System ATEX approval for SONO 3100 together with transmitter FUS060-Ex	ATEX II 2 G Ex dem [ia/ib] IIC T6/T4/T3 Gb or ATEX II 2G Ex d IIC T3-T6 Gb with SONO 3200 Ex d transducers (for standard FUS060 transmitter, installed outside of Ex zone)  For FUS060 Ex version the trans- ducer cable length is restricted to 3 m (9.84 ft), in order to meet require- ments for electrical immunity.
Conformity certificate CE	The devices are supplied as standard with a Siemens Certificate of Conform- ity on DVD.
Material certificates	Material certificate according to EN 10204-3.1 is optionally available.
NDT examination report	Extended material certificate is optionally available.
Pressure certificate	Pressure test according EN 1024-2.3 optionally available
Calibration report	A standard calibration report is shipped with each flowmeter.  Optionally available:  Extended accredited ISO/IEC 17025 calibration certificates
Approvals	No custody transfer approvals

The sensor SONO 3100 with transmitter FUS060 conforms to Product Family Standard EN 61326/A3 appendix A (Title: Electrical Equipment for Measurement control and laboratory use – EMC requirements).

The sensors are approved according to EU directive 2014/68/EU regarding fluid group 1, classified in category III. Design according to EN 13480 (PED Directive).

The SONO 3100 as weld-in version does not include the flanges. Thus, it can neither be tested nor approved according to PED. After the installation, all installation-related activities (welding, pressure test etc.) are the responsibility of the customer.

Electrical connection of SITRANS FUS060 and SONO 3100

## Flow Measurement

### SITRANS FS (ultrasonic)

#### Inline ultrasonic flowmeters

#### SONOKIT flowmeter (with FUS060 or FUS080)

#### Overview

SONOKIT is a transit time based ultrasonic flowmeter for retrofitting on existing pipelines.

The kit offers all necessary parts and special tools to make the installation as 1-path or 2-path flowmeter.

The set is made for installation on empty pipes or pipes under pressure without process shut-down (hot-tap).

Please contact Siemens for further information on hot-tap tools and instructions.

SONOKIT has inline transducers (in contact with media) which assure superior accuracy and performance.

#### Benefits

- Cost-effective solution – contains all the necessary components for retrofitting
- SONOKIT is easy to install in pipeline sizes DN 200 to DN 3000 (8" to 120") 1-path DN 100 to DN 2400 (4" to 96").
- No bypass installation necessary – withstands pressures up to 40 bar (580 psi) and media temperatures between -20 °C and +200 °C (-4 °F and +392 °F)
- High accuracy – the bigger the pipe, the more accurate the result
- Solid construction and no moving parts for a 100 % maintenance and obstruction-free flowmeter
- The SONOKIT comes with transducers in IP68 enclosure.
- Available in a robust version that can be buried and withstands constant flooding.
- Inline transducers assure superior accuracy and performance.
- Automatic calculation of the calibration factor when pipe geometry data are entered in the transmitter.
- FST030 transmitter, modified for inline HART or Modbus
- FUS080 transmitter, battery or mains-powered

#### Application

- Raw water intake for water treatment plants
- Water distribution systems
- Irrigation systems
- Power generation (energy and water)
- District heating plants
- Cooling water plants within the industry and in power stations
- Systems within the oil and refinery business
- Sewage treatment plants
- Plants transporting non-conductive liquids

#### Design

The SONOKIT package box contains all necessary parts to build an ultrasonic flowmeter on existing pipes depending on choices at ordering:

- Papers to wrap around pipes for alignment of sensors
- Transducer alignment tools
- Mounting plates, transducer holders and SONO 3200 transducers
- Transducer cables
- SITRANS FUS060 or FUS080 transmitter for wall mounting
- For pipes bigger DN500 (20") please order FST030 transmitter separately (FDK-085X6329)

#### Technical specifications

The transmitter related to this system is the SITRANS FUS080 or FST030.

Technical specifications on pages 3/260 and 3/331.

#### Accuracy

Typical, depending on accuracy of measurements of installation

- 2-path:  $\leq \pm (0.5 \dots 1.5 \%)$
- 1-path:  $\leq \pm (1 \dots 3 \%)$

#### Note:

Accuracy depends on the accuracy of the measurements taken at location. This means that inaccurate measurements of angles, distance between transducers, wall thickness and pipe diameter have a direct effect on the accuracy. Values measured are entered into the memory of the FUS060 or FUS080 transmitter.

#### Requirements for pipes

<b>Size</b>	FUS060: DN 100 ... DN 3000 (4" ... 120") FUS080: DN 100 ... DN 1200 (4" ... 48")
Line pressure	max. 40 bar (580 psi)
Media temperature	
• Standard version	-10 ... +200 °C (14 ... 392 °F)
• ATEX Ex d version (FUS060)	-20 ... +180 °C (-4 ... +356 °F)
• ATEX Ex i version (FUS060)	-10 ... +190 °C (14 ... 374 °F)
Ambient temperature sensor	
• Standard and Ex-i version	-20 ... +60 °C (-4 ... +140 °F)
• Ex d version	-20 ... +180 °C (-4 ... +356 °F)
<b>Transducer enclosure/ approvals/certificates</b>	
Standard version	IP67 (NEMA 6)/IP68 (NEMA 6P)
Ex approval	System ATEX approval for SONO 3200 Ex i transducers together with transmitter FUS060-Ex: ATEX II 2 G Ex dem [ia/Ib] IIC T6/T4/T3 Gb or  ATEX II 2G Ex d T3-T6 Gb with SONO 3200 Ex d transducers (for standard FUS060 transmitter, installed outside of Ex zone)
Material certificates	EN 10204-3.1 material certificate on transducer mounting parts
<b>Transducer materials</b>	
Terminal housing	Standard version: PA 6.6, 100 °C (212 °F) or stainless steel AISI 316, 200 °C (392 °F)
Transducer body	Standard version: Stainless steel AISI 316, 200 °C (392 °F)

#### Technical specifications (continued)

Materials of existing pipeline	
Steel	Transducer holder: EN 10273 or EN 10216 (P235GH) Mounting plates <sup>1)</sup> : EN 10273 or EN 10216 (P235GH)
Concrete	Transducer holder: Stainless steel AISI 316 or similar Mounting plates <sup>1)</sup> : (not included)
Stainless steel	Transducer holder: Stainless steel AISI 316 or similar Mounting plates <sup>1)</sup> : Stainless steel AISI 316 or similar
Pipe wall thickness	
Steel pipe (AISI 316 and St. 37.2 or corresponding material)	Transducer and holder available in length L = 160, allowing a pipe wall thickness up to 20 mm (0.79")
Concrete pipe	Transducer and holder available in length L = 230, allowing a pipe wall thickness up to 200 mm (7.9") and pipe sizes ≥ DN 600.

<b>Dimension of the package box</b> (L x W x H)	856 x 390 x 344 mm (33.7" x 15.4" x 13.5")
<b>Weight example of a package</b> (standard 2-path with FUS060)	approx. 53 kg (116.8 lb)
Certificates and approvals	
Conformity certificate	The devices are supplied as standard with a Siemens Certificate of Conformity on a DVD.
Material certificate	Material certificate for the transducer parts according to EN 10204-3.1 is optionally available.
Approvals	No custody transfer approvals

**Information on PED approval:**  
The SONOKIT includes the pipe mounting parts only and therefore it cannot be PED-approved. After the installation, all installation-related activities (welding, pressure test etc.) are the responsibility of the customer.

<sup>1)</sup> Mounting plates are only included for empty pipe installation types (refer to selection "A"). For hot tap mounting the mounting plates are not included (refer to selection "B").

#### Installation requirements

The space requirements (in mm) around the pipe for retrofitting a SITRANS F US ultrasonic flowmeter type SONOKIT are given below:

Empty pipe installation

Hot-tap installation

## Flow Measurement

### SITRANS FS (ultrasonic)

Inline ultrasonic flowmeters

#### SITRANS FUS380 standard flowmeter

##### Overview

The 2-path flowmeter SITRANS FUS380 comes as battery or mains-powered and is designed to measure water flow in district heating plants, local networks, boiler stations, substations, chiller plants (including glycol mixes) and other general water applications.

The type-approved flowmeter version is named SITRANS FUE380 – see page 3/301.

Technically, the meter types SITRANS FUS380 and SITRANS FUE380 are completely identical, only difference is the calibration limit and the type approval for custody transfer.

##### Benefits

- Battery-powered up to 6 years
- 115/230 V mains-powered with back-up battery option in case of mains power failure
- Fast measuring frequency 15 Hz/0.5 Hz (230 V AC/Battery)
- Easy one-button straight forward display
- 2-path measuring principle for optimum accuracy
- Compact or remote mounting
- Measures on most district water qualities and water conductivities
- No pressure drop
- Long-term stability
- 2 galvanically isolated digital outputs for easy connection to a calculator (potential-free)
- Analog output 4 to 20 mA
- Bidirectional measurement, with 2 totalizers and outputs
- Dynamic range  $q_i$  (min) :  $q_s$  (max) up to 1:400

##### Application

The main application for SITRANS FUS380 is measurement of water flow or water flow in energy meter systems in district heating networks or chilled water (including glycol mixes).

##### Design

The 2-path design of SITRANS FUS380 ensures maximum accuracy under short inlet conditions. The flowmeter consists of a flow sensor pipe, 4 transducers/transducer cables and a transmitter SITRANS FUE080.

The unit is available in a compact or a remote version. Both versions are pre-mounted with short coax-cables. Remote transmitter up to a distance of 30 m by one Sensor link cable (SSL).

Compact mounting is only possible up to 120 °C (248 °F). The sensor must be isolated to protect transmitter from heat. The transmitter is available in an IP67/NEMA 4X/6 enclosure.

##### Function

Together with the SIMATIC PDM tool the FUS380 offers the possibility of testing and verifying the flowmeter on site and creating a printed "Qualification Certificate" with specific data that defines the quality status of the measurement.

The Qualification Certificate shows information about the actual status of the flowmeter:

- General settings, flowmeter and battery information, totalizer values, and pulse output settings
- Detailed information about the transmitter and the sensor functionality, and a main parameter list for evaluating the functionality of the flowmeter

##### Integration

The flowmeter digital output is often used as input for an energy meter or as input for digital systems for remote reading.

SITRANS FUS380 has two digital output functions that can be individually selected.

Pulse output rate is defined when ordering. To get optimal benefit the pulse value must be selected as low as possible.

If the flowmeter forms part of an energy meter system for custody transfer, no further approvals are needed, except possible local approvals on the flowmeter.

**Configuration****Selection guide SITRANS FUS380, standard version**

1200	36 000	37 800	18 000	180	171,000	0,45	100

The values Q<sub>i</sub>, Q<sub>p</sub> and Q<sub>s</sub> are shown on the system label of the FUS380. Q<sub>i</sub> (Q<sub>min</sub>) means the minimal and Q<sub>p</sub> (Q<sub>nom</sub>) the nominal flow rate. Q<sub>s</sub> is the highest operatable flow rate. The maximum flow rate (Q<sub>max</sub>) is 105 % of Q<sub>s</sub>. The low flow cut-off is 50 % of Q<sub>i</sub>.

In order to obtain best pulse output resolution in the range Q<sub>min</sub> to Q<sub>s</sub> of approx. 100 Hz at Q<sub>s</sub>, two or three flow values for every dimension can be selected at ordering. Therefore the ordering data table also shows Q<sub>p</sub> (Q<sub>n</sub>). This flow rate is between Q<sub>i</sub> (Q<sub>min</sub>) and Q<sub>s</sub> and indicates the normal or typical flow.

To get optimal benefit of the pulses the pulse value and pulse length shall be selected as low as possible. The following calculation formula can be used for determining the shortest pulse value at a pulse length of 5 ms: L/pulse > Q<sub>s</sub> (m<sup>3</sup>/h) /360.

For example Q<sub>s</sub> = 300 m<sup>3</sup>/h; L/pulse > 300/360; L/pulse > 0.83; therefore the pulse value must be 1 l/pulse

<sup>1)</sup> Typical pulse values for SITRANS FUS380 with pulse length 5 ms. Other values are possible - please see the selections at the 7ME340 order codes.

## Flow Measurement

### SITRANS FS (ultrasonic)

#### Inline ultrasonic flowmeters

#### SITRANS FUS380 standard flowmeter

#### Technical specifications

Sensor design	2-path sensor with flanges and inline transducers wet-calibrated from factory
Nominal size (DN 50 ... DN 80 in bronze)	DN 50, 65, 80, 100, 125, 150, 200, 250, 300, 350, 400, 500, 600, 700, 800, 1000, 1200
Pressure rate	PN 16, PN 25, PN 40 EN 1092-1 flanges: • type 01 (B): DN 100 to DN 125 • type 11 (B): DN 150 to DN 1200 • type 11 (B) 'design': DN 50 to DN 80
Pipe material	• DN 100 ... DN 1200: Carbon Steel EN 1.0345/P235 GH, painted in light-gray. • DN 50 ... DN 80: Die-cast bronze G-CuSn10/W2.1050.01 (EN 1982)
Transducer design	• DN 100 ... DN 1200: Inline version and welded onto the pipe • DN 50 ... DN 80: Screwed into the pipe
Transducer material	Stainless steel (AISI 316/1.4404)/brass (CuZn <sub>36</sub> Pb <sub>2</sub> As)

#### Sensor operating conditions

Ambient temperature	-10 ... +60 °C (14 ... 140 °F)
• Operation	(MID version: -10 ... +55 °C (14 ... 131 °F))
• Storage	-40 ... +85 °C (-40 ... +185 °F)
Measured media	Heating water, according to VDI-2035 (pH 8.2 - 10.5), industrial VdTVV information sheet 1466 and AGFW information sheet FW 510.
Media/surface temperature	
• DN 100 ... DN 1200	Remote: 2 ... 200 °C (35.6 ... 392 °F)
• DN 50 ... DN 80	Remote: 2 ... 150 °C (35.6 ... 302 °F)
• DN 50 ... DN 1200	Compact: 2 ... 120 °C (35.6 ... 248 °F)
Degree of protection	Sensor connection IP67/NEMA 4X/6
Max. flow velocity	DN 50 ... DN 1200: 9 m/s (29.5 ft/s)
Electromagnetic compatibility	
• Emitted interference	To EN 55011/CISPR-11
• Noise immunity	To EN/IEC 61326-1 (Industry)

#### Transmitter

The transmitter related to this system is the SITRANS FUS080. Technical specifications to the FUS080 see page 3/259

#### Sensor cable

Transducer cable length	Pre-mounted with short coax-cables
Sensor link cable length (SSL)	5, 10, 20, 30 m (16.4, 32.8, 65.6, 98.4 ft)

#### Certificates and approvals

Conformity certificate (CE)	The devices are supplied as standard with a Siemens Certificate of Conformity on DVD.
Material certificate	Material certificate according EN 10204-3.1 is optionally available.
Calibration report	A standard calibration report is shipped with every flowmeter.  Extended accredited ISO/IEC 17025 calibration certificates optionally available
Approvals	No custody transfer approvals

The sensors are approved according to EU directive 2014/68/EU regarding fluid group 1, classified in category III. Design according to EN 13480 (PED Directive).

#### SITRANS FUS380 uncertainty

	FUS380
Flow value setting	Predefined settings according to dimension
Approval	No approval
Flow rate $v_f$	0.02 ... 9 m/s (0.065 ... 29.5 ft/s)
Output A	Pulse: forward, reverse, forward net, reverse net (Preset: forward)
Output B	Pulse forward, reverse, forward net, reverse net, alarm, call-up (Preset: alarm)
Pulse value A & B (depending on DN value)	0.1 l/p, 0.25 l/p, 0.5 l/p, 1 l/p, 2.5 l/p, 10 l/p, 25 l/p, 50 l/p, 100 l/p, 250 l/p, 500 l/p, 1 m <sup>3</sup> /p, 2.5 m <sup>3</sup> /p, 5 m <sup>3</sup> /p, 10 m <sup>3</sup> /p, 25 m <sup>3</sup> /p, 50 m <sup>3</sup> /p, 100 m <sup>3</sup> /p, 250 m <sup>3</sup> /p, 500 m <sup>3</sup> /p, 1000 m <sup>3</sup> /p
Pulse width	5/10/20/50/100/200/500 ms
Flow unit setup	Preset: m <sup>3</sup> /h
Volume unit setup	Preset: m <sup>3</sup>

#### Flowmeter Calibration and traceability

To ensure continuous accurate measurement, flowmeters must be calibrated. The calibration is conducted at Siemens flow facilities with traceable instruments referring directly to the physical unit of measurement according to the International System of Units (SI).

Therefore, the calibration certificate ensures recognition of the test results worldwide, including the US (NIST traceability). Siemens offers accredited calibrations assured to ISO 17025 in the flow range from 0.0001 m<sup>3</sup>/h to 10 000 m<sup>3</sup>/h. Siemens Flow Instruments accredited laboratories are recognized by ILAC MRA (International Laboratory Accreditation Corporation - Mutual Recognition Arrangement) ensuring international traceability and recognition of the test results worldwide.

A standard calibration certificate with  $Q_n$  as selected flow is shipped with each SITRANS FUS380. This production calibration protocol consists of 2 x 3 points at  $Q_i$ , 10 %  $Q_p$  and  $Q_p$  (max. 4 200 m<sup>3</sup>/h).

#### Accuracy SITRANS FUS380:

± 0.5 % for 0.5 m/s < v < 10 m/s and ± 0.25/ $V_{act}$  [%] below 0.5 m/s

<b>Pulse output value setup</b>						
To get optimal benefit of the pulses the pulse value and pulse length shall be selected as low as possible. The following calculation formula can be used for determining the shortest pulse value at a pulse length of 5 ms: L/pulse > Q <sub>s</sub> (m <sup>3</sup> /h) /360. For example Q <sub>s</sub> = 300 m <sup>3</sup> /h; L/pulse > 300/360; L/pulse > 0.83; therefore the pulse value must be 1 l/pulse

## Flow Measurement

SITRANS FS (ultrasonic)

Inline ultrasonic flowmeters

### SITRANS FUS380 standard flowmeter

#### Circuit diagrams

3

Electrical connection of transmitter SITRANS FUS/FUE380

Electrical connection of sensor SITRANS FUS/FUE380

## Overview

The 2-path flowmeter SITRANS FUE380 comes as battery or mains-powered and is designed to measure water flow in district heating plants, local networks, boiler stations, substations, chiller plants (including glycol mixes without type approval) and other general water applications.

The flowmeter FUE380 is approved according to energy meter standards EN 1434 class 2, OIML R 75 class 2 and MID class 2. Metrological parameters are protected against manipulation. The type-approved flowmeter version is named SITRANS FUE380. For a standard flowmeter type FUS380 without a type approval, see the section about FUS380.

Technically, the meter types SITRANS FUS380 and SITRANS FUE380 are completely identical, only difference is the calibration limit and the type approval for custody transfer.

## Benefits

- Battery-powered up to 6 years
- 115/230 V mains-powered with back-up battery option in case of mains power failure
- Fast measuring frequency 15 Hz/0.5 Hz (230 V AC/Battery)
- Easy one-button straight forward display
- 2-path measuring principle for optimum accuracy
- Compact or remote mounting
- Measures on most district water qualities and water conductivities
- No pressure drop
- Long-term stability
- 2 galvanically isolated digital outputs for easy connection to a calculator (potential-free)
- Analog output 4 to 20 mA
- Bidirectional measurement, with 2 totalizers and outputs
- Dynamic range  $Q_i:Q_p$  up to 1:50/100 or max. range  $Q_i:Q_s$  up to 1:400

## Application

The main application for SITRANS FUE380 is measurement of water flow or water flow in energy meter systems for custody transfer in district heating networks or chilled water (including glycol mixes without type approval).

Combined with an energy calculator and a pair of temperature sensors, SITRANS FUE380 can be used as part of an energy meter system. For this purpose Siemens offers energy calculator SITRANS FUE950.

## Design

The 2-path design of SITRANS FUE380 ensures maximum accuracy under short inlet conditions. The approved flowmeter consists of a flow sensor pipe, 4 transducers/transducer cables and a transmitter SITRANS FUE080.

The unit is available in a compact or a remote version. Both versions are pre-mounted with short coax-cables. Remote transmitter up to a distance of 30 m by one Sensor link cable (SSL).

Compact mounting is only possible up to 120 °C (248 °F). The sensor must be isolated to protect transmitter from heat. The transmitter is available in an IP67/NEMA 4X/6 enclosure.

### FUE380 MI-004 approval

The SITRANS FUE380 program is type-approved according to international energy meter standard EN 1434. On 1 November 2006 the MI-004 energy meter directive became effective providing that all energy meters with a MI-004 verification label can be sold across the EU borders.

The FUE380 are MI-004 verified and labeled products according to Directive 2014/32/EU of the European Parliament and Council of 26 February, 2014 on measuring instruments, Annex IV Thermal Energy Meters (MI-004), in sizes from DN 50 to DN 1200.

The MID certification is obtained as module B + module D approvals according to the above-mentioned directive.

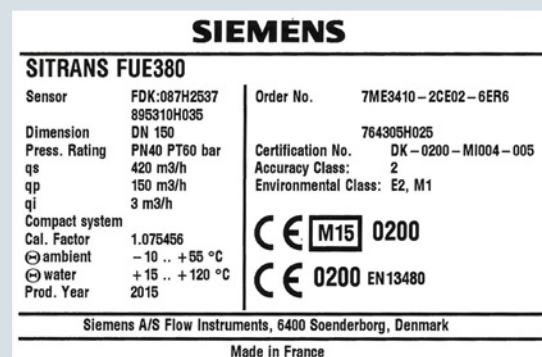

Module B: MI-004 Type approval according to EN 1434: 2007 (approved for media water)

Module D: Quality insurance MID approval of production

The MID system label with the approval information is placed on the side of the transmitter and on the sensor. An example of the product label is shown below:

FUE380 transmitter label (with MID first verification)

FUE380 sensor label (with MID first verification)

## Flow Measurement

### SITRANS FS (ultrasonic)

#### Inline ultrasonic flowmeters

#### SITRANS FUE380 flowmeter with CT approval

##### Function

Together with the SIMATIC PDM tool the FUE380 offers the possibility of testing and verifying the flowmeter on site and creating a printed "Qualification Certificate" with specific data that defines the quality status of the measurement.

The Qualification Certificate shows information about the actual status of the flowmeter:

- General settings, flowmeter and battery information, totalizer values, and pulse output settings
- Detailed information about the transmitter and the sensor functionality, and a main parameter list for evaluating the functionality of the flowmeter

##### Integration

The flowmeter digital output is often used as input for an energy meter or as input for digital systems for remote reading.

SITRANS FUE380 has two digital output functions that can be individually selected.

Pulse output rate is defined when ordering. To get optimal benefit the pulse value must be selected as low as possible.

If the flowmeter forms part of an energy meter system for custody transfer, no further approvals are needed, except possible local approvals on the flowmeter.

##### Configuration

#### Selection guide SITRANS FUE380, type-approved flowmeter

Dynamic range Q<sub>i</sub>:Q<sub>p</sub>: better than 1:100 to OIML R 75 class 2 and MID EN 1434 class 2.

Q<sub>i</sub> (Q<sub>min</sub>) means the minimal and Q<sub>p</sub> (Q<sub>nom</sub>) the nominal flow rate according to the approval requirements.

Q<sub>s</sub> is the highest operatable flow rate. The maximum flow rate (Q<sub>max</sub>) is 105 % of Q<sub>s</sub>. The low flow cut off is 95 % of Q<sub>i</sub>.

Q<sub>i</sub>, Q<sub>p</sub> and Q<sub>s</sub> are shown on the system nameplate of the FUE380.

In order to obtain best pulse output resolution in the range Q<sub>min</sub> to Q<sub>s</sub> of approx. 100 Hz at Q<sub>s</sub>, two or three flow values for every dimension can be selected at ordering. Therefore the ordering data table also shows Q<sub>p</sub> (Q<sub>n</sub>). This flow rate is between Q<sub>i</sub> (Q<sub>min</sub>) and Q<sub>s</sub> and indicates the normal or typical flow according to the approval requirements.

Note:

The minimum flow (Q<sub>i</sub>) should be checked in the PIA-selector or product master data base (PMD).

To get optimal benefit of the pulses the pulse value and pulse length shall be selected as low as possible. The following calculation formula can be used for determining the shortest pulse value at a pulse length of 5 ms: L/pulse > Q<sub>s</sub> (m<sup>3</sup>/h) /360.

For example Q<sub>s</sub> = 300 m<sup>3</sup>/h; L/pulse > 300/360; L/pulse > 0.83; therefore the pulse value must be 1 l/pulse

#### SITRANS FUE380 flowmeter with CT approval

#### Technical specifications

Pipe design	2-path sensor with flanges and inline transducers wet-calibrated from factory
Nominal size welded version (DN 50 ... DN 80 in bronze)	DN 50, 65, 80, 100, 125, 150, 200, 250, 300, 350, 400, 500, 600, 700, 800, 900, 1000, 1200
Pressure rate	PN 16, PN 25, PN 40 EN 1092-1 EN 1092-1 flanges: • type 01 (B): DN 100 to DN 125 • type 11 (B): DN 150 to DN 200 • type 11 (B) 'design': DN 50 to DN 80
Pipe material	• DN 100 ... DN 1200: Carbon Steel EN 1.0345/P235 GH, painted in light-gray. • DN 50 ... DN 80: Die-cast bronze G-CuSn10/W2.1050.01 (EN1982)
Transducer design	• DN 100 ... DN 1200: Inline version and welded onto the pipe • DN 50 ... DN 80: Screwed into the pipe
Transducer material	Stainless steel (AISI 316/1.4404)/brass (CuZn <sub>36</sub> Pb <sub>2</sub> As)

#### Sensor operating conditions

Ambient temperature	-10 ... +60 °C (14 ... 140 °F) (MID version: -10 ... +55 °C (14 ... 131 °F)) -40 ... +85 °C (-40 ... +185 °F)
• Operation	
• Storage	
Measured media	Heating water, according to VDI-2035 (pH 8.2 - 10.5), industrial VdTUV information sheet 1466 and AGFW information sheet FW 510.
Media/surface temperature	
• DN 100 ... DN 1200	Remote: 2 ... 200 °C (35.6 ... 392 °F) MID: min. +15 °C/+59 °F
• DN 50 ... DN 80	Remote: 2 ... 150 °C (35.6 ... 302 °F) MID: min. +15 °C/+59 °F
• DN 50 ... DN 1200	Compact: 2 ... 120 °C (35.6 ... 248 °F) MID: min. +15 °C/+59 °F
Degree of protection	Sensor connection IP67/NEMA 4X/6
Electromagnetic compatibility	
• Emitted interference	To EN 55011/CISPR-11
• Noise immunity	To EN/IEC 61326-1 (Industry)
• MID	Environment class E2 and M1
Max. flow velocity at Q <sub>s</sub>	DN 50 ... DN 1200: 9 m/s (29.5 ft/s)

#### Transmitter

The transmitter related to this system is the SITRANS FUS080.

Technical specifications to the FUS080 see page 3/259.

#### Sensor cable

Transducer cable length	Pre-mounted with short coax-cables
Sensor Ink cable length (SSL)	5, 10, 20, 30 m (16.4, 32.8, 65.6, 98.4 ft)

#### Certificates and approvals

Conformity certificate (CE)	The devices are supplied as standard with a Siemens Certificate of Conformity on DVD.
Material certificate	Material certificate according EN 10204-3.1 is optionally available.
Calibration report	A standard calibration report is shipped with every flowmeter. Extended accredited ISO/IEC 17025 calibration certificates optionally available
Approvals	<ul style="list-style-type: none"> <li>• Approval standards: N 1434 and OIML R 75 Class 2</li> <li>• Type approval: ID, MI-004, class 2 approval and certification (according to EN 434)</li> <li>• CPA/CMC (China)</li> </ul>

The sensors are approved according to EU directive 2014/68/EU regarding fluid group 1, classified in category III. Design according to EN 13480 (PED Directive).

#### Type-dependent settings

Flow value	Predefined according to EN 1434/OIML R 75/MID
Approval	Country specific
Flow rate v <sub>f</sub>	0.02 ... 9 m/s (0.065 ... 29.5 ft/s)
Output A	Preset: Forward pulses
Output B	Preset: Alarm
Pulse value A & B (depending on DN value)	Preset: See scheme – previous page Preset for SITRANS FUE950 or free selectable, depending on flow rate (Q <sub>s</sub> )
Pulse width	Preset: 5 ms
Flow unit setup	Preset: m <sup>3</sup> /h
Volume unit setup	Preset: m <sup>3</sup>

#### Flowmeter Calibration and traceability

To ensure continuous accurate measurement, flowmeters must be calibrated. The calibration is conducted at Siemens flow facilities with traceable instruments referring directly to the physical unit of measurement according to the International System of Units (SI).

Therefore, the calibration certificate ensures recognition of the test results worldwide, including the US (NIST traceability). Siemens offers accredited calibrations assured to ISO 7025 in the flow range from 0.0001 m<sup>3</sup>/h to 10 000 m<sup>3</sup>/h. Siemens Flow Instruments accredited laboratories are recognized by ILAC MRA (International Laboratory Accreditation Corporation - Mutual Recognition Arrangement) ensuring international traceability and recognition of the test results worldwide.

A standard calibration certificate with Q<sub>n</sub> as selected flow is shipped with each SITRANS FUE380. This production calibration protocol consists of 2 x 3 points at Q<sub>i</sub>, 10% Q<sub>p</sub> and Q<sub>p</sub> (max. 4 200 m<sup>3</sup>/h).

#### Typical accuracy SITRANS FUE380:

$$\pm (0.5 + 0.02 Q_p/Q) [\%]$$

Q<sub>p</sub> according to EN 1434/OIML requirements.

Example: DN 100, Q<sub>p</sub> = 60 m<sup>3</sup>/h at Q = 1.2 m<sup>3</sup>/h:  
Accuracy at 1.2 m<sup>3</sup>/h = typical 1.5 %

SITRANS FUE380 fulfils the requirements  
E<sub>f</sub> = ± (2 + 0.02 Q<sub>p</sub>/Q<sub>i</sub>) max. ± 5 %, according to EN 1434 and OIML R 75, class 2 or MID requirements.

## Calibration/certificate FUS380

Production calibration for DN 50 ... 1200 with  $Q_n$  as selected in diameter. Incl. Calibration protocol: 2 x 3 points,  $Q_i$ , 10 %  $Q_p$  and  $Q_p$  (max. 8000 m<sup>3</sup>/h).

Included

Accredited Siemens ISO/IEC 17025 calibration for DN 50 ... 200 with  $Q_n$  as selected in diameter. Certificate: 2 x 5 points,  $Q_i$ , 5 %, 10 %, 50 % and 100 % of  $Q_p$  (max. 630 m<sup>3</sup>/h).

D20

Accredited Siemens ISO/IEC 17025 calibration for DN 250 ... 600 with  $Q_n$  as selected in diameter. Certificate: 2 x 5 points, 5 %, 10 %, 50 % and 100 % of  $Q_p$  (max. 2800 m<sup>3</sup>/h).

D21

Accredited Siemens ISO/IEC 17025 calibration, DN 500 ... 1200 with  $Q_n$  as selected in diameter. Certificate: 2 x 5 points,  $Q_i$ , 5 %, 10 %, 50 % and 100 % of  $Q_p$  (max. 8000 m<sup>3</sup>/h).

D22

Output B as reverse flow pulses. No calibration/verification of this function.

E21

## Material certificate

EN 10204-3.1 (pipe material)

C12

## Tag name plate

Stainless steel TAG plate (1 x 24 x 80 mm), wire fixed. Font size depends on text length: 8 mm for 1 ... 10 characters, 4 mm for 11 ... 20 characters (specify in plain text).

Electrical connection of transmitter SITRANS FUS380 and FUE380

Electrical connection of sensor SITRANS FUS380 and FUE380

## Overview

SITRANS FUE950 is a universal thermal energy calculator, which meets the requirements EN 1434 and has the MID and PTB K7.2 approval for energy metering with the media water.

SITRANS FUE950 has been developed for the SITRANS FUS380/FUE380 and alternatively MAG 5000/6000 or FST020. SITRANS FUE950 is modular in construction and can by order be fitted with optional modules depending on the application. The FUE950 supports none of the SITRANS FX, FC products and only some of the FUS clamp-on products.

## Benefits

### Basic functions

- Prepared for heating, cooling measurement
- Approval for MID for heat metering and PTB K7.2 for cooling
- High-accuracy thermal energy metering, meets EN 1434 requirements
- Measured temperature range  $-20 \dots +190 \text{ }^{\circ}\text{C}$  ( $-4 \dots +374 \text{ }^{\circ}\text{F}$ )
- Instantaneous values for energy/volume flow
- Battery or mains powered
- Battery version with battery lifetime of typically up to 10 years
- Optical data interface
- Real date and time
- Auto-detection of 2-wire or 4-wire temperature sensors

### Additional functions

- Individual tariff functions
- Advanced functions for cooling/heating applications or the combination
- Memory for 24 periods (months, weeks, days)
- Data logger function
- Expandable functionality with 2 optional plug and play add-on modules
- Communication over M-Bus, RS 485 or RS 232

### Add-on modules

- Plug-in module with 2 extra pulse inputs
- Plug-in module with 2 pulse outputs
- Plug-in module with combination of input and output pulses
- Plug-in module for M-Bus communication
- Plug-in module for RS 232 or RS 485 communication
- Plug-in module with 2 passive current outputs ( $4 \dots 20 \text{ mA}$ )

## Application

The SITRANS FUE950 is able to handle 3 kinds of applications, means energy calculation in:

- District heating applications
- Chilled water applications
- Combined cooling/heating applications

### Energy metering in heating, hot water applications (code "A" and "B")

### Energy metering in cooling, chilled water applications (code "C" and "D")

### Energy metering in combined cooling/heating applications (code "E" and "F")

## Flow Measurement

### SITRANS FS (ultrasonic)

#### Inline ultrasonic flowmeters

## SITRANS FUE950 energy calculator

### Design

SITRANS FUE950 has an easy-read 8-digit LCD display with associated pictograms for the various functions. As the display has been made for several applications, some figures/symbols not used for normal district heating applications will be shown.

SITRANS FUE950 has a push button for simple operation and provides user-friendly control via the various display menu loops. The display will always be configured for the application chosen, and for the selected display settings.

The integrator has an IP54 plastic housing and is designed for wall or panel mounting. The housing comes with prepared rubber gaskets cable entries for fast and easy installation.

#### Operation menu loop structure

The FUE950 display has six menu loops and the menus are numbered in the display from 1 to 6. Some display menus consist of two values (to maximum seven) that are shown alternately at 4-second intervals.

The main menu loop no. 1 with the current data, e.g. for energy, volume, flow rate and temperature, is preprogrammed as default setting.

In the combined heating/cooling configuration the menu loop no. 5 (tariff menu loop) will be activated additionally.

#### Displays and output pulses

Units: MWh, GJ, Gcal, MBtu, m<sup>3</sup>, gal, m<sup>3</sup>/h, GPM, °C, °F and kW; all decimal points are statically (the unit "gal" is shown with factor x 100).

The display unit and the last fractional digit are typical used for the pulse outputs.

### Function

#### Technical principle

Calculation of energy is based on the following formula:

$$\text{Energy} = \text{Volume} \times (T_{\text{Hot}} - T_{\text{Cold}}) \times K_{\text{factor}} (T_i)$$

Volume: Volume [m<sup>3</sup>] of a given amount of volume pulses

$T_{\text{Hot}}$ : Measured temperature in the hot line

$T_{\text{Cold}}$ : Measured temperature in the cold line

$K_{\text{factor}} (T_i)$ : Thermal coefficient of media enthalpy and heat content

The energy calculation is made by a counter and depends on temperature difference, pulse input frequency and legal requirements.

The calculator always carries out at least one energy calculation every 2 seconds. If the connected flowmeter has not sent enough pulses the energy calculation and flow indication is also based on the 8 seconds value.

#### Data memory

The FUE950 has a history memory of 24 periods (months, weeks, days). The following values are stored monthly, weekly or daily in the EEPROM on the programmed day of 1...31 (via software tool).

• Date/Time	• Volume
• Energy	• Error day counter
• Tariff energy 1	• Maximum monthly flow rate
• Tariff energy 2	• Maximum monthly power
• Tariff definition 1	• Date of maximum monthly flow rate
• Tariff definition 2	• Date of maximum monthly power
• Pulse counter input 1	• Pulse counter input 2
• Operation hours	

#### Data logger memory (LOG)

The LOG of the calculator is stored every 24 hours with all cumulative values in the EEPROM. The storage frequency can be selected from various storage intervals (5, 6, 10, 12, 15, 20, 30, 60 minutes or the default setting of 24 hours). The data which are stored in the LOG could be read out using a software tool and can be used for evaluations.

#### Extract of possible LOG settings

Storage interval	Values	Number of data records	Recording period
5 minutes	• Error status	440	36.6 hours
15 minutes	• Overload time temperature	440	110 hours
1 hour	• Overload time flow rate	440	18.3 days
24 hours (default setting)	• Forward temperature	440	440 days
	• Return temperature		
	• Date and time		
	• Energy		
	• Tariff energy 1		
	• Tariff energy 2		
	• Tariff definition 1		
	• Tariff definition 2		
	• Volume		
	• Error day counter		

#### Maximal Values

The integrator creates max. values for power and flow rate based on consumption time, which are stored in the EEPROM. The integration intervals are adjustable to 6, 15, 30 or 60 minutes and 24 h. Default setting is 60 minutes.

#### Tariff/Accounting date function

The calculator includes two independent memories in which the accumulated energy at two programmable tariff dates are stored.

- Last accounting date
- Last but one accounting date

#### Values stored

- Energy
- Volume
- Tariff counter 1
- Tariff counter 2
- Pulse counter 1
- Pulse counter 2
- Date

The integrator offers two optional tariff memories for monitoring plant load states. Here it concerns threshold value tariffs. Extensive tariff conditions make it possible to adapt the calculator individually to the required customer-specific applications.

Both tariffs are separately configurable and independent from each other. Energy or time can be measured alternatively per tariff register dependent on the tariff mode adjusted in each case.

With the "time triggered tariff function" the switch-on time and the switch-off time are adjustable independent from each other for each day of the week in steps of 15 minutes.

### Function (continued)

The following tariff limit types of the tariff are possible: (This example applies to the display at 3 fractional digits after comma)

Type	Description	Limit	Limit resolution
dT	Temperature difference	1 ... 190 °C	1 °C
-dT	Negative temperature difference	1 ... 190 °C	1 °C
TR	Return temperature (low)	1 ... 190 °C	1 °C
TV	Forward temperature (high)	1 ... 190 °C	1 °C
P	Power	10 ... 2500 kW	10 kW
Q	Flow	1 ... 255 m <sup>3</sup> /h	1 m <sup>3</sup> /h
FE	"Theoretically forward energy" with return temperature of 0 °C		
Z	"Time triggered" counting energy		
E	"External" counting energy		

### Error handling and memory

Events such as changes and faults are stored in a non-volatile memory with a capacity of up to 127 entries. The following events are recorded:

- Checksum error
- Temperature measurement error
- Error hours
- Start and end of test mode

If SITRANS FUE950 records an error, this will be automatically indicated by a "alarm symbol" on the display.

To protect the reading data, all the relevant data are saved in a non-volatile memory (EEPROM). This memory saves the measured values, device parameters and types of error at regular intervals.

The following events are recorded:

- Temperature sensor error
- Swapped hot and cold temperature sensors
- Battery low warning
- Power supply failure
- Optical communication warning
- RAM checksum error

### Outputs/Inputs/Communication

#### Communication interfaces:

SITRANS FUE950 is fitted with an optical infra-red send/receive port in accordance with EN 1434/IEC 61107, protocol standard, EN 1434/EN 60870-3 (M-Bus protocol).

A specific optical head with a permanent magnet (IrDA-adapter) in accordance with EN 1434 can be used for readout data or communication with the parameterization software.

#### 2 ports for optionally plug-in modules

The calculator features 2 ports for the plug-in modules.

One slot is for the function modules and the other for the communication modules.

#### Communication modules

The following communication modules are available as options: RS 232 module, RS 485 module and M-Bus module. The RS 232 and RS 485 communication modules are serial interfaces and permit data exchange with the calculator. For this purpose a special data cable is necessary.

The M-Bus module is a serial interface for communication with external devices (M-Bus Master/Centre). According to the M-Bus structure a number of calculators can be connected to a control centre.

#### Pulse input module

Two pulse inputs are available. The pulse value and the unit is configurable for energy, water, gas or electrical meter by parameterization software. Data are separate cumulated in different registers and are also stored on the two accounting day's (Tariff registers).

#### Combined pulse Input/Output module

Two pulse inputs combined with one pulse output are available on one module. The pulse inputs are configurable with value and the unit by parameterization software.

The pulse output is also programmable using the parameterization software.

#### Pulse output

The calculator provides levels for two optional external pulse outputs, which can be freely programmed using the parameterization software tool.

Default setting is one pulse which occurs per change in the least significant digit in the display with the unit and resolution selected by the device ordering.

Possible pulse output values

- Energy (default setting)
- Volume (default setting)
- Tariff energy 1
- Tariff energy 2
- Tariff condition 1, limit switch
- Tariff condition 2, limit switch
- Energy error
- Volume error
- Volume with specific resolution (0.1, 1.0, 10 or 100)
- Energy with specific resolution (0.1, 1.0, 10 or 100)

#### Combined current output module

Optional module with 2 passive 4 ... 20 mA outputs.

Possible output values:

- Power (default setting for output #1)
- Flow (default setting for output #2)
- Hot, cold or difference temperature

The settings can be configured by parameterization software. The current output module occupies both ports, means no other plug-in module will possible to plug in.

#### Module combinations

The calculator has a group of extension modules for communication and another group of extension modules for additional functionality. These modules are available first selected within the calculator, or for retrofitting in the field.

One single function module as well as one single communication module out of following modules is selectable.

Function modules:

- Pulse input module, 2 inputs
- Pulse output module, 2 outputs
- Combined pulse module 2 inputs, 1 output
- Combined current output module, 2 x passive 4 ... 20 mA (occupies both ports)

Communication modules:

- M-Bus (M-Bus protocol according EN 1434-3)
- RS 232 (M-Bus protocol according EN 1434-3)
- RS 485 (M-Bus protocol according EN 1434-3)

## Flow Measurement

### SITRANS FS (ultrasonic)

#### Inline ultrasonic flowmeters

### SITRANS FUE950 energy calculator

#### Integration

SITRANS FUE950 is a multi-purpose energy calculator for media water which meets the requirements of EN 1434. Further, the energy calculator has been specially developed to process volume pulses from SITRANS FUS380/FUE380 or alternatively MAG 5000/6000 or FST020 transmitter.

#### Technical specifications

Approval	MID approved in accordance with energy meter EN 1434 and PTB K7.2 (German national cooling approval)
Approved temperature range	0 ... 180 °C (32 ... 356 °F)
• Heating	0 ... 105 °C (32 ... 221 °F)
• Cooling	
Absolute temperature range	-20 ... +190 °C (-4 ... -374 °F)
Differential temperature	
• Heating	3 ... 177 K (starting at 0.1 K)
• Cooling	3 ... 102 K
Measuring accuracy	Meets requirements of EN 1434 Typically max. $\pm (0.5 + 3 K/\Delta\theta)$ [%] of measured value
Measuring rates	
• Battery type D-cell	Volume: 1 s, temperature: 4 s
• Mains versions	Volume: 1/8 s, temperature: 2 s
Flow range	Depends on pulse input value (I/P), see "Selection and Ordering data"
Power range value	Depends on pulse input value as follows:
Pulse input value (I/P or gal/P)	Max power [kW]
1	15000
2.5	15000
5	15000
10	150000
25	150000
50	150000
100	1500000
250 *)	1500000
500 *)	1500000
1000 *)	15000000

\*) not available for gal/pulse

#### Typical accuracy of FUE950

<b>User interface (always included)</b>	
Display	8-digit LCD display with associated pictograms/symbols
Units	MWh, GJ, Gcal, MBtu, m <sup>3</sup> , m <sup>3</sup> /h, GPM, gal, °C, °F, kW, MBtu/h (gal is shown with factor x 100)
Totalizer value range	99 999 999 or 9 999 999.9 (0 and 1 digit after comma). Display digits: Flow in 6 digits; Volume, power and energy in 8 digits
Values	Power, energy, volume, flow rate, temperatures
Push button	Single push button for the menu controlling
Optical interface IrDA interface	ZVEI optical interface with M-Bus protocol as per EN 1434, connection via separate IrDA-adapter baud rate: 300 or 2400

<b>Rated operation conditions</b>	
Enclosure	IP54 in accordance with IEC 529
Material	
• Housing	C Lexan 141R (or similar); colors: light gray (top part) and black (bottom part)
• Pipe/wall fitting	PA 6,6 GF25 (or similar)
• Other plastic parts	ABS Cycolac GPM500 (or similar)
• Gaskets	Neoprene and rubber cable bushings: EPDM 50
• Rubber cable bushings	EPDM 50
Temperature	
• Ambient	5 ... 55 °C (41 ... 131 °F)
• Storage	-25 ... +70 °C (-13 ... +158 °F)
	Relative ambient humidity < 93 %
Environment class	
• Mechanic class	M1/M2
• Electromagnetis class	E1/E2 (MID) or C (DIN EN 1434)

<b>Temperature input (always included)</b>	
Function	The temperature sensors must be connected to terminals 1-5 and 6-2 (T <sub>H</sub> ) and 3-7 and 8-4 (T <sub>C</sub> ) depending on cable type (2-wire or 4-wire).
Temperature range	-20 ... 190 °C (-4 ... 374 °F) for T <sub>H</sub> and T <sub>C</sub>
Absolute measuring range	
Temperature difference	Start 0.1 K, min. 3 K, max. 177 K
Measurement cut-off	0.125 K
Display resolution	T <sub>H</sub> and T <sub>C</sub> : 0.1 K ΔT: 0.1 K 16-bit digital resolution AD converter
Sensor types	Pt100 or Pt500 as 2-wire or 4-wire; Standard is Pt500. Sensor cable length: up to 10 m (according EN 1434 and MID-type approval).
Sensor connection	4-wire or 2-wire; auto detection of connection version

#### Technical specifications (continued)

<b>Flow input (IN0) (always included)</b>		<b>Pulse output 1</b>	
Function	Used as standard for flow input of the external flowmeter. The input is marked as 10 (+ Flow Pulse), 11 (- Gnd) on the terminal strip.  Note: The pulse input value selection must be the same as the pulse output setting of the flowmeter.	<ul style="list-style-type: none"> <li>• Pulse frequency</li> <li>• Pulse width</li> <li>• Pulse duration</li> <li>• Pulse break</li> </ul>	<ul style="list-style-type: none"> <li>≤ 4 Hz</li> <li>125 ms ± 10 %</li> <li>125 ms ± 10 %</li> <li>≥ 125 ms -10 %</li> </ul>
Pulse value	1 ... 1000 l/pulse or 1 ... 100 gal/pulse, selection by corresponding order code. Will be shown at the device label	<ul style="list-style-type: none"> <li>• Pulse output 2</li> <li>• External voltage supply</li> </ul>	<ul style="list-style-type: none"> <li>≤ 100 Hz, depending on the selected pulse length</li> <li>Pulse duration/pulse break ~ 1:1</li> <li>5, 10, 50, 100 ms (default: 5 ms)</li> <li>3 ... 30 V DC</li> </ul>
Pulse frequency	≤ 100 Hz (200 Hz)	<ul style="list-style-type: none"> <li>• Ratio</li> </ul>	<ul style="list-style-type: none"> <li>≤ 20 mA with a residual voltage of ≤ 0.5 V</li> </ul>
Pulse ON-time	≥ 3 ms	Pulse length	<ul style="list-style-type: none"> <li>• Energy (default setting for 'Out1')</li> <li>• Volume (default setting for 'Out2')</li> <li>• Tariff energy 1</li> <li>• Tariff energy 2</li> <li>• Tariff condition 1 (limit switch)</li> <li>• Tariff condition 2 (limit switch)</li> <li>• Energy error</li> <li>• Volume error</li> <li>• Volume with specific display resolution (or with factor 0,1, 10 or 100 thereof)</li> <li>• Energy with specific display resolution (or factor 0.1 thereof)</li> </ul>
Pulse OFF-time	≥ 2 ms	External voltage supply	
Type	Active pulse input	Current	
Terminal voltage	3.6 V DC (supplied internally by FUE950)	Possible pulse output selection	
Flowmeter installation place	The flowmeter installation place can be in the hot line or cold line ("forward or return pipe") selected by corresponding order code. The "installation place" will be shown at the device display and nameplate		
Connected cable	Max. 10 m (shielded cables are highly recommended)		
<b>Ports for option modules</b>		<b>Pulse input</b>	
Type	The calculator features 2 ports for optional plug-in modules.	Function	Add-on module for two additional counters. The pulse input 1 is marked as I1, 'gnd' and the input 2 as I2, 'gnd' on the terminal strip and indicated in the display as separate registers IN1 and IN2 and can also be transferred via the communication modules.
Function modules (Port 1 or 2)	<ul style="list-style-type: none"> <li>• Pulse input module, 2 inputs (In1, In2)</li> <li>• Pulse output module, 2 outputs (Out1, Out2)</li> <li>• Combination module of 2 inputs (In1, In2) and 1 output (Out1)</li> </ul>	Type	Passive "open collector" pulse inputs, outputs not potential isolated to each other, data are separate cumulated in different registers and are also stored on the two accounting day's.
Current output module (Port 1)	2 passive 4 ... 20 mA (#1, #2) (occupies both port 1 and 2)	Pulse value	Pulse value and the unit are configurable for energy, water, gas or electrical meter by a software tool  Default: Pulse input 0,1 m3 or 1 gal (if unit 'gal' is ordered with the Z-option "L05")
Communication modules (Port 1 or 2)	M-Bus, RS 232 or RS 485 (M-Bus protocol, according EN 1434-3)	Pulse frequency	≤ 8 Hz
<b>Pulse output</b>		Pulse length	≥ 10 ms
Function	The module contains connections for 2 pulse outputs, which can be programmed as desired using a software tool. The pulse outputs are marked as standard as O1, 'gnd' and O2, 'gnd' on the terminal strip and Out1 respectively Out2 in the display.	External voltage supply	3 V DC (supplied internally by FUE950)
Type	Passive "open collector" pulse output, outputs potential isolated to each other	Current	based on $R_i = 2.2 \text{ M}\Omega$
Pulse value	Last significant digits of the display (unit/pulse), selection by corresponding order code and setting can be read via display menu, settings changeable via software tool	Cable length	< 10 m connection limit

## Flow Measurement

### SITRANS FS (ultrasonic)

#### Inline ultrasonic flowmeters

#### SITRANS FUE950 energy calculator

#### Technical specifications (continued)

##### Current output module

Function	The module contains connections for 2 passive current outputs, which can be programmed individually using the software tool. The outputs are marked „#1“ and „#2“ with corresponding polarity „+“ and „-“ on the terminal strip. The module will be connected on port 1 only, but both ports are occupied by the module.
Terminal voltage	External supply: 10 ... 30 V DC (passive output)
Signal range	4 ... 20 mA; 4 mA = 0 value and 20 mA = default maximum values (for #1: Power in kW and for #2: Flow with the max. values and selected unit). Defaults: For power it is the max. selectable value x 100 000 the last digit of display (e. g. 20 mA = 10 000.0 kW (1 digit res.) or 100 000 kW (0 digit res)). For flow it is the max. selectable value x 10 000 the last digit of display (e. g. 20 mA = 1 000.0 m <sup>3</sup> /h (1 digit res.) or 10 000 m <sup>3</sup> /h (0 digit res.)).
Load	Max. 800 Ω
Upper limit	Up to 20.5 mA (exceed causes the error current value)
Signal on alarm	Errors are indicated with 3.5 mA or 22.6 mA (programmable, default: 3.5 mA)
Output values	Power, flow, temperature (configuring via software tool; default: for #1: Power and for #2: Flow)

##### M-Bus output

Type	The optional M-Bus plug-in module is a serial interface for communication with external devices (M-Bus Repeater)
Protocol	M-Bus according EN 1434-3
Connection	The connection is not polarity-conscious and is electrically isolated, connection of 2 x max. 2.5 mm <sup>2</sup> wires, 300 or 2400 baud (auto baud detection), current drawn: one M-Bus load. M-Bus address: Each port has its own primary M-Bus address (Prim1 = the last two digits of the serial number; Prim2 = 0). The secondary address is unique for each calculator and is factory-set to equal the serial number.

##### RS 232 output

Type	The optional module RS 232 is a serial interface for data transmission with external devices, e.g. PC; baud rate: 300 or 2400. The module contains a 3-pole terminal strip with terminals marked 62 (TX), 63 (RX) and 64 (GND). For this purpose a special data cable is necessary.
Protocol	M-Bus according EN 1434-3
Connection	The module contains a 3-pole terminal strip with terminals marked 62, 63, 64 (max. 2.5 mm <sup>2</sup> ); Connected cable length: max 10 m; For communication with a PC a special adapter cable is required (order no. A5E02611774).

##### RS 485 output

Function	The optional RS 485 module is a serial interface for data transmission with external devices, e.g. PC; baud rate: 2400. The module contains a 4-pole terminal strip with terminals marked D+, D-, Vcc and GND.
Protocol	M-Bus protocol according EN 1434-3
Connection	Terminals D+ and D-; electrically isolated; 2400 baud only. An external supply of 12 V DC ± 5 V (<5 W) is needed for the module (terminals Vcc and GND). The module terminals are max. for 2.5 mm <sup>2</sup> wires. Connected cable length: max. 10 m

##### Power consumption

230 V and 24 V versions	Typical current appr. 0.15 VA
3.6 V D-cell battery	Typical battery lifetime 10 years under normal conditions (no add-on modules, max. 40 °C ambient temperature)
Supply data	Internal voltage 3.6 V by the battery or plug-in power supply module
Battery, 3.6 V type (option)	3.6 V lithium D-cell, battery lifetime typically 16 years with independently powered flowmeter
230 V AC module (option)	Plug-in module for 230 V AC (195 ... 253 V AC), 50/60 Hz (incl. battery backup)
24 V AC module (option)	Plug-in module for 24 V AC (12 ... 30 V AC) (incl. battery backup)
Battery backup (option)	Only with mains supply modules by internal 3.0 V lithium battery (type CR 2032) Displayed values, date and time are still updated, but the measuring functions have stopped, including the flow rate measurement. Communication via optional modules M-Bus, RS 485, RS 232 or optical interface is maintained, affecting the backup battery lifetime.

#### Accessories/Software

The parameterization software based on the M-Bus is a convenient tool for handling the calculator. It runs on Windows and is used for configuration of the calculator functionality, reading out different memories, printing out calculator logs. For further details please contact your local Siemens representative.

A specific optical head with a permanent magnet in (IrDA adapter with bluetooth) accordance with EN 1434 can be used for programming/altering programming of readout data, configuration data, etc. The reader head can also be used to change measuring data.

**Electrical connection for SITRANS FUS380/FUE380/FUE950 and MAG 5000/6000/FUE950**

The diagram shows the connection between SITRANS FUE950 (terminals 10 and 11) and FUS380/FUE380 and MAG 5000/6000 (terminals 56 and 57). Temperature sensors must be connected to terminals 5 (1) and 6 (2) (T<sub>H</sub>) and 7 (3) and 8 (4) (T<sub>C</sub>).

Note:  
The right flowmeter pulse output value must be equal to the FUE950 pulse input value and must be checked via the user menu of the transmitter MAG 5000/6000 or nameplate of FUE380 or FUS380.

## Flow Measurement

### SITRANS FS (ultrasonic)

#### Inline ultrasonic flowmeters

#### SITRANS FUE950 energy calculator > Pt500 temperature sensor pairs

### Application

The temperature sensor set is designed for use with the Siemens energy calculator type SITRANS FUE950 for measurement of the energy consumption in a district heating or cooling net.

Temperature sensors are one of the integral components of every thermal energy meter in heating or cooling applications. They are used for determining temperature changes in fluids due to energy taken from or supplied to the loop. The temperature is thus measured by mounting temperature sensors upstream and downstream from the point where the exchange in the thermal energy of the system is.

To ensure an accurate measurement of the temperature difference according to MID (EN 1434) or PTB K7.2 the sensors are delivered as matched pairs.

By selection with the corresponding order code the Pt500 sensor pair sets can be delivered with heating approval or with approvals for combined heating/cooling applications.

### Technical specifications

#### Temperature sensor pairs

##### 2-wire Pt500

Pt500 2-wire temperature sensor pair (EN 1434)	
Measuring insert	Pt500 temperature sensor, EN 60751, tolerance class B, 2-wire
Pairing	Paired to EN 1434 (10 ... 130 °C/14 ... 266 °F)
Media temperature	0 ... 150 °C (32 ... 302 °F)
Response time $T_{0.5}$	See sensor pocket specifications
Medium	Typically heating water
Pressure rating	See sensor pocket specifications
Protection	IP65
Pipe material	AISI 304 Ti/1.4303
Dimension	Ø 6 mm
Sensor tube length	50 m
Cable length	Up to 10 m (32.8 ft), fixed connected silicon cable, 2 connection wire terminals, terminal sleeves to DIN 46228

##### 4-wire Pt500

Pt500 4-wire temperature sensor pair (with MID and PTB K7.2 approval)	
Measuring insert	Pt500 temperature sensor, EN 60751, tolerance class to ISO 751 Class B; 4-wire
Pairing	Matched paired according to EN 1434 at 10, 75 and 140 °C (50, 167 and 284 °F)
Type approval	MID (DE-06-MI004-PTB011) and PTB K7.2 (PTB 22.77/09.01). Only to be mounted with related sensor pockets according to the type approvals.
Media temperature	0...150 °C (32 ... 302 °F)
Permissible temp. pair range for $\Delta T$	
• Heating	3 ... 150 K
• Cooling	3 ... 85 K
Medium	Approved for heating/cooling water
Protection	IP65
Environment	
• Meachnic class	M3
• Electromagnetic class	E1 (MID)
Pressure rating	See sensor pocket specifications
Material	
• Protective tube	Stainless steel AISI 304Ti/1.4571 (or similar), diameter of protective tube: 6 mm
• Connector cable	Silicon cable, 4 connection wire terminals, terminal sleeves to DIN 46228
Sensor tube length	140 or 230 mm (5.51 or 9.06 inch)
Cable length	5 m (16.4 ft), fixed connected

#### Sensor pockets

##### Stainless steel sensor pocket (for 4-wire Pt500 types only - standard)

Media temperature	0 ... 150 °C (32 ... 302 °F)
Approval	Approved only together with 4-wire sensors
Medium	Approved for heating/cooling water; up to max. 5 m/s flow velocity
Pressure rating	PN 40
Length	Face-to-face length 120/135 and 210/225 mm (4.72"/5.23" and 8.27"/8.86")
External diameter	Protective tube 8/11 mm (0.32"/0.43")
Internal diameter	Protective tube 6 mm (0.24")
Pipe connection	Thread G 1/2" (with sealing screw for sensor)
Material	Protective tube AISI 316Ti/1.4571 (or similar)
Use	<ul style="list-style-type: none"> <li>• Use with related 4-wire Pt500 sensors only (according type approval)</li> <li>• For flow velocities up to 5 m/s</li> <li>• Recommended to install with welded sleeve (according to EU standard)</li> </ul>

##### Stainless steel sensor pocket (for 2-wire Pt500 types only, some only available as spare parts)

Media temperature	0 ... 180 °C (32 ... 356 °F)										
Medium	Approved for heating water										
Response time $T_{0.5}$	Typically 13 s at 0.4 m/s without pasta Typically 5 s at 0.4 m/s with pasta										
Pressure rating	PN 25										
Length	<table border="1"> <tr> <td>L1 (mm)</td> <td>92</td> <td>127</td> <td>168</td> <td>223</td> </tr> <tr> <td>L (mm)</td> <td>82</td> <td>117</td> <td>155</td> <td>210</td> </tr> </table>	L1 (mm)	92	127	168	223	L (mm)	82	117	155	210
L1 (mm)	92	127	168	223							
L (mm)	82	117	155	210							
Material	Stainless steel: AISI 316Ti/1.4571										
Use	For 2-wire Pt500 types only										

##### Brass sensor pocket (for 2-wire Pt500 types only, some only available as spare part)

Media temperature	0 ... 150 °C (32 ... 302 °F)								
Medium	Approved for heating water								
Response time $T_{0.5}$	Typically 9 s at 0.4 m/s without pasta Typically 5 s at 0.4 m/s with pasta								
Pressure rating	PN 16								
Length	<table border="1"> <tr> <td>L1 (mm)</td> <td>47</td> <td>92</td> <td>127</td> </tr> <tr> <td>L (mm)</td> <td>40</td> <td>82</td> <td>117</td> </tr> </table>	L1 (mm)	47	92	127	L (mm)	40	82	117
L1 (mm)	47	92	127						
L (mm)	40	82	117						
Material	Brass: CuZn <sub>40</sub> Pb <sub>2</sub> (Ms58)								
Use	For 2-wire Pt500 types only								

**Dimensional drawings**

Cable length 2, 3, 5 or 10 m ('C' at the dimensional drawing)

**Pt500 4-wire temperature sensor pair (with MID and PTB K7.2 approval)**

Pt500 4-wire temperature sensor, dimensions in mm (inch)

**Stainless steel sensor pocket (for 2-wire Pt500 types only, some only available as spare parts)**

Sensor pocket (for 2-wire Pt500 types only), stainless steel, dimensions in mm (inch)

**Stainless steel sensor pocket (for 2-wire Pt500 types only)**

Length	L1 (mm)	92	127	168	223
	L (mm)	82	117	155	210

**Stainless steel sensor pocket (for 4-wire Pt500 types only - standard)**

Stainless steel sensor pocket, dimensions in mm (inch)

**Brass sensor pocket (for 2-wire Pt500 types only, some only available as spare part)**

Sensor pocket, brass (for 2-wire Pt500 types only), dimensions in mm (inch)

**Brass sensor pocket for 2-wire Pt500 types only)**

Length	L1 (mm)	47	92	127
	L (mm)	40	82	117

## Flow Measurement

SITRANS FS (ultrasonic)

Clamp-on ultrasonic flowmeters

### SITRANS FS230 ultrasonic flowmeter

#### Overview

SITRANS FST030 with FSS200 and external DSL

SITRANS FS clamp-on ultrasonic flowmeters provide highly accurate measurement while minimizing installation time and maintenance expense.

#### Benefits

- Easy installation; no need to cut pipe or stop flow
- Minimal maintenance; external sensors do not require periodic cleaning
- No moving parts to foul or wear
- No pressure drop or energy loss
- Wide turn-down ratio
- Single or dual path with internal DSL, up to four paths with external DSL option

#### System performance

Approvals	<ul style="list-style-type: none"> <li>• ATEX Zone 2 (Sensors: Zone 0, 1, 2)</li> <li>• IIECEx Zone 2 (Sensors: Zone 0, 1, 2)</li> <li>• FM/FMc Class I Div. 2 (Sensors: Class I Div. 1)</li> </ul>
Accuracy	± 0.5 ... 1 % for velocities above 0.3 m/s and >10 diameters straight run
Repeatability	± 0.25 % (based on ISO 11631)
Pipe size range	12.7 ... 10 m (0.5 ... 394")
Wall Thickness Range	0.64 ... 76.2 mm (0.025 ... 3.0")
Pipe material	Any sonically conductive material (steel, plastic, aluminum, glass, cement, ductile iron, copper)
Optional External DSL	Zone 0, 1, 2, Class 1 Div. 1 with transmitter in Zone 2 Class 1 Div 2 area

#### Optional External DSL

The optional external DSL allows for additional flexibility in application configurations. The External DSL benefits include:

- Measurement of 1-4 paths
- 2 x additional analog inputs, RTD or current
- Up to 150 m cable from DSL to transmitter (connection from zone 0,1 area to zone 2 area)

#### Applications

SITRANS FS230 standard functions are suitable for a wide variety of liquid applications, including the following:

- Water industry
  - Raw water
  - Potable water
  - Chemicals
- Wastewater industry
  - Raw sewage
  - Effluent
  - Sludges
  - Mixed liquor
  - Chemicals
- HVAC industry
  - Condensers
  - Hot and cold water systems
- Power industry
  - Nuclear
  - Fossil
  - Hydroelectric
- Processing industry
  - Process control
  - Batching
  - Rate indication
  - Volumetric and mass measurement

SITRANS FS230 hydrocarbon functions are ideal for applications carrying crude oil, refined petroleum or liquefied gas.

#### Standard volume (high end system)

- Standard (net) volume flow measurement
- Suitable for use in leak detection systems
- Mass flow output measurement
- Chemical and petrochemical processing
- Precise identification of interfaces on multi-liquid pipelines
- Product identification
- Standard density indication
- Applications with multiple liquids having a wide viscosity range
- Automatic gross volume compensation due to viscosity

SITRANS FS230 is ideal for most natural and process gas industry applications, including:

- Checkmetering
- Allocation
- Flow survey verification
- Lost and unaccounted for (LAUF) gas analysis
- Production
- Storage

The FS230 can be supplied with an external DSL option that allows for up to four paths with two additional analog inputs. The External DSL enclosure can be installed in a Zone 1 or Div 1 area near the sensors and measurement pipe using short sensor cables, with communication cable to transmitter up to 150 meters away.

## Flow Measurement

SITRANS FS (ultrasonic)

Clamp-on ultrasonic flowmeters

### SITRANS FSS200 ultrasonic flow sensor

#### Function

##### Operating Principle

The SITRANS FS system is a transit-time ultrasonic meter that provides exceptional performance using a non-intrusive clamp-on approach. Ultrasonic sensors transmit and receive acoustic signals directly through the existing pipe wall, where the fluid refraction angle is governed by Snell's law of refraction.

Clamp-on sensor mounted in a reflect configuration

The beam refraction angle is calculated as follows:

$$\sin \theta = c / V_{\phi}$$

$c$  = Velocity of sound in fluid

$V_{\phi}$  = Phase velocity (a constant in the pipe wall)

The flowmeter automatically compensates for any change in fluid sound velocity (or beam angle) in response to variations in the average transit time between sensors A and B. By subtracting the computed fixed times (within the sensors and pipe wall) from the measured average transit time, the meter can then infer the required transit time in the fluid ( $T_{\text{Fluid}}$ ).

The sound waves traveling in the same direction as the flow ( $T_{A,B}$ ) arrive earlier than sound waves traveling against the direction of flow ( $T_{B,A}$ ). This time difference ( $\Delta t$ ) is used to compute the line integrated flow velocity ( $v$ ) as shown in the equation below:

$$v = V_{\phi} / 2 \cdot \Delta t / T_{\text{Fluid}}$$

Once the raw flow velocity is determined, the fluid Reynolds Number ( $Re$ ) must be determined to properly correct for fully developed flow profile. This requires the entry of the fluid's kinematic viscosity ( $\text{visc}$ ) as shown in the equations below, where  $Q$  represents the final flow profile compensated volumetric flow rate.

$$Re = Di \cdot v / \text{visc} \cdot Q = K(Re) \cdot (\pi / 4 \cdot Di^2) \cdot v$$

$v$  = Flow velocity

$\text{visc} = \mu / \rho$  = (dynamic viscosity / density)

$K(Re)$  = Reynolds flow profile compensation

In wetted type ultrasonic flowmeters the meter constants are configured prior to leaving the factory. As this is not possible with clamp-on meters, the settings must be made by the customer at the time of installation. These settings include pipe diameter, wall thickness, liquid viscosity, etc.

SITRANS clamp-on flowmeters that include temperature sensing can be configured to dynamically infer changes in fluid viscosity for the purpose of computing the most accurate flow profile compensation ( $K_{Re}$ ).

##### Ultrasonic sensor types

Two basic types of clamp-on sensors can be selected for use with the SITRANS FS flowmeter. The lower cost "universal" sensor is the most common type in the industry and is suitable for most single liquid applications where the sound velocity does not vary much. This sensor type can be used on any sonically conductive pipe material (including steel) making it well suited for portable survey applications. Universal sensors are selected

based on the pipe diameter range alone, so wall thickness is less important to the selection process.

The second sensor type is the "WideBeam" sensor (called high precision), which utilizes the pipe wall as a kind of waveguide to optimize the signal to noise ratio and provide a wider area of vibration. This makes this kind of sensor less sensitive to any change in the fluid medium.

The WideBeam sensor is designed for steel pipes, but can also be used with aluminum and titanium. It is the preferred sensor for HPI applications. Note that unlike the universal type, this sensor selection is dependent only on the pipe's wall thickness.

##### Multi-path flowmeters

For improved flow profile averaging, redundancy or better cost per measurement, clamp-on meters can be supplied with 1, 2, 3 or 4 path measurement systems.

In the standard FS230 systems, these can be installed on a single pipe as shown below (four paths on same pipe).

Four path installation example

#### Function (continued)

##### SITRANS meter family description

###### SITRANS FS230 clamp-on flowmeters

The FS230 system is a basic function, permanent (or dedicated) Clamp-on meter that is available with a full range of safety approvals and I/Os. This meter can be used in a wide range of applications.

##### FST030 transmitter standard flow functions

When configured with standard flow functions, the FST030 transmitter is typically programmed with a fixed viscosity and specific gravity entry, which can limit the mass flow and volumetric flow accuracy when highly variable (multi-product) liquid properties flow through the same pipeline.

It will have the ability to accommodate clamp-on RTDs, or analog input from a temperature transmitter.

##### FST030 hydrocarbon flow functions

When configured with hydrocarbon functions, the FST030 can be used for applications that will flow a wide range of viscosity with a standard volume (mass) and interface detection functions available. All functions rely on a variable referred to as "Liquident (TM)", which is used to infer the liquid's viscosity and density. This variable represents the measured liquid sonic velocity compensated by the operating temperature and pressure, so for a given liquid product the measured Liquident (TM) output will remain constant over a wide range of pressure or temperature.

##### Standard volume description:

This Liquident (TM) variable can also be used to identify the liquid flowing through the pipe as well as its physical properties (density, viscosity and compressibility) at base conditions. With this information the meter can be configured to output a temperature and pressure compensated (standard) volume flow rate using the API MPMS chapter 11.2.1 methods as shown below.

##### Correction for temperature:

Compute thermal expansion coefficient ( $\alpha_b$ ):

$$\alpha_b = KO / \rho_b^2 + K1 / \rho_b$$

where: KO and K1 are constants dependent on type of liquid and  $\rho_b$  is the liquid density at base conditions

Compute temperature correction factor ( $K_T$ ):

$$K_T = \rho_b * \text{EXP}(-\alpha_b \Delta T (1 + 0.8 \alpha_b \Delta T))$$

where:  $\Delta T = (T - \text{base temperature})$

##### Correction for pressure:

Compute compressibility factor (F):

$$F = \text{EXP}(A + B T + (C + D T) / \rho_b^2)$$

where: A, B, C and D are constants, and "T" is liquid temperature

Compute pressure correction factor ( $K_p$ ):

$$K_p = 1 / (1 - F (P_{\text{act}} - P_{\text{base}}) * 10^{-4})$$

**Final volume correction:**  $Q_{\text{std}} = Q_{\text{act}} * K_t * K_p$

Available outputs from this meter include: API, standard density, mass flowrate, standard volume flowrate and liquid identification.

##### General installation guidelines for transit time clamp-on sensor

- Minimum measuring range: 0 to  $\pm 0.3$  m/s velocity (see meter accuracy graph below for more detail)
- Maximum measuring range: 0 to  $\pm 12$  m/s ( $\pm 30$  m/s for high precision sensors). Final flow range determination requires application review

- Pipe must be completely full within the sensor installation volume for accurate flow measurement
- Typical MINIMUM straight pipe requirements are: 10 Diameters upstream/5 Diameters downstream. Additional straight run is required for double out-of-plane elbows and partially open valves.
- Sensors should be installed at least 20° off vertical for horizontal pipes. This reduces the chance of beam interference from gas buildup at the top of the pipe
- Operation inside the Reynolds transition region, between  $1000 < Re < 5000$  should be avoided for best accuracy
- Submersible and direct burial installations can be accommodated. Consult sales representative for details
- Ultrasonic coupling compound is provided with all sensor orders. Insure that a permanent coupling compound is used for long term installations
- Refer to the "Sensor type selection guide" to insure proper application of the equipment

General survey (clean liquids) on non-steel pipes		X	
General survey (clean liquids) on a limited range of steel pipes	X		
Moderately aerated liquid or slurry, up to 121 °C (250 °F)	X		
Permanent installation on steel pipe (clean liquids and gases)	X		
Installation in offshore or corrosive environment	X <sup>1)</sup>	X <sup>2)</sup>	Sensor size C/D/E come standard as corrosion resistant. Size A and B optional stainless steel
Liquid temperature greater than 120 °C (248 °F)	O	X	FSS200 high temperature metal block sensors (up to 232 °C (450 °F))
Operation on single pipeline flowing multiple products	X	O	
<b>Pipe material</b>			
Steel	X		
Steel pipe with diameter/wall thickness ratio <10	O	X	
Non-steel pipe material (copper, ductile iron, cast iron, etc.)	O	X	High precision sensors can also be used on plastic and aluminum pipes in special cases
Wall thickness > 31.75 mm (1.25")	O	X	

O = not suitable X = preferred choice

<sup>1)</sup> For steel and stainless steel pipes only<sup>2)</sup> Not preferred for steel pipes

#### Definitions

Sensor chart	Description
FSS200	Formerly 1011 clamp-on sensors of the 1010 systems
Standard	Standard system sensor, selectable as part of a configured product
Special	Sensors available for non-standard applications and pipes. Contact tech support for application use
Corrosion resistant	Stainless steel metal parts on all Size C, D and E and all high temperature sensors
Aluminum	Aluminum metal parts on all HP and Universal size A and B (Corrosion resistant on request for size B)
Spare	Not available as part of a configured product, must be ordered separately
CE	Transmitter and sensors certified for sale in the EU
Trackless mount	Sensors fixed only by straps, no other mounting (spacer bar as an option) - not recommended
Tracks	Permanent installation for universal size A/B, high precision size A/B and all sizes of high temperature. Tracks always come as dual-part for either direct or reflect mounting, and always with straps.
Frames	Three sizes, for permanent installation for universal size C/ D/ E, and for high precision size C/D. For universal and high precision size B available for pipes > 125 OD (Spare)
T1	Usable from -40 ... +120 °C (-40 ... +248 °F), but best for Ø temperature below 80 °C (< 176 °F), standard
T2	Usable from -40 ... +120 °C (-40 ... +248 °F), but best for Ø temperature above 80 °C (> 176 °F)
Submersible	Sensors can be used submerged; adding Denso for supplemental protection is recommended

## Overview

FST030 is based on the latest developments within Digital Signal Processing (DSP) technology – engineered for high measuring performance, fast response to step changes in flow, high immunity against process noise, easy to install commission and maintain.

The FST030 transmitter delivers true multi-parameter measurements i.e. volume flow, standard volume flow, density, mass flow, fluid sound velocity and temperature.

The multiple outputs and bus communication mean that all primary process information can be read either instantaneously (10 ms update) or periodically as required by plant operations.

### Process values

- Volume flow
- Mass flow
- Flow velocity
- Sound velocity
- Standard volume flow (hydrocarbon variant only)
- Density
- Kinematic viscosity
- Pressure
- Medium temperature
- Specific gravity (hydrocarbon variant only)
- Totalizer 1
- Totalizer 2
- Totalizer 3
- Standard density (hydrocarbon variant only)
- Standard specific gravity (hydrocarbon variant only)
- Standardizing factor (hydrocarbon variant only)
- Liquident (hydrocarbon variant only)
- API gravity (hydrocarbon variant only)
- Standard API gravity (hydrocarbon variant only)
- Standard kinematic viscosity (hydrocarbon variant only)
- Liquid identifier (hydrocarbon variant only)

## Benefits

### Flow calculation and measurement

- Dedicated volume flow calculation with DSP technology
- 100 Hz update rate for all output on all primary process values
- Maximum data age from sensor to output is 20 ms
- Independent low flow cut-off settings for volume and mass flow, standard volume flow and velocity
- Zero-point adjustment on command from discrete input or host system

### Operation and display

- User-configurable operation display
  - Full graphical display 240 x 160 pixels with up to 6 programmable views
  - Self-explaining alarm handling/log in clear text
  - Help text for all parameters appears automatically in the configuration menu
- SensorFlash technology stores production specific system documentation and provides removable memory of all flowmeter setups and functions
  - Calibration certificates (with ordered calibration)
  - Non-volatile memory backup of operational data
  - Transfer of user configuration to other flowmeters
  - 4GB SD card for storage and data logging
  - Audit trail of all parameter changes
  - Alarm logging

### Alarms and safety

- Advanced diagnosis and service menu enhances troubleshooting and meter validation
- Configurable upper and lower alarm and warning limits for all process values
- Alarm handling can be selected between Siemens and NAMUR standard configurations

### Outputs and control

- Monitoring comprising of 3 individually configurable totalizers
- Multi-parameter outputs, configurable outputs assigned individually to any of the following parameters:
  - Volume flow
  - Standard volume flow
  - Mass flow
  - Flow velocity
  - Sound velocity
  - Density
  - Process viscosity
  - Process pressure
  - Process/medium temperature

Up to six I/O channels are configured as follows.

#### Channel 1

Channel 1 is 4 to 20 mA analog output with HART 7.5. The current signal can be configured for massflow, volume flow and includes the availability of active or passive function selected by wiring on the non-Ex terminals. Alternative Modbus RTU RS 485 is available.

#### Channel 2

Channel 2 is a signal output which can be freely configured for any process variable.

- Analog current (0/4 to 20 mA)
- Frequency or pulse
- Operational and alarm status

#### Channels 3 and 4

Channels 3 and 4 can be ordered with signal (freely configured for any process variable) or relay outputs, or signal input.

## Flow Measurement

SITRANS FS (ultrasonic)

Clamp-on ultrasonic flowmeters

### SITRANS FST030 transmitter, wall mount housing

#### Benefits (continued)

##### Signal output

Signal output can be user configured to:

- Analog current (0/4 to 20 mA)
- Frequency or pulse
- Redundant frequency or pulse (linked to channel 2)
- Operational and alarm status

##### Signal input

Signal input can be user-configured for:

- Totalizer reset functions
- Force outputs or freeze process values
- Initiate automatic zero point adjustment

##### Relay

Relay output(s) can be user configured to:

- Alarm status

4-20 mA signal outputs and inputs are ordered as active or passive for Ex versions, active and passive for non-Ex versions - function selected by wiring on the terminals.

During initial commissioning of the flowmeter, all outputs can be forced to a preset value for simulation, verification or calibration purposes.

##### Channels 5 and 6 (with internal DSL)

- RTD temperature inputs for 1000, 500 or 100  $\Omega$  RTD's - 2, 3 or 4 wire RTD's supported
- Channels 5 and 6 (with external DSL option)
- RTD Temperature inputs or 4-20 ma inputs. Selectable in menu.

##### Approvals and certificates

The SITRANS FST030 transmitter was designed to comply with or exceed the requirements of international standards and regulations.

#### Design

The SITRANS FST030 is designed in an IP67/Nema 4X aluminum enclosure with corrosion resistant coating. It can be wall or pipe mounted and the enclosure can be locked with a padlock or wired with lead security seals. Includes all flow and DSL functions integrated into one unit.

The FST030 is available as standard with one current, HART 7.5 output and can be ordered with additional input/output functions.

The transmitter has a modular design with discrete, replaceable electronic modules and connection boards to maintain separation between functions and facilitate field service. All modules are fully traceable and their provenance is included in the transmitter setup.

##### SensorFlash

SensorFlash is a standard, 4 GB micro SD card with the ability to be updated by PC. It is supplied with each transmitter and comes with a complete set of certification documents including report if ordered. Factory conformance certificates are optional at ordering.

The Siemens SensorFlash memory unit offers the following features and benefits:

- Copy site setups to SD card for easy transfer to other similar transmitters
- Permanent database of operational and functional information from the moment that the flowmeter is switched on
- New firmware updates can be downloaded from the Siemens internet portal for Product Support and placed onto SensorFlash (unmounted from the transmitter and inserted into a PC's SD card slot). The firmware is then inserted into the existing flowmeter for system/firmware upgrade.

#### Function

The following functions are available:

- Up to four configurable outputs and 2 RTD input channels selected at ordering
- Outputs can be individually configured for mass flow, volume flow etc.
- Three built-in totalizers which can count positive, negative or net flows
- Independent low flow cut-offs, adjustable
- Uni/bidirectional flow measurement
- Flow direction adjustable
- Alarm system consisting of alarm-log, alarm pending menu
- Change log, logs all changes made to menu parameters or via communications
- Internal data logger
- Display of operating time with real-time clock
- Flowrate outputs are freely configurable between maximum negative and maximum positive flows according to the sensor capacity
- Limit switches programmable for flow, density and temperature. Limit points can be graded as warning and alarm for values both above and below nominal process conditions
- Zero adjustment menu, with zero point evaluation display
- Full service menu for effective and straight forward application and meter troubleshooting
- Precise temperature measurement ensures optimal accuracy on massflow and density
- Fully compatible with Siemens PDM version 8.2 service pack 1 or higher

<b>Current output</b>	
Current	0 ... 20 mA or 4 ... 20 mA (channel 1 only 4 ... 20 mA)
Load	< 500 Ω per channel
Time constant	0 ... 100 s adjustable
<b>Digital output</b>	
Pulse	41.6 μs ... 5 s pulse duration
Frequency	0 ... 10 kHz, 50 % duty cycle, 120 % overscale provision
Time constant	0 ... 100 s adjustable
Active	0 ... 22 V DC, 30 mA, short-circuit-protected
Passive	3 ... 30 V DC, max. 110 mA
<b>Relay</b>	
Type	SPDT dry contact relay
Load	30 V AC/100 mA
Functions	Alarm level, alarm number, limit, flow direction
<b>Digital input</b>	
Voltage	15 ... 30 V DC (2 ... 15 mA)
Current	4 ... 20 mA
Functionality	Reset totalizer 1, 2 and 3, force output, freeze process values, zero point adjustment

<b>Galvanic isolation</b>	All inputs and outputs are galvanically isolated, isolation voltage 500 V
<b>Alarm and warning limit</b>	Available for all process values
<b>Totalizer</b>	Three counters for forward, net and reverse flow
<b>Display</b>	<ul style="list-style-type: none"> <li>• Background illumination with alpha-numerical text to indicate flow rate, totalized values, settings and faults</li> <li>• Adjustable damping constant of 0 ... 100 s</li> <li>• Reverse flow indicated by negative sign</li> </ul>
<b>SD card functions</b>	<ul style="list-style-type: none"> <li>• Parameter change log</li> <li>• Configurable data logger</li> <li>• FW update log</li> <li>• Diagnostic log</li> <li>• Error and alarm log</li> <li>• Parameter backup</li> </ul>
<b>Ambient temperature</b>	
Operation	
• Transmitter	-40 ... +60 °C (-40 ... +140 °F), (humidity max. 95 %)
• Display	-20 ... +60 °C (-4 ... +140 °F)
Storage	
• Transmitter	-40 ... +70 °C (-40 ... +158 °F) (humidity max. 95 %)
<b>Communication</b>	HART 7.5 Modbus RTU RS 485
<b>Enclosure</b>	
Material	Aluminum
Rating	IP66/67, Nema 4X to IEC 529 and DIN 40050 (1 mH <sub>2</sub> O for 30 min.)
Mechanical load	18 ... 400 Hz random, 3.17 g RMS, in all directions
<b>Power supply</b>	
Universal	20 ... 27 V DC 100 ... 240 V AC, 47 ... 63 Hz
Fluctuation	No limit
Power consumption	20 W/22 VA
<b>Minimum pressure for Gas</b>	7 ... 10 bar (100 ... 145 psi), typical (gas composition and application dependent; plastic pipes support operation at atmospheric pressure)
<b>Environment</b>	
Environmental conditions acc. to IEC/EN/UL 61010-1	<ul style="list-style-type: none"> <li>• Altitude up to 2000 m</li> <li>• Pollution degree 2</li> <li>• Overvoltage category II</li> </ul>
<b>Maintenance</b>	The flowmeter has a built-in error log/pending menu which should be inspected on a regular basis
<b>Cable glands</b>	Cable glands are available in nylon, nickel plated brass or stainless steel (316L/W1.4404)

SITRANS FS (ultrasonic)

Clamp-on ultrasonic flowmeters

### Selection and ordering data for SITRANS FS230

#### Selection and ordering data

#### Order code

##### Further designs

Please add “-Z” to Article No. and specify Order code(s) and plain text.

##### Cable glands - transmitter, DSL (not for sensor cables)

No glands, metric threads on transmitter

A01

No glands, metric thread with NPT thread adapters, nickel plated brass: quantity based on selection "N" in data place 14

A40

No glands, metric thread with NPT thread adapters, stainless steel: quantity based on selection "N" in data place 14

A41

Nickel plated brass glands: quantity based on selection "N" in data place 14

A42

Plastic glands: quantity based on selection "N" in data place 14

A44

Stainless steel glands: quantity based on selection "N" in data place 14

A46

No glands, metric thread with NPT thread adapters, nickel plated brass: quantity based on selection "Q" in data place 14

A50

No glands, metric thread with NPT thread adapters, stainless steel: quantity based on selection "Q" in data place 14

A51

Nickel plated brass glands: quantity based on selection "Q" in data place 14

A52

Plastic glands: quantity based on selection "Q" in data place 14

A54

Stainless steel glands: quantity based on selection "Q" in data place 14

A56

No glands, metric thread with NPT thread adapters, stainless steel: quantity based on selection "U" in data place 14

A60

No glands, metric thread with NPT thread adapters, nickel plated brass: quantity based on selection "U" in data place 14

A61

Nickel plated brass glands: quantity based on selection "U" in data place 14

A62

Plastic glands: quantity based on selection "U" in data place 14

A64

Stainless steel glands: quantity based on selection "U" in data place 14

A66

No glands, metric thread with NPT thread adapters, nickel plated brass: quantity based on selection "V" in data place 14

A70

No glands, metric thread with NPT thread adapters, stainless steel: quantity based on selection "V" in data place 14

A71

Nickel plated brass glands: quantity based on selection "V" in data place 14

A72

Plastic glands: quantity based on selection "V" in data place 14

A74

Stainless steel glands: quantity based on selection "V" in data place 14

A76

No glands, metric thread with NPT thread adapters, nickel plated brass: quantity based on selection "W" in data place 14

A80

No glands, metric thread with NPT thread adapters, stainless steel: Quantity based on selection "W" in data place 14

A81

Nickel plated brass glands: quantity based on selection "W" in data place 14

A82

Plastic glands: quantity based on selection "W" in data place 14

A84

Stainless steel glands: quantity based on selection "W" in data place 14

A86

##### Software functions and CT approvals

Software: for standard industry applications

B11

Software including hydrocarbon process values

B39

Software including gas process values

B50

##### I/O configuration Ch1

Non-Ex, 4 ... 20 mA HART, menu selected passive/active

E02

Ex, 4 ... 20 mA HART, active

E06

Ex, 4 ... 20 mA HART, passive

E07

Modbus RTU 485

E14

##### I/O configuration Ch2, Ch3 and Ch4

None

F00

Non-Ex

• Ch2: current/freq./pulse, Ch3: none Ch4: none. Active/passive menu selected

F01

• Ch2: current/freq./pulse, Ch3: current/freq./pulse Ch4: none. Active/passive menu selected

F02

• Ch2:current/freq./pulse, Ch3: current/freq./pulse Ch4:current/freq./pulse. Active/passive menu selected

F03

• Ch2:current/freq./pulse, Ch3: current/freq./pulse Ch4: relay. Active/passive menu selected

F04

• Ch2: current/freq./pulse, Ch3: relay Ch4: relay. Active/passive menu selected

F05

• Ch2: current/freq./pulse, Ch3: relay Ch4: none. Active/passive menu selected

F06

Ex Active

• Ch2: current/freq./pulse, Ch3: none Ch4: none

F11

• Ch2: current/freq./pulse, Ch3: current/freq./pulse Ch4: none

F12

• Ch2: current/freq./pulse, Ch3: current/freq./pulse Ch4: current/freq./pulse

F13

• Ch2: current/freq./pulse, Ch3: current/freq./pulse, Ch4: relay

F14

• Ch2: current/freq./pulse, Ch3: relay, Ch4: relay

F15

• Ch2: current/freq./pulse, Ch3: relay, Ch4: none

F16

Ex Passive

• Ch2: current/freq./pulse, Ch3: none, Ch4: none

• Ch2: current/freq./pulse, Ch3: current/freq./pulse Ch4: None

F22

• Ch2:current/freq./pulse, Ch3: current/freq./pulse Ch4:current/freq./pulse

F23

• Ch2: current/freq./pulse, Ch3: current/freq./pulse Ch4: relay

F24

• Ch2: current/freq./pulse, Ch3: relay, Ch4: relay

F25

• Ch2: current/freq./pulse, Ch3: relay, Ch4: none

F26

##### DSL strap kit (to strap DSL to pipe)

• 60.3 mm (2 inch) pipe mount with U-bolts

G01

• Stainless steel strap to mount DSL to pipe DN 60 ... 150 pipe size (2 ... 6 inch)

G03

• Stainless steel strap to mount DSL to pipe DN 150 ... 300 (6 ... 12 inch)

G05

• Stainless steel strap to mount DSL to pipe DN 300 ... 400 (12 ... 16 inch)

G07

• Stainless steel strap to mount DSL to pipe DN 400 ... 600 (16 ... 24 inch)

G08

##### Temperature sensors and pockets

1000 Ω platinum standard clamp-on RTD

J61

1000 Ω platinum submersible clamp-on RTD

J62

## Flow Measurement

SITRANS FS (ultrasonic)

Clamp-on ultrasonic flowmeters

### Selection and ordering data for SITRANS FS230

Selection and ordering data	Article No.	Article No.
<b>System spare parts</b>		
<b>Tool kits and loose parts</b>		
"F" connector tool kit, 2 per	A5E38145699	A5E38012039
Bag of loose spare parts; for wallmount, including cable strain relief components, mounting tool, seals and gasket, assorted screws and washers, hex cap nut, blind plugs, and O-rings	A5E38288072	A5E38012056
<b>Electronics assemblies and modules</b>		
Wall mount transmitter		
• Display and keypad assembly	A5E37697615	
• Digital Sensor Link (DSL), internal, module only, for wall box, standard process values	A5E38014726	
• Digital Sensor Link (DSL), internal, module only, for wall box, hydrocarbon process values	A5E42138542	A5E38012121
• Digital Sensor Link (DSL), internal, module only, for wall box, gas process values	A5E47202379	
• SensorFlash (4 GB micro SD card) -40 °C ... +85 °C	A5E38288507	A5E38019235
• Power supply, for wall box, (240 V AC, 47 ... 63 Hz), (24 ... 90 V DC)	A5E38263021	A5E38019263
• Foam insert for wall box with connectors	A5E38287828	A5E38019378
External DSL		
• Digital Sensor Link (DSL), external, module only, standard process values	A5E38014662	
• Digital Sensor Link (DSL), external, module only, hydrocarbon process values	A5E37843869	
• Digital Sensor Link (DSL), external, module only, gas process values	A5E47202369	
• F connector board set: board A, board B and screws for mounting	A5E45882316	
• Front end module cover plate with screws for mounting	A5E45882046	
<b>Cassettes, I/O configuration and communication</b>		
<b>Ex</b>		
• Ch1: I/O and comm (active) 4 ... 20 mA output and HART 7.2	A5E38012278	
• Ch1: I/O and comm (passive) 4 ... 20 mA output and HART 7.2	A5E38013025	
• Ch1: communication Modbus RTU 485	A5E38013054	
<b>Non Ex</b>		
• Ch1: I/O and comm (active/passive) 4 ... 20 mA output and HART 7.2	A5E38013040	
• Ch1: communication Modbus RTU 485	A5E38013069	
• Ch2: current/freq./pulse, Ch3: None Ch4: none. Menu select active/passive	A5E38006256	
• Ch2: current/freq./pulse, Ch3: current/freq./pulse Ch4: none. Menu select active/passive	A5E38006558	
• Ch2: current/freq./pulse, Ch3: current/freq./pulse Ch4: current/Freq./Pulse. Menu select active/passive	A5E38006598	
• Ch2: current/freq./pulse, Ch3: current/freq./pulse Ch4: relay. Menu select active/passive	A5E38006896	
• Ch2: current/freq./pulse, Ch3: relay Ch4: relay. Menu select active/passive	A5E38006900	
• Ch2: current/freq./pulse, Ch3: relay Ch4: none. Menu select active/passive	A5E38011432	
		Ex Active
		• Ch2: current/freq./pulse, Ch3: None Ch4: none
		A5E38012039
		• Ch2: current/freq./pulse, Ch3: current/freq./pulse Ch4: none
		A5E38012056
		• Ch2: current/freq./pulse, Ch3: current/freq./pulse Ch4: current/freq./pulse
		A5E38012121
		• Ch2: current/freq./pulse, Ch3: current/freq./pulse Ch4: relay
		A5E38019235
		• Ch2: current/freq./pulse, Ch3: relay Ch4: relay
		A5E38019263
		• Ch2: current/freq./pulse, Ch3: relay Ch4: none
		A5E38019378
		Ex Passive
		• Ch2: current/freq./pulse, Ch3: none Ch4: none
		A5E38011478
		• Ch2: current/freq./pulse, Ch3: current/freq./pulse Ch4: none
		A5E38011509
		• Ch2: current/freq./pulse, Ch3: current/freq./pulse Ch4: current/freq./pulse
		A5E38011541
		• Ch2: current/freq./pulse, Ch3: current/freq./pulse Ch4: relay
		A5E38011600
		• Ch2: current/freq./pulse, Ch3: relay Ch4: relay
		A5E38011618
		• Ch2: current/freq./pulse, Ch3: relay Ch4: none
		A5E38011908
<b>Miscellaneous parts</b>		
<b>General</b>		
		• Blind plug brass-nickel 10 pcs (Ex version)
		A5E38145685
		• Blind plug stainless steel 10 pcs (Ex version)
		A5E38145689
		• F connectors, 4 pcs
		A5E38268608
		• M12 adapter for DSL or wall mounted transmitter
		A5E03906095
<b>Wall mount transmitter</b>		
		• Wall bracket "pipe mounting"
		A5E38288020
		• Wall bracket "panel mounting"
		A5E38288032
		• Metal kit: PSU cover, back plane
		A5E38415145
		• Power input cover plate
		A5E38415205
<b>External DSL</b>		
		• Wall mount bracket and screws for mounting DSL on bracket
		A5E45882610
		• Lid with O-ring
		A5E45818351
		• Bag with parts: cable strain reliefs, screws and washers, lid lock screw, grounding parts
		A5E38111577
		• Accessory pipe mount kit for 60.3 mm (2.375 inch) pipe
		A5E36617118006
		• Accessory pipe strap kit for DN 50 ... 150 (2 ... 6 inch) pipe
		A5E36617118007
		• Accessory pipe strap kit for DN 150 ... 300 (6 ... 12 inch) pipe
		A5E36617118008
		• Accessory pipe strap kit for DN 300 ... 400(12 ... 16 inch) pipe
		A5E36617118009
		• Accessory pipe strap kit for DN 400 ... 600(16 ... 24 inch) pipe
		A5E36617118010

## Flow Measurement

SITRANS FS (ultrasonic)

Clamp-on ultrasonic flowmeters

### SITRANS FS220 ultrasonic flowmeter

#### Overview

The SITRANS FS220 is a clamp-on ultrasonic flow system consisting of an FST020 transmitter and FSS200 clamp-on sensors.

The transmitter classification FST020 describes a basic clamp-on ultrasonic flowmeter for basic application requirements. Based on the same digitalized platform as the FST030 this system provides the same accuracy and similar functions on a lower cost level. This system is ideal for water measurement and any application not requiring temperature or viscosity compensation.

#### Benefits

- Easy installation at any time; no production stop, no need to cut pipe or stop flow
- Minimal maintenance; external sensors do not require periodic cleaning
- No moving parts to foul or wear. No contact with media
- No pressure drop or energy loss
- Wide turn-down ratio, bidirectional and high stability at zero flow conditions
- Anomaly compensation tool for correction of non-ideal straight pipe runs. Automatic compensation during backflow
- Optional WideBeam technology ensures highest performance and accuracy
- Compatible with all previously installed transit time sensors

#### Application

The SITRANS FS220 can be used for the following application conditions:

- Pipe sizes from 10 mm to 10 m
- Pipe materials: ideal for all metals, glass, FRP and most PVC variants; NOT for concrete pipes and special compound pipes
- Pipe wall thickness from 1 to 35 mm; specials on request up to 65 mm
- Media temperatures from -40 to 121 °C; universal high temperature sensors for up to 230 °C max.
- Underground/submerged locations, non-ideal environments, strong pipe vibrations

SITRANS FS220 flowmeters are suitable for most clean liquid applications, including the following:

- Water and wastewater industry
  - Potable water
  - Water and aqueous solutions
  - Wastewater, influent & effluent
  - Processed sewage, sludge
- Chemical feed industry
  - Sodium hypochlorite
  - Sodium hydroxide
- HVAC and power industries
  - Coolant flow
  - Fuel flow
  - Utility district heating, cooling
  - Refrigeration liquids
- Process control
  - Chemicals
  - Pharmaceuticals
  - Food products
  - Very low flow sensitivity (< 0.1 m/s)
  - High temperature liquids > 120 °C (248 °F)

### Application (continued)

#### Sensor type selection guide

Application condition Note all that apply before making selection	Standard sensor supported in MLFB		Notes
	High precision	Universal	
<b>Media</b>			
General survey (clean liquids) on non-steel pipes		X	
General survey (clean liquids) on a limited range of steel pipes	X		
Moderately aerated liquid or slurry, up to 121 °C (250 °F)	X		
Permanent installation on steel pipe (clean liquids)	X		
Installation in offshore or corrosive environment	X		With optional stainless steel mounting
Liquid temperature greater than 120 °C (248 °F)	O	X	High temperature metal block sensors (up to 230 °C (446 °F))
Operation on single pipeline flowing multiple products	X	O	
<b>Pipe material</b>			
Steel	X		
Steel pipe with diameter/wall thickness ratio < 10	O	X	
Non-steel pipe material (copper, ductile iron, cast iron, etc.)	O	X	High precision sensors can also be used on plastic and aluminum pipes in special cases

O = not suitable X = preferred choice

#### Definitions

Sensor chart	Description
FSS200	Formerly 1011 clamp-on sensors of the 1010 systems
Standard	Standard system sensor, selectable as part of a configured product
Special	Sensors available for non-standard applications and pipes. Contact tech support for application use
Corrosions resistant	Stainless steel metal parts on all Size C, D and E and all high temperature sensors
Aluminum	Aluminum metal parts on all HP and Universal size A and B (Corrosion resistant on request for size B)
Spare	Not available as part of a configured product, must be ordered separately
CE	Transmitter and sensors certified for sale in the EU
Trackless mount	Sensors fixed only by straps, no other mounting (spacer bar as an option) - not recommended
Tracks	Permanent installation for universal size A/B, high precision size A/B and all sizes of high temperature. Tracks always come as dual-part for either direct or reflect mounting, and always with straps.
Frames	Three sizes, for permanent installation for universal size C/ D/ E, and for high precision size C/D. For universal and high precision size B available for pipes > 125 OD (Spare)
T1	Usable from -40 ... +120 °C (-40 ... +248 °F), but best for Ø temperature below 80 °C (< 176 °F); standard
T2	Usable from -40 ... +120 °C (-40 ... +248 °F), but best for Ø temperature above 80 °C (< 176 °F)
Submersible	Sensors can be used submerged; adding Denso for supplemental protection is recommended

#### Function

#### Operating principle

The SITRANS F S system is a transit-time ultrasonic meter that provides exceptional performance using a non-intrusive clamp-on approach. Ultrasonic sensors transmit and receive acoustic signals directly through the existing pipe wall, where the fluid refraction angle is governed by Snell's law of refraction.

Clamp-on sensor mounted in a reflect configuration

The beam refraction angle is calculated as follows:

$$\sin \theta = c / V_{\phi}$$

$c$  = Velocity of sound in fluid

$V_{\phi}$  = Phase velocity (a constant in the pipe wall)

The flowmeter automatically compensates for any change in fluid sound velocity (or beam angle) in response to variations in the average transit time between sensors A and B. By subtracting the computed fixed times (within the sensor and pipe wall) from the measured average transit time, the meter can then infer the required transit time in the fluid ( $T_{\text{Fluid}}$ ).

The sound waves traveling in the same direction as the flow ( $T_{A,B}$ ) arrive earlier than sound waves traveling against the direction of flow ( $T_{B,A}$ ). This time difference ( $\Delta t$ ) is used to compute the line integrated flow velocity ( $v$ ) as shown in the equation below:

$$v = V_{\phi} / 2 \cdot \Delta t / T_{\text{Fluid}}$$

Once the raw flow velocity is determined, the fluid Reynolds Number ( $Re$ ) must be determined to properly correct for fully developed flow profile. This requires the entry of the fluid's kinematic viscosity ( $\text{visc}$ ) as shown in the equations below, where  $Q$  represents the final flow profile compensated volumetric flow rate.

$$Re = Di \cdot v / \text{visc} \quad Q = K(Re) \cdot (\pi / 4 \cdot Di^2) \cdot v$$

$v$  = Flow velocity

$\text{visc} = \mu / \rho$  = (dynamic viscosity / density)

$K(Re)$  = Reynolds flow profile compensation

In wetted type ultrasonic flowmeters the meter constants are configured prior to leaving the factory. As this is not possible with clamp-on meters, the settings must be made by the customer at the time of installation. These settings include pipe diameter, wall thickness, liquid viscosity, etc.

SITRANS clamp-on flowmeters that include temperature sensing can be configured to dynamically infer changes in fluid viscosity for the purpose of computing the most accurate flow profile compensation ( $K_{Re}$ ).

#### Ultrasonic sensor types

Two basic types of clamp-on sensors can be selected for use with the SITRANS F S flowmeter. The lower cost "universal" sensor is the most common type in the industry and is suitable for most single liquid applications where the sound velocity does not vary much. This sensor type can be used on any sonically conductive pipe material (including steel) making it well suited for temporary survey applications. Universal sensors are selected based on the pipe diameter range alone, so wall thickness is less important to the selection process.

The second sensor type is the patented "WideBeam" sensor (called high precision), which utilizes the pipe wall as a kind of waveguide to optimize the signal to noise ratio and provide a wider area of vibration. This makes this kind of sensor less sensitive to any change in the fluid medium.

The WideBeam sensor is designed for steel pipes, but can also be used with aluminum and titanium. It is the preferred sensor for HPI applications. Note that unlike the universal type, this sensor selection is dependent only on the pipe's wall thickness.

## Flow Measurement

SITRANS FS (ultrasonic)

Clamp-on ultrasonic flowmeters

### SITRANS FS220 ultrasonic flowmeter

#### Function (continued)

#### General installation guidelines for SITRANS FSS200 clamp-on sensor

- Minimum measuring range: 0 to  $\pm 0.3$  m/s velocity (see meter accuracy graph on next page for more detail)
- Maximum measuring range: 0 to  $\pm 12$  m/s ( $\pm 30$  m/s for high precision sensors). Final flow range determination requires application review

- Pipe must be completely full within the sensor installation volume for accurate flow measurement
- Typical MINIMUM straight pipe requirements are: 10 Diameters upstream/5 Diameters downstream. Additional straight run is required for double out-of-plane elbows and partially open valves.
- Sensors should be installed at least 20° off vertical for horizontal pipes. This reduces the chance of beam interference from gas buildup at the top of the pipe
- Operation inside the Reynolds transition region, between  $1000 < Re < 5000$  should be avoided for best accuracy
- Submersible and direct burial installations can be accommodated. Consult sales representative for details
- Ultrasonic coupling compound is provided with all sensor orders. Insure that a permanent coupling compound is used for long term installations
- Refer to the "Sensor type selection guide" to insure proper application of the equipment

#### Technical specifications

<b>Rangeability</b>

##### Description

##### Article No.

##### FSS200 Universal Sensors

7ME3950-...

Selected for general purpose measurement.  
Since they are selected based on diameter only, a wide range of pipe sizes and materials can be covered with a minimum number of sensors. These can also be selected for cost savings on applications where standard accuracy is sufficient.

##### FSS200 High Precision Sensors

7ME3950-...

Selected for increased performance on steel pipes. They provide the highest accuracy achievable by the meters and therefore should be selected whenever higher accuracy / repeatability is required primarily based on pipe wall thickness.

##### FSS200 High Temperature Sensors

7ME3950-...

Selected whenever pipe temperature will exceed 250 °F (120 °C) up to a maximum of 450 °F (232 °C). They are universal type and can therefore be used on any pipe material and are selected by pipe diameter. Constructed in stainless steel. Connection junction box included.

##### Mounting tracks

7ME3960-...

Typically used on smaller pipes for easier and more stable mounting of dedicated universal style sensor size A or B; also available for dedicated high precision sensor size A or B.

##### Mounting Frames

7ME3960-...

These items are useful in simplifying sensor installation. They are strapped to the pipe first and then the sensors are installed, making the installation less cumbersome and more precise. They also enable easy repeated mounting of the sensors assuring alignment to the original sensor positioning. They may be left in place at each measurement location where periodic flow surveys are conducted to simplify subsequent installations and ensure repeatable results.

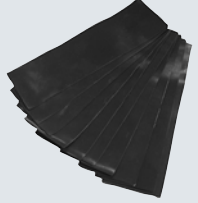

##### Magnetic mounting frames

7ME3960-0MD02

Magnetic mounting frames are designed to simplify clamp-on sensor installation on pipelines 8 inches (DN 200) and larger by eliminating the need for straps to secure them. They feature powerful magnets to ensure quick and accurate setup. Compatible with all C, D and E universal and high-precision sensors belonging to the SITRANS FSS200 clamp-on family. Magnetic mounting frames are constructed in aluminum for a high level of durability. Ideal use on temporary installations.

Clamp-on ultrasonic flowmeters

### SITRANS FS220 ultrasonic flowmeter

#### Dimensional drawings

SITRANS FST020 IP65 (NEMA 4X), wall mount enclosure, dimensions in mm (inch)

#### SITRANS FST020 ultrasonic flow transmitter, wall mount housing

### Overview

The SITRANS FST020 is the basic device for simple and cost-effective clamp-on applications. As a single-path device, it is suitable for flow measurement on liquids that do not require temperature or viscosity consideration and where highest accuracies are not required.

Historically, the FST020 comes from the clamp-on family of analog FUS1010 transmitters. Since the revision in 2017, the updated transmitter is now part of a digital platform based on the latest developments within Digital Signal Processing (DSP) technology - engineered for high measuring performance, fast response to step changes in flow, high immunity against process noise and simplicity in installation, commissioning and maintenance.

The FST020 transmitter delivers standard parameter measurements i.e. volume flow, flow speed or sound velocity by analog outputs and Modbus communication.

Process values

- Volume flow
- Flow velocity
- Sound velocity
- Totalizer 1

### Benefits

#### Flow calculation and measurement

- Dedicated volume flow calculation with DSP technology
- 100 Hz update rate for all primary process values
- Maximum data age from sensor to output is 20 ms
- Independent low flow cut-off settings for volume flow and velocity
- Zero-point adjustment on command from discrete input or host system

#### Operation and display

- User-configurable operation display
  - Fully graphical display 240 x 160 pixel display with up to 6 programmable views
  - Self-explaining alarm handling/log in clear text
  - Help text for all parameters appears automatically in the configuration menu

- SensorFlash technology stores production specific system documentation and provides removable memory of all flow-meter setups and functions
  - Calibration certificates (with ordered calibration)
  - Non-volatile memory backup of operational data
  - Transfer of user configuration to other flowmeters
  - 4GB SD card for storage and data logging
  - Audit trail of all parameter changes
  - Alarm logging

#### Alarms and safety

- Advanced diagnosis and service menu enhances troubleshooting and meter validation
- Configurable upper and lower alarm and warning limits for all process values

#### Outputs and control

- Monitoring comprised of 1 individually configurable totalizer
- Single parameter outputs that can be assigned individually to any of the following parameters:
  - Volume flow
  - Flow velocity
  - Sound velocity
  - Flow direction

Channel 1 is 4 to 20 mA analog output. The current signal can be configured for passive volume flow.

Relay output(s) can be user configured to Alarm status or warning.

Modbus RTU RS 485 comes as standard.

#### Signal input

The signal input can be user-configured for:

- Totalizer reset functions
- Forcing outputs or freezing process values
- Initiating automatic zero point adjustment

#### Approvals and certificates

The SITRANS FST020 transmitter was designed to comply with or exceed the requirements of international standards and regulations.

### Design

- Field clamp-on (non-intrusive)
- Single path, for only one pair of sensors on one pipe
- IP65 (NEMA 4X) wall mount housing, constructed of polycarbonate
- Available AC or DC power, 100 to 240 V AC, 11.5 to 28.5 V DC

### Function

- 240 x 160 pixel graphical display with 4 key navigation and backlight
- 6 user programmable views for individual process and diagnostic information
- Modbus RTU communication
- 100 Hz update rate for all primary process value
- Independent low flow cut-off settings for volume and flow velocity
- Fully compatible with Siemens PDM version 8.2 service pack 1 or higher
- Bidirectional flow operation
- Menus available in English and German

#### Sensor FSS200<sup>1)</sup>

When ordering a flow system, sensors always come automatically with suitable mounting equipment. Smaller sensor sizes A & B come with mounting tracks, while sensor sizes C, D & E are supplied with frames and spacer bars. Straps provided are for the indicated maximum OD listed below. Strap kits are available to accommodate larger pipes (refer to spare part list). Refer to "Sensor Selection Charts" to find the most suitable sensors for specific pipe sizes and wall thicknesses.

For the following Universal sensors, temperature range is -40 ... +121 °C (-40 ... +250 °F), FSS200 Universal: select according to outer pipe diameter

FSS200 Universal	A2	12.7 ... 50 mm (0.5 ... 2")	Track mount and straps provided up to 75 mm (3")	B
FSS200 Universal	B3	19 ... 127 mm (0.75 ... 5")	Track mount and straps provided up to 125 mm (5")	C
FSS200 Universal	C3	51 ... 305 mm (2 ... 12")	Mounting frame, straps and spacer bar provided up to 330 mm (13")	D
FSS200 Universal	D3	203 ... 610 mm (8 ... 24")	Mounting frame and straps and spacer bar provided up to 600 mm (24")	E
FSS200 Universal	E2	304 ... 9144 mm (12 ... 360")	Mounting frame and straps and spacer bar provided up to 1200 mm (48")	F

For the following High Precision sensors T1, temperature range is -40 ... +120 °C (-40 ... +248 °F), FSS200 High Precision: select according to pipe wall thickness

FSS200 HP	A1H	0.6 ... 1.0 mm (0.025 ... 0.4")	Track mount and straps provided up to 75 mm (3")	G
FSS200 HP	A2H	1.0 ... 1.5 mm (0.04 ... 0.06")	Track mount and straps provided up to 75 mm (3")	H
FSS200 HP	A3H	1.5 ... 2.0 mm (0.06 ... 0.08")	Track mount and straps provided up to 75 mm (3")	J
FSS200 HP	B1H	2.0 ... 3.0 mm (0.08 ... 0.12")	Track mount and straps provided up to 125 mm (5")	K
FSS200 HP	B2H	3.0 ... 4.1 mm (0.12 ... 0.16")	Track mount and straps provided up to 125 mm (5")	L
FSS200 HP	C1H	4.1 ... 5.8 mm (0.16 ... 0.23")	Mounting frame, straps and spacer bar up to 600 min (24")	M
FSS200 HP	C2H	5.8 ... 8.1 mm (0.23 ... 0.32")	Mounting frame, straps and spacer bar up to 600 min (24")	N
FSS200 HP	D1H	8.1 ... 11.2 mm (0.32 ... 0.44")	Mounting frame and straps provided up to 1200 mm (48") <sup>1)</sup>	P
FSS200 HP	D2H	11.2 ... 15.7 mm (0.44 ... 0.62")	Mounting frame and straps provided up to 1200 mm (48") <sup>1)</sup>	Q
FSS200 HP	D4H	15.7 ... 31.8 mm (0.62 ... 1.25")	Mounting frame and straps provided up to 1200 mm (48") <sup>1)</sup>	R

For the following High Temperature sensors, temperature range is -40 ... +230 °C (-40 ... +446 °F), FSS200 High Temperature: select according to outer diameter

FSS200 HT	Size 2	30 ... 200 mm (1 ... 8")	Mounting track and straps provided up to 250 mm (10")	Z	P 1 A
FSS200 HT	Size 3	150 ... 610 mm (6 ... 24")	Mounting track and straps provided up to 650 mm (26")	Z	P 2 A
FSS200 HT	Size 4	400 ... 1200 mm (16 ... 48")	Mounting track and straps provided up to 1250 mm (50")	Z	P 3 A

### Overview

The thickness gauge is used to measure the wall thickness of the pipe that a clamp-on ultrasonic flowmeter is installed on. The wall thickness value is a vital factor in the flow computation model and a prerequisite for precise clamp-on ultrasonic flow measurement. When measuring any pipe wall thickness the thickness gauge can also be used as a stand-alone tool used to measure the wall thickness of any metallic or non-metallic pipe materials capable of acting as an ultrasonic wave conductor.

### Benefits

The thickness gauge is an indispensable tool in accurate clamp-on ultrasonic flow measurement. For a flowmeter to measure correctly it needs to know the exact wall thickness of the pipe it is measuring on. Since even the smallest miscalculation can have a major effect on the flow reading, the pipe thickness gauge has to be extremely precise. This is why the standard probe operates at a 5 MHz frequency making it capable of measuring pipe thickness ranging from 0.1 to 200 mm (0.03" to 7.9") with a very high resolution of up to 0.1 mm (0.004").

### Application

The thickness gauge can be used in any field application where there is a need for flow measurement.

### Design

The hand-held micro-processor controlled gauge is designed to measure the thickness of various metallic or non-metallic pipe. Such materials include steel, aluminum, titanium, plastics and ceramics. Measurement results are shown in either inches or millimeter; only a simple pre-calibration to a known thickness or sound velocity is required. The simple-to-read 4-digit LCD display featuring a basic user friendly menu is easily navigable with only three conveniently located push buttons. The lightweight computing unit weighs a mere 150 g (5.3 oz) making it ideal for quick and easy on-site pipe wall thickness measurement and with two AAA alkaline batteries trouble-free operation is ensured for 250 hours.

### Function

The thickness gauge measurement is based on the transit time ultrasonic wave propagation principle: a high frequency ultrasonic beam is transmitted into the pipe being measured through a probe acting as a sender and receiver. When the probe subsequently retrieves that same signal, an internal counter calculates the time taken for the signals to be sent and received through the pipe. This value is used to evaluate the speed of sound through the pipe and consequently, the thickness of the pipe wall.

### Technical specifications

#### Thickness gauge

Display type	4-digit LCD
Display resolution	0.1 mm (0.004")
Measurement units	Metric and imperial
Sound velocity range	1 000 ... 9 999 m/s (3 280 ... 32 805 ft/s)
Operating temperature	-10 ... +50 °C (14 ... 122 °F)
Probe/pipe temperature	70 °C (158 °F)
Update range	4 Hz
Frequency	5 MHz
Power source	2 x 1.5 V AAA dry cells
Power consumption	Working current is less than 3 mA
Battery life	Approx. 250 h on a set of batteries
Dimensions (W x H x D)	61 x 108 x 28 mm (2.4 x 4.3 x 1.1")
Weight	150 g (5.3 oz)

### SITRANS FS (ultrasonic)

#### Clamp-on ultrasonic flowmeters

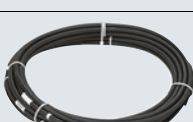

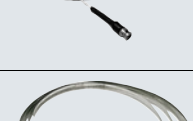

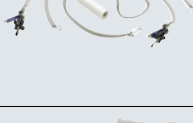

#### Accessories and spare parts

#### Selection and ordering data

#### Accessories / Spare parts for Clamp-on ultrasonic flowmeters

Description	Article No.		Description	Article No.	
<b>Universal Portable Sensors</b> Selected generally for portable systems where a wide variety of pipes are to be measured. Since they are selected based on diameter only, a wide range of pipe sizes and materials can be covered with a minimum number of sensors. These can also be selected as a cost savings on applications where standard accuracy is sufficient.	7ME3951-...		<b>Magnetic mounting frames</b> Magnetic mounting frames are designed to simplify clamp-on sensor installation on pipelines 8 inches (DN200) and larger by eliminating the need for straps to secure them. They feature powerful magnets to ensure quick and accurate setup. Compatible with all C, D and E universal and high-precision sensors belonging to the SITRANS F US clamp-on family, magnetic mounting frames can be installed on any carbon steel pipe and are constructed in aluminum for a high level of durability.	7ME3960-0MD02	
<b>High Precision Sensors</b> Selected generally for dedicated meters since the need to cover a range of pipes is not a requirement. They provide the highest accuracy achievable by the meters and therefore should be selected whenever higher accuracy/repeatability is required. They are only applicable to steel pipes but no other metals, and are selected solely by wall thickness.	7ME3950-...		<b>Mounting Frames</b> These items are useful in simplifying sensor installation. They are strapped to the pipe first then the sensors are installed, making the installation less cumbersome and more precise. They also enable easy repeated mounting of the sensors assuring conformation to the original sensor positioning. They may be left in place at each measurement location where periodic flow surveys are conducted to simplify subsequent installations and ensure repeatable results.	7ME3960-...	
<b>High Temperature Sensors</b> Are selected whenever pipe temperature will exceed 250 °F (120 °C) up to a maximum of 450 °F (232 °C). They are universal type and can therefore be used on any pipe material and are selected by pipe diameter.	7ME3950-...		<b>Spacer Bars</b> Sensors are required to be mounted at a set distance from each other as determined by pipe size and medium being measured. The spacer bar simplifies this requirement by eliminating the need to undertake a precise dimensional measurement. The flowmeter will specify a specific spacing index which is easily accommodated with the marked indices on the bar.	7ME3960-...	
<b>High Precision Mount</b> These provide the most secure and strongest mounting of the flow sensors. They are generally selected for "High End" meter types where maximum performance criteria applies. They accommodate high precision sensors designed to mount inside these enclosures. May be welded to the pipe if so desired by the customer. They come in 2-piece or 1-piece configurations depending upon the application pipe size and type (Liquid/Gas).	7ME3960-...		<b>Clamp-On RTD's</b> 1000 W platinum RTD's for use where temperature is required. Used with Energy Meters to record supply/return temperature. For this purpose precision matched pairs (to 0.02 °C) are supplied. Single RTD's are also used with FUH and FUG meters to enable live calculations of "Liquident" and Standard Volume Correction.	7ME3950-...	
<b>Mounting tracks</b> Typically used on smaller pipes for easier and more stable mounting for dedicated universal style sensor size A or B, also available for dedicated high precision sensor size A or B.	7ME3960-...		<b>Insert RTD's</b> Are identical to clamp-on RTD's as described above except that they are inserted into the pipe (In a Thermowell). They provide more precise and quicker responding temperature measurement. They are selected when precise temperature measurement of the actual liquid or gas is required as opposed to pipe "skin temperature". Since they project into the pipe they cannot be used in pipeline that undergo periodic "pigging".	7ME3950-...	

## Selection and ordering data (continued)

Description	Article No.	
<b>Standard Cable (Flow Sensor or RTD)</b> Selected for general purpose installations where no special application requirements exist.	7ME3960-...	
<b>Submersible Cable (Flow Sensor)</b> Polyethylene jacketed, for locations that experience periodical or continual submersion of the flow sensors.	7ME3960-...	
<b>Plenum Cable (Flow Sensor or RTD)</b> For temperatures above 180 °F. Teflon jacketed to withstand high temperatures, is used when high temp sensors are specified.	7ME3960-...	
<b>Armored Cable (Flow Sensor)</b> Double shielded cable, selected when cable will not be installed in conduit between meter and sensors.	7ME3960-...	
<b>Temperature sensor cable</b> Cable to connect field installed RTD to flow meter, available in Teflon wrapped, plenum or submersible grade. Typically used for FUE, FUH and FUG series meters where a temperature sensor is employed.	7ME3960-...	
<b>Straps</b> Used to fasten sensors or mounting frames to pipe for dedicated meter installations. Stainless steel construction for corrosion resistance.	7ME3960-...	
<b>Chains (EZ clamps)</b> Used to fasten portable sensors or mounting frames to pipe. Thumbscrews eliminate need for hand tools when mounting sensors, and allow for easy on/off operations.	7ME3960-...	
<b>Ultrasonic Couplant</b> Fills any voids between sensor emitting surface and pipe wall to allow maximum energy transfer between sensor and pipe. Several different types of couplants are employed as determined by the application conditions and type of installation (Temporary or permanent).	7ME3960-...	
<b>Dry Couplant</b> The dry coupling pad is intended for use in any liquid, clamp-on transit time or Doppler applications that require a more durable coupling material. Installation is easy by simply placing one strip of material between sensor and pipe. Not intended for clamp-on gas where damping material is used. The temperature range is -34 to +200 °C (-30 to +392 °F).	7ME3960-...	

Description	Article No.	
<b>Damping Material</b> Used with gas meters, and required as part of their sensor installation. This material absorbs excess ultrasonic energy from the pipe wall to enable the meter to detect and operate with low amplitude sensor signals normally associated with Clamp-on Gas applications.	7ME3960-...	
<b>Test Block</b> Used for checking operation of a meter and sensors prior to a field installation, or as a troubleshooting tool. Selected by sensor size, each block accommodates 2 sensor sizes. Available only for universal sensors.	7ME3960-...	
<b>Termination Kit (Flow Sensor or RTD)</b> Provides the connectors, labels and shrink tubing or other associated hardware to complete the termination of a specific cable type. These can be provided in cases where users will be purchasing bulk cable directly and cutting to length at their site, or when existing cable length is to be altered. Selected by cable type.	7ME3960-...	
<b>Cable Gland Kit</b> Cable gland kit for use with SITRANS FUS1010, FUH1010 and FUG1010 Ultrasonic Flowmeters housed in IP65 NEMA 4X wall mount enclosures. Kit contains a total of 5 glands to manage and seal the exit and entry of wires and cables to ancillary devices.	A5E32834162

### Overview

SITRANS FX vortex flowmeters provide accurate volumetric and mass flow measurement of steam, gases and liquids as an all-in-one solution with integrated temperature and pressure compensation.

### Benefits

- 2-wire technology with HART communication
- Integrated temperature compensation for saturated steam as standard feature
- Integrated temperature and pressure compensation enabling direct measurement of mass, standard volume flow rate and energy
- One instrument for measuring pressure, temperature and flow. No additional installation of pressure and temperature sensors
- Maximum process reliability thanks to Intelligent Signal Processing (ISP) - stable readings, free of external disturbances
- Fully welded stainless steel construction with high corrosion, pressure and temperature resistance
- Maintenance-free design
- Ready to use due to plug & play feature
- Minimal pressure drop
- Compact or remote design
- Free Air Delivery (FAD) measurement of a compressor

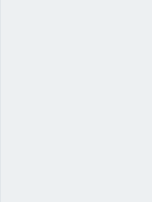

### Application

The SITRANS FX300 is a flowmeter in a single or dual transmitter version, suitable for measuring industrial steam, gases, as well as conductive and non-conductive liquids, e.g. steam (saturated steam, superheated steam), industrial gases (compressed air, nitrogen, liquefied gases, flue gases), and conductive and non-conductive liquids (demineralized water, boiler feed water, solvents, heat transfer oil).

The main applications of SITRANS FX300 can be found in the following sectors:

- Chemical
- Petrochemical
- Oil & Gas
- Power plants
  - Air
  - Heating
  - Cooling
  - Chilling
- Food & beverage
  - Pharmaceutical
  - Sugar refineries
  - Dairies
  - Breweries
  - Production of soft drinks
- Pulp & paper
- Water & waste water

## Flow Measurement

### SITRANS FX (Vortex)

#### SITRANS FX300

##### Design

SITRANS FX300 vortex flowmeters are available in the following variants:

##### SITRANS FX300 Single transmitter

The single transmitter variant exists in flange or sandwich design. In flange design the SITRANS FX300 offers a sensor with integrated nominal diameter reduction up to two nominal diameter sizes. That ensures best results in accuracy and optimal measuring ranges even in pipelines with large diameters, designed for low pressure loss. By forgoing complex pipeline reduction installations, space and cost saving installations can be realized. At the same time the number of potential leakages is reduced to a minimum.

The flowmeters in sandwich design will be supplied with additional optimised centring rings. With installation of the centring rings the SITRANS FX300 can be aligned centrally and eliminates any offset between the sensor and the pipeline.

The SITRANS FX300 is also available as a remote version. This feature allows separating the transmitter from the sensor up to a distance of 15m (49 ft). The remote mounted transmitter allows easy operation and optimal readability.

The following configurations can be selected for the single transmitter variant:

- **Basic version**  
Suitable for liquids and gases, integrated temperature compensation included as standard for saturated steam
- **With integrated pressure compensation**  
Version with integrated temperature and pressure compensation for gases, wet gases, gas mixtures or steam (energy measurement optional)
- **With integrated pressure compensation and isolation valve**  
Allowing the pressure sensor to be shut off for the purpose of pressure and leak testing of the pipeline or for being exchanged without interrupting the process.
- **Remote version**  
With this version transmitter and sensor are locally separated. In addition, it offers the same features as the compact version (integrated temperature and pressure compensation, isolation valve).

##### SITRANS FX300 Dual transmitter

This is a genuine redundant system with two independent sensors and transmitters providing twofold functional reliability and availability of the measurement. This variant is optimally suited for measurements in multi-product pipelines.

The dual transmitter version is available as:

- **Basic version**  
Suitable for liquids and gases, temperature compensation integrated as standard for saturated steam

##### Function

##### **Operating Principle**

SITRANS F X vortex flowmeters measure flow rate by detecting the frequency at which alternating vortices are shed from a bluff body inserted into the flow stream. This principle of measurement is derived from the Karman phenomenon of vortex shedding. The frequency of the alternating vortices is proportional to the flow rate.

The passage of a vortex causes a slight stress on a pick-up sensor placed downstream of the bluff body. The stress is detected by piezo-electric crystals placed inside the pick-up sensor.

① = Bluff Body, ② = Pick-up

The flowmeter calculates the flow velocity using the following equation:

$$Q = A \cdot V = A \cdot d / St \cdot f = 101.93 \cdot f / K \text{ [m}^3\text{/h]}$$

Where:

Q = flow rate [m<sup>3</sup>/h]

f = vortex shedding frequency [Hz]

K = calibration constant [pulses/m<sup>3</sup>]

d = width of the bluff body [m]

St = Strouhal Number

A = cross-section area [m<sup>2</sup>]

V = flow velocity [m/s]

##### **Requirements**

In order to generate the vortex streets, the medium must have a minimum velocity:

- For steam and gases, the flow velocity must be 2 to 80 m/s (6.6 to 262 ft/s)
- For liquids the flow velocity must be 0.4 to 10 m/s (1.3 to 32.8 ft/s)

## Configuration

Valid combinations of sensor/connections size with flange norm/nominal pressure are shown in the following table

## SITRANS FX (Vortex)

### SITRANS FX300

#### Technical specifications

<b>Input</b>		<b>Software</b>	
Measuring range limits	See "Dimensional Drawings"	Uncompensated for liquids and gases, density-compensated by temperature for saturated steam	Order option 1
Media pressure	1 ... 100 bar (14.5 ... 1450 psi) (Higher pressures on request)	Density-compensated by temperature and pressure for superheated steam	Order option 4
<b>Output</b>		Gross heat meter	
Current output		When the thermal energy of steam is to be measured	Order option 5
• Measuring range	4 ... 20 mA	Following information is required at option Y51 to Y56	<ul style="list-style-type: none"> <li>• Y51 Variable current output: Flow rate, power</li> <li>• Y52 Power unit</li> </ul> Select one of the following units: kJ/h, MJ/h, GJ/h, Btu/h, kcal/h, kW, MW or special (custom)
• Over range	20.8 mA ± 1 % (105 % ± 1 %)		<ul style="list-style-type: none"> <li>• Y53 Fullscale value power</li> <li>• Y54 Variable pulse output: Totalized flow, energy</li> <li>• Y55 Totalizer on/off</li> <li>• Y56 Energy unit</li> </ul> Select one of the following units: kJ, MJ, GJ, Btu th, kcal, kWh, MWh or special (custom).
• Load			
- min.	100 Ω		
- max.	$R_{max} = (U_{Power\ Supply} - 14\ V)/22\ mA$		
• Error signal	NAMUR NE 43		
• Maximum output	22 mA (112.5 %)		
• Multidrop mode	4 mA		
Digital output			
• Communication	HART	Density compensated by temperature and pressure for gases, wet gases	Order option 7
• Physical layer	FSK	Wet gases	Select Y49 and enter relative humidity of process medium in %
• Device category	Transmitter	FAD - Free Air Delivery	
<b>Pulse output</b>		When the delivered air of a compressor is to be measured	Order option 8
Passive pulse output, setting pulse value (meter factor) for totalized flow or heat quantity (energy) with option Y47 (e.g.: 1 pulse/kg or 1 pulse/kWh)		In Y81 to Y87 add information regarding:	<ul style="list-style-type: none"> <li>• Y81 Inlet suction temperature</li> <li>• Y82 Atmospheric pressure</li> <li>• Y83 Pressure drop at inlet suction filter</li> <li>• Y84 Inlet relative humidity</li> <li>• Y85 Actual compressor rotation (rpm)</li> <li>• Y86 Rated compressor rotation (rpm) Rated compressor rotation (rpm)</li> <li>• Y87 Relative humidity at compressor output</li> </ul>
• Pulse frequency	Max. 0.5 Hz		
• Power supply	Min. 24 V DC as NAMUR or open < 1 mA, max. 36 V, closed 100 mA, $U < 2\ V$		
• Non-Ex version	open < 1 mA, max. 30 V, closed 100 mA, $U < 2\ V$		
• Ex version			
<b>Accuracy</b>			
Standard version			
• For liquids	± 0.75 %		
- Re ≥ 20 000			
• For steam and gases	± 1 %		
- Re ≥ 20 000			
• For steam, gases and liquids	± 2 %		
- 10 000 < Re < 20 000			
Pressure and temperature compensated version			
• For liquids			
- 10 000 < Re < 20 000	± 2 %		
- Re ≥ 20 000	± 0.75 %		
• For gases and steam			
- 10 000 < Re < 20 000	± 2.5 %		
- Re ≥ 20 000	± 1.5 %		
Repeatability	± 0.1 %		
<b>Installation conditions</b>			
(At different conditions, e.g. installation after control valve, bends or reductions, please refer to the operating instructions.)			
• Inlet run	≥ 20 x DN		
• Outlet run	≥ 5 x DN		
		<b>Rated operation conditions</b>	
		Ambient temperature	
		• Non-Ex version	-40 ... +85 °C (-40 ... +185 °F)
		• Ex version	-40 ... +65 °C (-40 ... +149 °F)
		Storage temperature	-50 ... +85 °C (-58 ... +185 °F)
		Media temperature	-40 ... +240 °C (-40 ... +464 °F)
		Density	Taken into consideration when dimensioning
		Viscosity	< 10 cP
		Reynold's number	10 000 ... 2 300 000
		Media pressure limit	Max. 100 bar (1450 psi) Higher pressure on request (contact your local Siemens representative)

Material	
• Sensor/Pick-up	AISI 316L (1.4404)/AISI 316L (1.4435)
	Hastelloy C22/2.4602 available on request (contact your local Siemens representative)
• Transmitter housing	Aluminum
• Sensor gaskets (Pick-up/Pressure sensor)	AISI 316L(1.4435) /FPM or FFKM
	FPM (Viton) for steam and non-aggressive gases
	FFKM (Kalrez) for chlorine and other aggressive gases.
	(The meter is fitted with FPM/FFKM gasket only when configured with pressure sensor.)
Process connections	Flange norm DIN EN 1092-1 form B1/B2 or ANSI B16.5 RF.
	Other flanges on request (contact your local Siemens representative)
• Flange version	DN 15 ... 300 (½ ... 12")
• Sandwich version	DN 15 ... 100 (½ ... 4")
Degree of protection	IP66/IP67
Dimensions and weights	See "Dimensional Drawings"
<b>Display and operating interface</b>	
Local display	2 lines, 10 characters per line
Languages	German, English, French
<b>Power supply</b>	
• Standard version	14 ... 36 V DC
• Ex version	14 ... 30 V DC
<b>Certificates and approvals</b>	
Explosion protection	
• ATEX	II 2G EEx d ia [ia] IIC T6
• FM US/C	Class I, II, III, Div 1 & 2
<b>Calibration</b>	All flowmeters will be delivered with a 3 point calibration certificate
<b>Material Certificate</b>	Certificate of compliance, pressure test, material certificate, material in acc. of NACE and PMI of pressure bearing metal parts.
<b>Cleaning</b>	Choose Cleaning Class1 when fluid is oxygen or contains chloride.
<b>Certificates</b>	X-ray and dye penetration test on pressure bearing weldings

## Selection and ordering data

## Order code

**Additional information**

Please add "-Z" to Article No. and specify as minimum Order code Y40, Y41, Y42 and Y45 and plain text.

**Input process data**

Specify medium (liquid, gas, steam or customer-specific) **Y40**

Temperature: Specify operating temperature with unit **Y41**

Pressure: Specify operating pressure with unit **Y42**

Density (only for customer-specified medium): Specify density with unit **Y43**

Viscosity (only for customer-specified medium): Specify viscosity with unit **Y44**

Flow rate: Specify max. flow rate with units **Y45**

Setting of pulse output: Specify pulse value (meter factor) for totalized flow (1 pulse/unit) **Y47**

Relative humidity of process medium in % **Y49**

**Settings of gross heat**

Variable current output: Flow rate, power **Y51**

Power unit (specify: kJ/h, MJ/h, GJ/h, Btu/h, kcal/h, kW, MW or special (custom)) **Y52**

Fullscale value power **Y53**

Variable pulse output: Totalized flow, energy **Y54**

Totalizer on/off **Y55**

Energy unit (specify: kJ, MJ, GJ, Btu th, kcal, kWh, MWh or special (custom)) **Y56**

**Settings of FAD**

Inlet suction temperature<sup>1)</sup> **Y81**

Atmospheric pressure<sup>1)</sup> **Y82**

Pressure drop at inlet suction filter<sup>2)</sup> **Y83**

Inlet relative humidity<sup>1)</sup> **Y84**

Actual compressor rotation (rpm)<sup>2)</sup> **Y85**

Rated compressor rotation (rpm)<sup>2)</sup> **Y86**

Relative humidity at compressor outlet<sup>2)</sup> **Y87**

<sup>1)</sup> Required information from customer.

<sup>2)</sup> Required information from compressor manufacturer (data sheet).

**Further designs**

Please add "-Z" to Article No. and specify Order code.

**Converter housing material**

Aluminum for increased requirement, color: petrol green **A10**

**Material certificate**

Certificate of compliance EN 10204-2.1 **C10**

Pressure test + 3.1 accordance EN 10204 **C11**

Material certificate of pressure bearing parts + certificate 3.1 **C12**

Material in accordance with NACE MR 0175-01 **C13**

PMI of pressure bearing metal parts + certificate 3.1 **C14**

Material certificate of pressure bearing parts + PMI + certificate 3.1 **C15**

**Calibration certificate FX300**

As standard the flow device has a 3-point calibration certificate

5-point calibration certificate **D11**

**Hardness test**

Hardness test on pressure bearing parts + certificate 3.1 **H30**

**Cleaning**

Cleaning class 1 **K46**

Cleaning class 1 + certificate 3.1 acc. EN 10204 **K48**

**Certificates**

X-ray test on pressure bearing weldings **M56**

Dye penetration test on pressure bearing weldings **M58**

**Tag name plate**

Stainless steel tag with 3 mm characters, max. 2 x 8 characters (40 x 20 mm, add plain text) **Y17**

Stainless steel tag with 2.5 mm characters, max. 8 x 40 characters (120 x 46 mm, add plain text) **Y18**

### Overview

SITRANS FX vortex flowmeters are designed for use in industrial applications and optimally suited to the demands in auxiliary supply systems.

The proven principle of vortex flowmeters is suitable for measurement of liquids, gases and vapors unaffected by conductivity, viscosity, temperature and pressure.

### Benefits

- Integrated pressure and temperature compensation
- Temperature compensation for saturated steam included as standard
- High measuring accuracy
- Maintenance-free sensor
- Non-wearing, fully welded stainless steel construction with high resistance to corrosion, pressure and temperature
- SIL2 certified according to IEC 61508 Edition 2
- Use in hazardous areas
- Integrated reduction of nominal diameter for space-saving and economic installation and large measuring ranges
- Redundant data management: Easy exchange of electronics without loss of calibration and configuration data
- FAD (Free Air Delivery) functionality
- Gross and net heat calculation to support advanced energy management
- Remote version with cable length up to 50 m (164 ft) (in preparation)

Even the basic version of the vortex flowmeter SITRANS FX330 is equipped with temperature compensation for saturated steam applications. With the optional pressure sensor the SITRANS FX330 has integrated density compensation for calculation of corrected volume and mass (online density compensation). The density compensation for calculation of corrected volume and mass is based on the standards of NIST for gases and IAPWS for steam.

#### Higher measuring accuracy with the use of compact measuring systems

With the classic installation of a vortex flowmeter and separate pressure and temperature sensor as well as flow calculator, all errors occurring in the measuring chain must be taken into account when determining system accuracy. This can result in a measuring error between  $\pm 3$  to 5 %.

Using a vortex flowmeter with integrated pressure and temperature compensation such as the SITRANS FX330 allows you not only to lower installation costs but also increase the measuring accuracy of the measuring point. In this case the accuracy is  $\pm 1.5$  % of the measured value.

#### classic

#### integrated

Flowmeter with integrated pressure and temperature compensation

The SITRANS FX330 in flange design is available with integrated reduction of nominal diameter for space-saving installations and large measuring spans. About 90% of all vortex flowmeters are ordered one size smaller than the line diameter in order to increase the flow speed and to get a wider measuring range. Here, the line has to be reduced before and widened after the sensor, typically including 20x DN inlet and 5x DN outlet run. With the reduction and widening of nominal diameter included in the sensor, it is no longer necessary. To compensate the non-existent straight inlet run between reduction and the vortex bluff body, these devices are specially calibrated and linearized.

A new feature of the SITRANS FX330 is the advanced signal processing and filtering called AVFD (Advanced Vortex Frequency Detection): Interferences and disturbances in the measuring signal are suppressed, signals outside from the relevant frequency band are filtered out.

Redundant data management prevents loss of calibration and configuration data when changing electronics or display.

By default, all SITRANS FX330 meters are factory-calibrated (traceable to international standards) and pre-set according to customer specifications. The SITRANS FX330 also comes with an installation wizard to ease installation; e.g. in a steam application it will only show related settings.

Developed according to the standard IEC 61508 edition 2, the SITRANS FX330 can be used in safety-related application with classification SIL2 for continuous volume flow measurement.

## Flow Measurement

### SITRANS FX (Vortex)

#### SITRANS FX330

##### Application

- Measurement of saturated steam and superheated steam
- Steam boiler monitoring
- Heat metering of steam and hot water
- Measurement of consumption of industrial gases
- Measurement of consumption in compressed air systems
- Monitoring of compressor output
- Evaluation of Free Air Delivery (FAD)
- SIP and CIP processes in the food, beverage and pharmaceutical industries
- Measuring of conductive and non-conductive liquids
- Safety-related measurement in SIL applications (SIL2)

##### Gross and net heat quantity calculation

The SITRANS FX330 was designed for applications in auxiliary and supply service lines, such as internal monitoring of energy flows for saturated and superheated steam or hot water. Equipped with temperature sensor as standard, the device can be installed as heat meter in the feed line directly connected with an external temperature sensor in the return line. The gross and net heat calculation can be fed into a DCS to support advanced energy management.

When it comes to energy, the most accurate measurement of consumption is essential. By combining flow, temperature and pressure measurements in one device, SITRANS FX330 provides the basis for a precise mass flow calculation.

In steam applications, the software even determines the enthalpy - the heat content - of the steam. Therefore, SITRANS FX330 is able to calculate the gross heat quantity.

In case net heat quantity consumption of process is asked for, a single temperature sensor can be added to the return line. SITRANS FX330 uses the readings to calculate the amount of heat consumed.

The SITRANS FX330 thereby proves itself to be a reliable partner.

##### Design

SITRANS FX330 Flange	SITRANS FX330 Sandwich
	
Flange version with integrated temperature compensation as standard for saturated steam and optional pressure compensation for superheated steam, gases and wet gases.	All advantages of the flange version in a space-saving sandwich design; centering rings guarantee an easy installation without any offset.
Integrated reduction of nominal diameter for space-saving and economic installations plus large measuring ranges.	Integrated reduction of nominal diameter not available
Also in remote design with field housing and connection cable up to 50 m (164 ft) (in preparation)	
With shut off valve allowing <ul style="list-style-type: none"> <li>• exchange and calibration of pressure sensor</li> <li>• pressure and leak testing of pipeline without interrupting the process</li> </ul>	

##### Function

Vortex flowmeters are used to measure the flow of gases, vapors and liquids in completely filled pipes. The measuring principle is based on the principle of the Karman vortex street. Inside the measuring sensor vortices are shed from a bluff body and are detected by a sensor located behind. The frequency  $f$  of the vortex shedding is proportional to the flow velocity  $v$ .

The nondimensional Strouhal number  $S$  describes the relationship between vortex frequency  $f$ , width  $b$  of the bluff body and the mean flow velocity  $v$ :

$$f = (S \cdot v) / b$$

The vortex frequency is recorded at the sensor and evaluated at the converter.

Functional principle

### Overview

SITRANS FVA250 variable area meter

### Benefits

- Standard version available at short notice
- Robust all-metal valve with impact-resistant housing cover
- Can also be used for corrosive and flammable media
- Can be used at high pressures and temperatures
- Product and percentage scales
- Can be optionally fitted with heating and cooling sheaths
- Contamination-resistant guiding for float

### Application

The devices are particularly suitable for measuring:

- Water
- Liquids
- Anti-corrosives and lubricants
- Solvents
- Saturated and superheated steam
- Food and beverages
- Industrial gases

### Design

Due to its full metal design, the SITRANS FVA250 variable area meter with a standard length of 250 mm (9.84 inch) can be used to measure many different types of liquids and gases passing through closed piping. The robust design means that it can also be used in harsh conditions. The various types of flange connections, linings and float materials satisfy the requirements of the pharmaceutical and chemical industries.

The measured value is displayed directly on the scale with the standard version. For process monitoring and control, the device can be equipped with a transmitter (MEM) as well as limit switches.

### Function

Flow measurement with the SITRANS FVA250 is performed according to the float principle. The flowing medium lifts the conical float in the measuring ring. This increases the ring gap until an equilibrium is established between the buoyant force of the medium and the weight of the float. The height of the float is directly proportional to the flow rate. The movement of the float is transmitted from one magnet to another magnet in the display unit outside of the measuring tube.

Measuring cone/scale angle

#### Technical specifications

<b>Application</b>	See page 3/395
<b>Design and function</b>	See page 3/395
Principle of measurement	Variable-area flowmeter
<b>Input</b>	
Measuring range	See table on page 3/397
Pressure ratings	PN 16 to PN 100 (232 to 1 450 psi) depending on the version (see table on page 3/397)
Installation / flow direction	Vertical/from bottom to top
<b>Rated conditions</b>	
Ambient temperature	
• With local display	-40 ... +80 °C (-40 ... +176 °F)
• With limit switches	-40 ... +65 °C (-40 ... +149 °F)
• With electric remote encoder (MEM)	-40 ... +70 °C (-40 ... +158 °F)
Measuring accuracy acc. to VDI/VDE 3513-2	
• For liquids	± 1.6 % (q <sub>G</sub> = 50 %)
• For gases	± 2.0 % (q <sub>G</sub> = 50 %)
Reproducibility	0.5 % of the measuring range limit (URV)
Operating temperature	See page 3/397
Operating pressure	Minimum operating pressure > 2x pressure drop (see table on page 3/397)
<b>Design</b>	
Flanges	EN 1092-1, ANSI B16.5
Material	
• Fitting	Stainless steel, Hastelloy
• Float	Stainless steel, Hastelloy, PTFE
• Wetted parts materials	Stainless steel, PTFE, Hastelloy depending on version
Degree of protection (display unit)	
• Display unit made of aluminum	IP65
• Display unit made of stainless steel	IP66
<b>Electromagnetic compatibility</b>	
• EN 61000-6-2: 2011	Interference immunity industrial sector
• EN 61000-6-3	Interference immunity residential sector
• EN 55011: 2011	Group 1, Class B
• NAMUR recommendation	NE 21

#### Classification according to pressure equipment directive (PED 2014/68/EU)

Article No. 7ME586.-	Permissible media	Category

#### Technical specifications of contacts

<b>Limit switch</b>	
Cable gland	M20x1.5
Auxiliary power supply	5 ... 25 V DC
Isolation (2 contacts)	Electrically isolated
Limit switch	SJ3.5-N-BU
• Switching function	NAMUR NC
Nominal voltage U <sub>O</sub>	8.2 V DC (R <sub>i</sub> approx. 1 kΩ)
Explosion protection	II 2G EEx ia IIC T6 - T4 Gb
EC Type Examination Certificate for Directive 2014/34/EU	PTB 99 ATEX 2219 X
<b>Transmitter (MEM) with 4 to 20 mA, pulse output and limit switch</b>	
Cable gland	M20x1.5
Auxiliary power supply	14 ... 30 V DC
Analog output	4 ... 20 mA (2-wire)
Binary output	Pulses, limit switch
• Pulses	Max. pulse rate 10 Hz
• Limit switch	SJ3.5-N-BU (NAMUR, IEC 60947-5-6:1999)
Temperature influence	≤ ± 0.5% of the measuring range limit (URV)/10 K
Explosion protection	II 2G Ex ia IIC T6 Gb
EC Type Examination Certificate for Directive 2014/34/EU	BVS 07 ATEX E 033
<b>Transmitter (MEM) PROFIBUS PA</b>	
Cable gland	M20x1.5
Auxiliary power supply	10 ... 25 V DC
Basic current	< 16.5 mA
Fault current	< 18 mA
Transfer rate	31.25 Kbaud
Temperature influence	≤ ± 0.5% of the measuring range limit (URV)/10 K
Explosion protection	II 2G Ex ia IIC T6 Gb
EC Type Examination Certificate for Directive 2014/34/EU	BVS 07 ATEX E 033

#### Float damping

Float damping is recommended

- Generally for gas measurement
- When air bubbles in the medium cannot be avoided
- When there are pressure surges in the lines caused by a delay in the flow, for example, due to rapid throttling or blocking
- When turbulence, pulsations or other instabilities cause the float to vibrate
- When the flow pressure cannot be built up slowly
- When vibrations in the line cannot be avoided

**Overview**

With the SITRANS FP product line Siemens offers a complete solution for differential pressure flow measurements. This well-established technology is suitable for all kinds of applications – liquids, dry or wet gases and steam. Due to the robust though variable design it has been and still is one of the main technologies for flow measurement in various industries.

The new product line offers full flexibility for your processes. SITRANS FP is not a simple substitution of our previous orifice program but a completely new setup. A new digital sizing process ensures minimum effort during presales and full traceability in aftersales. The differential pressure portfolio consists of the averaging pitot tube measuring system SITRANS FPS300 and the differential pressure sensors according to ISO 5167 (orifices) SITRANS FPS200.

**Overview** (continued)**Sizing procedure**

The SITRANS FP sizing tool is available via PIA Life Cycle Portal and supports you in choosing the right device within this portfolio:

<https://www.pia-portal.automation.siemens.com>

After registration you have access to a web-based sizing procedure generating reference IDs which can be used as application data for the ordering process.

**Benefits**

- Suitable for a vast range of different applications
- Available as pre-mounted compact system as well as remote parts
- Advanced intelligent sizing procedure
- Web-based sizing and data storage enables full traceability and easy communication
- All benefits of SITRANS P320 available

**Application**

The SITRANS FP230/330 devices are applicable in a variety of applications:

## Chemical industry

- Different materials for aggressive substances
- Namur NE107, self-monitoring and diagnostics
- Namur NE21, increase EMC conformity
- Measurement of various liquid and gas media

## Oil &amp; Gas

- Complete setup made of stainless steel
- Robust design and well-established technology
- Measurement of liquid and gas hydrocarbons

## Power

- QAL1 approval for continuous emission monitoring applications according to EN 15267
- Specific design for steam applications
- Measurement of steam, condensate and water

## and others

- Cost-effective device
- Easy commissioning

**Function****Mode of operation**

The so-called primary element (orifice plate, averaging pitot tube, etc.) creates a differential pressure. The pressure is transferred to the measuring cell of the differential pressure transmitter. This can be done through a compact installation where the differential pressure transmitter is installed directly at the primary element or as remote installation through separately installed pipes that connect primary element and differential pressure transmitter.

Different types and designs of primary elements for differential pressure flow measurement have been established historically. Traditional primary elements such as orifice meters are harmonized in the international standard ISO 5167. Other primary elements such as the averaging pitot tube follow the same working principle, they are not standardized but are widely used and accepted.

**Principle of the differential pressure method**

Principle of the differential pressure method: Pressure curve at orifice plate

The differential pressure method is based on the law of continuity and Bernoulli's energy equation. A primary differential pressure device is installed at the measuring point to measure the flow. The primary element restricts the pipe.

According to the law of continuity, the mass flow of a moving fluid (gas, steam or liquid) in a pipeline is the same at all points. If the cross-section is reduced at one point, the flow velocity must increase at this point. Thus, the restriction causes an overpressure directly in front of the primary element and a drop in pressure behind the primary element. This pressure drop is greatly influenced by the degree of restriction. This degree is usually measured in relation of the diameters of the restriction to the diameter of the pipe, the diameter ratio  $\beta$ :

$$\beta = \frac{d}{D}$$

## Flow Measurement

### SITRANS FP (differential pressure flow measurement)

#### Introduction

#### Function (continued)

The difference between overpressure before the primary element and lower pressure after the primary element is called differential pressure ( $\Delta p$ , "delta p"). According to Bernoulli's energy equation, the square-root of the differential pressure is proportional to the flow rate:

$$q \sim \sqrt{\Delta p}$$

The created differential pressure is partly recovered with sufficient distance to the primary element but a permanent pressure drop,  $\Delta\omega$ , remains.

The exact flow equation of ISO 5167 additionally considers the properties of the primary device, the pipe, and the fluid:

$$q = f(C, \Delta p, \rho, \varepsilon, \beta)$$

Where:

- $q$ : mass flow
- $\Delta p$ : differential pressure
- $C$ : "coefficient of discharge"
- $\rho$ : density of fluid before the point of measurement
- $\varepsilon$ : expansion number
- $\beta$ : diameter ratio

The C-factor is determined during design of the differential pressure flow meter. For certain types of flow meters it is a constant (e.g. Venturi flow meters), for others it is slightly non-linear and dependent on flow rate (orifice flow meters).

The expansion number considers the change in fluid properties due to the differential pressure itself.

All factors will be considered during the design of the differential pressure flow meter.

For flow measurement applications where all quantities (density, pressure, temperature, etc.) can – with sufficient accuracy – be considered constant, it can be reduced to the basic relation given above:

$$q \sim \sqrt{\Delta p}$$

#### Differential pressure flow measurement in practice

A differential pressure flow measurement usually consists of at least 3 components:

- primary element (orifice, pitot tube, etc.)
- manifold (plus primary shut-off valve for remote installations)
- differential pressure transmitter

The picture above shows all these components installed together in a "compact" arrangement (manifold and differential pressure transmitter sitting on top of the primary element).

Depending on the process the application might require additional components such as:

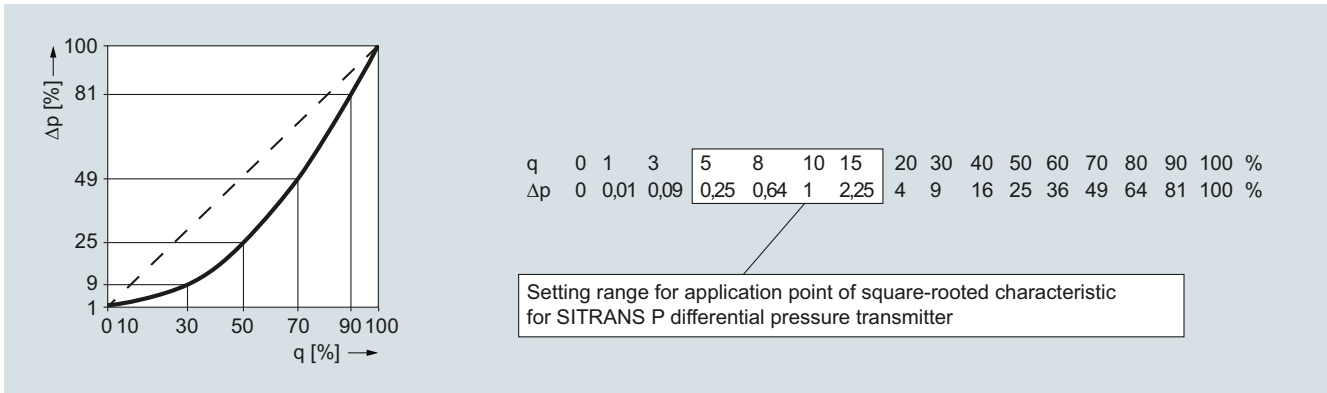

- absolute pressure measurement
- temperature measurement

which are also shown above. If absolute pressure and/or temperature are not constant, these quantities have to be measured as well to calculate the density changes caused by the change of these process conditions. This process is called "compensation" meaning re-calculation of actual fluid density based on actual process conditions as explained above.

### Characteristic curves

Based on the relations described above differential pressure measurement systems generally show a square-root relationship between differential pressure and flow. Therefore, a square-root transmitter is required to create a linear flow characteristic. If no square-root characteristic is selected, the transmitter will output a signal proportional to differential pressure.

The conversion from differential pressure to flow has to be done in a subsequent system (flow computer, DCS, etc.). This is required if additional measurements such as absolute pressure and/or temperature are connected to such a system to correct for changes in operational density (so called "compensation").

Relationship between flow  $q$  and differential pressure  $\Delta p$

## Flow Measurement

### SITRANS FP (differential pressure flow measurement)

#### SITRANS FP230/FPS200 primary elements according to ISO 5167

##### Overview

Primary differential pressure devices are standardized mechanical flow sensors, often also referred to as differential pressure transducers. The primary differential pressure devices are calculated and manufactured according to DIN EN ISO 5167.

Through constriction of the line diameter in the pressure device, the flow rate creates a differential pressure that is converted with the help of a differential pressure transmitter into a proportional current signal or flow value. The assignment of differential pressure to flow is created by a calculation of the primary differential pressure device.

Primary differential pressure devices are suitable for single-phase media such as gas, vapor and liquids without solid components.

##### Benefits

- Suitable for universal use across the globe and widely accepted in all industries
- Very robust and can be used in a wide range of nominal sizes
- Suitable for high temperature and pressure ranges
- Low uncertainty of measurement
- No wet calibration required as they use an internationally standardized flow rate measurement procedure
- Differential pressure transmitter can be used over a long distance from the measuring location
- Differential pressure method is well known and has a large installed base
- SITRANS P differential pressure transmitter is easy to parameterize again if process data change. They are adapted by recalculating and assigning new parameters to the transmitter or, in case of an orifice plate with annular chamber, by using a new orifice disk.

##### Application

- Technical Gases
- Compressed Air
- Fresh and Combustion Air
- Steam/Heat Quantities
- Heat Transfer Fluids
- Water

##### Design

###### Basics: Orifices for flow measurement

Orifice plates are usually differentiated by their type of installation, type of differential pressure tapping and the shape of the orifice.

The characteristic differential pressure is created by the orifice bore which is the defined circular opening. It is usually of square edged concentric type according to ISO 5167-2 positioned in the middle of the pipe.

The main features are a sharp edge, a cylindrical bore of a certain length and a conical bevel tapering to the rear. Alternatively, the relevant standards provide for deviating designs, which are used for applications with highly viscous (e.g. quarter-circle nozzles) or contaminated media (e.g. segment orifices).

The standard design is permitted by the standard for an inner diameter of the pipe between 50 mm and 1000 mm. For pipes with smaller inside diameters, standards such as ISO 15377-TR or ASME MFC-14M which go beyond these standards must be taken into account. Orifice plates for pipes with small inside diameters are usually designed as meter tubes.

In order to reduce the uncertainties of these meter tubes, the devices can be calibrated on a flow test bench if required on request.

**Design** (continued)**Types of differential pressure tappings**

The differential pressure can be tapped in different ways:

Corner tapping

Directly in front of and behind the orifice plate an opening is placed in the corner of a carrier ring to measure upstream and downstream pressure. Both pressure signals are routed through these openings to the outside.

Corner tapping with annular chamber

The orifice plate is held by an annular chamber. Upstream and downstream pressure are measured through an annular gap opening between carrier ring and orifice plate. Both pressure signals are averaged over the entire circumference and routed outside.

Flange tapping

The orifice plate is held between two so-called orifice flanges. Upstream and downstream pressure signals are measured through flange taps which are drilled into the flanges.

Tapping with distance D, D/2

The orifice plate is held between regular flanges. Upstream and downstream pressure signals are measured through taps in the pipe with distance of D (upstream) and D/2 (downstream) to the orifice plate.

**Designs**

- Orifice plate with pressure tappings (7ME171)
- Orifice plate with annular chamber (7ME172)
- Orifice meter run (7ME173)
- Orifice plate (7ME174)
- Orifice plate with orifice flange (7ME175)

**Mounting arrangements**

For more information on installation position and piping, please see the Operating Instructions "SITRANS FPS200" on SIOS.

**Integration**

The orifice plate is installed between two flanges in the pipeline. Using condensation pots (for steam) and initial shut-off valves, the differential pressure of the high-pressure side and low-pressure side is directed through differential pressure lines to a manifold and to the differential pressure transmitter. For fluids with pressure and temperature fluctuations it makes sense to take an additional measurement of the pressure and temperature in order to correct the flow signal of the transmitter in a subsequent correction computer.

**Selection of mounting point**

The flow measuring regulations DIN EN ISO 5167 not only consider the design of primary differential pressure devices, but also assume that their installation is in accordance with the standard so that the specified tolerances can be retained. The required inlet and outlet pipe sections according to ISO 5167 can be found in the calculation protocol of the respective orifice plate. Configuration of the pipeline should allow for standardized installation (required inlet and outlet pipe section). Particular attention must be paid to ensure that the primary device can be fitted in a sufficiently long straight section of pipe. Bends, valves and similar should be fitted sufficiently far upstream of the primary device to prevent them having a detrimental effect. Primary devices with a large diameter ratio are particularly sensitive to interferences.

**Design of measuring point**

The design of the measuring point depends on the medium and on the spatial conditions. The designs for gas and water only differ with regard to the position of the tapping sockets (see section "Tapping sockets"); condensation pots are provided for steam applications.

**Orifice meter runs**

On lines with small nominal sizes (DN 10 to DN 50) the measurements are influenced by the wall roughness and diameter tolerances of the pipes, more than measurements with larger nominal sizes. These influences are counteracted by using orifice meter runs with fitted inlet and outlet pipe sections made of precision pipes. For exact measurements with orifice meter runs, the flow coefficient C can be determined by means of calibration.

## Flow Measurement

### SITRANS FP (differential pressure flow measurement)

#### SITRANS FP230/FPS200 primary elements according to ISO 5167

#### Technical specifications

##### General design

Working principle	Differential pressure orifice meter (other ISO 5167 primary elements on request)
Media	<ul style="list-style-type: none"> <li>• Steam (saturated, superheated)</li> <li>• Gas (dry, up to 100% water saturated)</li> <li>• Liquids (water, non-conductive liquids, oil, etc.)</li> </ul>
Transmitter installation	<ul style="list-style-type: none"> <li>• Compact mount with differential pressure transmitter (acc. to IEC 61518)</li> <li>• Remote mounted differential pressure transmitter</li> </ul>
Bidirectional flow	On request
Design	According to ISO 5167-2 (2003); for orifice plates smaller than 50 mm inner diameter according to ISO/TR 15377 or ASME MFC-14M:2003

##### Accuracy

Uncertainty at design flow (of Sensor Coefficient of Discharge)	Typically in the range of 0.5 ... 1.2% (depends on application and final design)
Measurement range	Typically between up to 1:5 ... 1:10 (real measurement range depends on transmitter performance and non-linearity of coefficient of discharge)

##### Operating conditions

Pressure	Max. PN 100 or Class 600 (higher pressure ratings on request)
Temperature	According to EN 1092-1 or ASME B16.5 (exact maximum temperature depends on sensor design)
Pressure loss	30 ... 80% of differential pressure

##### Installation conditions

Straight inlet diameter	Will be calculated by sizing tool (depends on $\beta$ -coefficient, typically in the range of 16 ... 44 $\times$ inner diameter behind 90° elbow, can be reduced with 0.5% added uncertainty)
Straight outlet diameter	Will be calculated by sizing tool (depends on $\beta$ -coefficient, typically in the range of 6 ... 8 $\times$ inner diameter, can be reduced with 0.5% added uncertainty)  Note: For detailed calculation of recommended installation pipe length please refer to sizing tool or manual

##### Design

Material orifice plate	Standard: <ul style="list-style-type: none"> <li>• Stainless steel 1.4404/AISI 316L</li> <li>• Carbon steel</li> </ul> (other materials on request)
Material orifice flanges / orifice holder	<ul style="list-style-type: none"> <li>• Stainless steel 1.4404/AISI 316L</li> <li>• Carbon steel</li> </ul> (other materials on request)
Pipe diameter	<ul style="list-style-type: none"> <li>• DIN: DN 10 ... DN 600</li> <li>• ASME: 3/8" ... 24"</li> </ul> (other sizes on request)
Process connection	Orifice meter runs: Flanges EN 1092-1 B1 or ASME B16.5 RF  All other designs: Suitable for installation between flanges EN 1092-1 B1 or ASME B16.5 RF (other process connections on request)
Length	Orifice with carrier ring and pressure tapings: 40 mm (65 mm for compact steam applications) Orifice plate with annular chamber: 65 mm Orifice meter run: depends on pipe diameter (see below)  Single piece orifice for orifice flanges (with or without orifice flanges): depends on pipe diameter (see below)
Approvals	<ul style="list-style-type: none"> <li>• Hazardous area (see differential pressure transmitter)</li> <li>• Enclosure rating (see differential pressure transmitter)</li> <li>• Operational safety (see differential pressure transmitter)</li> </ul>

#### Options

Further versions that are available on request:

- Other types of primary differential pressure device: nozzles, venturi nozzles, classic venturi tubes etc.
- Other nominal sizes and nominal pressures to EN, ASME and other standards
- Other lengths, special lengths
- Other materials
- Sealing face with recess or groove
- Flushing rings
- Other tapping sockets, multiple tapings
- Material acceptance test certificates or cold water pressure tests

#### More information

For more information please see the Installation Instructions and the Instruction Manuals SITRANS P on SIOS.

**Application**

SITRANS FP230 compact design

SITRANS FPS200 remote design

Compact orifice plate with integrated pressure tapings in carbon or stainless steel for flow measurement of gas, steam and liquid.

## Flow Measurement

SITRANS FP (differential pressure flow measurement)

SITRANS FP230/FPS200 primary elements according to ISO 5167

### Orifice plate with pressure tapplings

#### Design

Orifice plates with integral tapplings are manufactured from a single body and are therefore particularly inexpensive. The pressure tapping takes place at two points and is integrated into the carrier ring. Differential pressure connection can be compact and remote. The instruments are easy to handle and offer good accuracy with reasonable inlet and outlet runs. They are installed between regular flanges.

##### Nominal size

- EN: DN 50 ... 500
- ASME: 2 ... 20 inch

##### Nominal pressure

- EN: PN 6 ... 100
- ASME: class 150 ... 600

##### Connection length

##### Compact mount for gas and liquids

##### Differential pressure tapping

- Corner tapping: Measurement of differential pressure at 2 points in the corner of the carrier ring

##### Sealing face

- According to EN 1092-1: flat (for flanges form B1 and B2)
- According to ASME B16.5: flat (for flanges RF and SF)

##### Overall length

- 40 mm (65 mm for compact steam applications)

##### Material

- Orifice: Carbon steel / orifice edge: 316L/1.4404
- Orifice: 316L/1.4404 / orifice edge: 316L/1.4404

##### Compact mount for steam

##### Remote mount for gas and liquids

##### Remote mount for steam

**Design** (continued)**Tapping sockets**Gases and liquids**Remote design**

For single body orifice plates in remote design, the angle  $\alpha$  between the pressure tap depends on the pressure rating and the nominal size of the flanges.

**Compact design**

For single body orifice plates in compact design, a so-called flange plate is used. The manifold and the differential pressure transmitter are mounted on this flange plate.

**Tap position/angle in horizontal pipe:**

Tap position/angle in horizontal pipe (gas)

Tap position/angle in horizontal pipe (liquid)

## Flow Measurement

\*) Fitting for DN 65 PN 16 flange with 4 holes. If design for flange with 8 holes is required, please add a comment to the corresponding project within the sizing tool.

**Design (continued)**Wet gases**Remote design**

For single body orifice plates in remote design for wet gases, nozzles bent at right angles with welded-on valves are used. This design is only necessary for vertical pipes. For horizontal pipes, the design for gases and liquids can be selected because the nozzles point up as listed in the table above.

**Compact design**

For single body orifice plates in compact design for wet gases, nozzles bent at right angles with oval flanges are used. The manifold and the differential pressure transmitter are mounted on these oval flanges. This design is only necessary for vertical pipes. For horizontal pipes, the design for gases and liquids can be selected because the flange plate with manifold and transmitter always points up.

Steam**Remote design**

For single body orifice plates in remote design for steam, the condensate vessels with shut-off valves are welded at an angle of 180°.

**Compact design**

For single body orifice plates in compact design for steam, the condensate vessels and the manifold are welded-on one side. The orifice has a width of 65 mm in this case (deviating from the standard).

**Application**

SITRANS FP230 compact design

SITRANS FPS200 remote design

Orifice plate with annular chamber pressure tapping in carbon or stainless steel for flow measurement of gas, steam and liquid.

**Design**

Annular chamber orifice plates consist of two rings pressed together, between which the orifice plate is clamped. The pressure is measured upstream and downstream through an annular chamber. The accuracy is comparable to that of the standard orifice plate.

Orifice plates with annular chamber tapplings consist of a two-piece carrier ring with annular chamber and integral tapplings and an inserted orifice plate. Pressure before and after the orifice is averaged through the annular chamber. Tapping connections are integrated into each part of the carrier ring. Differential pressure connection can be compact and remote. The instruments are easy to handle and offer good accuracy with reasonable inlet and outlet runs. They are installed between regular flanges. The orifice can be disassembled to replace the inserted orifice plate.

Nominal sizes

- EN: DN 50 ... 600
- ASME: 2 ... 24 inch

Nominal pressure

- EN: PN 6 ... 64 (for steam applications maximum of PN 16 is recommended)
- ASME: class 150 ... 600 (for steam applications maximum of class 150 is recommended)

Pressure tapping

- Annular chamber: Corner tapping through annular chamber

Connection length

- Suitable for gases and liquids for a maximum of approx. 80 mm pipe insulation
- Suitable for steam for a maximum of approx. 140 mm pipe insulation

Sealing face

- According to EN 1092-1: flat (for flanges form B1 and B2)
- According to ASME B16.5: flat (for flanges RF and SF)

Overall length

- 65 mm

Material

- Carrier ring: Carbon steel / orifice plate: 316L/1.4404
- Carrier ring: 316L/1.4404 / orifice plate: 316L/1.4404

Gaskets

- Gas and liquids: Klingersil C4400
- Steam: Graphite with stainless steel inlay

## Flow Measurement

SITRANS FP (differential pressure flow measurement)

SITRANS FP230/FPS200 primary elements according to ISO 5167

### Orifice plate with annular chamber

**Design** (continued)

#### Tapping sockets

Gases and liquids

#### Remote design

For annular chamber orifice plates in remote design, the angle  $\alpha$  between the pressure tap depends on the pressure rating and the nominal size of the flanges.

#### Compact design

For annular chamber orifice plates in compact design, so-called oval flanges are used. The manifold and the differential pressure transmitter are mounted on these oval flanges.

#### Tap position/angle in horizontal pipe:

Tap position/angle in horizontal pipe (gas)

Tap position/angle in horizontal pipe (liquid)

## Flow Measurement

SITRANS FP (differential pressure flow measurement)

SITRANS FP230/FPS200 primary elements according to ISO 5167

### Orifice plate with annular chamber

#### Design (continued)

##### Wet gases

##### Remote design

For annular chamber orifice plates in remote design for wet gases, nozzles bent at right angles with welded-on valves are used. This design is only necessary **for vertical pipes**. For horizontal pipes, the design for gases and liquids can be selected because the nozzles point up as listed in the table above.

##### Compact design

For annular chamber orifice plates in compact design for wet gases, nozzles bent at right angles with oval flanges are used. The manifold and the differential pressure transmitter are mounted on these oval flanges. This design is only necessary **for vertical pipes**. For horizontal pipes, the design for gases and liquids can be selected because the flange plate with manifold and transmitter always points up.

##### Steam

##### Remote design

For annular chamber orifice plates in remote design for steam, the condensate vessels with shut-off valves are mounted at an angle of 0°.

##### Compact design

For annular chamber orifice plates in compact design for steam, the condensate vessels are mounted on one side. The manifold and the differential pressure transmitter are mounted to the condensate vessels using oval flanges. The condensate vessels are equipped with filling nozzles, which means a 3-way manifold can be used.

## Flow Measurement

SITRANS FP (differential pressure flow measurement)

SITRANS FP230/FPS200 primary elements according to ISO 5167

### Orifice meter run

#### Application

SITRANS FP230 compact design

SITRANS FPS200 remote design

Orifice meter run with flanges ends in carbon or stainless steel for flow measurement of gas, steam and liquid.

#### Design

Orifice meter runs for small diameter pipes come with partial straight inlet and outlet pipe runs with flanged ends. The pipes are connected to an annular chamber where the orifice plate is mounted. The annular chamber consists of a two-piece carrier ring with annular chamber and integral tappings and an inserted orifice plate.

Pressure before and after the orifice is averaged through the annular chamber. Tapping connections are integrated into each part of the carrier ring. Differential pressure connection can be compact and remote. The instruments are easy to install in the pipe system. Additional straight pipe length may be required before and after the orifice meter run. The orifice can be disassembled to replace the inserted orifice plate.

##### Nominal sizes

Please add "-Z" to Article No. and specify Order code(s) and plain text.

##### Certificates of primary element incl. manifolds

Inspection certificate of the primary element (EN 10204-3.1) - material of pressure-containing and wetted parts **C52**

Factory certificate of the primary element (EN 10204-2.2) - wetted parts (MR 0175-2015) **C54**

Dimensional record of the primary element **C55**

Inspection certificate (DIN EN 571-1) - dye penetration test of weldings **C56**

Hydrostatic pressure test of the primary element (EN 13480-5) of weldings **C58**

Dimensional drawing 1:1 DWG of the primary element **C59**

##### Maximum measuring span of pressure transmitter

20 mbar (8.037 inH<sub>2</sub>O) **I01**

60 mbar (24.11 inH<sub>2</sub>O) **I02**

250 mbar (100.5 inH<sub>2</sub>O) **I03**

600 mbar (241.1 inH<sub>2</sub>O) **I04**

1600 mbar (643 inH<sub>2</sub>O) **I05**

##### Shut-off valves

With mounted shut-off valves DN8 made of carbon steel, up to 300 °C with tube fitting 12 mm **T50**

With mounted shut-off valves DN8 made of stainless steel, up to 300 °C with tube fitting 12 mm **T51**

With mounted shut-off valves DN8 made of carbon steel, up to 300 °C and condensate vessel made of carbon steel with tube fitting 12 mm **T56**

With mounted shut-off valves DN8 made of stainless steel, and condensate vessel made of stainless steel with tube fitting 12 mm **T57**

##### Valve manifolds for mounting on primary element

With mounted manifold (3-fold) made of stainless steel, PTFE sealings, cadmium-plated steel screws **U40**

With mounted manifold (3-fold) made of stainless steel, PTFE sealings, stainless steel screws **U41**

With mounted manifold (5-fold) made of stainless steel, PTFE sealings, cadmium-plated steel screws **U42**

With mounted manifold (5-fold) made of stainless steel, PTFE sealings, stainless steel screws **U43**

With mounted manifold (5-fold) made of carbon steel, up to 300 °C cadmium-plated steel screws and condensate vessel made of carbon steel **U46**

With mounted manifold (3-fold) made of stainless steel, PTFE sealings, stainless steel screws and condensation vessels incl. filling union 1/2" NPT made of stainless steel **U47**

With enclosed manifold (3-fold) made of stainless steel, PTFE sealings, cadmium-plated steel screws with tube fitting 12 mm **U50**

With enclosed manifold (3-fold) made of stainless steel, PTFE sealings, stainless steel screws with tube fitting 12 mm **U51**

With enclosed manifold (5-fold) made of stainless steel, PTFE sealings, cadmium-plated steel screws with tube fitting 12 mm **U52**

With enclosed manifold (5-fold) made of stainless steel, PTFE sealings, stainless steel screws with tube fitting 12 mm **U53**

With enclosed manifold (5-fold) made of carbon steel, up to 300 °C cadmium-plated steel screws with tube fitting 12 mm **U56**

##### Application data

ID number of the primary element according to sizing tool **Y40**

#### Scope of delivery

- Orifice meter run consisting of 2 parts, each with flanged ends, pipe, and annular chamber with integrated pressure tapping
- Orifice plate mounted in annular chamber
- Gasket for annular chamber
- Screws and nuts for annular chamber
- Condensation pots for steam applications
- Shut-off valves for remote design (options T5x selected in PIA)
- Manifold for compact/remote design (options U4x, U5x selected in PIA)

## Flow Measurement

SITRANS FP (differential pressure flow measurement)

SITRANS FP230/FPS200 primary elements according to ISO 5167

### Orifice plate

#### Application

SITRANS FPS200 remote design

Orifice plate for installation between flanges in stainless steel for flow measurement of gas, steam and liquid.

#### Design

Orifice plates for the installation with flange tappings consist of the orifice plate with a welded-on marking and grip plate. The plates have no pressure tappings and are therefore normally mounted between measuring flanges containing the pressure tappings.

##### Pressure tapping

- Not included

##### Sealing face

- According to EN 1092-1: flat (for flanges form B1 and B2)
- According to ASME B16.5: flat (for flanges RF and SF)

##### Material

- 316L/1.4404

SITRANS FP (differential pressure flow measurement)  
SITRANS FP230/FPS200 primary elements according to ISO 5167

Orifice plate with orifice flange according to ASME B16.36

### Application

SITRANS FPS200 remote design

Orifice flange pair according to ASME B36.16 with orifice plate in carbon steel (flanges) or stainless steel for flow measurement of gas and liquid.

### Design

The orifice plate is mounted between traditional orifice flanges according to ASME B16.36. The orifice flanges are manufactured with integral pressure tapplings. System design is always remote. The orifice plate can be exchanged. The flanges have to be welded into the pipe.

- Design of orifice plate, see Orifice plates

#### Differential pressure tapping

- In the flange: Differential pressure tapping in special measuring flanges with integrated connectors in the flange, always remote

#### Tapping sockets

- 0°

#### Connection length

- For gases and liquids suitable for up to approx. 80 mm pipe insulation

#### Sealing face

- According to ASME B16.5: flat

#### Materials

- Flange carbon steel, plate 316L
- Flange and plate 316L

#### Gaskets

- Spiral graphite

## Overview

Due to the robust technology and the simple principle of measurement, averaging pitot tubes can be used in many different ways even under difficult conditions and offer considerable advantages over other measuring technology from easy installation to long-term measuring stability.

Further special advantages are the possibilities of bidirectional flow measurement as well as the integration of temperature and pressure measurement.

## Benefits

- Easy to retrofit (no rebuilding of the pipe)
- Easy to install
- Good for large nominal sizes
- Wide range of application (media, nominal sizes, process conditions)
- Minor measurement inaccuracy
- Special designs possible for special applications
- Also work in rectangular ducts and pipes

## Application

- Technical Gases
- Compressed Air
- Exhaust Air
- Fresh and Combustion Air
- Heat Transfer Fluids
- Water
- Exhaust Gas
- Steam/Heat Quantities

## Design

### Basics: Averaging pitot tubes for flow measurement

- Mounting by insertion into the pipe (no flange-to-flange instrument)
- Differential pressure generation through forced flow
- Variation of the classic "pitot tube" through multiple metering orifices (so-called "averaging pitot tube")
- Design follows manufacturer guidelines, not standardized

### Designs

- Averaging Pitot Tube for gas and liquids (7ME161)
- Averaging Pitot Tube for steam (7ME162)
- Averaging Pitot Tube with FASTLOK (7ME163), to remove sensor during operation without interruption of process

## System design

- Compact design for dry gases and liquids without integrated temperature measurement
- Compact design for wet gases with or without integrated temperature measurement as well as for dry gases and liquids with integrated temperature measurement
- Compact design for steam with or without integrated temperature measurement
- Remote design for dry or wet gases, liquids and steam

## Function

### Design of the averaging pitot tube

Similar to other differential pressure devices averaging pitot tubes create a differential pressure to measure flow. They are not specified in the general standard ISO 5167, but they follow the same technical principle. In contrast to the classic differential pressure sensors, averaging pitot tube sensors are not "inline" devices but consist of a "profile" that is inserted into the side of the pipeline.

Differential pressure is created when fluid flows around the profile of the averaging pitot tube. Since the constriction of the pipeline by the profile in relation to the cross-sectional area is much smaller than, for example, with an orifice plate, the created differential pressure and the respective permanent pressure drop are smaller.

The flow comes to a complete stop at the upstream side of the averaging pitot tube creating the upstream pressure. At the downstream side a negative pressure is created by the so-called Kármán vortex street. The differential pressure (difference between upstream pressure and negative pressure) is the measurement signal and is proportional to the flow rate. This results in the following basic formula for flow measurement with averaging pitot tubes:  $q_m = A \cdot k \cdot \sqrt{2 \cdot \Delta p \cdot \rho}$

$q_m$ : mass flow

$A$ : cross-sectional area of the pipe

$k$ : device factor of the pitot tube

$\Delta p$ : differential pressure

$\rho$ : density

The k-factor is the device factor of the averaging pitot tube and is determined, among other things, by the shape of the profile of the pitot tube. Thanks to the sharp-edged shape of the profile, it remains constant over a very wide Reynolds number range and enables linear flow measurement.

The averaging pitot tube features the same number of measuring openings on the front and back. The special distribution of the measuring openings over the cross section allows geometric averaging in case of uneven flow distribution and thus an accurate measurement even with very short inlet and outlet distances. The generated upstream and downstream pressures are averaged in the respective chambers and routed to the differential pressure transmitter.

## Flow Measurement

### SITRANS FP (differential pressure flow measurement)

#### SITRANS FP330/FPS300 averaging pitot tube

#### Technical specifications

##### General design

Working principle	Multi-port averaging pitot tube for round and rectangular pipes
Media	<ul style="list-style-type: none"> <li>• Steam (saturated, superheated)</li> <li>• Gas (dry, up to 100% water saturated) (automatic purging unit for high dust applications on request)</li> <li>• Liquids (water, non-conductive liquids, oil, etc.)</li> </ul>
Transmitter installation	<ul style="list-style-type: none"> <li>• Compact mount with differential pressure transmitter</li> <li>• Remote mounted differential pressure transmitter</li> </ul>
Bidirectional flow	Yes (symmetric sensor design)
Calculation	According to manufacturer standard

##### Accuracy

Linearity (of Sensor k-Factor)	Re > 20.000: 1%
Repeatability (of Sensor k-Factor)	Re > 20.000: 0,1%
Measurement range	Typically, up to 1:10 (real measurement range depends on transmitter performance)

##### Operating Conditions

Pressure	Flange: Max. PN 100 Cutting Ring: Max. PN 40 (max. 180 °C) FASTLOK: Max. PN 16 (max. 180 °C) (Higher pressure ratings on request)
Temperature	Stainless Steel sensor: -100 ... 500 °C 16Mo3: -20 ... 530 °C Hastelloy: -20 ... 700 °C (exact maximum temperature depends on sensor design, feasibility will be calculated by sizing tool)
Pressure loss	generally, <10 % of differential pressure

##### Installation conditions

Straight inlet diameter	7x Inner diameter behind 90 ° elbow
Straight outlet diameter	3x Inner diameter (for detailed calculation of recommended installation pipe length please refer to sizing tool or manual)

##### Design

Material sensor	Standard: Stainless steel 1.4404/ AISI 316L Optional: 1.5415/16Mo3, Hastelloy C22 (other materials on request)
Diameter	40 ... 4000 mm (larger sensors on request)
Material mounting parts	Standard: Carbon Steel Optional: Stainless Steel 1.4404 / AISI 316L (other materials on request)
Process connection	Flange EN 1092-1 B1 Flange ASME B16.5 RF Cutting Ring Fitting FASTLOK (retractable design) (other process connections on request)
Thickness of pipe insulation	0 ... 200 mm

##### Approvals

Hazardous area	(see differential pressure transmitter)
Enclosure rating	(see differential pressure transmitter)
Operational safety	(see differential pressure transmitter)
QAL1, SIRA	

#### Options

Further versions that are available on request:

- Weld-in sensor for high pressure steam
- Calibrated metering pipes
- FASTLOK with flange ball valve
- Etc.

#### More information

For more information please see the Installation Instructions and the Instruction Manuals SITRANS P on SIOS.

**Application**

SITRANS FP330 compact design

SITRANS FPS300 remote design

These sensors are using the averaging pitot tube technology and can be used wherever flow rates of gases or liquids are to be measured.

## Flow Measurement

SITRANS FP (differential pressure flow measurement)

SITRANS FP330/FPS300 averaging pitot tube

### Averaging pitot tube for gas and liquids

#### Design

##### Mounting type

- Flange, cutting ring (carbon steel, stainless steel)

The averaging pitot tube can be mounted to pipes and ducts either with a traditional flange or a cutting ring fitting:

##### Flange mounting

##### Cutting ring mounting

The required mounting components are always supplied together with the averaging pitot tube.

Flange mounting style can be applied to a large range of applications and is widely accepted. Cutting ring mounting style has a limited temperature and pressure range (see max. pressure and max. temperature below) but provides an economic alternative for simple flow measurement applications.

##### Dimensions of mounting parts

Flange	Profile 10	Profile 22	Profile 32	Profile 50
PN 16	(min. PN 40)	(min. PN 40)	(min. PN 40)	DN 80
PN 40	DN 15	DN 32	DN 40	On request
PN 100	DN 25	DN 40	DN 40	On request
Class 150	½"	1 ¼"	1 ½"	3"
Class 300	½"	1 ¼"	1 ½"	On request
Class 600	1"	1 ½"	1 ½"	On request

Cutting ring	Profile 10	Profile 22
PN 40	M22	M36

##### Standard lengths of mounting parts (MTL)

Profile 10	Profile 22	Profile 32	Profile 50
80 mm	100 mm	100 mm	120 mm

Mounting part length can be increased based on thermal pipe insulation in 50 mm steps (H).

**Design** (continued)**System design of differential pressure connection**

The differential pressure transmitter can be installed in compact design (at the averaging pitot tube) or in remote design.

Gas and liquid application, compact design

For gas and liquid applications with compact design the averaging pitot tube sensor is equipped with a traditional flange plate to mount manifold and differential pressure transmitter directly at the sensor.

Gas and liquid application, remote design

For gas and liquid applications with remote design the averaging pitot tube sensor is equipped with valves mounted directly to the sensor. Impulse pressure piping (not supplied) has to be installed from the valves to the remote mounted manifold and differential pressure transmitter.

## Flow Measurement

SITRANS FP (differential pressure flow measurement)

SITRANS FP330/FPS300 averaging pitot tube

### Averaging pitot tube for gas and liquids

#### Design (continued)

Gas and liquid application, compact design for wet gases and/or with integrated temperature measurement with PT100

The averaging pitot tube sensor is equipped with a 90° rotated flange plate to mount manifold and differential pressure transmitter directly at the sensor. The rotated flange plate serves the purpose of providing space for the integrated temperature measurement and will also allow condensed water of wet gases to flow back from the outside assembly into the averaging pitot tube. This is particularly useful for installations in vertical pipes, or in horizontal pipes where the averaging pitot tube has to be mounted from the side. If the pitot tube can be mounted from the top, a regular flange plate is sufficient.

#### Averaging pitot tube materials

- Standard: 1.4404/316L
- Option: Hastelloy C-22

#### Mounting parts materials

- Carbon steel, 1.4404/316L

#### Flange gaskets

- Up to PN 40: Klingsil C4400
- As of PN 63: graphite with stainless steel insert

#### Integrated temperature measurement using PT100

- Can be integrated in averaging pitot tube (> DN 100, only 1.4404, ≤ PN 40)

#### Max. pressure

- EN: up to PN 100 (for flange), PN 40 (for cutting ring)
- ASME: up to Class 600 (for flange)

#### Max. temperature

- Mounting parts:
  - Flange: according to EN 1092-1 or ASME B16.5
  - Cutting ring: 200 °C (carbon steel), 400 °C (stainless steel)
- Sensor: will be calculated by sizing tool

## Scope of delivery

- Averaging pitot tube with differential pressure connections
- Mounting part:
  - Flanged installation: Flanged mounting part including gasket, screws and nuts.
  - Cutting ring installation: Welding socket, cutting ring, nut
- If necessary: closed counter support
- Shut-off valves for remote design (options T5x selected in PIA)
- Manifold for compact/remote design (options U4x, U5x selected in PIA)

## Flow Measurement

SITRANS FP (differential pressure flow measurement)

SITRANS FP330/FPS300 averaging pitot tube

### Averaging pitot tube for steam

#### Application

SITRANS FP330 compact design

SITRANS FPS300 remote design

These sensors for steam probes are used wherever flow of superheated or saturated steam is to be measured.

#### Design

##### Mounting type

The averaging pitot tube for steam can be mounted to pipes with a traditional flange:

##### Dimensions of mounting parts

Flange	Profile 10	Profile 22	Profile 32
PN40	DN 15	DN 32	DN 40
PN100	DN 25	DN 40	DN 40
Class 150	1/2"	1 1/4"	1 1/2"
Class 300	1/2"	1 1/4"	1 1/2"
Class 600	1"	1 1/2"	1 1/2"

##### Standard lengths of mounting parts

Profile 10	Profile 22	Profile 32
80 mm	100 mm	100 mm

**Design** (continued)**System design of differential pressure connection**

The differential pressure transmitter can be installed in compact design (at the averaging pitot tube) or in remote design.

Steam applications, compact design

For steam applications with compact design the averaging pitot tube sensor is equipped with integrated condensation pots, a 5-way-manifold is welded directly to the sensor.

Steam applications, remote design

For steam applications with remote design the averaging pitot tube sensor is equipped with integrated condensation pots, valves are welded directly to the sensor. Impulse pressure piping (not supplied) has to be installed from the valves to the remote mounted manifold and differential pressure transmitter.

Profile width

- Depending on selected type

Averaging pitot tube materials

- Standard: 1.4404/316L
- Option: 16Mo3/1.5415

Mounting parts materials

- Carbon steel, 1.4404/316L

Flange gaskets

- Up to PN 40: graphite
- As of PN 63: graphite with stainless steel insert

Integrated temperature measurement using PT100

- Can be integrated in averaging pitot tube (> DN 100, only 1.4404, ≤ PN 40)

Max. pressure

- EN: up to PN 100
- ASME: up to Class 600

Max. temperature

- Mounting parts: According to EN 1092-1 or ASME B16.5
- Sensor: Will be calculated by sizing tool

**Application**

SITRANS FP330 compact design

SITRANS FPS300 remote design

In the FASTLOK version the sensor can be assembled and disassembled into the pipe without interrupting plant operation. This pitot tube is used for dry gases, wet gases and liquids. On request it is available in different pressure ratings or with an integrated gear drive.

**Design****Mounting type**

The averaging pitot tube with FASTLOK mechanism is mounted with a screwed ball valve. A threaded nozzle is welded to the pipe onto which the ball valve is screwed.

Isolation mechanism

- Ball valve with screwed-on threaded pipe with gland packing

Retraction mechanism

- The sensor is inserted or removed into/out of the pipe by turning the operating handle on top of the threaded rod. A gland packing prevents gas or liquid from exiting while the isolation ball valve is opened.

System design of differential pressure connection<sup>1)</sup>

- Compact, remote

Profile width

- Depending on selected type

Averaging pitot tube materials

- 1.4404/316L

Mounting parts materials

- Carbon steel, 1.4404/316L

Ball valve material

- Stainless steel 1.4404

Gasket ball valve

- PTFE

Pressure rating

- PN16

Max. temperature

- Approx. 200 °C

<sup>1)</sup> For details see Design under the section "Averaging pitot tube for gas and liquids" on page 3/445.

##### Application data

ID number of the primary element according to sizing tool

**Y40**

#### Scope of delivery

- Averaging pitot tube with removal mechanism, packing gland, differential pressure connection
- Mounting part threaded welding socket with isolation ball valve
- If necessary: closed counter support
- Shut-off valves for remote design (options T5x selected in PIA)
- Manifold for compact/remote design (options U4x, U5x selected in PIA)

## Overview

### Introduction

Inverse frequency shift capacitance point level and material detection switches are designed to withstand the harsh environments of high pressure and high temperature applications.

### Inverse Frequency Technology

Siemens inverse frequency shift capacitance devices incorporate a unique frequency-based approach to level measurement. The capacitance units monitor the effect of capacitance based on frequency change. The relationship between capacitance and frequency is inverse. Because small level changes result in a large frequency change, the result is excellent resolution and accuracy.

### Principle of Operation

Inverse frequency shift capacitance devices require two components: a reference electrode of a variable capacitor and the measurement electrode. In capacitive level measurement, the environment (typically the vessel wall) acts as the reference electrode, while the probe supplies the measurement electrode. The dielectric is composed of the vessel contents and, if the measurement electrode is insulated, the insulating layer.

Inverse frequency shift capacitance operation

Capacitance is affected by the surface area of the electrodes, the separation distance between the electrodes and the dielectric constant of the vessel contents. The dielectric constant is the measure of a material's ability to store energy. The relative dielectric constant of air (vacuum) is 1; all other materials have a higher value.

## Mode of operation

### Common Terms

#### Capacitance

The property of a system of conductors and dielectrics that permits the storage of electricity when a potential difference exists between the conductors. Its value is expressed as the ratio of a quantity of electricity to a potential difference and the unit is a Farad.

#### Capacitor

A device in a circuit that has the potential to store an electric charge. Typically a capacitor has two conductors or electrodes separated by a layer of a non-conducting material called a dielectric. With the conductors on opposite sides of the dielectric layer oppositely charged by a source of voltage, the electrical energy of the charged system is stored in the polarized dielectric.

#### Dielectric constant

The ability of a dielectric to store electrical potential energy under the influence of an electric field. This is measured by a ratio which compares the capacitance of a condenser with the material as dielectric to its capacitance with a vacuum/dry air as dielectric: the dielectric constant of air is 1.

#### Active shield

The portion of the probe isolated from the active measurement section. The sensor signal is connected to the active shield portion of the probe, eliminating the electrical potential difference between the shield and the measurement section. So, the shield portion of the probe near the process connection is not affected by changes in vapor concentration, material buildup, dust, or condensation.

#### Overview

Pointek CLS100 is a compact, 2-wire, inverse frequency shift capacitance switch for level and material detection in constricted spaces, interfaces, solids, liquids, slurries, and foam; with the ability to tune out buildup on probe.

#### Benefits

- Easy installation with verification by built-in LED
- Low maintenance with no moving parts
- Sensitivity adjustment
- Integrated cable or PBT enclosure versions available
- Intrinsically Safe, Dust Ignition Proof, and General Purpose options available

#### Application

Pointek CLS100's short insertion length of 100 mm (4 inch) and versatility in various applications and in vessels or pipes makes it a good replacement for traditional capacitance sensors.

Its advanced tip-sensing technology provides accurate, repeatable switchpoint performance. The PPS (Polyphenylene sulfide) probe [optional PVDF (Polyvinylidene Fluoride)] is chemically resistant with an effective process operating temperature range from -30 to +100 °C (-22 to +212 °F) (7ML5501), and -10 to +100 °C (14 to 212 °F) (7ML5610). The fully potted design ensures reliability in a vibrating environment such as agitated tanks up to 4 g. When used with a SensGuard protection cover, the CLS100 is protected from shearing, impact, and abrasion in tough primary processes.

The Pointek CLS100 is available in three versions. The integral cable version has a stainless steel process connection and probe options of PPS or PVDF. The fully synthetic version has a thermoplastic polyester enclosure with a PPS process connection combined with a PPS probe. The standard enclosure version has a thermoplastic polyester enclosure with a stainless steel process connection in combination with a PPS or PVDF probe.

- Key Applications: liquids, slurries, powders, granules, food and pharmaceuticals, chemicals, hazardous areas

#### Enclosure and Fully Synthetic Version

- \* Switch/relay normally open in unpowered state
- \* Relay not available on Pointek CLS100 IS version (7ML5501)

#### Note:

When driving an inductive load (for example, an external relay), a protection diode must be connected in the correct polarity to prevent possible switch damage due to inductive spikes generated by switching the inductor (please refer to instruction manual). Intrinsically Safe Models - please follow local regulations and area classifications; refer to instruction manual for more details.

Pointek CLS100 connections

## Overview

Pointek CLS200 (standard version) is a versatile inverse frequency shift capacitance level and material detection switch with optional rod/cable choices and configurable output. CLS200 is ideal for detection of liquids, solids, slurries, foam, and interfaces and has the ability to tune out buildup on the probe.

## Benefits

- Potted construction protects signal circuit from shock, vibration, humidity, and/or condensation
- High chemical resistance
- Level detection independent of tank or pipe earth reference
- Insensitive to product buildup due to high frequency oscillation
- 3 LED indicators for sensor status, output status, and power
- Suitable for API 2350

## Application

Pointek CLS200 standard version has 3 LED indicators with basic relay and solid-state switch alarms. Universal switch for solids/liquids and interface.

The power supply is galvanically isolated and accepts a wide range of voltages (12 to 250 V AC/DC). When used with thermal isolator, the stainless steel and PPS (PVDF optional) materials used in the probe construction provide a temperature rating up to 125 °C (257 °F) on the process wetted portion of the probe. The switch responds to any material with a dielectric constant of 1.5 or more by detecting a change in oscillating frequency, and it can be set to detect before contact or on contact with the probe. The CLS200 operates independently of the tank wall or pipe so it does not require an external reference electrode for level detection in a non-conductive vessel such as concrete or plastic (EMC regulations applicable in some regions).

- Key Applications: liquids, slurries, powders, granules, pressurized applications, hazardous areas

## Configuration

### Installation

Keep unit out of path of falling material, or protect probe from falling material.

Avoid areas where material build up occurs.

Install probe at least 50 (2) from tank wall.

Pointek CLS200 installation, dimensions in mm (inch)

## Level measurement

### Point level measurement

### RF Capacitance switches

#### Pointek CLS200 - Standard

#### Technical specifications

<b>Mode of operation</b>	
Measuring principle	Inverse frequency shift capacitive level detection
<b>Input</b>	
Measured variable	Change in picroFarad (pF)
<b>Output</b>	
Output signal	1 SPDT Form C relay
• Relay output	<ul style="list-style-type: none"> <li>• 30 V DC</li> <li>• 250 V AC</li> </ul>
- Max. contact voltage	
- Max. contact current	<ul style="list-style-type: none"> <li>• 5 A DC</li> <li>• 8 A AC</li> </ul>
- Max. switching capacity	150 W DC
	2 000 VA AC
- Time delay (ON and/or OFF)	1 ... 60 s
• Solid-state output	
- Output	Galvanically isolated
- Protection	Against reversed polarity (bipolar)
- Max. switching voltage	<ul style="list-style-type: none"> <li>• 30 V DC</li> <li>• 30 V peak AC</li> </ul>
- Max. load current	82 mA
- Voltage drop	< 1 V, typical at 50 mA
- Time delay (pre or post switching)	1 ... 60 s
<b>Rated operating conditions<sup>1)</sup></b>	
Installation conditions	
• Location	Indoor/outdoor
Ambient conditions	
• Ambient temperature	-40 ... +85 °C (-40 ... +185 °F) <sup>2)</sup>
• Storage temperature	-40 ... +85 °C (-40 ... +185 °F)
• Installation category	II
• Pollution degree	4
Medium conditions	Liquids, bulk solids, slurries and interfaces
	Min. 1.5
• Relative dielectric constant $\epsilon_r$	
• Process temperature	
- Without thermal isolator	-40 ... +85 °C (-40 ... +185 °F) <sup>2)</sup>
- With thermal isolator	-40 ... +125 °C (-40 ... +257 °F)
• Process pressure (rod version)	-1 ... +25 bar g (-14.6 ... +365 psi g) (nominal)
• Process pressure (cable version) <sup>3)</sup>	-1 ... +10 bar g (-14.6 ... +150 psi g) (nominal)
• Process pressure (sliding coupling version)	-1 ... +10 bar g (-14.6 ... +150 psi g) (nominal)
<b>Electromagnetic compatibility</b>	
	To comply with CE EMC regulations (where applicable); the CLS200 should be installed per the instruction manual.

<b>Design</b>	
Material	Epoxy-coated aluminum with gasket
• Enclosure	316L stainless steel
• Optional thermal isolator	
Connection	Removable terminal block, max. 2.5mm <sup>2</sup>
Degree of protection	IP65/Type 4/NEMA 4 (optional IP68)
Cable inlet	2 x M20 x 1.5 thread (option: 2 x ½" NPT conduit entry including 1 plugged entry)
<b>Power supply</b>	
	12 ... 250 V AC/DC, 0 ... 60 Hz max. 2 W
<b>Certificates and approvals</b>	
General Purpose	CSA, FM, CE, RCM
Dust Ignition Proof	ATEX II ½ D T100 °C
Flameproof Enclosure With IS Probe	ATEX II 1 G EEx d[ia] IIC T6 ... T4 ATEX II ½ D T100 °C
Dust Ignition Proof with IS Probe	CSA/FM Class II, Div. 1, Groups E, F, G CSA/FM Class III T4
Explosion Proof Enclosure With IS Probe	CSA/FM Class I, Div. 1, Groups A, B, C, D CSA/FM Class II, Div. 1, Groups E, F, G CSA/FM Class III T4
Marine	Lloyds Register of Shipping, Categories ENV1, ENV2, and ENV5
Overfill Protection	WHG (Germany) VLAREM II
Others	Pattern Approval (China), SIL

<sup>1)</sup> When operation is in areas classified as hazardous, observe restrictions according to relevant certificate. See also Pressure/Temperature curves on page 5/34.

<sup>2)</sup> Thermal isolator is used if process connection temperature exceeds 85 °C (185 °F)

<sup>3)</sup> Pressure rating of process seal is temperature dependent. See Pressure/Temperature curves on page 5/34.

#### Circuit diagrams

##### Wiring: Pointek CLS200 standard

##### Notes:

- Identification label is on underside of lid. Switch and potentiometer settings are for illustration purposes only (refer to operation/setup in manual).
- All field wiring must have insulation suitable for at least 250 V.
- Relay contact terminals are for use with equipment having no accessible live parts and wiring having insulation suitable for at least 250 V.
- Maximum working voltage between adjacent relay contacts shall be 250 V.
- Refer to the Instruction Manual or contact Siemens representative for detailed wiring information.

##### Wiring: Pointek CLS200 Digital

##### Notes:

Refer to the instruction manual or contact a Siemens representative for detailed wiring information.

##### \*Magnet activated sensor Test

A magnet can be used to test the sensor without opening the lid of the Pointek CLS200 Digital version. Bring the magnet close to the test area indicated on the enclosure. The sensor test starts and finishes automatically after 10 seconds.

Pointek CLS200 connections

## Overview

Pointek CLS200 (digital version) is a versatile inverse frequency shift capacitance level and material detection switch with optional rod/cable choices and configurable output. CLS200 is ideal for detection of liquids, solids, slurries, foam, and interfaces and has the ability to tune out buildup on the probe. The digital version includes PROFIBUS PA, an LCD display, and advanced diagnostic features.

## Benefits

- Potted construction protects signal circuit from shock, vibration, humidity, and/or condensation
- High chemical resistance
- Level detection independent of tank or pipe earth reference
- Insensitive to product buildup due to high frequency oscillation
- High sensitivity allows installation in a wide range of liquids, solids or slurry applications
- Integral LCD display allows for easy menu-driven setup
- PROFIBUS PA communication (SIMATIC PDM compatible)

## Application

Pointek CLS200 digital version provides an integral LCD display for stand-alone use, and also provides PROFIBUS PA communication (Profile version 3.0, Class B) for connection to a network.

The power supply is galvanically isolated and accepts a wide range of voltages (12 to 30 V DC). When used with thermal isolator, the stainless steel and PPS (PVDF optional) materials used in the probe construction provide a temperature rating up to 125 °C (257 °F) on the process wetted portion of the probe. The switch responds to any material with a dielectric constant of 1.5 or more by detecting a change in oscillating frequency, and it can be set to detect before contact or on contact with the probe. The menu-driven setup allows precise control of the switch point signal damping and alarm functions.

When connected to the PROFIBUS network, advanced diagnostics and set up using SIMATIC PDM are possible.

The CLS200 operates independently of the tank wall or pipe so it does not require an external reference electrode for level detection in a non-conductive vessel such as concrete or plastic (EMC regulations applicable in some regions).

- Key Applications: liquids, slurries, powders, granules, pressurized applications, hazardous areas

## Configuration

### Installation

Keep unit out of path of falling material, or protect probe from falling material.

Avoid areas where material build up occurs.

Install probe at least 50 (2) from tank wall.

Pointek CLS200 installation, dimensions in mm (inch)

## Level measurement

Point level measurement  
RF Capacitance switches

### Pointek CLS200 - Digital

#### Selection and ordering data

##### Pointek CLS200 RF Capacitance point level switch, digital, cable design

Detects level and interface in liquids, solids, slurries, and foam. Cable extension options to 30 m (98.43 ft), adaptable sensitivity, with the ability to tune out build-up on probe. With display and digital communications.

##### Probe length

(length from flange face)  
(threaded lengths include process thread)

Note: No Y01 needed in Order code for standard lengths

Extended cable, 3 000 mm (118.11 inch), length can be determined by customer on assembly  
Extended cable, 6 000 mm (236.22 inch), length can be determined by customer on assembly

Add Order code Y01 and plain text: "Insertion length ... mm"

Extended cable, 500 ... 5 000 mm  
(19.69 ... 196.85 inch)

Extended cable, 5 001 ... 10 000 mm  
(196.89 ... 393.70 inch)

Extended cable, 10 001 ... 15 000 mm  
(393.74 ... 590.55 inch)

Extended cable, 15 001 ... 20 000 mm  
(590.59 ... 787.40 inch)

Extended cable, 20 001 ... 25 000 mm  
(787.44 ... 984.25 inch)

Extended cable, 25 001 ... 30 000 mm  
(984.29 ... 1 181.10 inch)

##### Thermal isolator

Without thermal isolator

With thermal isolator [for process connection temperatures over 85 °C (185 °F)]

##### Remote mount electronics and mounting bracket

With 2 m (79 inch) of cable<sup>2)</sup>

With 5 m (197 inch) of cable<sup>2)</sup>

##### Wetted seals

FKM and PTFE

FFKM and PTFE [for process temperatures above -20 °C (-4 °F)]

Probe material

FEP jacketed cable with PPS probe body

FEP jacketed cable with PVDF probe body

##### Approvals

### Pointek CLS200 - Digital

#### Circuit diagrams

##### Wiring: Pointek CLS200 standard

##### Notes:

- Identification label is on underside of lid. Switch and potentiometer settings are for illustration purposes only (refer to operation/setup in manual).
- All field wiring must have insulation suitable for at least 250 V.
- Relay contact terminals are for use with equipment having no accessible live parts and wiring having insulation suitable for at least 250 V.
- Maximum working voltage between adjacent relay contacts shall be 250 V.
- Refer to the Instruction Manual or contact Siemens representative for detailed wiring information.

##### Wiring: Pointek CLS200 Digital

##### Notes:

Refer to the instruction manual or contact a Siemens representative for detailed wiring information.

##### \*Magnet activated sensor Test

A magnet can be used to test the sensor without opening the lid of the Pointek CLS200 Digital version. Bring the magnet close to the test area indicated on the enclosure. The sensor test starts and finishes automatically after 10 seconds.

Pointek CLS200 connections

## Overview

Pointek CLS300 (standard version) is an inverse frequency shift capacitance level and material detection switch with optional rod/cable choices and configurable output. CLS300 is ideal for detecting liquids, solids, slurries, foam, and interfaces in demanding conditions where high pressure and temperatures are present and has the ability to tune out buildup on the probe.

## Benefits

- Active-Shield technology so measurement is unaffected by material buildup or nozzle interference in active shield section
- Performs in extremely abrasive conditions because of solid rod construction
- Three LED indicators for adjustment control, output status, and power
- High-temperature version up to 400 °C (752 °F)

## Application

Pointek CLS300 standard version has three LED indicators with basic relay and solid-state switch alarms.

The robust design of CLS300 makes it specifically applicable for heavy solids applications where abrasive materials occur as in the mining industry. The fully potted electronics are unaffected by condensation, dust or vibration.

Wetted parts are made of stainless steel with a PFA shield for high chemical resistance, and of ceramic and stainless steel for high temperature version. Materials with low or high dielectric constants can be accurately detected. The unique Active Shield suppresses interference from material buildup or long installation nozzles.

The unique modular design of the Pointek CLS300 provides a wide range of configurations, process connections, extensions and approvals to meet the temperature and pressure requirements of specific applications. The modular design makes ordering easier and reduces stocking requirements. A wide range of probe configurations are available, including rod and cable versions.

- Key Applications: liquids, slurries, bulk solids, relatively high pressure and temperature, hazardous areas, milling and mining applications

## Configuration

### Installation

Keep unit out of path of falling material, or protect probe from falling material.

Build up of material in active shield area does not affect switch operation.

Install probe at least 50 (2) from tank wall.  
Note angle of repose and adjust accordingly.

Pointek CLS300 installation, dimensions in mm (inch)

#### Pointek CLS300 - Standard

#### Technical specifications

Mode of operation		Design	
Measuring principle	Inverse frequency shift capacitive level detection	Material (enclosure)	Powder-coated aluminum with gasket
<b>Input</b>		Degree of Protection	Standard: Type 4/NEMA 4/IP65 Optional: Type 4/NEMA 4/IP68
Measured variable	Change in picoFarad (pF)	Cable inlet	2 x M20 x 1.5 thread (option: 2 x 1/2" NPT conduit entry including 1 plugged entry)
<b>Output</b>		<b>Controls and displays</b>	
Output signal		Displays	3 LEDs, for probe status, output status and power supply
• Relay output	1 SPDT Form C relay	Potentiometers	2 potentiometers for time delay and sensitivity
- Max. contact voltage	• 30 V DC • 250 V AC	Switches	5 DIP switches for delay on/off, fail-safe high/low, time delay test/adjust, high/low sensitivity, test delay settings
- Max. contact current	• 5 A (DC) • 8 A (AC)	<b>Power supply</b>	
- Max. switching capacity	• 150 W (DC) • 2 000 VA (AC)	Supply	12 ... 250 V AC/DC, 0 ... 60 Hz, galvanically isolated, 2 W
- Time delay (ON and/or OFF)	1 ... 60 s	<b>Certificates and approvals</b>	
• Solid-state output		General Purpose	CSA, FM, CE, RCM
- Output	Galvanically isolated	Flameproof Enclosure with IS Probe	ATEX II 1/2 G EEx d[ia] IIC T6 ... T1 ATEX II 1/2 D T100 °C
- Protection	Against reversed polarity (bipolar)	Dust Ignition Proof with IS Probe	ATEX II 1/2 D T100 °C CSA/FM Class II, Div. 1, Groups E, F, G CSA/FM Class III T4
- Max. switching voltage	• 30 V (DC) • 30 V peak (AC)	Explosion Proof Enclosure with IS Probe	CSA/FM Class I, Div. 1, Groups A, B, C, D CSA/FM Class II, Div. 1, Groups E, F, G CSA/FM Class III T4
- Max. load current	82 mA	Marine	Lloyds Register of Shipping, Categories ENV1, ENV2, and ENV5
- Voltage drop	< 1 V, typical at 50 mA	Overfill Protection	WHG (Germany) VLAREM II (Belgium)
- Time delay (pre or post switching)	1 ... 60 s	Others	Pattern Approval (China)
<b>Accuracy</b>		<sup>1)</sup> When operation is in areas classified as hazardous, observe restrictions according to relevant certificate. See also Pressure/Temperature curves starting on page 5/57. <sup>2)</sup> Thermal isolator is used if process connection temperature exceeds 85 °C (185 °F). <sup>3)</sup> Pressure rating of process seal is temperature dependent. See Pressure/Temperature curves starting on page 5/57.	
Resolution			
• Min. sensitivity (pF)	1 % change in actual capacitance		
• Max. temperature error	0.2 % of actual capacitance value		
<b>Rated operating conditions<sup>1)</sup></b>			
Installation conditions			
• Location	Indoor/outdoor		
Ambient conditions			
• Ambient temperature	-40 ... +85 °C (-40 ... +185 °F) <sup>2)</sup>		
• Storage temperature	-40 ... +85 °C (-40 ... +185 °F)		
Medium conditions			
	Liquids, bulk solids, slurries and interfaces, and applications with viscous materials		
• Relative dielectric constant $\epsilon_r$	Min. 1.5		
• Process temperature			
- Rod/Cable version	-40 ... +200 °C (-40 ... +392 °F) <sup>2)</sup>		
- High-temperature version	-40 ... +400 °C (-40 ... +752 °F)		
• Process pressure <sup>3)</sup>	-1 ... +35 bar g (-14.6 ... +511 psi g)		

#### Design: Probe

	Rod version	High Temperature version	Cable version
Length	Min. 250 mm (9.8 inch), max. 1 000 mm (40 inch)	Min. 250 mm (9.8 inch), max. 1 000 mm (40 inch)	Min. 1 000 mm (40 inch), max. 25 000 mm (984 inch)
Sensor wetted parts	PFA (no insulation on active probe), 316L stainless steel, PEEK isolators	Ceramic (ZrO <sub>2</sub> <sup>1)</sup> ) isolators (no insulation on active probe), 316L stainless steel	316 stainless steel, optional PFA, PEEK isolators
O-ring seal material	FKM (optional FFKM) <sup>2)</sup>	Graphite <sup>2)</sup>	FKM (optional FFKM) <sup>2)</sup>

### Pointek CLS300 - Standard

#### Circuit diagrams

##### Wiring: Pointek CLS300 standard

**Notes:**

- Identification label is on underside of lid. Switch and potentiometer settings are for illustration purposes only (refer to operation/setup in manual).
- All field wiring must have insulation suitable for at least 250 V.
- Relay contact terminals are for use with equipment having no accessible live parts and wiring having insulation suitable for at least 250 V.
- Maximum working voltage between adjacent relay contacts shall be 250 V.
- Refer to the Instruction manual or contact Siemens representative for detailed wiring information.

##### Wiring: Pointek CLS300 digital

**Notes:**

Refer to the instruction manual or contact a Siemens representative for detailed wiring information.

**\*Magnet activated sensor test**

A magnet can be used to test the sensor without opening the lid of the Pointek CLS300 digital version. Bring the magnet close to the test area indicated on the enclosure. The sensor test starts and finishes automatically after 10 seconds.

Pointek CLS300 connections

## Overview

Pointek CLS300 (digital version) is an inverse frequency shift capacitance level and material detection switch with optional rod/cable choices and configurable output. It is ideal for detecting liquids, solids, slurries, foam, and interfaces in demanding conditions where high pressure and temperatures are present and has the ability to tune out buildup on the probe. The digital version includes PROFIBUS PA, an LCD display, and advanced diagnostic features.

## Benefits

- Active-Shield technology so measurement is unaffected by material buildup or nozzle interference in active shield section
- Performs in extremely abrasive conditions because of solid rod construction
- Push-button calibration, full-function diagnostics
- High sensitivity allows installation in a wide range of liquids, solids or slurry applications
- Integral LCD display allows for easy menu-driven setup
- PROFIBUS PA communication (SIMATIC PDM compatible)

## Application

Pointek CLS300 digital version provides an integral LCD display for stand-alone use, with PROFIBUS PA communication (Profile version 3.0, Class B) when required. Solid-state switch alarm is standard.

The robust design of CLS300 makes it specifically applicable for heavy solids applications where abrasive materials occur as in the mining industry.

The fully potted electronics are unaffected by condensation, dust or vibration.

Wetted parts are made of stainless steel with a PFA shield for high chemical resistance, and of ceramic and stainless steel for high temperature version. Materials with low or high dielectric constants can be accurately detected. The unique Active Shield suppresses interference from material buildup or long installation nozzles.

The unique modular design of the Pointek CLS300 provides a wide range of configurations, process connections, extensions and approvals to meet the temperature and pressure requirements of specific applications. The modular design makes ordering easier and reduces stocking requirements. A wide range of probe configurations are available, including rod and cable versions.

- Key Applications: liquids, slurries, bulk solids, relatively high pressure and temperature, hazardous areas, milling and mining applications

## Configuration

### Installation

Keep unit out of path of falling material, or protect probe from falling material.

Build up of material in active shield area does not affect switch operation.

Install probe at least 50 (2) from tank wall.  
Note angle of repose and adjust accordingly.

Pointek CLS300 installation, dimensions in mm (inch)

Vibrating switches

### SITRANS LVL100

#### Overview

SITRANS LVL100 is a compact vibrating level switch for material detection in liquid and slurry applications such as overflow, high, low and demand applications, as well as pump protection. It is ideal for use in confined spaces.

#### Benefits

- Proven vibrating level switch technology for liquids
- Compact insertion length of 40 mm (1.57 inch) for confined space applications
- Available starting at 1/2" threaded process connections
- Fault monitoring for corrosion, loss of vibration, or line break to the piezo drive
- Integrated test function to confirm correct operation

#### Application

SITRANS LVL100 is a compact level switch designed for industrial use in all areas of process technology and can be used for material detection with liquids and slurries. With an insertion length of only 40 mm (1.57 inch), SITRANS LVL100 can be mounted in small pipes and confined space applications. It is virtually unaffected by the chemical and physical properties of the liquid. The LVL100 can be used in difficult conditions including turbulence, air bubbles, foam generation, buildup, or external vibration.

The tuning fork is piezoelectrically energized and vibrates at a mechanical resonance frequency of approximately 1 200 Hz. The vibration frequency changes when the tuning fork is covered by the medium. This change is detected by the integrated oscillator and converted into a switching command. The integrated electronics evaluate the level signal and output a switching signal to connected devices.

- Key Applications: for use in liquids and slurries, for level measurement, overflow, and dry run protection

## Overview

SITRANS LVL200 is a standard vibrating level switch for material detection in liquid and slurry applications such as overflow, high, low, and demand applications, as well as pump protection. For use in SIL-2 applications.

## Benefits

- Proven vibrating level switch technology for liquids
- Compact insertion length of 40 mm (1.57 inch) for confined space applications
- Fault monitoring for corrosion, loss of vibration or line break to the piezo drive
- Functional Safety (SIL 2). Device suitable for use in accordance with IEC 61508 and IEC 61511
- Hygienic process connections
- Suitable for API 2350
- Optional remote test signal conditioner

## Application

SITRANS LVL200 is a level switch designed for industrial use in all areas of process technology and can be used with liquids and slurries. With a tuning fork insertion length of only 40 mm (1.57 inch), SITRANS LVL200 can be mounted in small pipes and applications with confined space. The LVL200 can be used to measure products with a minimum density of  $> 0.5 \text{ g/cm}^3$  ( $0.018 \text{ lb/in}^3$ ). The LVL200 can be used in difficult conditions including turbulence, air bubbles, foam generation, buildup, or external vibration.

SITRANS LVL200 continuously monitors faults via frequency evaluation, providing early detection of strong corrosion or damage on the tuning fork, loss of vibration, or a line break to the piezo drive.

The tuning fork is piezoelectrically energized and vibrates at its mechanical resonance frequency of approximately 1 200 Hz. The vibration frequency changes when the tuning fork is covered by the medium. This change is detected by the integrated oscillator and converted into a switching command. The integrated electronics evaluate the level signal and output a switching signal, directly operating connected devices.

The optional signal conditioner provides a remote test feature to ensure continuous product reliability.

- Key Applications: for use in liquids and slurries, for level measurement, overflow, and dry run protection

##### Further designs

Please add **"-Z"** to Article No. and specify Order code(s).

Switching status indication with colors red-green<sup>12)</sup>

**A21**

Cleaning including Certificate (oil, grease, and silicone free)

**W01**

Identification label (measurement loop) stainless steel: max. 40 characters, add in plain text. To add more than one line, use a comma ", " for line break.

**Y17**

Identification Label (measurement loop) foil: max. 40 characters add in plain text. To add more than one line, use a comma ", " for line break.

**Y18**

NACE0175 to 3.1 Material Certificate for material (EN10204 NACE MR 0175)<sup>8)</sup> Note: not available with Process Connection and Rigid extension coatings PFA, ECTFE, and Enamel. NACE not available with Hygienic process connections.

**D07**

Material Inspection certificate 3.1 of EN 10204<sup>8)</sup>

**C05**

2.2-Factory certificate for material (EN 10204)<sup>8)</sup>

**C15**

Functional Safety (SIL 2). Device suitable for use in accordance with IEC 61508 and IEC 61511<sup>8)</sup>

**C20**

Dye penetration test, results confirmed via a 3.1 certificate/instrument (EN 10204)<sup>8)</sup>

**C13**

X-ray test + 3.1 certificate/instrument<sup>8)</sup>

**C14**

Positive material identification test + 3.1 certificate/instrument<sup>8)</sup>

**C16**

Roughness test + 3.1 certificate/instrument<sup>8)</sup>

**C18**

3.1-Inspection Certificate for instrument with test data (EN 10204)<sup>8)</sup>

**C25**

Quality and test plan

**C26**

Pressure test + 3.1 certificate/instrument<sup>8)</sup>

**C31**

Helium leak test + 3.1 certificate/instrument<sup>8)</sup>

**C32**

Ferrite measuring accuracy to DIN 32514-1 + 3.1 certificate/instrument<sup>8)</sup>

**C60**

Pressure test according to Norsok + 3.1 certificate/instrument<sup>8)</sup>

**C61**

## Overview

SITRANS LVS100 is a vibrating point level switch for material detection in bulk solids.

## Benefits

- High resistance to mechanical forces
- Sliding sleeve options for adjustable insertion length and ease of cleaning
- Rotatable enclosure for ease of installation and wiring
- Suitable for point level detection of materials starting at a bulk density of 30 g/l (1.9 lb/ft<sup>3</sup>)
- Customer desired extensions up to 4 000 mm (157.48 inch)

## Application

SITRANS LVS100 detects high, low or demand levels of dry bulk solids in bins, silos or hoppers.

SITRANS LVS100 has a compact design and can be top, side, or angle mounted. The vibrating fork design ensures the tines are kept clean. The unique design of the fork and crystal assembly eliminates false high level readings even if tines become damaged.

A signal from the electronic circuit excites a crystal in the probe causing the fork to vibrate. If the fork is covered by material, the change in vibration is detected by the electronic circuitry which causes the relay to change state after a one second delay. When the fork is free from material pressure, full vibration resumes and the relay reverts to its normal condition.

- Key Applications: dry bulk solids in bins, silos, hoppers

## Configuration

SITRANS LVS100 installation, dimensions in mm (inch)

#### SITRANS LVS100

#### Technical specifications

Mode of Operation	
Measuring principle	Vibrating point level switch
Input	
Measured variable	High, low and demand
Measuring frequency	200 Hz
Output	
Relays	DPDT relay
Relay delay	From loss of vibration: approximately 1 second From resumption of vibration: approximately 1 ... 2 s
Signal delay	Probe uncovered to covered: approximately 1 s Probe covered to uncovered: approximately 1 ... 2 s
Relay fail-safe	High or low, switch selectable
Alarm output	Relay 8 A at 250 V AC, non-inductive Relay 5 A at 30 V DC, non-inductive
Sensitivity	
	High or low, switch selectable
Rated operating conditions	
Installation conditions	
• Location	Indoor/outdoor
Ambient conditions	
• Ambient temperature	-40 ... +60 °C (-40 ... +140 °F)
• Storage temperature	-40 ... +80 °C (-40 ... +176 °F)
• Installation category	III
• Pollution degree	2
Medium conditions	
• Process temperature	-40 ... +150 °C (-40 ... +302 °F)
• Max. threaded bushing temperature	80 °C (176 °F)
• Max. enclosure surface temperature (Category 2D)	90 °C (194 °F)
• Max. extension surface temperature (Category 1D)	150 °C (302 °F)
• Pressure (vessel)	Max. 10 bar g (145 psi g) European Pressure Directive 2014/68/EU: Category 1
Minimum material density	Approx. 30 g/l (1.9 lb/ft <sup>3</sup> )

Design	
Material	Epoxy coated aluminum

### SITRANS LVS100

#### Dimensional drawings

SITRANS LVS100, dimensions in mm (inch)

#### Circuit diagrams

SITRANS LVS100 connections

#### Overview

SITRANS LVS200 is a vibrating point level switch for high, low, or demand level detection of bulk solids.

#### Benefits

- High resistance to mechanical forces
- Strong vibration resistance to high bulk material loads
- Rotatable enclosure for convenient wiring
- Suitable for low density material: standard version, 20 g/l (1.3 lb/ft<sup>3</sup>); liquid/solid interface version, 50 g/l (3 lb/ft<sup>3</sup>) and low density option min. 5 g/l (0.3 lb/ft<sup>3</sup>)
- Customer desired extensions up to 20 000 mm (787 inch)
- Optional detection of solids within liquid
- Durable short fork option with 165 mm (6.5 inch) insertion length

#### Application

The standard LVS200 detects high, low, or demand levels of dry bulk solids in bins, silos, or hoppers. The liquid/solid interface version can also detect settled solids within liquids or solids within confined spaces such as feed pipes. It is designed to ignore liquids in order to detect the interface between a solid and a liquid.

A pipe extension version is available with either the standard or liquid/solid interface electronics and fork, separated by a customer supplied 1 inch pipe.

SITRANS LVS200 has an optional 4 to 20 mA output for monitoring buildup on the fork to determine when preventative maintenance should be performed in sticky applications.

The LVS200 has a compact design and can be top, side or angle mounted. The vibrating fork design ensures the tines are kept clean. The unique design of the fork and crystal assembly eliminates false high level readings even if tines become damaged.

A signal from the electronic circuit excites a crystal in the probe causing the fork to vibrate. If the fork is covered by material, the change in vibration is detected by the electronic circuitry which causes the relay to change state after a one second delay. When the fork is free from material pressure, full vibration resumes and the relay reverts to its normal condition.

- Key Applications: dry bulk solids in bins, silos, hoppers or settled solids within liquids (interface version)

Vibrating switches

## SITRANS LVS200

### Circuit diagrams

4

SITRANS LVS200 connections

## Overview

SITRANS LVS300 is a vibrating rod point level switch for high, low, or demand level detection of bulk solids.

## Benefits

- High resistance to mechanical forces.
- Adjustable sensitivity for varied applications including build-up.
- Rotatable enclosure for convenient wiring.
- Suitable for low density material: standard version, 20 g/l (1.3 lb/ft<sup>3</sup>).
- Customer desired extensions up to 4 000 mm (157 inch).
- 160 mm (6.3 inch) insertion length.
- Flexible, customer supplied, rods to 4 meters.
- Process connections starting at 1 inch.

## Application

The standard LVS300 detects high, low, or demand levels of dry bulk solids in bins, silos, or hoppers.

A pipe extension version is available, separated by a customer supplied 1 inch pipe.

The LVS300 has a compact design and can be top, side or angle mounted. The vibrating rod design ensures the product will not be impacted by bridging of traditional forks in applications with buildup potential. A durable probe design ensures the product will withstand heavier materials without damage or bending.

A signal from the electronic circuit excites a crystal in the probe causing the rod to vibrate. If the rod is covered by material, the change in vibration is detected by the electronic circuitry which causes the output to change state after a one second delay. When the probe is free from material, full vibration resumes and the relay reverts to its normal condition.

- Key Applications: dry or bulk solids with buildup potential, in bins, silos, or hoppers, such as lime, molding sand, milk powder, flour, salt, and plastic granules.

## Overview

SITRANS LPS200 is a rotary paddle switch for point level and material detection in bulk solids.

## Benefits

- Proven paddle switch technology for bulk solids
- High integrity mechanical seal
- Universal power supply options available
- Unique friction clutch mechanism prevents damage from falling material
- Rotatable enclosure for convenient wiring
- Optional paddles for use with low density materials
- Small paddle makes for simple installation through existing process connection
- High temperature model and optional extension kit available
- Optional fail-safe configuration detects loss of rotation
- Functional Safety (SIL 2). Device suitable for use in accordance with IEC 61508 and IEC 61511

## Application

The paddle switch technology detects full, empty, or demand conditions on materials such as grain, feed, cement, plastic granulate, and wood chips. The paddle switch can handle bulk densities as low as 15.06 g/l (0.94 lb/ft<sup>3</sup>) with the optional rectangular vane or 100 g/l (6.25 lb/ft<sup>3</sup>) with the standard measuring vane.

A low revolution geared motor with slip clutch drives a rotating measuring vane which senses the presence of material at the mounted level of the LPS200. As material comes into contact with the rotating paddle, rotation stops, which changes the microswitch state. When the paddle is no longer covered by material, rotation resumes and the relay reverts to its normal condition.

The LPS200 has a rugged design for use in harsh conditions in the solids industry. The sensitivity of the paddle can be adjusted for varying material properties like buildup on the vane.

The LPS200 comes in a variety of configurations including compact, extended and cable extension. It is equipped with a standard vane which is effective in most applications, but can be configured with a hinged or rectangular vane for increased sensitivity for light materials.

- Key Applications: bulk solids such as grain, feed, cement, plastic granulate, wood chips

## Technical specifications

<b>Mode of operation</b>	
Measuring principle	Rotating point level switch
<b>Input</b>	
Measured variable	High and low and demand
<b>Output</b>	
Output signal	
• Alarm output	Microswitch 5 A at 250 V AC, non-inductive
	Microswitch SPDT contact 4 A at 30 V DC, non-inductive
• Pickup delay	Standard (1 rpm model): approx. 1.3 seconds
	Optional process applications (5 rpm model): approx. 0.26 seconds
<b>Sensitivity</b>	
	Adjustable via reset force of spring or geometry of measuring vane
<b>Rated operating conditions</b>	
Installation conditions	
• Location	Indoor/outdoor
Ambient conditions	
• Ambient temperature	-25 ... +60 °C (-13 ... +140 °F)
• Storage temperature	-40 ... +80 °C (-40 ... +176 °F)
• Installation category	III
• Pollution degree	2
Medium conditions	Bulk solids
• Temperature	
- Standard	-25 ... +80 °C (-13 ... +176 °F)
- Optional	-25 ... +600 °C (-13 ... +1 112 °F)
	Higher temperature version is available. Consult a local sales person for details. For more information, please visit <a href="http://www.automation.siemens.com/aspa_app">http://www.automation.siemens.com/aspa_app</a> .
• Pressure (vessel)	
- Standard	Max. 0.5 bar g (7.25 psi g)
- Optional	Max. 10 bar g (145 psi g)
• Minimum material density	
- Standard measuring vane	Can detect down to 100 g/l (6.25 lb/ft <sup>3</sup> )
- Optional measuring vane	Can detect down to 15.06 g/l (0.94 lb/ft <sup>3</sup> )
<b>Design</b>	
Material	
• Enclosure	Epoxy coated aluminum
• Process connection, measuring shaft and vane	Stainless steel or aluminum
Process connection	Thread NPT, BSP, and flange options
Degree of protection	IP65/Type 4/NEMA 4
Conduit entry	2 x M20 x 1.5 or 2 x ½" NPT (For FM and CSA approved versions only)
<b>Power supply</b>	
AC or DC versions	115 V AC, ± 15 %, 50 ... 60 Hz, 4 VA or 230 V AC, ± 15 %, 50 Hz, 6 VA, or 48 V AC, or 24 V AC, or 24 V DC, ± 15 %, 2.5 W
Universal voltage (DPDT replay)	24 V DC ± 15 % 50 ... 60 Hz, 22 ... 230 V AC, ± 10 %, max. 10 VA
<b>Certificates and approvals</b>	
	<ul style="list-style-type: none"> <li>• CSA/FM General Purpose</li> <li>• CE</li> <li>• CSA/FM Dust Ignition Proof</li> <li>• ATEX II 1/2 D</li> <li>• RCM</li> <li>• IECex</li> </ul>

#### Selection and ordering data

Article No.

Article No.

#### SITRANS LPS200 Rotary paddle point level switch, cable extension design

7ML5727-  
Ord. code

Level detection in solids. Top mount, with extension options to 10 m (32.80 ft).

➤ Click on the Article No. for the online configuration in the PIA Life Cycle Portal.

#### Process temperature

- Up to 80 °C (176 °F) **1**
- Up to 150 °C (302 °F) **2**
- Up to 250 °C (482 °F) **3**
- Up to 600 °C (1 112 °F)<sup>1)2)</sup> **4**
- Up to 80 °C (176 °F) basic version<sup>3)</sup> **5**

#### Power supply

- 230 V AC, 1 rev/min. **A**
- 230 V AC, 5 rev/min. **C**
- 115 V AC, 1 rev/min. **E**
- 115 V AC, 5 rev/min. **G**
- 48 V AC, 1 rev/min. **J**
- 24 V AC, 1 rev/min. **K**
- 24 V DC, 1 rev/min. **L**
- 24 V DC, 5 rev/min. **N**
- 48 V AC, 5 rev/min. **Z**
- 24 V AC, 5 rev/min. **Z**
- Universal voltage, 1 rev/min. **Z**
- Universal voltage, 1 rev/min., fail-safe **Z**
- Universal voltage, 5 rev/min. **Z**
- Universal voltage, 5 rev/min., fail-safe **Z**

#### Process connection

##### Threaded

- G 1¼" [(BSPP), EN ISO 228-1] **A**
- G 1½" [(BSPP), EN ISO 228-1] **B**
- 1¼" NPT [(Taper), ANSI/ASME B1.20.1] **C**
- 1½" NPT [(Taper), ANSI/ASME B1.20.1] **D**

##### Flanged

- DN 32 PN 6, EN 1092-1, flat face<sup>4)</sup> **E**
- DN 100 PN 6, EN 1092-1, flat face<sup>4)</sup> **F**
- DN 100 PN 16, EN 1092-1, flat face **G**
- 2" ASME 150 lb B16.5, raised face **H**
- 3" ASME 150 lb B16.5, raised face **J**
- 4" ASME 150 lb B16.5, raised face **K**

#### SITRANS LPS200 Rotary paddle point level switch, cable extension design

7ML5727-  
Ord. code

Level detection in solids. Top mount, with extension options to 10 m (32.80 ft).

#### Process pressure

- Up to 0.5 bar (7.25 psi) **1**
- Up to 5 bar (72.5 psi) **2**
- Up to 10 bar (145 psi) **3**

#### Process connection material

- Aluminum<sup>5)</sup> **1**
- Stainless steel, threads 303 (1.4305), flanges 321 (1.4541) **2**

#### Cable extension length

- Standard cable length, 2 000 mm (78.74 inch) **0**
- Add Order code Y01 and plain text: "Insertion length ... mm"
- 500 ... 1 000 mm (19.69 ... 39.37 inch) **1**
- Cable length 1 001 ... 2 000 mm (39.41 ... 78.74 inch) **2**
- Cable length 2 001 ... 3 000 mm (78.78 ... 118.11 inch) **3**
- Cable length 3 001 ... 4 000 mm (118.15 ... 157.48 inch) **4**
- Cable length 4 001 ... 5 000 mm (157.52 ... 196.85 inch) **5**
- Cable length 5 001 ... 6 000 mm (196.89 ... 236.22 inch) **6**
- Cable length 6 001 ... 7 000 mm (236.26 ... 275.59 inch) **7**
- Cable length 7 001 ... 10 000 mm (275.63 ... 393.70 inch) **8**
- Without extension<sup>12)</sup> **9**

#### Measuring vane

- Boot shaped, 35 x 106 mm (1.38 x 4.17 inch)<sup>6)</sup> **A**
- Hinged vane, 65 x 200 mm (2.56 x 7.87 inch)<sup>6)</sup> **B**
- Boot shaped, 28 x 98 mm (1.10 x 3.86 inch)<sup>7)</sup> **C**
- Rectangular, 50 x 150 mm (1.97 x 5.91 inch)<sup>7)</sup> **D**
- Rectangular, 50 x 250 mm (1.97 x 9.84 inch)<sup>7)</sup> **E**
- Rectangular, 98 x 150 mm (3.86 x 5.91 inch)<sup>7)</sup> **F**
- Rectangular, 50 x 98 mm (1.97 x 3.86 inch)<sup>7)</sup> **G**

##### Spare Parts

Replacement vane, boot shape, 35 x 106 mm (1.38 x 4.17 inch)

**7ML1830-1KH**

Hinged vane, 98 x 200 mm (3.86 x 7.87 inch)

**7ML1830-1KJ**

- 1) Available with approval options 3 and 4, up to max 0.5 bar.
- 2) Not available with process connections A, C, E.
- 3) Available with process pressure options 1 and 2 only.
- 4) Available with process temperature 1 only.
- 5) Available with process connections A ... E only, with process pressure option 1 and process temperature option 1 only.
- 6) Available with process connection options B, D, F ... L and measuring vane option A.
- 7) Available with process pressure 1 and process temperature 1 only.
- 8) Available with extension length options A ... Q only.
- 9) Available with extension length options R ... Y only.
- 10) Available with process connection options B, D, F ... L and measuring vane A, process connection material 3. Available only with extension length options P1A ... P1H only.
- 11) Only available with seal at tube end options P06 ... P09.
- 12) Add 16 mm (0.63 inch) to extension length.
- 13) Available with process connections F, G, H, J, K only.
- 14) Available with approval option 4 only.
- 15) Available with power supply options A, C, E, G, J, K, L, N, J1B, J1D, J1E, J2A, J2C only.
- 16) Available when ordered with ingress protection seal options P06 ... P09 only.
- 17) Available up to 250 °C (482 °F). This option does not automatically implement a food conform design.
- 18) Available with process pressure option 1 only.
- 19) Available up to 250 °C (482 °F).
- 20) Available with Power supply options J2A and J2C only.
- 21) Available with Approval options 1, 2, 3, 4, and 5 only. Approvals 1 and 3 with FM only.
- 22) Internal probe construction is 1.4305, add seal option P09 to prevent ingress.

**Dimensional drawings**

**Standard model: compact version**

**High temperature model: compact version**

**Measuring vanes**

**Rectangular vane options**

	A	B
	50 (1.97)	98 (3.86)
	50 (1.97)	150 (5.90)
	50 (1.97)	250 (9.84)
	98 (3.86)	150 (5.90)
	98 (3.86)	250 (9.84)

- For 35 x 106 mm boot shaped and 98 x 200 mm hinged measuring vanes, add 16 mm to extension length.
- For use with all approval options except CSA class II. See manual for more details.

**Notes**

For heavy material, only top mounting of paddle switch is recommended.  
Compact LPS200 is recommended for side mounting on bins for low or intermediate material levels.

## SITRANS LPS200

### Circuit diagrams

#### AC or DC version

#### Power supply:

##### AC version:

24 V or 48 V or 115 V or 230 V 50/60 Hz max. 4 VA  
All voltages ± 10 %<sup>1)</sup>  
Supply voltage as selected.  
External fuse: max 10 A, fast or slow, HBC, 250 V

##### DC version:

24 V DC ± 15 %<sup>1)</sup> max. 2.5 W  
External fuse: not required

<sup>1)</sup> Including ±10% of EN 61010

#### Signal output:

Micro switch, SPDT contact  
max. 250 V AC, 5 A, non inductive  
max. 30 V DC, 4 A, non inductive  
External fuse: max 10 A, fast or slow, HBC, 250 V

#### Universal voltage (DPDT relay)\*

\* See manual for universal voltage with SIL.

\*\* With option Fail safe alarm (rotation control).  
Contact open when de-energised.  
Fail safe alarm switching and timing behaviour:  
If the vane is not covered, the rotating vane shaft will send pulses at 20 second intervals.  
In case of fault, the pulses are missed.  
After 30 seconds, the alarm relay will open.

#### Signal output: delay

Sensor covered -> free  
Factory setting = 3 sec

Sensor covered -> covered  
Factory setting = 1 sec

SITRANS LPS200 connections

#### Benefits

- 2 switch outputs for high-high, high, low, and low-low level alarms or pump up/pump down control
- Integral temperature compensation
- AC or DC power supply
- Electronics provided with fail-safe function
- Threaded and sanitary fitting clamp process connections
- Polycarbonate enclosure, Type 6/NEMA 6/IP67
- Easy, two-button programming

#### Application

The measuring range for bulk solids is max. 3 m (9.8 ft) and 5 m (16.4 ft) for liquids and slurries. Unlike invasive contacting devices, there is no material buildup on the sensor.

The level switch has a rugged design, combining the transducer and electronics in one durable device. It has no moving parts and is virtually maintenance-free.

The transducer, available in ETFE or PVDF copolymer, is inert to most chemicals. This means the device can be used in the chemical, petrochemical, water, and wastewater industries. A sanitary version of the ULS200, with an industry standard flange option, is easy to remove from the application for cleaning. It thus satisfies the prerequisites for use in the food, beverage, and pharmaceutical industries. The Pointek ULS200 delivers superior performance while reducing maintenance, downtime, and equipment replacement costs.

- Key Applications: liquids, slurries, fluid materials, plugged chute detection, chemical industry

#### Design

##### Installation

The Pointek ULS200 should be mounted in an area that is within the temperature range specified and that is suitable to the enclosure rating and materials of construction. The cover should be accessible to allow programming, wiring and display viewing.

It is advisable to keep the Pointek ULS200 away from high voltage or current runs, contactors and SCR control drives.

Locate the Pointek ULS200 so that it has a clear sound path perpendicular to the material surface. The sound path should not intersect the fill path, rough walls, seams, rungs etc.

##### Mounting and Interconnection

The Pointek ULS200 is available in three thread types: 2" NPT, R 2" (BSPT), EN 10226 or PF2 and can be fitted with the optional 75 mm (3 inch) flange adapter for mating to 3" ASME, DN 65, PN 10, and JIS 10K 3B sized flanges.

Separate cables and conduit may be required to conform to standard instrumentation wiring or electrical codes.

#### Configuration

Pointek ULS200 mounting

**Level measurement**

Point level measurement

Ultrasonic non-contacting switch

**Pointek ULS200****Technical specifications****Mode of operation**

Measuring principle      Ultrasonic level switch

**Measuring range**

Measuring range in liquids      0.25 ... 5 m (0.8 ... 16.4 ft)

Measuring range in bulk solids      0.25 ... 3 m (0.8 ... 9.8 ft)

**Output**

AC Version (relay)      2 SPDT Form C contacts, rated 5 A at 250 V AC or 30 V DC, resistive load; rated 1 A at 48 V DC resistive load

DC Version (relay)      2 SPDT Form C contacts, rated 5 A at 30 V DC, resistive load; rated 1 A at 48 V DC resistive load

DC Version (transistor)      2 switches, rated max. 100 mA, 48 V DC

**Accuracy**

AC/DC version

• Resolution      3 mm (0.1 inch)

• Repeatability      0.25 % of measuring range

**Rated operation conditions**

Installation conditions

• Location      Indoors/outdoors

• Beam angle      12°

Ambient conditions

• Ambient temperature      -40 ... +60 °C (-40 ... +140 °F)

• Storage temperature      -40 ... +60 °C (-40 ... +140 °F)

• If mounted in metal threads      -20 ... +60 °C (-5 ... +140 °F)

Medium conditions

• Process pressure      0.5 bar (7.25 psi) max.

**Design**

Material      Polycarbonate with gasket

Weight      Approx. 1.5 kg (3.3 lb)

Transducer material      PVDF or ETFE copolymer

Threaded mounting      2" NPT [(Taper), ANSI/ASME B1.20.1]  
R 2" [(BSPT), EN 10226]  
or G 2" [(BSPP), EN ISO 228-1]

• Optional flange adapter      For 3" ASME, DN 65, PN 10, and JIS 10 K3B

Sanitary mounting      4" sanitary fitting clamp

**Power supply**

AC version      100 ... 230 V AC, ± 15 %, 50/60 Hz, max. 12 VA, 5 W

DC version      18 ... 30 V DC, 3 W

**Displays and controls**

Display      LCD, three digits, 9 mm (0.35 inch) high, for display of distance between sensor face and material, multi-segment graphic for operating state

Memory      EEPROM, non-volatile

Programming      2 keys

**Electronics/enclosure**      Connection: terminal block, max. 2.5 mm<sup>2</sup> (14 AWG) solid/1.5 mm<sup>2</sup> (16 AWG) stranded

Degree of protection      IP67/Type 6/NEMA 6

Cable inlet      2 x ½" NPT or 2 x PG 13.5

**Certificates and approvals**      CE, CSA <sub>US/C</sub>, FM

## Overview

After driving the market in ultrasonic level controllers for the past 40 years, Siemens has evolved its industry leading solutions to include control for 80 GHz radar sensors.

Siemens level controller portfolio provides high-accuracy open channel monitoring, flexible control for multiple-relay ultrasonics, and reliable controllers for long-range, high frequency radar.

### SITRANS LT500

#### Overview

SITRANS LT500 is a versatile, single and multi-vessel level monitor/controller for virtually any application in a wide range of industries.

#### Benefits

- Easy to use HMI display with local four-button programming, menu-driven parameters, and Wizard support for key applications.
- English, German, French, Spanish, Chinese, Italian, Portuguese, Japanese, Danish, Dutch, Swedish, Finnish, Polish, and Russian texts on the HMI.
- Removable terminal blocks for ease of wiring.
- Digital input for back-up level override from point level device.
- Communication options for HART, Modbus RTU, PROFIBUS PA, PROFIBUS DP and ProfiNet.
- Single or dual point level monitoring.
- Auto False-Echo Suppression for fixed obstruction avoidance.
- Up to 6 independent programmable relays for pump control, alarms, or remote totalization.
- Level, volume, and flow measurements in open channels, differential control, extended pump control, and alarm functions.
- Wall and panel mounting options.

#### Application

SITRANS LT500 can be used with SITRANS LR110, LR120, Probe LU240 or any level device generating a mA signal. SITRANS LT500 offers true dual point monitoring and digital communications. SITRANS LT500 is low maintenance and economical. With its advanced control functions, it can operate pumps during lower cost time periods and manage pump rosters for efficiency.

SITRANS LT500 will monitor open channel flow and features advanced relay alarming and pump control functions as well as volume conversion.

- Key Applications: wet wells, flumes/weirs, bar screen control, hoppers, chemical storage, liquid storage, crusher bins, dry solids storage

#### Design

SITRANS LT500 is available in wall or panel mounting options.

#### Technical specifications

##### Sensor input

Number of inputs	1 or 2
Terminal voltage	Max. 26 V, Min. 18 V (0 ... 22.6 mA)
Wiring	2 conductor, twisted, shielded, 0.5 ... 0.75 mm <sup>2</sup> (22 ... 18 AWG)
Max. cable length	500 m (1 640.42 ft)
Sensor input communication	<ul style="list-style-type: none"> <li>4 ... 20 mA</li> <li>HART protocol, for supported sensors: SITRANS LR110, LR120, SITRANS Probe LU240</li> </ul>
4 ... 20 mA sensor input	
• Resolution	0.025 % of full scale
• Accuracy	0.1 % of full scale
HART sensor input	Resolution and accuracy are dependent on connected sensor

##### Discrete input

Quantity	2 (1 additional available on optional HART communication card)
Switching threshold, low	0 ... 0.5 V DC
Switching threshold, high	10 ... 50 V DC
Input current	Max. 3 mA
Bias voltage	24 V

##### Analog output

Quantity	2
Range	0 ... 20 mA or 4 ... 20 mA
• Max. load	750 Ω
• Resolution	0.1 % of range
Accuracy	±20 μA
Wiring	2 conductor, twisted, shielded, 0.5 ... 0.75 mm <sup>2</sup> (22 ... 18 AWG)

##### Relay output

Quantity	Up to 6, 4 form A and 2 form C
Rating	5 A at 250 V AC, non-inductive

##### Rated operating conditions

Installation conditions	
• Location	Indoor/outdoor
• Installation category	II
• Pollution degree	4
Ambient conditions	
• Ambient temperature	-20 ... +50 °C (-4 ... +122 °F)
• Storage temperature	-20 ... +50 °C (-4 ... +122 °F)

##### Design

Weight	
• Wall mount	1.22 kg (2.68 lb)
• Panel mount	1.35 kg (2.97 lb)
Enclosure	
• Material	Polycarbonate
• Degree of protection	
- Wall mount	IP65/Type 4X/NEMA 4X
- Wall mount	IP54/Type 3/NEMA 3

##### Display and control

LCD display	60 x 40 mm (2.36 x 1.57 inch) LCD, 240 x 160 pixels resolution
Menu navigation	4 push button keys

##### Memory card

	8 GB Industrial micro SD
--	--------------------------

##### Power supply

AC version	100 ... 230 V AC, ±15 %, 50/60 Hz, 36 VA (17 W)
DC version	12 ... 30 V DC (20 W)

##### Certificates and approvals

	<ul style="list-style-type: none"> <li>CE, RCM</li> <li>FM, cCSA<sub>US</sub>, cUL<sub>US</sub></li> </ul>

### SITRANS LT500

#### Circuit diagrams

**Note:**

1. Use 2-core copper wire, twisted, with shield, for expansion up to 365 m (1 200 ft). Route cable in grounded metal conduit, separate from other cables.
2. Verify that all system components are installed in accordance with instructions.
3. Connect all cable shields to the SITRANS LT500 shield connections. Avoid differential ground potentials by not connecting cable shields to ground (earth) anywhere else.
4. Keep exposed conductors on shielded cables as short as possible to reduce noise on the line caused by stray transmissions and noise pickup.

SITRANS LT500 connections

### Overview

The SITRANS LUT400 series controllers are compact, single point, long-range ultrasonic controllers for continuous level or volume measurement of liquids, slurries, solids, and high accuracy monitoring of open channel flow.

### Benefits

- Small 1/2 DIN enclosure [144 h x 144 d x 146 w mm (5.7 x 5.7 x 5.75 inch)] with standard universal mounting bracket for wall, pipe, and DIN rail, plus an optional panel mount
- Easy to use HMI display with local four-button programming, menu-driven parameters, and Wizard support for key applications
- English, German, French, Spanish, Chinese, Italian, Portuguese, and Russian texts on the HMI.
- Level, Volume, OCM Flow monitoring
- Three relays combined with a suite of pump, alarm, and relay control features
- HART Communications
- EDDs for SIMATIC PDM, AMS Device Manager, and Field Communicator 375/475, plus DTMs for FDTs (Field Device Tools)
- Web browser for local programming from an intuitive web-based interface
- Two discrete inputs for backup level override and pump interlock functions
- Echo profile and trend views from the local display
- Patented digital receiver for improved performance in electrically noisy applications (close proximity to VSDs)
- Real time clock with daylight savings time, supporting an integrated datalogger and energy saving algorithms for minimizing pump operation during high cost energy periods
- Removable terminal blocks for ease of wiring
- MCERTS Certified for Open Channel Flow

### Application

The SITRANS LUT400 comes in three different models, depending on the application, level of performance and functionality required:

- SITRANS LUT420 Level Controller: Level or volume measurement of liquids, slurries, and solids, as well as basic pump control functions, and basic data logging capability
- SITRANS LUT430 Level, Pump and Flow Controller: Includes all features of the LUT420 plus a full suite of advanced pump control and alarm functionality, open channel flow monitoring, and basic flow data logging capability
- SITRANS LUT440 High Accuracy OCM: Our most featured, highest accuracy model. Includes all features of the LUT430, plus the industry's best accuracy ( $\pm 1$  mm within 3 m), full suite of advanced control functionality, and enhanced flow logging capability
- Key Applications: wet wells, reservoirs, flumes/weirs, chemical storage, liquid storage, hoppers, crusher bins, dry solids storage

### SITRANS LUT400 series

#### Technical specifications

<b>Mode of Operation</b>	Ultrasonic level, volume, pump, and open channel flow
Measuring range	0.3 ... 60 m (1 ... 196 ft), transducer dependent
<b>Input</b>	
Discrete	0 ... 50 V DC switching level Logical 0 ≤ 10 V DC Logical 1 = 10 ... 50 V DC Max. 3 mA
<b>Output</b>	
Transducer frequency	10 ... 52 kHz
Ultrasonic transducer	Compatible transducers: All Echo-Max and ST-H series transducers
Relays	<ul style="list-style-type: none"> <li>• 1 SPDT Form C, NO or NC relay, rated 1A at 250 V AC, non-inductive and 3A at 30 V DC</li> <li>• 2 SPST Form A, NO relays, rated 5A at 250 V AC, non-inductive and 3 A at 30 V DC</li> </ul>
mA output	4 ... 20 mA, isolated
Max. load	600 Ω max. in ACTIVE mode, 750 Ω max. in PASSIVE mode
Resolution	0.1 % of range
<b>Accuracy</b>	
Error in measurement	<ul style="list-style-type: none"> <li>• Standard operation: ± 1 mm (0.04 inch) plus 0.17 % of measured distance</li> <li>• High accuracy OCM: ± 1 mm (0.04 inch), within 3 m (9.84 ft) range</li> </ul>
Resolution	<ul style="list-style-type: none"> <li>• Standard operation: 0.1 % of range or 2 mm (0.08 inch), whichever is greater</li> <li>• High accuracy OCM: 0.6 mm (0.02 inch), within 3 m (9.84 ft) range</li> </ul>
Temperature compensation	<ul style="list-style-type: none"> <li>• -40 ... +150 °C (-40 ... +300 °F)</li> <li>• Integral temperature sensor in transducer</li> <li>• External TS-3 temperature sensor (optional)</li> <li>• Programmable fixed temperature values</li> </ul>
<b>Rated operating conditions</b>	
Installation conditions	
• Location	Indoor/outdoor
• Installation category	II
• Pollution degree	4
Ambient conditions	
• Ambient temperature (enclosure)	-20 ... +50 °C (-4 ... +122 °F)
• Storage temperature	-20 ... +50 °C (-4 ... +122 °F)

<b>Design</b>	
Weight	
• Enclosure with display lid	1.3 kg (2.87 lb)
• Enclosure with blank lid	1.2 kg (2.65 lb)
Material (enclosure)	Polycarbonate
Degree of protection	
• Enclosure with display or blank lid	IP65/Type 4X/NEMA 4X
• Enclosure with blank lid and knock-out removed	IP20
Remote display lid	IP65/Type 3/NEMA 3
<b>Cable</b>	
Transducer and mA output signal	<ul style="list-style-type: none"> <li>• Transducer, mA output: 2 copper conductors, twisted, with foil shield/drain wire, 300 V 0.5 ... 0.75 mm<sup>2</sup> (22 ... 18 AWG)</li> <li>• Relay/power to be copper conductors per local requirements to meet 250 V 5 A contact rating</li> </ul>
Max. separation between transducer and transceiver	365 m (1 200 ft)
<b>Displays and controls</b>	60 x 40 mm (2.36 x 1.57 inch) removable LCD, 240 x 160 pixels resolution, operational up to 5 m from enclosure base
Programming	
• Primary	4 Local push buttons
• Secondary	<ul style="list-style-type: none"> <li>• PC running SIMATIC PDM</li> <li>• PC running Emerson AMS Device Manager</li> <li>• PC running a web browser</li> <li>• PC running a Field Device Tool (FDT)</li> <li>• Field Communicator 375/475 (FC375/FC475)</li> </ul>
Memory	<ul style="list-style-type: none"> <li>• 512 kB flash EPROM</li> <li>• 1.5 MB flash for data logging</li> </ul>
<b>Power supply</b>	
AC version	100 ... 230 V AC ± 15 %, 50/60 Hz, 36 VA Fuse: 5 x 20 mm, Slow Blow, 0.25 A, 250 V
DC version	10 ... 32 V DC, 10 W Fuse: 5 x 20 mm, Slow Blow, 1.6 A, 125 V
<b>Certificates and approvals</b>	
General	CSA <sub>US/C</sub> , CE, FM, UL listed, RCM, EAC, KCC, MCERTS certified for Open Channel Flow
Hazardous	
• Non-incendive (Canada)	CSA Class I, Div. 2, Groups A, B, C, D; Class II, Div. 2, Groups F, G; Class III
• Shipping	Lloyd's Register, ABS
<b>Communication</b>	HART 7.0, USB

## Level measurement

### Continuous level measurement Controllers

#### SITRANS LUT400 series

#### Selection and ordering data

##### SITRANS LUT420 and LUT430

Continuous, non-contact, 60 m (197 ft) range. Monitors level, volume, and volume flow in liquids, slurries, and solids. With high accuracy volume flow and built in data logging.

➤ Click on the Article No. for the online configuration in the PIA Life Cycle Portal.

##### Model

SITRANS LUT420 - Level controller

SITRANS LUT430 - Level, Pump & Flow controller

##### Enclosure display options

With display

With remote panel mount display  
[Includes panel mount cable extension,  
2.5 m (8.2 ft)]

No display (blank lid provided)

Note: Enclosure includes back-plate for wall and pipe mounting, and an integrated clip for DIN-rail mounting. DIN-rail mounting for standard TS35 x 7.5 and TS35 x 15 mm DIN-rail to IEC 60715, EN 60715

##### Input voltage

100 ... 230 V AC ± 15 %

10 ... 32 V DC

##### Cable inlet

3 cable inlets, cable glands not supplied

3 cable inlets, 3 M20 plastic cable glands supplied

##### Number of measurement points

Single point system (includes one transducer input, one mA output, and one external temperature sensor input)

##### Communications and I/O

HART, 2 discrete inputs, 3 relays

##### Approvals

General purpose CE, FM, CSA<sub>US/C</sub>, UL, RCM, EAC, KCC

Hazardous locations CSA Class I, II, III, Div. 2, Groups A, B, C, D, F, G

##### Further designs

Please add **"-Z"** to Article No. and specify Order code(s).

Manufacturer's test certificate M to DIN 55350, Part 18 and to ISO 9000

Stainless steel tag [69 x 50 mm (2.71 x 1.97 inch)]: Measuring-point number/identification (max. 27 characters) specify in plain text

Namur NE43 failsafe setting - device preset to failsafe < 3.6 mA

##### Operating Instructions

#### Overview

MultiRanger 200 HMI is a versatile short to medium-range ultrasonic single and multi-vessel level monitor/controller for virtually any application in a wide range of industries.

#### Benefits

- Easy to use HMI display with local four-button programming, menu-driven parameters, and Wizard support for key applications
- English, German, French, Spanish, Chinese, Italian, Portuguese, and Russian texts on the HMI
- Removable terminal blocks for ease of wiring
- Digital input for back-up level override from point level device
- Communication using built-in Modbus RTU via RS 485 and SIMATIC PDM configuration software
- Compatible with SmartLinx system: PROFIBUS DP, PROFINET (cyclic access of process values only), DeviceNet, Modbus TCP/IP, and EtherNet/IP
- Single or dual point level monitoring
- Auto False-Echo Suppression for fixed obstruction avoidance
- Differential amplifier transceiver for common mode noise reduction and improved signal-to-noise ratio
- Level, volume, and flow measurements in open channels, differential control, extended pump control, and alarm functions
- Wall and panel mounting options

#### Application

MultiRanger 200 HMI can be used with various materials, including, water, municipal waste, acids, woodchips, or on materials with high angles of repose. MultiRanger 200 HMI offers true dual point monitoring, digital communications with built-in Modbus RTU via RS 485, as well as compatibility with SIMATIC PDM, allowing PC configuration and set-up. MultiRanger 200 HMI features Sonic Intelligence advanced echo-processing software for increased reading reliability.

MultiRanger 200 HMI will monitor open channel flow and features more advanced relay alarming and pump control functions as well as volume conversion.

It is compatible with chemical-resistant EchoMax transducers that are approved for hostile environments.

- Key Applications: wet wells, flumes/weirs, bar screen control, hoppers, chemical storage, liquid storage, crusher bins, dry solids storage

#### Design

The MultiRanger 200 HMI is available in wall or panel mounting options.

## Level measurement

### Continuous level measurement Controllers

#### MultiRanger 200 HMI

#### Technical specifications

Mode of Operation	
Measuring principle	Ultrasonic level measurement
Measuring range	0.3 ... 15 m (1 ... 50 ft)
Measuring points	1 or 2
Input	
Analog	0 ... 20 mA or 4 ... 20 mA, from alternate device, scalable
Discrete	10 ... 50 V DC switching level Logical 0 ≤ 0.5 V DC Logical 1 = 10 ... 50 V DC max. 3 mA
Output	
EchoMax transducer	44 kHz
Ultrasonic transducer	Compatible transducers: ST-H and EchoMax series XPS-10, XPS-15/15F, and XRS-5
Relays	Rating 5 A at 250 V AC, non-inductive
mA output	0 ... 20 mA or 4 ... 20 mA
• Max. load	750 Ω, isolated
• Resolution	0.1 % of range
Accuracy	
Error in measurement	0.25 % of range or 6 mm (0.24 inch), whichever is greater
Resolution	0.1 % of measuring range <sup>1)</sup> or 2 mm (0.08 inch), whichever is greater
Temperature compensation	<ul style="list-style-type: none"> <li>-50 ... +150 °C (-58 ... +302 °F)</li> <li>Integral temperature sensor</li> <li>External TS-3 temperature sensor (optional)</li> <li>Programmable fixed temperature values</li> </ul>
Rated operating conditions	
Installation conditions	
• Location	Indoor/outdoor
• Installation category	II
• Pollution degree	4
Ambient conditions	
• Ambient temperature (housing)	-20 ... +50 °C (-4 ... +122 °F)
• Storage temperature	-20 ... +50 °C (-4 ... +122 °F)

Mode of Operation	
Design	
Weight	
• Wall mount	1.22 kg (2.68 lb)
• Panel mount	1.35 kg (2.97 lb)
Material (enclosure)	Polycarbonate
Degree of protection (enclosure)	
• Wall mount	IP65/Type 4X/NEMA 4X
• Panel mount	IP54/Type 3/NEMA 3
Electrical connection	
• Transducer and mA output signal	2-core copper conductor, twisted, shielded, 0.5 ... 0.75 mm <sup>2</sup> (22 ... 18 AWG), Belden 8760 or equivalent is acceptable
• Max. separation between transducer and transceiver	365 m (1 200 ft)
Displays and controls	
	60 x 40 mm (2.36 x 1.57 inch) LCD 240 x 160 pixels resolution
Power supply	
AC version	100 ... 230 V AC ± 15 %, 50/60 Hz, 36 VA (17 W)
DC version	12 ... 30 V DC (20 W)
Certificates and approvals	
	<ul style="list-style-type: none"> <li>CE, RCM, EAC, KCC<sup>2)</sup></li> <li>FM, CSA<sub>US/C</sub>, UL</li> <li>CSA Class I, Div. 2, Groups A, B, C, and D, Class II, Div. 2, Groups F and G, Class III (wall mount only)</li> </ul>
Communication	
	<ul style="list-style-type: none"> <li>RS 232 with Modbus RTU or ASCII via RJ-11 connector</li> <li>RS 485 with Modbus RTU or ASCII via terminal strips</li> <li>Optional: SmartLinX cards for               <ul style="list-style-type: none"> <li>PROFIBUS DP-V1, PROFINET (cyclic access of process values only)</li> <li>DeviceNet, Modbus TCP/IP, EtherNet/IP</li> </ul> </li> </ul>

Continuous level measurement  
Controllers

### MultiRanger 100/200

#### Overview

MultiRanger is a versatile short to medium-range ultrasonic single and multi-vessel level monitor/controller for virtually any application in a wide range of industries.

#### Benefits

- Digital input for back-up level override from point level device
- Communication using built-in Modbus RTU via RS 485
- Compatible with SmartLinx communication options or SIMATIC PDM via RS 485
- Single or dual point level monitoring
- Auto False-Echo Suppression for fixed obstruction avoidance
- Differential amplifier transceiver for common mode noise reduction and improved signal-to-noise ratio
- MultiRanger 100: level measurements, simple pump control, and level alarm functions
- MultiRanger 200: level, volume, and flow measurements in open channels, differential control, extended pump control, and alarm functions
- Wall and panel mounting options

#### Application

MultiRanger can be used on different materials, including fuel oil, municipal waste, acids, woodchips, or on materials with high angles of repose. MultiRanger offers true dual point monitoring, digital communications with built-in Modbus RTU via RS 485, as well as compatibility with SIMATIC PDM, allowing PC configuration and setup. MultiRanger features Sonic Intelligence advanced echo-processing software for increased reading reliability.

MultiRanger 100 offers cost-effective level alarming, as well as on/off and alternating pump control. MultiRanger 200 will monitor open channel flow and features more advanced relay alarming and pump control functions as well as volume conversion.

It is compatible with chemical-resistant EchoMax transducers that can be used in hostile environments at temperatures as high as 145 °C (293 °F).

- Key Applications: wet wells, flumes/weirs, bar screen control, hoppers, chemical storage, liquid storage, crusher bins, dry solids storage

#### Design

The MultiRanger is available in wall or panel mounting options.

#### Technical specifications

Mode of Operation	
Measuring principle	Ultrasonic level measurement
Measuring range	0.3 ... 15 m (1 ... 50 ft)
Measuring points	1 or 2
Input	
Analog (MultiRanger 200 only)	0 ... 20 mA or 4 ... 20 mA, from alternate device, scalable
Discrete	10 ... 50 V DC switching level Logical 0 ≤ 0.5 V DC Logical 1 = 10 ... 50 V DC Max. 3 mA
Output	
EchoMax transducer	44 kHz
Ultrasonic transducer	Compatible transducers: ST-H and EchoMax series XPS-10, XPS 15/15F, and XRS-5
Relays	Rating 5 A at 250 V AC, non-inductive 1 SPST Form A

### HydroRanger 200 HMI

#### Overview

HydroRanger 200 HMI is an ultrasonic level controller for up to six pumps and provides control, differential control, and open channel flow monitoring.

#### Benefits

- Easy to use HMI display with local four-button programming, menu-driven parameters, and Wizard support for key applications
- English, German, French, Spanish, Chinese, Italian, Portuguese, and Russian texts on the HMI
- Removable terminal blocks for ease of wiring
- Monitors wet wells, weirs, and flumes
- Communication using built-in Modbus RTU via RS 485 and SIMATIC PDM configuration software
- Compatible with SmartLinx system: PROFIBUS DP, PROFINET (cyclic access of process values only), DeviceNet, Modbus TCP/IP, and EtherNet/IP
- Single or dual point level monitoring
- 6 relays
- Auto False-Echo Suppression for fixed obstruction avoidance
- Anti-grease ring/tide mark buildup
- Differential amplifier transceiver for common mode noise rejection and improved signal-to-noise ratio
- Wall and panel mounting options

#### Application

For water authorities, municipal water, and wastewater plants, HydroRanger 200 HMI is an economical, low-maintenance solution delivering control efficiency and productivity needed to meet today's exacting standards. It offers single point monitoring with all models, and optional dual-point monitoring with 6 relay model. As well, it has digital communications with built-in Modbus RTU via RS 485.

The standard 6 relay HydroRanger 200 HMI will monitor open channel flow and features advanced relay alarming and pump control functions as well as volume conversion. It is compatible with SIMATIC PDM, allowing for PC configuration and set-up. Sonic Intelligence advanced echo-processing software provides increased reading reliability.

HydroRanger 200 HMI uses proven continuous ultrasonic echo ranging technology to monitor water and wastewater of any consistency up to 15 m (50 ft) in depth. Achievable resolution is 0.1 % with accuracy to 0.25 % of range. Unlike contacting devices, HydroRanger 200 HMI is immune to problems caused by suspended solids, harsh corrosives, grease or silt in the effluent, reducing downtime.

- Key Applications: wet wells, flumes/weirs, bar screen control

### HydroRanger 200

#### Overview

HydroRanger 200 is an ultrasonic level controller for up to six pumps and provides control, differential control, and open channel flow monitoring.

#### Benefits

- Monitors wet wells, weirs and flumes
- Digital communications with built-in Modbus RTU via RS 485
- Compatible with SmartLinx communication options or SIMATIC PDM via RS 485
- Single or dual point level monitoring
- 6 relay (standard), 1 or 3 relay (optional)
- Auto False-Echo Suppression for fixed obstruction avoidance
- Anti-grease ring/tide mark buildup
- Differential amplifier transceiver for common mode noise rejection and improved signal-to-noise ratio
- Wall and panel mounting options

#### Application

For water authorities, municipal water, and wastewater plants, HydroRanger 200 is an economical, low-maintenance solution delivering control efficiency and productivity needed to meet today's exacting standards. It offers single point monitoring with all models, and optional dual-point monitoring with 6 relay model. As well, it has digital communications with built-in Modbus RTU via RS 485.

The standard 6 relay HydroRanger 200 will monitor open channel flow and features more advanced relay alarming and pump control functions as well as volume conversion. It is compatible with SIMATIC PDM, allowing for PC configuration and setup. Sonic Intelligence advanced echo-processing software provides increased reading reliability. The optional 1 or 3 relay models provide accurate level measurement functions only; these two models do not provide open channel flow, differential level measurement or volume conversion functions.

HydroRanger 200 uses proven continuous ultrasonic echo ranging technology to monitor water and wastewater of any consistency up to 15 m (50 ft) in depth. Achievable resolution is 0.1 % with accuracy to 0.25 % of range. Unlike contacting devices, HydroRanger 200 is immune to problems caused by suspended solids, harsh corrosives, grease or silt in the effluent, reducing downtime.

- Key Applications: wet wells, flumes/weirs, bar screen control

## Level measurement

Continuous level measurement

Ultrasonic

### Introduction

#### Overview

##### Introduction

Ultrasonic measurement is based on the speed of sound. Sound can be used as a measurement tool because there is a measurable time lapse between sound generation and the "hearing" of the sound. This time lapse is then converted into usable information. Ultrasonic sensing equipment generates a sound above 20 000 Hz and then interprets the time lapse of the returned echo. The transducer creates the sound and senses the echo and then a transceiver interprets the sound and converts it into information.

Siemens ultrasonic units include Sonic Intelligence, a signal processing technology. Using unique algorithms, Sonic Intelligence differentiates between true echoes from the material and false echoes from obstructions or electrical noise, providing intelligent processing of echo profiles.

##### Typical System

Ultrasonic level measurement requires two components: one to generate the sound and catch the echo (transducer) and one to interpret the data and derive a measurement (transceiver). Even though some ultrasonic instruments combine the components in one unit, the individual functionality remains distinct. The measurement output is communicated to the unit, PLCs or PCs for process control.

##### Principle of Operation

A piezoelectric crystal inside the transducer converts an electrical signal into sound energy, firing a burst into the air which travels to the target and then is reflected back to the transducer. The transducer then acts as a receiving device and converts the sonic energy back into an electrical signal contained in the transceiver. An electronic signal processor analyzes the return echo and calculates the distance between the transducer and the target. The time lapse between firing the sound burst and receiving the return echo is directly proportional to the distance between the transducer and the material in the vessel. This basic principle lies at the heart of the ultrasonic measurement technology and is illustrated in the equation:

Distance = (Velocity of Sound x Time)/2.

#### Mode of operation

##### Common Terms

###### Attenuation

Denotes a decrease in signal magnitude in transmission from one point to another. Attenuation may be expressed as a scalar ratio of the input magnitude to the output magnitude or in decibels.

###### Beam angle

The diameter of a conical boundary centered around the axis of transmission when the power (radiating perpendicular to the transducer face on the axis of transmission) is reduced by half (-3 dB).

###### Blanking distance

Specified zone extending downward from the transducer face in which received echoes are ignored by the transceiver. Blanking distance ignores echoes from ringing.

###### Echo confidence

The recognition of the validity of the echo as material level. A measure of echo reliability.

###### Ringing

The inherent nature of the transducer to continue vibrating after the transmit pulse has ceased; the decay of the transmit pulse.

###### Transducer/Transceiver

A transducer provides the initial ultrasonic pulse and receives its echo. An ultrasonic transducer amplifies the sound wave created by the piezoelectric crystal and transmits that sound wave to the face of the transducer while at the same time dampening the sound wave from the other sides of the crystal.

Transceivers analyze the echo from the transducer to determine the required measurement.

Ultrasonic transmitters

### SITRANS LU150

#### Overview

SITRANS LU150 is a short-range integrated ultrasonic level transmitter. This general purpose, 2-wire, 4 to 20 mA loop powered transmitter is ideal for liquids, slurries, and bulk materials in open or closed vessels to 5 m (16.4 ft).

#### Benefits

- Easy to install, program, and maintain
- Accurate and reliable
- Sanitary models available
- Patented Sonic Intelligence echo processing
- Integral temperature compensation

#### Application

The transducer is available in PVDF copolymer, making the device suitable for use in a wide variety of applications.

SITRANS LU150 is easy to install and maintain, and can be quickly removed for cleaning as required by the food, beverage and pharmaceutical industries.

The reliability of the level data is based on the Sonic Intelligence echo processing algorithms. A filter discriminates between the true echo and false echoes from acoustic or electrical noises and agitator blades in motion. The ultrasonic pulse propagation time to the material and back is temperature-compensated and converted into distance for display, analog output.

- Key Applications: chemical storage vessels, filter beds, mud pits, liquid storage vessels, food applications

#### Configuration

### SITRANS Probe LU

#### Overview

SITRANS Probe LU is a 2-wire loop powered ultrasonic transmitter for level, volume and flow monitoring of liquids in open channels, storage vessels, and simple process vessels.

#### Benefits

- Continuous level measurement up to 12 m (40 ft) range
- Easy installation and simple startup
- Programming using infrared Intrinsically Safe handheld programmer, SIMATIC PDM or HART Communicator
- Communication using HART or PROFIBUS PA
- ETFE or PVDF transducers for chemical compatibility
- Sonic Intelligence signal processing
- Auto False-Echo Suppression for fixed obstruction avoidance
- Level to volume or level to flow conversion

#### Application

The SITRANS Probe LU is ideal for level monitoring in the water and wastewater industry, chemical storage vessels, and small bulk hoppers.

The range of SITRANS Probe LU is 6 or 12 m (20 or 40 ft). Using Sonic Intelligence, Auto False Echo Suppression for fixed obstruction avoidance, and accuracy of 0.15 % of range or 6 mm (0.25 inch), the Probe LU provides unmatched reliability.

The Probe LU offers two communications options: HART or PROFIBUS PA (Profile version 3.0, Class B).

The transducer on the Probe LU is available as ETFE or PVDF to suit the chemical conditions of your application. As well, for applications with varying material and process temperatures, the Probe LU incorporates an internal temperature sensor to compensate for temperature changes.

- Key Applications: chemical storage vessels, filter beds, liquid storage vessels

#### Configuration

SITRANS Probe LU mounting

### SITRANS Probe LU

#### Circuit diagrams

SITRANS Probe LU connections

### Overview

SITRANS Probe LU240 ultrasonic level transmitter, ideal for level, volume, and volume flow measurements. It works with liquids, slurries, and bulk materials up to 12 m (40 ft).

### Benefits

- Continuous level measurement up to 12 m (40 ft) range
- Easy installation and simple startup
- Programming using 4-button HMI or SIMATIC PDM
- Communication using HART
- ETFE or PVDF transducers for chemical compatibility
- Process Intelligence signal processing
- Auto False Echo Suppression for fixed obstruction avoidance
- Low power and current startup

### Application

SITRANS Probe LU240 is ideal for level monitoring in the water and wastewater industry, chemical storage vessels, and small bulk hoppers.

The range of SITRANS Probe LU240 is 3, 6, or 12 m (10, 20, or 40 ft). Probe LU240 provides unmatched reliability, using Process Intelligence, Auto False Echo Suppression for fixed obstruction avoidance, and accuracy of 0.15 % of range or 6 mm (0.25 inch) (on 6 m and 12 m models only).

SITRANS Probe LU240 offers HART communication on certain models and mA output on all models.

The transducer on the Probe LU240 is available as ETFE or PVDF to suit the chemical conditions of your application. As well, for applications with varying material and process temperatures, Probe LU240 incorporates an internal temperature sensor to compensate for temperature changes.

- Key Applications: chemical storage vessels, filter beds, liquid storage vessels

## Overview

The Probe is a short-range integrated ultrasonic level transmitter, ideal for liquids and slurries in open or closed vessels.

## Benefits

- Easy to install, program, and maintain
- Accurate and reliable
- Sanitary models available
- Sonic Intelligence echo processing
- Integral temperature compensation

## Application

The transducer is available in PVDF copolymer, making the device suitable for use in a wide variety of applications. The Probe is easy to install and maintain, and can be quickly removed for cleaning as required by the food, beverage and pharmaceutical industries.

The reliability of the level data is based on the Sonic Intelligence echo processing algorithms. A filter discriminates between the true echo and false echoes from acoustic or electrical noises and agitator blades in motion. The ultrasonic pulse propagation time to the material and back is temperature-compensated and converted into distance for display, analog output and relay actuation.

- Key Applications: chemical storage vessels, filter beds, mud pits, liquid storage vessels, food applications

Ultrasonic transducers

### Overview

#### Ultrasonic Transducers

Ultrasonic measuring systems are the cost-effective choice for monitoring and control in short- to long-range applications for liquids, slurries, and solids in a wide range of industries. Transducers are impervious to dust, moisture, corrosion, vibration, flooding, and extreme temperature. They are easy to install and virtually maintenance-free. Choose from a wide selection of models designed for short or long range applications on liquids or solids.

### Technical specifications

<sup>1)</sup> Max range is rated for measurement of liquids, recommended range for solids is 50 % of maximum. Application conditions such as extreme dust or angle of repose may reduce the usable maximum range. Consult a local sales person for more details.

#### Overview

ST-H transducers use ultrasonic technology to measure level in chemical storage and liquid tanks.

#### Benefits

- Can be mounted on a narrow standpipe
- Immune to corrosive and harsh environments
- Integral temperature sensor

#### Application

The narrow design of the ST-H allows the transducer to be mounted on a narrow standpipe. When mounted correctly, it is completely protected from the process and can even be used in harsh, corrosive environments.

During operation, the ultrasonic transducer emits acoustic pulses in a narrow beam perpendicular to the transducer face. The level transceiver measures the propagation time between pulse emission and reception of the echo to calculate the distance from the transducer to the material. Variations in sound velocity due to changes in temperature within the permissible range are automatically compensated by the integral temperature sensor.

- Key Applications: chemical storage, liquid tanks

#### Technical specifications

<b>Mode of operation</b>	
Measuring principle	Ultrasonic transducer
<b>Input</b>

## Level measurement

Continuous level measurement  
Ultrasonic transducers

### EchoMax XRS-5

#### Overview

EchoMax XRS-5 ultrasonic transducer provides reliable, continuous level monitoring of liquids and slurries in narrow lift stations/wet wells, flumes, weirs and filter beds using a beam angle of just 10° and a CSM rubber face.

#### Benefits

- Narrow beam angle of only 10°
- Chemically resistant PVDF copolymer enclosure and CSM rubber face
- Measuring range: 8 m (26 ft) for measurement of liquids and slurries
- Fully submersible: IP68 degree of protection
- Easy installation with 1" NPT or R 1" BSPT connection

#### Application

The XRS-5 is non-contacting with a measuring range from 0.3 to 8 m (1 to 26 ft). Advanced echo processing ensures reliable data even in conditions with obstructions, turbulence, and foam.

The hermetically sealed CSM rubber face and the PVDF copolymer enclosure are designed for maximum resistance to methane, salt water, caustics, and harsh chemicals common to wastewater installations. With an IP68 degree of protection, this rugged sensor is fully submersible in the event of flood conditions. Use a submergence shield if full submergence is possible in the application. A submergence shield will maintain a high level reading output during submerged conditions.

The low-cost XRS-5 transducer is compatible with a full range of Siemens controllers, from a basic system for high/low alarm or simple pump control, up to advanced control systems with communications, telemetry and SCADA integration capabilities.

- Key Applications: wet wells, flumes, weirs, filter beds

## Level measurement

Continuous level measurement  
Ultrasonic transducers

### EchoMax XPS

#### Overview

EchoMax XPS transducers use ultrasonic technology to measure level in a wide range of liquids and solids.

#### Benefits

- Integral temperature compensation
- Low ringing effect reduces blanking distance
- Optional foam facing for dusty applications
- Self-cleaning and low-maintenance
- Chemically resistant
- Hermetically sealed

#### Application

XPS transducers can be fully immersed, are resistant to steam and corrosive chemicals, and can be installed without flanges.

The XPS series offers versions for various measuring ranges up to 30 m (100 ft) and up to a max. temperature of 95 °C (203 °F).

During operation, the EchoMax transducers emit acoustic pulses in a narrow beam. The level monitor measures the propagation time between pulse emission and its reflection (echo) to calculate the distance.

#### Technical specifications

Input	XPS-10	XPS-15 (standard and F models)	XPS-30
Measuring range <sup>1)</sup>	0.3 ... 10 m (1 ... 33 ft)	<u>Standard:</u> 0.3 ... 15 m (1 ... 50 ft) <u>XPS-15F:</u> 0.45 ... 15 m (1.5 ... 50 ft)	0.6 ... 30 m (2 ... 100 ft)

## Circuit diagrams

### Direct connection

### Coaxial connection

### 3 terminal direct\*

### 3 terminal extension\*

\* For SITRANS LUT400, MultiRanger 100/200, HydroRanger 200

### Mounting

Make particularly sure that the radiating face of the transducer is protected from damage. Mount the transducer so that it is above the maximum material level by at least the blanking value. On liquid applications, the transducer must be mounted so that the axis of transmission is perpendicular to the liquid surface. On solids applications, an Easy Aimer should be used to facilitate aiming the transducer. Consider the optional temperature sensor when mounting the transducer.

### Interconnection

Do not route cable openly or near high voltage or current runs, contactors and SCR control drives. For optimum isolation against electrical noise, run cable separately in a grounded metal conduit. Seal all thread connections to prevent ingress of moisture.

XPS ultrasonic transducer connections

## Level measurement

Continuous level measurement  
Accessories for level sensors

### EA aiming devices

#### Application

##### EA 304 aiming device

The Easy Aimer 304 flange is a stainless steel aiming device for alignment of Siemens level sensors used for level measurement of bulk solids.

The sensor must be mounted aimed towards the low level draw point in the silo. The sensor can be rotated through 360° and angled at 0 to 27° off vertical. It must be mounted using an access plate with welded studs or a flange in order to isolate the mounting holes from the pressurized environment. When installed properly, the EA 304 aiming device is capable of withstanding pressures up to 0.5 bar (Europe) or 15 psi (North America). It can even be used in corrosive and aggressive environments.

##### EA 2 aiming device

The Easy Aimer 2 flange is a cast aluminum aiming device for alignment of Siemens level sensors.

The flange has graduated adjustments and an adjustable insertion length. When used for applications with bulk solids, the sensor is mounted so that it is aimed towards the lower level draw point in the silo. The sensor can be rotated through 360° and angled at 0 to 20° off vertical. It must be mounted using an access plate with welded studs or a flange in order to isolate the mounting holes from the pressurized environment. When installed properly, the EA 2 aiming device is capable of withstanding pressures up to 0.5 bar (Europe) or 15 psi (North America). It can even be used in corrosive and aggressive environments.

### FMS mounting brackets

#### Application

Siemens mounting brackets permit simple, fast installation of ultrasonic transducers. These rugged, high quality mounting brackets are constructed of 304 (1.4301) stainless steel and are suitable for use indoors and outdoors. They adjust to fit almost any application, saving you the time and expense of building custom brackets. Each kit includes all mounting parts.

#### **FMS-200** **universal box bracket system**

Mounting of units with 1 inch or 2 inch threaded connection.

Distance from sensor to wall or beam: 20 ... 31 cm (8 ... 12 inch).

The unique box design also acts as a sun shield for transducers with 1 inch threaded connections.

#### **FMS-210** **wall mounting set**

Mounting of transducers with 1 inch threaded connection.

Distance from transducer to wall or beam:  
12 ... 48 cm (5 ... 19 inch).

#### **FMS-220** **extended wall mounting set**

Mounting of transducers with 1 inch threaded connection.

Distance from transducer to wall or beam:  
32 ... 98 cm (13 ... 39 inch).

#### **FMS-310** **floor mounting set**

Mounting of transducers with 1 inch threaded connection.

Distance from transducer to floor: 20 ... 48 cm (8 ... 19 inch).

Distance from mounting support: 5 ... 57 cm (2 ... 22 inch).

#### **FMS-320** **extended floor mounting set**

Mounting of transducers with 1 inch threaded connection.

Distance from transducer to floor: 20 ... 48 cm (8 ... 19 inch).

Distance from mounting support: 41 ... 108 cm (16 ... 43 inch).

#### **FMS-350** **floor mounting set, bridge**

Mounting of transducers with 1 inch threaded connection.

Distance from transducer to floor: 20 ... 48 cm (8 ... 19 inch),  
anywhere along the complete width of the bridge [166 cm  
(65 inch)].

This kit is particularly suitable for measurements on open channels (OCM) by providing a very stable mount for the transducer above a flume or weir.

## Level measurement

Continuous level measurement  
Accessories for level sensors

### TS-3 temperature sensor

#### Overview

The TS-3 temperature sensor provides an input signal for temperature compensation of specific Siemens ultrasonic level controllers.

#### Benefits

- Chemically resistant ETFE enclosure
- Fast response time
- Approved for use in potentially explosive atmospheres

#### Application

Temperature compensation is essential in applications where temperature variations of the sound medium are expected.

By installing the temperature sensor close to the sound path of the associated ultrasonic transducer, a signal representative of the sound medium's ambient temperature is obtained. The temperature sensor should not be mounted in direct sunlight.

The TS-3 is used in conjunction with ultrasonic transducers that do not have an integral temperature sensor. It is also recommended in cases where the integral temperature sensor of the transducer cannot be used.

The following conditions are typical for use of the TS-3 sensor: where a fast reaction to temperature variations is required, where a flanged ultrasonic transducer is used, or where high temperatures are encountered.

The TS-3 is not compatible with devices using the TS-2 or LTS-1 temperature sensors. Refer to the associated controller manual for more details.

- Key Applications: for use in applications where temperature sensor measurement from transducer does not accurately represent vessel temperature. Used for applications requiring quick temperature response (open channel monitoring).

#### Design

TS-3 temperature sensor

## Level measurement

Continuous level measurement  
Radar level transmitters

### Introduction

#### Overview

Radar measurement technology is non-contacting and low maintenance. Because microwaves require no carrier medium, they are virtually unaffected by the process atmosphere (vapor, pressure, dust, or temperature extremes). Siemens offers a variety of models to meet the specific needs of your application.

SITRANS Probe LR is a 2-wire, 6 GHz pulse radar level transmitter for continuous monitoring of liquids and slurries in storage vessels with nominal pressure and temperature, to a range of 20 m (66 ft).

SITRANS LR100 is a 2 wire loop powered radar transmitter for continuous level measurement of liquids and slurries to a range of 8 m (26 ft).

SITRANS LR110 is a compact radar transmitter for continuous level measurement of liquids, slurries, and solids to a range of 15 m (49.2 ft).

SITRANS LR120 is a compact radar transmitter for continuous level measurement of liquids and solids to a range of 30 m (98.4 ft).

SITRANS LR140 is a 2 wire loop powered radar transmitter for continuous level measurement of liquids and slurries to a range of 8 m (26 ft).

SITRANS LR150 is a compact radar transmitter for continuous level measurement of liquids, slurries, and solids to a range of 15 m (49.2 ft), with optional HMI.

SITRANS LR200 is a 2-wire, 6 GHz pulse radar level transmitter for continuous monitoring of liquids and slurries in process vessels including high temperature, pressure, agitation, and turbulence, to a range of 20 m (65 ft).

SITRANS LR250 is a 2-wire, 25 GHz pulse radar level transmitter for continuous monitoring of liquids and slurries in storage and process vessels including high temperature and pressure, corrosive or aggressive materials, to a range of 20 m (66 ft). Ideal for small vessels and low dielectric media.

SITRANS LR460 is a 4-wire, 24 GHz FMCW radar level transmitter with extremely high signal to noise ratio and advanced signal processing for continuous monitoring of solids, up to 100 m (328 ft). It is ideal for measurement in extreme dust and high temperature applications.

SITRANS LR560 2-wire, 78 GHz FMCW radar level transmitter for continuous monitoring of solids and liquids, to a range of 100 m (328 ft). It is easy to install, plug and play, and there is virtually no maintenance.

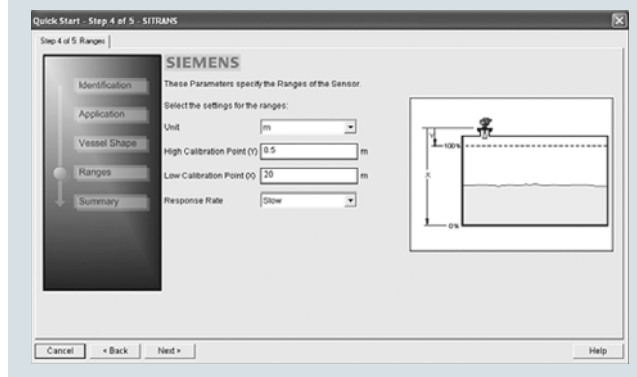

#### Auto False-Echo Suppression

SITRANS LR instruments offer the unique advantage of Process Intelligence signal processing technology. This in-depth knowledge and experience is built into the software's advanced algorithms to provide intelligent processing of echo profiles. The result is repeatable, fast and reliable measurement.

A special feature of SITRANS radar devices is Auto False-Echo Suppression, an echo processing technique that automatically detects and suppresses false echoes from vessel obstructions. You can implement this feature using two parameters on the local interface or SIMATIC PDM communicating over HART or PROFIBUS PA.

Local display interface – graphically displays echo profiles and diagnostic information (available with LR200, LR250, and LR560)  
Quick to configure – Quick Start Wizard via SIMATIC PDM guides you during setup

#### Mode of operation

##### Principle of Operation

Radar measurement technology measures the time of flight from the transmitted signal to the return signal. From this time, distance measurement and level are determined.

Unlike ultrasonic measurement, radar technology does not require a carrier medium and travels at the speed of light (300 000 000 m/s). Most industrial radar devices operate from 6 to 78 GHz.

Siemens offers pulse radar transmitters (SITRANS Probe LR, SITRANS LR200, SITRANS LR250) and FMCW (Frequency Modulated Continuous Wave) radar transmitters (SITRANS LR100, SITRANS LR110, SITRANS LR120, SITRANS LR140, SITRANS LR150, SITRANS LR460, SITRANS LR560).

Pulse radar emits a microwave pulse from the antenna at a fixed repetition rate that reflects off the interface between the two materials with different dielectric constants (the atmosphere and the material being monitored).

The echo is detected by a receiver and the transmit time is used to calculate level.

Reflected echoes are digitally converted to an echo profile. The profile is analyzed to determine the distance from the material surface to the reference point on the instrument.

FMCW (Frequency Modulated Continuous Wave) radar devices send microwaves to the surface of the material. The wave frequency is modulated continuously. At the same time, the receiver is also receiving continuously and the difference in frequency between the transmitter and the receiver is directly proportional to the distance to the material.

Radar operation in a reactor vessel

## Level measurement

Continuous level measurement  
Radar level transmitters

### SITRANS Probe LR

#### Overview

SITRANS Probe LR is a 2-wire, 6 GHz pulse radar level transmitter for continuous monitoring of liquids and slurries in storage vessels with nominal pressure and temperature, to a range of 20 m (66 ft).

#### Benefits

- Uni-Construction polypropylene rod antenna standard
- Easy installation and simple startup
- Programming using infrared Intrinsically Safe handheld programmer, SIMATIC PDM or HART handheld communicator
- Communication using HART
- Process Intelligence signal processing
- Auto False-Echo Suppression of false echoes

#### Application

The Probe LR is ideal for applications with chemical vapors, temperature gradients, vacuum or pressure, such as simple chemical storage or water treatment vessels. SITRANS Probe LR has a range of 0.3 to 20 m (1 to 65 ft).

Probe LR is designed for safe and simple programming using the Intrinsically Safe handheld programmer without having to open the instrument's lid. It has a standard Uni-Construction polypropylene rod antenna that offers excellent chemical resistance and is hermetically sealed. The Uni-Construction antenna includes an internal, integrated shield that eliminates vessel nozzle interference.

SITRANS Probe LR incorporates Process Intelligence signal processing. The Probe LR also has a high signal-to-noise ratio leading to improved reliability.

Startup is easy with as few as two parameters for basic operation. Programming is simple using SIMATIC PDM, HART handheld communicator or the Intrinsically Safe handheld programmer.

- Key Applications: chemical storage, wastewater wet well, and drilling mud

#### Configuration

##### Installation

##### Note:

- Beam angle is the width of the cone where the energy density is half of the peak energy density.
- The peak energy density is directly in front of and in line with the rod antenna.

##### Mounting unit on vessel

##### Mounting on a manhole cover

##### Mounting on a nozzle

Continuous level measurement  
Radar level transmitters

### SITRANS LR100

#### Overview

SITRANS LR100 is a 2 wire loop powered radar transmitter for continuous level measurement of liquids and slurries to a range of 8 m (26 ft).

#### Benefits

- Bluetooth connectivity for easy setup with SITRANS mobile IQ
- Chemically resistant PVDF enclosure
- W band FMCW radar yields narrow beam with small antenna for superior performance in short range applications
- Approved for open air applications outside of a tank
- Compact design fits in limited space installations

#### Application

SITRANS LR100 is a W band FMCW radar level transmitter, packaged in a hermetically sealed PVDF enclosure for years of trouble-free reliable measurement service.

4 to 20 mA loop powered, it provides accurate level measurement to ranges of 8 m (26 ft). Measurement is possible non-intrusively through plastic vessel tops for easy installation. Programming is convenient using the Bluetooth connection and SITRANS mobile IQ application on your smart device.

#### Technical specifications

<b>Mode of operation</b>	
Measuring principle	W band FMCW radar

### SITRANS LR110

#### Overview

SITRANS LR110 is a compact radar transmitter for continuous level measurement of liquids, slurries, or solids to a range of 15 m (49.2 ft).

#### Benefits

- Bluetooth connectivity for easy setup with SITRANS mobile IQ
- Chemically resistant PVDF enclosure
- HART 7.0 or Modbus RTU (in preparation) communication for intelligent integration into your application
- W band FMCW radar yields narrow beam with small antenna for superior performance in short range applications
- Approved for open air applications outside of a tank
- 2 mm accuracy and zero near range distance yields optimum inventory management capability
- Compact design fits in limited space installations
- Hazardous area variants available for safe use in explosive gas or dust environments.

#### Application

SITRANS LR110 is a W band FMCW radar level transmitter, packaged in a hermetically sealed PVDF enclosure for years of trouble-free reliable measurement service.

4 to 20 mA loop powered with HART [optional 4-wire Modbus RTU (in preparation)], providing accurate level measurement to ranges of 15 m (49.2 ft). Measurement is possible non-intrusively through plastic vessel tops for easy installation. Programming is convenient using the Bluetooth connection and SITRANS mobile IQ application on your smart device.

## Overview

SITRANS LR120 is a compact radar transmitter for continuous level measurement of liquids and solids to a range of 30 m (98.4 ft).

## Benefits

- Bluetooth connectivity for easy setup with SITRANS mobile IQ
- Chemically resistant PVDF enclosure
- HART 7.0 or Modbus RTU (in preparation) communication for intelligent integration into your application
- W band FMCW radar yields narrow beam with small antenna for superior performance in applications with obstructions
- Approved for open air applications outside of a tank
- 2 mm accuracy and zero near range distance yields optimum inventory management capability
- Submergence shield accessory prevents build up on sensor during flooding conditions
- Hazardous area variants available for safe use in explosive gas or dust environments

## Application

SITRANS LR120 is a W band FMCW radar level transmitter, packaged in a hermetically sealed PVDF enclosure for years of trouble-free reliable measurement service.

4 to 20 mA loop powered with HART [optional 4-wire Modbus RTU (in preparation)], providing accurate level measurement to ranges of 30 m (98.4 ft). Its long range, narrow beam make LR120 suitable for wet wells with obstructions or solids level measurement, for example aggregates or plastic pellets. Programming is convenient using the Bluetooth connection and SITRANS mobile IQ application on your smart device.

## Level measurement

Continuous level measurement  
Radar level transmitters

### SITRANS LR140

#### Overview

SITRANS LR140 is a 2 wire loop powered radar transmitter for continuous level measurement of liquids and slurries to a range of 8 m (26 ft).

#### Benefits

- Bluetooth connectivity for easy setup with SITRANS mobile IQ.
- Chemically resistant PVDF sensor.
- W band FMCW radar yields narrow beam with small antenna for superior performance in short range applications.
- Approved for open air applications outside of a tank.
- Compact design fits in limited space installations.

#### Application

SITRANS LR140 is a W band FMCW radar level transmitter, packaged in a chemically resistant enclosure with PVDF sensor for years of trouble-free reliable measurement service.

4 to 20 mA loop powered, it provides accurate level measurement to ranges of 8 m (26 ft). Measurement is possible, non-intrusively, through plastic vessel tops for easy installation. Programming is convenient using the Bluetooth connection and SITRANS mobile IQ application on your smart device.

#### Technical specifications

Mode of operation	
Measuring principle	W band FMCW radar
Measuring range	0 ... 8 m (0 ... 26 ft)
Frequency	80 GHz nominal
Beam angle	8°
Power Supply	
Voltage	12 ... 35 V DC
Current	4 ... 20 mA
Accuracy	
	± 5 mm
Rated operating conditions	
Vessel pressure	-1 ... +3 bar (14.50 ... 43.51 psi g)
Ambient temperature	-40 ... +60 °C (-40 ... +140 °F)
Process temperature	-40 ... +60 °C (-40 ... +140 °F)
Storage temperature	-40 ... +80 °C (-40 ... +176 °F)

#### Technical specifications (continued)

Design	
Weight	0.5 kg (1.1 lb), plus 0.1 kg/m (0.2 lb/ft) cable length
Material (sensor)	PVDF
Material (enclosure)	PBT
Process connection	1-½" NPT, 1-½" BSPT, or 1-½" BSPP
Degree of protection	IP66/IP67
Certificates and approvals

## Level measurement

Continuous level measurement  
Radar level transmitters

### SITRANS LR150

#### Overview

SITRANS LR150 is a compact radar transmitter for continuous level measurement of liquids, slurries, and solids to a range of 15 m (49.2 ft).

#### Benefits

- Bluetooth connectivity for easy setup with SITRANS mobile IQ.
- Optional HMI with pushbutton programming and local diagnostic data.
- Chemically resistant PVDF sensor.
- HART 7.0 communication for intelligent integration into your application.
- W band FMCW radar yields narrow beam with small antenna for superior performance in short range applications.
- Approved for open air applications outside of a tank.
- 2 mm accuracy and zero near range distance yields optimum inventory management capability.
- Compact design fits in limited space installations.
- Hazardous area variants available for safe use in explosive gas or dust environments (pending).

#### Application

SITRANS LR150 is a W band FMCW radar level transmitter, with a chemically resistant PVDF sensor, for years of trouble-free, reliable measurement service.

4 to 20 mA loop powered with HART, providing accurate level measurement to ranges of 15 m (49.2 ft). Measurement is possible, non-intrusively, through plastic vessel tops for easy installation. Programming is convenient using the Bluetooth connection and SITRANS mobile IQ application on your smart device or locally with an optional HMI.

SITRANS LR150 connections

## Overview

SITRANS LR200 is a 2-wire, 6 GHz pulse radar level transmitter for continuous monitoring of liquids and slurries in process vessels including high temperature, pressure, agitation, and turbulence to a range of 20 m (65 ft).

## Benefits

- Graphical local user interface (LUI) makes operation simple with plug-and-play setup using the intuitive Quick Start Wizard
- LUI displays echo profiles for diagnostic support
- Communication using HART or PROFIBUS PA
- Process Intelligence signal processing for improved measurement reliability and Auto False-Echo Suppression of fixed obstructions
- Programming using infrared Intrinsically Safe handheld programmer or SIMATIC PDM

## Application

SITRANS LR200's unique design allows safe and simple programming using the Intrinsically Safe handheld programmer without having to open the instrument's lid. It also features a built-in alphanumeric display in four languages.

The SITRANS LR200 has a standard Uni-Construction polypropylene rod antenna that offers excellent chemical resistance and is hermetically sealed. The Uni-Construction antenna features an internal, integrated shield that eliminates vessel nozzle interference.

Startup is easy with as few as two parameters for basic operation. Installation is simplified as the electronics are mounted on a rotating head that swivels, allowing the instrument to line up with conduit or wiring connections or simply to adjust the position for easy viewing. SITRANS LR200 features Process Intelligence signal-processing technology for superior reliability.

- Key Applications: liquid process vessels with agitators, vaporous liquids, high temperatures, asphalt

## Configuration

### Installation

Min. 300 mm (1 ft) for every 3 m (10 ft) of vessel wall.

#### Note:

- Beam angle is the width of the cone where the energy density is half of the peak energy density.
- Beam angle for horn antenna dependent on horn size
- The peak energy density is directly in front of and in line with the rod antenna.
- There is a signal transmitted outside of the beam angle; therefore false targets may be detected.

### Mounting unit on vessel

### Mounting unit on stilling well

### Mounting on a nozzle

SITRANS LR200 installation, dimensions in mm (inch)

## Level measurement

Continuous level measurement  
Radar level transmitters

### SITRANS LR200

#### Integration

SITRANS LR200 with flange adapter for connection to optional antennas.

Horn with waveguide extension. Used for high temperature isolation, long standpipes, and clearing tank obstructions.

Flat faced flange connection with PTFE rod antenna.

Shielded rod antenna with a stainless steel shield eliminates standpipe interference. Various lengths available.

Antenna configurations for SITRANS LR200

Antenna types	Flat Faced Flange with Rod	Shielded Rod	Horn (4", 6", 8" sizes available)
<b>Connection type</b>	Flat faced flange nominal pipe sizes 50, 80, 100, 150 mm (2, 3, 4, 6 inch)	Threaded 2" NPT, R 2" (BSPT), G 2" (BSPP) or flat faced flange nominal pipe sizes 80, 100 mm (3, 4 inch)	Flat faced flange nominal pipe sizes 50, 80, 100, 150 mm (2, 3, 4, 6 inch)
<b>Wetted parts</b>	PTFE	PTFE, 316L stainless steel, FKM O-ring	316L stainless steel PTFE, FKM O-ring
<b>Extensions</b>	50 or 100 mm (2 or 4 inch) PTFE or UHMW-PE	100, 150, 200 or 250 mm (4, 6, 8 or 10 inch) standard shield length	Use waveguide for extensions to 6 m (20 ft) long
<b>Dielectric constant</b>	> 3	> 3	> 3
<b>Insertion length (max.)</b>	41 cm (16.3 inch)	Variable	Variable with extension
<b>Purging option (liquid or gas)</b>	No	No	Yes
<b>Sliding waveguide option for digesters<sup>1)</sup></b>	Yes	No	Yes
<b>Weight<sup>2)</sup></b>	6.5 kg (14.3 lb)	5.0 kg (11 lb)	7.5 kg (16.5 lb)

<sup>1)</sup> Maximum pressure 0.5 bar g at 60 °C (7.25 psi g at 140 °F)

<sup>2)</sup> Not including extensions, includes SITRANS LR200 and smallest process connection

## Technical specifications

### Mode of operation

Measuring principle	Radar level measurement
Frequency	C-band, approx. 6 GHz
Measuring range	0.3 ... 20 m (1.0 ... 65 ft)

### Output

Analog output	4 ... 20 mA
Accuracy	± 0.02 mA
Span	Proportional or inversely proportional
Communications	HART Optional: PROFIBUS PA (Profile 3.0, Class B)
Fail-safe	Programmable as high, low or hold (Loss of Echo)

### Performance (according to reference conditions IEC60770-1)

From end of antenna to 600 mm	40 mm (1.57 inch)
Remainder of range	10 mm (0.4 inch) or 0.1 % of span (whichever is greater)

### Rated operating conditions

Installation conditions	Indoor/outdoor
• Location	
Ambient conditions (enclosure)	-40 ... +80 °C (-40 ... +176 °F)
• Ambient temperature	
• Storage temperature	
• Installation category	
• Pollution degree	

### Medium conditions

Dielectric constant $\epsilon_r$	$\epsilon_r > 1.6$ (for $\epsilon_r < 3$ , use stillpipe)
Vessel temperature and pressure	Varies with connection type; see Pressure/Temperature curves for more information

### Design

Enclosure	Aluminum, polyester powder coated 2 x M20 x 1.5 or 2 x ½" NPT
• Material • Cable inlet	
Degree of protection	Type 4X/NEMA 4X, Type 6/ NEMA 6, IP67, IP68
Weight	< 2.82 kg (6.21 lb) (polypropylene rod antenna)

**Notes:**

1. DC terminal shall be supplied from an SELV source in accordance with IEC 1010-1 Annex H.
2. All field wiring must have insulation suitable for rated input voltages.
3. Use shielded twisted pair cable (14 ... 22 AWG) for HART version.
4. Separate cables and conduit may be required to conform to standard instrumentation wiring practices or electrical codes.

SITRANS LR200 connections

## Overview

SITRANS LR250 is a 2-wire, 25 GHz pulse radar level transmitter for continuous monitoring of liquids and slurries in storage and process vessels including high temperature and pressure, to a range of 20 m (66 ft).

## Benefits

- Graphical local user interface (LUI) makes operation simple with plug-and-play setup using the intuitive Quick Start Wizard
- LUI displays echo profiles for diagnostic support
- 25 GHz high frequency allows for small antennas for easy mounting in nozzles
- Insensitive to mounting location and obstructions, and less sensitive to nozzle interference
- Short blanking distance for improved minimum measuring range to 50 mm (2 inch) from the end of the antenna
- Communication using HART, PROFIBUS PA, or FOUNDATION Fieldbus
- Process Intelligence signal processing for improved measurement reliability and Auto False-Echo Suppression of fixed obstructions
- Programming using infrared Intrinsically Safe handheld programmer or over a network using SIMATIC PDM, Emerson AMS, or Field Device Tools such as PACTware or Fieldcare via SITRANS DTM
- Functional Safety (SIL 2). Device suitable for use in accordance with IEC 61508 and IEC 61511
- 3 mm (0.118 inch) accuracy in accordance with IEC 60770-1
- Suitable for API 2350

## Application

SITRANS LR250 includes a graphical local user interface (LUI) that improves setup and operation by including an intuitive Quick Start Wizard, and echo profile displays for diagnostic support. Startup is easy using the Quick Start wizard with a few parameters required for basic operation.

The 25 GHz frequency creates a narrow, focused beam allowing for smaller horn antenna options and decreasing sensitivity to obstructions.

SITRANS LR250's unique design allows safe and simple programming using the Intrinsically Safe handheld programmer without saving to open the instrument's lid.

SITRANS LR250 measures superbly on low dielectric media, and in small vessels, as well as tall and narrow vessels.

- Key Applications: liquid bulk storage tanks, process vessels, vaporous liquids, high temperatures, low dielectric media and applications with functional safety requirements

## Configuration

### Installation

#### Note:

- Beam angle is the width of the cone where the energy density is half of the peak energy density.
- The peak energy density is directly in front of and in line with the horn antenna.
- There is a signal transmitted outside of the beam angle; therefore false targets may be detected.
- Use largest possible antenna.

### Mounting on bypass

Orient front or back of device toward vent.

### Mounting on stilling well

Orient front or back of device toward stillpipe slots.

### Mounting on vessel

#### Technical specifications

##### Mode of operation

Measuring principle	Radar level measurement
Frequency	K-band (25.0 GHz)
Minimum measuring range	50 mm (2 inch) from end of antenna
Maximum measuring range	20 m (65 ft), antenna dependent

##### Output

HART	Version 5.1
• Analog output	4 ... 20 mA
• Accuracy	± 0.02 mA
• Fail-safe	<ul style="list-style-type: none"> <li>Programmable as high low or hold (loss of echo)</li> <li>NE 43 programmable</li> </ul>
PROFIBUS PA	Profile 3.01
• Function blocks	2 Analog Input (AI)
FOUNDATION Fieldbus	H1
• Functionality	Basic or LAS
• Version	ITK 5.2.0
• Function blocks	2 Analog Input (AI)

##### Performance (according to reference conditions IEC60770-1)

Maximum measured error	3 mm (0.118 inch)
Influence of ambient temperature	< 0.003 %/K

##### Rated operating conditions

Installation conditions	Indoor/outdoor
• Location	
Ambient conditions (enclosure)	-40 ... +80 °C (-40 ... +176 °F) -40 ... +80 °C (-40 ... +176 °F) I 4
• Ambient temperature	
• Storage temperature	
• Installation category	
• Pollution degree	

##### Medium conditions

Dielectric constant $\epsilon_r$	> 1.6, antenna and application dependent
Process temperature	-40 ... +200 °C (-40 ... +392 °F) (at process connection with FKM O-ring) -20 ... +200 °C (-4 ... +392 °F) (at process connection with FFKM O-ring)
Process pressure	Up to 40 bar g (580 psi g), process connection and temperature dependent. See Pressure/Temperature curves for more information

##### Design

Enclosure	Aluminum, polyester powder-coated
• Material	
• Cable inlet	2 x M20 x 1.5 or 2 x ½" NPT
Degree of protection	Type 4X/NEMA 4X, Type 6/NEMA 6, IP67, IP68
Weight	< 3 kg (6.6 lb) 3.75 mm (1½ inch) threaded connection with 1½" horn antenna
Display (local)	Graphic local user interface including quick start wizard and echo profile display
Antenna	316L stainless steel
• Material	
• Dimensions (nominal horn sizes)	Standard 1.5 inch (40 mm), 2 inch (48 mm), 3 inch (75 mm), 4 inch (95 mm) horn, and optional 100 mm (4 inch) horn extension
Process connections	1½", 2" or 3" NPT [(Taper), ANSI/ASME B1.20.1] R 1½", 2" or 3" [(BSPT), EN 10226] G 1½", 2" or 3" [(BSPP), EN ISO 228-1]
• Process connection	
• Flange connection	2", 3", 4" (ANSI 150, 300 lb), 50, 80, 100 mm (PN 16, 40, JIS 10K)

##### Power supply

4 ... 20 mA/HART	Nominal 24 V DC (max. 30 V DC) with max. 550 Ω
PROFIBUS PA	<ul style="list-style-type: none"> <li>15 mA</li> <li>Per IEC 61158-2</li> </ul>
FOUNDATION Fieldbus	<ul style="list-style-type: none"> <li>20.0 mA</li> <li>Per IEC 61158-2</li> </ul>

Part number:  
7ML1930-1BK

**Notes:**

1. DC terminal shall be supplied from a source providing electrical isolation between the input and output, to meet the applicable safety requirements of IEC 61010-1.
2. All field wiring must have insulation suitable for rated input voltages.
3. Use shielded twisted pair cable (14 ... 22 AWG) for HART version.
4. Separate cables and conduit may be required to conform to standard instrumentation wiring practices or electrical codes.

Radar level transmitters

### SITRANS LR250 Polypropylene Lens Antenna

#### Overview

SITRANS LR250 Polypropylene lens antenna is a 25 GHz pulse radar level transmitter for continuous monitoring of liquids and slurries in storage and process vessels including corrosive materials to a range of 20 m (65.6 ft).

#### Benefits

- For use in chemical environments where aggressive and corrosive materials are present.
- Graphical local user interface (LUI) makes operation simple with plug-and-play setup using the intuitive Quick Start Wizard
- LUI displays echo profiles for diagnostic support
- Communication using HART, PROFIBUS PA, or FOUNDATION Fieldbus
- Process Intelligence signal processing for improved measurement reliability and Auto False-Echo Suppression of fixed obstructions
- Programming using infrared, Intrinsically Safe, handheld programmer or over a network using SIMATIC PDM, Emerson AMS, or Field Device Tools such as PACTware or Fieldcare via SITRANS DTM
- 3 mm (0.118 inch) accuracy in accordance with IEC 60770-1

#### Application

SITRANS LR250 includes a graphical local user interface (LUI) that improves setup and operation by including an intuitive Quick Start Wizard, and echo profile displays for diagnostic support. Startup is easy using the Quick Start wizard with a few parameters required for basic operation.

SITRANS LR250's unique design allows safe and simple programming using the Intrinsically Safe handheld programmer without having to open the instrument's lid.

- Key Applications: liquid bulk storage tanks, process vessels with agitators, vaporous liquids, corrosive and aggressive materials.

**Configuration**

**Installation of SITRANS LR250 Level Probing Radar**

Note:

- Beam angle is the width of the cone where the energy density is half of the peak energy density.
- The peak energy density is directly in front of and in line with the antenna.
- There is a signal transmitted outside of the beam angle; therefore false targets may be detected.

Polypropylene lens antenna

Radar level transmitters

### SITRANS LR250 Polypropylene Lens Antenna

#### Technical specifications

##### Mode of operation

Measuring principle	Radar level measurement
Frequency	K-band (25.0 GHz)
Minimum measuring range	50 mm (2 inch) from end of antenna
Maximum measuring range	20 m (66 ft)

##### Output

HART	Version 5.1
• Analog output	4 ... 20 mA
• Accuracy	± 0.02 mA
• Fail-safe	<ul style="list-style-type: none"> <li>• Programmable as high, low or, hold (loss of echo)</li> <li>• NE 43 programmable</li> </ul>
PROFIBUS PA	Profile 3.1
• Function blocks	2 Analog Input (AI)
FOUNDATION Fieldbus	H1
• Functionality	Basic or LAS
• Version	ITK 5.2.0
• Function blocks	2 Analog Input (AI)

##### Performance (according to reference conditions IEC 60770-1)

Maximum measured error	<ul style="list-style-type: none"> <li>• &gt; 500 mm from sensor reference point: 3 mm (0.118 inch)</li> <li>• &lt; 500 mm from sensor reference point: 25 mm (1 inch)</li> </ul>
Influence of ambient temperature	< 0.003 %/K

##### Rated operating conditions

Installation conditions	
• Location	Indoor/outdoor
Ambient conditions (enclosure)	
• Ambient temperature	-40 ... +80 °C (-40 ... +176 °F)
• Storage temperature	-40 ... +80 °C (-40 ... +176 °F)
• Installation category	I
• Pollution degree	4

##### Medium conditions

Dielectric constant $\epsilon_r$	> 1.6
Process temperature	-40 ... +80 °C (-40 ... +176 °F) at process connection
Process pressure	Up to 5 bar g (72 psi g) temperature dependent.

##### Design

Enclosure	
• Material	Aluminum, polyester powder-coated
• Cable inlet	2 x M20 x 1.5 or 2 x 1/2" NPT
Degree of protection	Type 4X/NEMA 4X, Type 6/NEMA 6, IP67, IP68
Weight	Polypropylene lens antenna with 3 inch (80 mm) polypropylene flange
	• Approximately 3.4 kg (7.5 lb)
Display (local)	Graphic local user interface including quick start wizard and echo profile display
Polypropylene lens antenna	
• Materials	<ul style="list-style-type: none"> <li>• Polyester powder coated exterior</li> <li>• 3 inch cast aluminum</li> <li>• Polypropylene lens</li> <li>• FKM seal</li> </ul>
• Process connections	
- Material	Polypropylene
- Dimensions	Universal flange: 3 inch (80 mm), 4 inch (100 mm), 6 inch (150 mm)

##### Power supply

4 ... 20 mA/HART	Nominal 24 V DC (max. 30 V DC) with max. 550 $\Omega$
PROFIBUS PA	<ul style="list-style-type: none"> <li>• 15 mA</li> <li>• per IEC 61158-2</li> </ul>
FOUNDATION Fieldbus	<ul style="list-style-type: none"> <li>• 20.0 mA</li> <li>• per IEC 61158-2</li> </ul>

**Notes:**

1. DC terminal shall be supplied from a source providing electrical isolation between the input and output, to meet the applicable safety requirements of IEC 61010-1.
2. All field wiring must have insulation suitable for rated input voltages.
3. Use shielded twisted pair cable (14 ... 22 AWG) for HART version.
4. Separate cables and conduit may be required to conform to standard instrumentation wiring practices or electrical codes.

### Radar level transmitters

#### SITRANS LR250 Flanged Encapsulated Antenna

#### Overview

SITRANS LR250 with flanged encapsulated antenna is a 2-wire, 25 GHz pulse radar level transmitter for continuous monitoring of liquids and slurries in storage and process vessels including corrosives or aggressive materials, to a range of 20 m (66 ft) (antenna dependent).

#### Benefits

- Fully encapsulated horn antenna design with FDA approved TFM 1600 PTFE lens for use in chemical and sanitary environments where aggressive and corrosive materials are used
- Cost effective replacement for transmitters made of exotic materials
- Graphical local user interface (LUI) makes operation simple with plug-and-play setup using the intuitive Quick Start Wizard
- LUI displays echo profiles for diagnostic support
- 25 GHz high frequency and 50 mm (2 inch) process connection/antenna allow for easy mounting
- Insensitive to mounting location and obstructions, and less sensitive to nozzle interference
- Short blanking distance for improved minimum measuring range to 50 mm (2 inch) from the end of the antenna
- Communication using HART, PROFIBUS PA, or FOUNDATION Fieldbus
- Process Intelligence signal processing for improved measurement reliability and Auto False-Echo Suppression of fixed obstructions
- Programming using infrared Intrinsically Safe handheld programmer or over a network using SIMATIC PDM, Emerson AMS, or Field Device Tools such as PACTware or Fieldcare via SITRANS DTM
- Functional Safety (SIL 2). Device suitable for use in accordance with IEC 61508 and IEC 61511
- Suitable for API 2350

#### Application

SITRANS LR250 includes a graphical local user interface (LUI) that improves setup and operation by including an intuitive Quick Start Wizard, and echo profile displays for diagnostic support. Startup is easy using Quick Start Wizard with a few parameters required for basic operation.

The 25 GHz frequency creates a narrow, focused beam allowing for smaller antenna options and decreasing sensitivity to obstructions.

SITRANS LR250's unique design allows safe and simple programming using the Intrinsically Safe handheld programmer without having to open the instrument's lid.

SITRANS LR250 measures superbly in small vessels and in tanks/vessels up to 20 m (66 ft) on materials with  $dk > 1.6$ .

- Key Applications: liquid bulk storage tanks, process vessels with agitators, vaporous liquids, temperatures to 170 °C (338 °F), corrosive and aggressive materials and applications where ease of cleaning is required such as food or fine chemicals

#### Configuration

##### Installation

##### Note:

- Beam angle is the width of the cone where the energy density is half of the peak energy density.
- The peak energy density is directly in front of and in line with the antenna.
- There is a signal transmitted outside of the beam angle; therefore false targets may be detected.

##### Mounting on bypass

Orient front or back of device toward vent.

##### Mounting on stilling well

Orient front or back of device toward stillpipe slots.

##### Mounting on vessel

### SITRANS LR250 Flanged Encapsulated Antenna

#### Technical specifications

##### Mode of operation

Measuring principle	Radar level measurement
Frequency	K-band (25.0 GHz)
Minimum measuring range	50 mm (2 inch) from end of antenna
Maximum measuring range	20 m (66 ft)

##### Output

HART	Version 5.1
• Analog output	4 ... 20 mA
• Accuracy	± 0.02 mA
• Fail-safe	<ul style="list-style-type: none"> <li>Programmable as high low or hold (loss of echo)</li> <li>NE 43 programmable</li> </ul>
PROFIBUS PA	Profile 3.01
• Function blocks	2 Analog Input (AI)
FOUNDATION Fieldbus	H1
• Functionality	Basic or LAS
• Version	ITK 5.2.0
• Function blocks	2 Analog Input (AI)

##### Performance (according to reference conditions IEC60770-1)

Maximum measured error	<ul style="list-style-type: none"> <li>&gt; 500 mm from sensor reference point: 3 mm (0.118 inch)</li> <li>&lt; 500 mm from sensor reference point: 25 mm (1 inch)</li> </ul>
Influence of ambient temperature	< 0.003 %/K

##### Rated operating conditions

Installation conditions	
• Location	Indoor/outdoor
Ambient conditions (enclosure)	
• Ambient temperature	-40 ... +80 °C (-40 ... +176 °F)
• Storage temperature	-40 ... +80 °C (-40 ... +176 °F)
• Installation category	I
• Pollution degree	4

##### Medium conditions

Dielectric constant $\epsilon_r$	≥ 1.6 (antenna dependent)
Process temperature	-40 ... +170 °C (-40 ... +338 °F) at process connection
Process pressure	See Pressure/Temperature curves for more information (page 4/233)

##### Design

Enclosure	
• Material	Aluminum, polyester powder-coated
• Cable inlet	2 x M20 x 1.5 or 2 x 1/2" NPT
Degree of protection	Type 4X/NEMA 4X, Type 6/NEMA 6, IP67, IP68
Weight (dependent on process connection)	<ul style="list-style-type: none"> <li>Approx. 7 kg (15.43 lb) for 2" Class 150 ASME B16.5 raised face flange (smallest size)</li> <li>Approx. 17.7 kg (39.02 lb) for 6" Class 150 ASME B16.5 raised face flange (largest size)</li> </ul>
Display (local)	Graphic local user interface including quick start wizard and echo profile display
Antenna	
• Material	Stainless Steel 316L (1.4435 or 1.4404) and TFM 1600 PTFE Lens (lens is the only wetted part)
• Dimensions (nominal sizes)	48 mm (2 inch), 80 mm (3 inch), 100 mm (4 inch), 150 mm (6 inch)

##### Process connections

Flanged connection	<p>Raised Face</p> <ul style="list-style-type: none"> <li>2, 3, 4, 6" Class 150 ASME B16.5</li> <li>50A, 80A, 100A, 150A 10K JIS B 2220</li> <li>DN 50, DN 80, DN 100 &amp; DN 150 PN 10/16 EN 1092-1 type B1</li> </ul>
--------------------	--

##### Power supply

Part number:  
7ML1930-1BK

**Notes:**

1. DC terminal shall be supplied from a source providing electrical isolation between the input and output, to meet the applicable safety requirements of IEC 61010-1.
2. All field wiring must have insulation suitable for rated input voltages.
3. Use shielded twisted pair cable (14 ... 22 AWG) for HART version.
4. Separate cables and conduit may be required to conform to standard instrumentation wiring practices or electrical codes.

SITRANS LR250 connections

#### SITRANS LR250 Hygienic Encapsulated Antenna

#### Overview

The SITRANS LR250 Hygienic Encapsulated Antenna is a 2-wire 25 GHz pulse radar level transmitter with sanitary and hygienic approvals for continuous monitoring of liquids, slurries, and pastes within the food, beverage, chemical, and pharmaceutical industries to a range of 20 m (66 ft) (antenna dependent).

Picture shown with accessories sold separately.

#### Benefits

- Fully encapsulated horn antenna design with FDA approved and USP Class VI compliant, TFM 1600 PTFE lens
- $< 0.8 \mu \text{ Ra}$  surface finish for maximum cleanability and hygiene requirements commonly required in sanitary environments
- Chemically resistant TFM 1600 PTFE lens is also suitable for aggressive or corrosive materials
- Approved device in accordance with 3-A, EHEDG EL Class I and/or EHEDG EL Aseptic Class I
- Cost effective replacement for transmitters made of exotic materials
- Graphical local user interface (LUI) makes operation simple with plug-and-play set-up using the intuitive Quick Start Wizard
- Industry standard process connections including ISO 2852, DIN 11851, DIN 11864-1, DIN 11864-2, DIN 11864-3, and Tuchenhagen Varivent Type F and N
- LUI displays echo profiles for diagnostic support
- 25 GHz high frequency and 2 inch (50 mm) process connection/antenna allow for easy mounting
- Insensitive to mounting location and obstructions, and less sensitive to nozzle interference
- Communication using HART, PROFIBUS PA, or FOUNDATION Fieldbus
- Process Intelligence signal processing for improved measurement reliability and Auto False-Echo Suppression of fixed obstructions
- Programming using infrared Intrinsically Safe handheld programmer or over a network using SIMATIC PDM, Emerson AMS, or Field Device Tools, such as PAC Tware or Fieldcare via SITRANS DTM.
- Functional Safety (SIL 2). Device suitable for use in accordance with IEC 61508 and IEC 61511

#### Application

SITRANS LR250 includes a graphical local user interface (LUI) that improves set-up and operation by including an intuitive Quick Start Wizard, and echo profile displays for diagnostic support. Startup is easy using the Quick Start wizard with few parameters required for basic operation.

The 25 GHz frequency creates a narrow, focused beam allowing for smaller antenna options and decreasing sensitivity to obstructions.

SITRANS LR250's unique design allows safe and simple programming using the Intrinsically Safe handheld programmer without having to open the instrument's lid.

SITRANS LR250 measures superbly in small vessels and in tanks/vessels up to 20 m (66 ft) on materials with  $dk > 1.6$ .

- Key Applications: applications within the food, beverage, chemical and pharmaceutical industries where sanitary, aseptic, or hygienic approvals are required or easy install/clean flush antennas are preferable, such as ice cream, fruit juice, milk, beer, and pharmaceutical or chemical additives and ingredients.

#### Configuration

##### Installation

##### Note:

- Beam angle is the width of the cone where the energy density is half of the peak energy density.
- The peak energy density is directly in front of and in line with the antenna.
- There is a signal transmitted outside of the beam angle; therefore false targets may be detected.

##### Mounting on vessel

##### Mounting on a nozzle

Nozzles should be maximum l/d ratio 1:1 (Eg. 50 mm length, 50 mm diameter)

LR250 Hygienic Encapsulated Antenna, dimensions in mm (inch)

## Level measurement

Continuous level measurement  
Radar level transmitters

### SITRANS LR250 Hygienic Encapsulated Antenna

#### Technical specifications

##### Mode of Operation

Measuring principle	Radar level measurement
Frequency	K-band (25.0 GHz)
Minimum measuring range	50 mm (2 inch) from end of antenna
Maximum measuring range	20 m (66 ft)

##### Output

HART	Version 5.1
• Analog output	4 ... 20 mA
• Accuracy	± 0.02 mA
• Fail-safe	<ul style="list-style-type: none"> <li>• Programmable as high low or hold (loss of echo)</li> <li>• NE 43 programmable</li> </ul>
PROFIBUS PA	Profile 3.01
• Function blocks	2 Analog Input (AI)
FOUNDATION Fieldbus	H1
• Functionality	Basic or LAS
• Version	ITK 5.2.0
• Function blocks	2 Analog Input (AI)

##### Performance (according to reference conditions IEC60770-1)

Maximum measured error	<ul style="list-style-type: none"> <li>• &gt; 500 mm from sensor reference point: 3 mm (0.118 inch)</li> <li>• &lt; 500 mm from sensor reference point: 25 mm (1 inch)</li> </ul>
Influence of ambient temperature	< 0.003 %/K

##### Rated operating conditions

Installation conditions	
• Location	Indoor/outdoor
Ambient conditions (enclosure)	
• Ambient temperature	-40 ... +80 °C (-40 ... +176 °F)
• Storage temperature	-40 ... +80 °C (-40 ... +176 °F)
• Installation category	I
• Pollution degree	4

##### Medium conditions

Dielectric constant $\epsilon_r$	≥ 1.6 (antenna dependent)
Process temperature	-40 ... +170 °C (-40 ... +338 °F) at process connection
Process pressure	See Pressure/Temperature curves for more information

##### Design

Enclosure	
• Material	Aluminum, polyester powder coated
• Cable inlet	2 x M20 x 1.5 or 2 x ½" NPT
Degree of protection	Type 4X/NEMA 4X, Type 6/NEMA 6, IP67, IP68
Weight (dependent on process connection)	<ul style="list-style-type: none"> <li>• Approx. 4.7 kg (10.4 lb) for 2" ISO 2852 (smallest size)</li> <li>• Approx. 7.9 kg (17.4 lb) for DN 100 DIN 11864-2 (largest size)</li> </ul>
Display (local)	Graphic local user interface including quick start wizard and echo profile display
Antenna	
• Material	Stainless steel 316L (1.4435 or 1.4404) and TFM 1600 PTFE Lens (lens is the only wetted part)
• Lens surface finish ( $R_a$ )	0.8 $\mu$ m

##### Process connections

### SITRANS LR250 Hygienic Encapsulated Antenna

#### Selection and ordering data

#### Article No.

#### Article No.

#### SITRANS LR250 hygienic encapsulated Specials

For "Electronics Head only" follow the standard configuration and choose YY option on positions 9 and 10 of the full part number.

For example: 7ML5433-1YY20-1AA0 will order an electronics head for the following:

**EHEDG EL Class 1 approval, 4 ... 20 mA HART, M20 cable entries, General purpose Haz Loc approval, pressure rating as per manual.**

#### Spare Lens Kits (Lens and O-ring)

Kit, 2 inch, ISO 2852, HEA, Lens, silicone secondary O-ring

**A5E32572731**

Kit, 3 inch, ISO 2852, HEA, Lens, silicone secondary O-ring

**A5E32572745**

Kit, 4 inch, ISO 2852, HEA, Lens, silicone secondary O-ring

**A5E32572747**

Kit, DN 50, DIN 11851, HEA, Lens, silicone secondary O-ring

**A5E32572758**

Kit, DN 80, DIN 11851, HEA, Lens, silicone secondary O-ring

**A5E32572770**

Kit, DN 100, DIN 11851, HEA, Lens, silicone secondary O-ring

**A5E32572772**

Kit, DN 50, DIN 11864-1, HEA, Lens, silicone secondary O-ring

**A5E32572773**

Kit, DN 80, DIN 11864-1, HEA, Lens, silicone secondary O-ring

**A5E32572779**

Kit, DN 100, DIN 11864-1, HEA, Lens, silicone secondary O-ring

**A5E32572782**

Kit, DN 50, DIN 11864-2/3, HEA, Lens, silicone secondary O-ring

**A5E32572785**

Kit, DN 80, DIN11864-2/3, HEA, Lens, silicone secondary O-ring

**A5E32572790**

Kit, DN 100, DIN11864-2/3, HEA, Lens, silicone secondary O-ring

**A5E32572791**

Kit, Tuchenhausen, Type F, HEA, Lens, silicone secondary O-ring

**A5E32572794**

Kit, Tuchenhausen, Type N, HEA, Lens, silicone secondary O-ring

**A5E32572795**

#### Accessories (customer side process connection and FKM and EPDM seal for each size and type)

Kit DN50 DIN11864-1 GS Form A tank connection, EPDM Seal Class II

**A5E32910638**

Kit, DN80 DIN11864-1 GS Form A tank connection, EPDM Seal Class II

Kit, DN100 DIN11864-1 GS Form A tank connection, EPDM Seal Class II

**A5E32910657**

Kit DN50 DIN11864-1 GS Form A tank connection, FKM Seal Class I

**A5E32910658**

Kit, DN80 DIN11864-1 GS Form A tank connection, FKM Seal Class I

**A5E32910671**

Kit, DN100 DIN11864-1 GS Form A tank connection, FKM Seal Class I

**A5E32910681**

Kit 2" ISO2852 tank connection, Clamp, Cleanable EPDM Seal Class II

**A5E32910686**

Kit 3" ISO2852 tank connection, Clamp, Cleanable EPDM Seal Class II

**A5E32910697**

Kit 4" ISO2852 tank connection, Clamp, Cleanable EPDM Seal Class II

**A5E32910708**

Kit 2" ISO2852 tank connection, Clamp, Cleanable FKM Seal

**A5E32910718**

Kit 3" ISO2852 tank connection, Clamp, Cleanable FKM Seal

**A5E32910723**

Kit 4" ISO2852 tank connection, Clamp, Cleanable FKM Seal

**A5E32910734**

Kit DN50 DIN11851 SC Tank connection, EPDM Seal Class II<sup>1)</sup>

**A5E32910746**

Kit DN80 DIN11851 SC Tank connection, EPDM Seal Class II<sup>1)</sup>

**A5E32910771**

Kit DN100 DIN11851 SC Tank connection, EPDM Seal Class II<sup>1)</sup>

**A5E32910780**

Kit DN50 DIN11851 SC Tank connection, FKM Seal Class II

**A5E32910784**

Kit DN80 DIN11851 SC Tank connection, FKM Seal Class II

**A5E32910789**

Kit DN100 DIN11851 SC Tank connection, FKM Seal Class II

**A5E32910790**

Kit DN50 DIN11864-2 Form A tank connection, M8 Hardware (nut/bolt/washer), EPDM Seal Class II

**A5E32910791**

Kit DN80 DIN11864-2 Form A tank connection, M10 Hardware (nut/bolt/washer), EPDM Seal Class II

**A5E32910793**

Kit DN100 DIN11864-2 Form A tank connection, M10 Hardware (nut/bolt/washer), EPDM Seal Class II

**A5E32910799**

Kit DN50 DIN11864-2 Form A tank connection, M8 Hardware (nut/bolt/washer), FKM Seal Class I

**A5E32910805**

Kit DN80 DIN11864-2 Form A tank connection, M10 Hardware (nut/bolt/washer), FKM Seal Class I

**A5E32910809**

Kit DN100 DIN11864-2 Form A tank connection, M10 Hardware (nut/bolt/washer), FKM Seal Class I

**A5E32910812**

Kit DN50 DIN11864-3 Form A tank connection, Clamp, EPDM Seal Class II

**A5E32910813**

Kit DN80 DIN11864-3 Form A tank connection, Clamp, EPDM Seal Class II

**A5E32910814**

Kit DN100 DIN11864-3 Form A tank connection, Clamp, EPDM Seal Class II

**A5E32910815**

Kit DN50 DIN11864-3 Form A tank connection, Clamp, FKM Seal Class I

**A5E32910816**

Kit DN80 DIN11864-3 Form A tank connection, Clamp, FKM Seal Class I

**A5E32910817**

Kit DN100 DIN11864-3 Form A tank connection, Clamp, FKM Seal Class I

**A5E32910818**

Kit Type F, Tuchenhausen, Clamp, EPDM Seal Class II (EHEDG only) - no tank connection

**A5E33489537**

Kit Type N, Tuchenhausen, Clamp, EPDM Seal Class II (EHEDG only) - no tank connection

**A5E33489543**

Kit Type F, Tuchenhausen, Clamp, FKM Seal Class I (EHEDG only) - no tank connection

**A5E33489828**

Kit Type N, Tuchenhausen, Clamp, FKM Seal Class I (EHEDG only) - no tank connection

**A5E33489830**

#### Ex-proof plugs

Ex-proof plugs kit, 1/2" NPT, qty 5

**A5E39979991**

Ex-proof plugs kit, M20, qty 5

**A5E39979992**

<sup>1)</sup>Class II for low fat applications when EPDM seal used on DIN11851

**Notes:**

1. DC terminal shall be supplied from a source providing electrical isolation between the input and output, to meet the applicable safety requirements of IEC 61010-1.
2. All field wiring must have insulation suitable for rated input voltages.
3. Use shielded twisted pair cable (14 ... 22 AWG) for HART version.
4. Separate cables and conduit may be required to conform to standard instrumentation wiring practices or electrical codes.

SITRANS LR250 connections

#### Overview

The SITRANS LR460 is a 4-wire, 24 GHz FMCW radar level transmitter with extremely high signal-to-noise ratio and advanced signal processing for continuous monitoring of solids up to 100 m (328 ft). It is ideal for measurement in extreme dust and high temperature.

#### Benefits

- Process Intelligence for advanced signal processing and quick and easy adjustment
- Self-guided quick start wizard for plug and play startup
- 24 GHz provides superior reflective properties on solids surfaces
- 100 m (328 ft) range for long-range and difficult applications
- Easy Aimer optimizes signal quality on sloped surfaces
- Programming using infrared Intrinsically Safe handheld programmer or with SIMATIC PDM or HART handheld device

#### Application

SITRANS LR460 provides excellent results even during conditions of extreme dust. The integral Easy Aimer included on the SITRANS LR460 allows for easy positioning for optimum measurement on solids.

Process Intelligence onboard SITRANS LR460 means advanced signal processing is harnessed for reliable operation on both simple and difficult solids application.

SITRANS LR460 features a robust enclosure, flange and horn components. It is virtually unaffected by atmospheric or temperature conditions within the vessel.

An optional dust cap is available for sticky solids. Optional air purging is also available for extremely sticky applications.

Safe on-site local programming is simple using the Intrinsically Safe handheld programmer. SIMATIC PDM can be used for easy remote programming using HART or PROFIBUS PA.

The characteristics of 24 GHz and high signal-to-noise ratio contribute to exceptional signal reflection, regardless of the dielectric value of the medium.

- Key Applications: long-range dusty applications, cement powder, fly-ash, coal, flour, grain, plastics

### SITRANS LR460

#### Technical specifications

<b>Mode of operation</b>	
Measuring principle	FMCW radar level measurement
Frequency	24.2 ... 25.2 GHz FMCW
Measuring range	0.35 ... 100 m (1.15 ... 328.08 ft)
<b>Output</b>	
Analog output (HART)	
• Signal range	Optically isolated
• Load	Max. 600 Ω
• Fail-safe	mA signal programmable as high, low or hold (LOE)
Communication	HART, optional PROFIBUS PA
Digital output	Relay, NC or NO function, max. 50 V DC, max. 200 mA, rating 5 W
PROFIBUS PA protocol	Layer 1 and 2, Class A, Profile 3.01
<b>Performance (Reference conditions according to IEC 60770-1)</b>	
Non-linearity	Greater of 25 mm (1 inch) or 0.25 % of span (including hysteresis and non-repeatability), over the full ambient temperature range
Non-repeatability	≤ 10 mm (0.4 inch)
<b>Rated operating conditions</b>	
Amb. temperature for enclosure	-40 ... +65 °C (-40 ... +149 °F)
Storage temperature	-40 ... +65 °C (-40 ... +149 °F)
Location	Indoor/outdoor
Installation category	II
Pollution degree	4
<b>Medium conditions</b>	
Dielectric constant	$\epsilon_r > 1.4$
Process temperature range	-40 ... +200 °C (-40 ... +392 °F)
Vessel pressure	0.5 bar g (7.25 psi g) maximum
<b>Design</b>	
Weight	Approx. 6.1 kg (13.4 lb) with 3 inch universal flange
Materials	
• Enclosure	Die-cast aluminum, painted
• Degree of protection	IP67/Type 4X/NEMA 4X/Type 6/NEMA 6
• Cable inlet	2 x M20 x 1.5 or ½" NPT
Process connections	
• Universal flanges, 304 stainless steel, flat faced, with integral Easy Aimer	3 inch/80 mm, 4 inch/100 mm, 6 inch/150 mm (mates with flange EN 1092-1, ASME B16.5, or JIS B2238 bolt pattern), 0.5 bar g (7.25 psi g) max. pressure

<b>Programming</b>	
Intrinsically Safe Siemens handheld programmer (ordered separately)	Infrared receiver
• Approvals for handheld programmer	IS model: ATEX II 1G EEx ia IIC T4, CSA/FM Class I, Div. 1, Groups A, B, C, D T6 at max. ambient temperature of 40 °C (104 °F)
Handheld communicator	HART Communicator 375
PC	SIMATIC PDM
Display (local)	Alphanumeric LCD for readout and entry
<b>Power supply</b>	
	100 ... 230 V AC ± 15 % (50/60 Hz), 6 W (12 VA) or 24 V DC +25/-20 %, 6 W (optional)
<b>Certificates and approvals</b>	
General	CSA <sub>US/C</sub> , CE, FM, RCM
Radio	European Radio (RED), Industry Canada, FCC, RCM
Hazardous Areas	CSA/FM Class II, Div. 1, Groups E, F, and G, Class III ATEX II 1D, 1/2 D, 2D T85 °C INMETRO ExTD A20 IP67 T85 °C EAC Ex DIP A20 T <sub>a</sub> 85 °C IP67
<b>Optional equipment</b>	
Dust cap	PTFE
Air purge connection	1/8" NPT

#### Circuit diagrams

##### AC version

##### DC version

##### Hand programmer

SITRANS LR460  
Part number:  
7ML5830-2AJ

#### Notes

- Recommended torque on terminal clamping screws, 0.5 ... 0.6 Nm
- 4 ... 20 mA, PROFIBUS PA, DC input circuits, 14 ... 20 AWG, shielded copper wire
- AC input circuit, min. 14 AWG copper wire
- All field wiring must have insulation suitable for at least 250 V
- The equipment must be protected by a 15 A fuse or circuit breaker in the building installation

SITRANS LR460 connections

#### Overview

SITRANS LR560 2-wire, 78 GHz FMCW radar level transmitter for continuous monitoring of solids and liquids to a range of 100 m (328 ft).

#### Benefits

- Rugged stainless steel design for industrial applications
- 78 GHz high frequency provides very narrow beam, virtually no mounting nozzle noise, and optimal reflection from sloped solids
- Aimer option to direct beam to area of interest, such as draw point of cone
- Lens antenna is highly resistant to product buildup
- Air purge connection is included for self-cleaning of extremely sticky solids
- Local display interface (LDI) allows local programming and diagnostics

#### Application

SITRANS LR560's plug and play performance is ideal for most solids applications and long range liquid applications, including those with extreme dust and high temperatures to 200 °C (392 °F). Unique design allows safe and simple programming using the Intrinsically Safe handheld programmer without having to open the instrument's lid.

SITRANS LR560 includes an optional graphical local display interface (LDI) that improves setup and operation using an intuitive Quick Start Wizard, and echo profile display for diagnostic support. Startup is easy using the Quick Start wizard with a few parameters required for basic operation.

SITRANS LR560 measures practically any solids material to a range of 100 m (328 ft).

- Key Applications: cement powder, plastic powder/pellets, grain, coal, wood powder, fly ash

#### Configuration

##### Installation

##### Note:

- Beam angle is the width of the cone where the energy density is half of the peak energy density
- The peak energy density is directly in front of and in line with the antenna
- There is signal transmitted outside of the beam angle; therefore false targets may be detected

Aiming will assist in measuring material in the cone

1) Rated to 120 °C max. when used with Pressure rating option 1.

1) Available with Approval option A only.

2) Available with Enclosure option B only.

3) Available with Output/communication options B and C only.

4) Only available with enclosure option A (NPT thread).

5) Available with Pressure rating option 1 only.

6) Available with Output/communication option A only.

7) Product shipped with plastic cable gland, rated to -20 °C. If -40 °C rating required, then metallic cable gland is recommended.

##### SITRANS LR560 Electronics Modules

SITRANS LR560 Electronics Module, HART, 100 m range, compatible with 7ML54401XX00XAXX, no enclosure or process connection included.

**7ML18303-AC**

SITRANS LR560 Electronics Module, PROFIBUS PA, 100 m range, compatible with 7ML54401XX00XBXX, no enclosure or process connection included.

**7ML18303-AH**

SITRANS LR560 Electronics Module, HART, 40 m range, compatible with 7ML54400XX00XAXX, no enclosure or process connection included.

**7ML18303-AK**

SITRANS LR560 Electronics Module, PROFIBUS PA, 40 m range, compatible with 7ML54400XX00XBXX, no enclosure or process connection included.

**7ML18303-AL**

##### SITRANS LR560 Miscellaneous Spare Kits

Kit, lid gasket, EPDM

**7ML18303-AA**

Kit, wrench for 4 inch and 6 inch Aimers

**7ML18303-AB**

Kit, O-rings for 3 inch Aimer

**7ML18303-AD**

Kit, O-rings for 4 inch Aimer

**7ML18303-AE**

Kit, O-rings for 6 inch Aimer

**7ML18303-AF**

Kit, lid screw and purge plug set with hex keys

**7ML18303-AG**

Kit, lid, no Window

**7ML18303-AP**

Customers interested in a custom designed device should consult a local sales person. For more information, please visit [http://www.automation.siemens.com/aspa\\_app](http://www.automation.siemens.com/aspa_app).

## Level measurement

Continuous level measurement  
Radar level transmitters

### SITRANS LR560

#### Circuit diagrams

#### Notes:

1. Depending on the approval rating, glands and plugs may be supplied with your instrument.
2. DC terminal shall be supplied from a source providing electrical isolation between the input and output, to meet the applicable safety requirements of IEC 61010-1.
3. All field wiring must have insulation suitable for rated input voltages.
4. Use shielded twisted pair cable (14 ... 22 AWG) for HART version.
5. Separate cables and conduit may be required to conform to standard instrumentation wiring practices or electrical codes.

SITRANS LR560 connections

## Overview

### Introduction

Guided Wave Radar transmitters use TDR (time domain reflectometry).

### Time Domain Reflectometry (TDR)

TDR uses pulses of electromagnetic (EM) energy to measure distances or levels. When a pulse reaches a dielectric discontinuity (created by media surface), part of the energy is reflected. The greater the dielectric difference, the greater the amplitude (strength) of the reflection.

The SITRANS LG includes a transmitter and waveguide that has a characteristic impedance in air and is used as a probe. When part of the probe is immersed in a material other than air, there is lower impedance due to the increase in the dielectric. When an EM pulse is sent down the probe and meets the dielectric discontinuity, a reflection is generated.

## Mode of operation

### Interface Detection

The SITRANS LG, is a transmitter capable of measuring both an upper level and an interface level. The upper liquid must have a dielectric constant between 1.6 and 10 and the two liquids have a difference in dielectric constants greater than 10. A typical application would be oil over water, with the upper layer of oil being non-conductive with a dielectric constant of approximately 2 and the lower layer of water being very conductive with a dielectric constant of approximately 80. This interface measurement can only be accomplished when the dielectric constant of the upper medium is lower than the dielectric constant of the lower medium.

## Level measurement

Continuous level measurement  
Guided wave radar transmitters

### SITRANS LG series

#### Overview

The Siemens SITRANS LG series are guided wave radar transmitters for level, level/interface, and volume measurement of liquids and solids. The SITRANS LG product line can handle changes in process conditions, high temperatures and pressures, and steam.

#### Benefits

- High accuracy to +/- 2 mm
- Advanced Diagnostics available for high degree of safety
- Simple menu driven display offers ease of setup
- Large range of options offers reliability in most continuous level measurement applications
- Ease of maintenance through module design and field replaceable and adjustable probe options
- Perfect solution for wide range of applications from storage to interface with options for extreme pressure and temperature conditions
- Universally applicable in liquids, interface, slurries and solids
- Highly immune to buildup using auto learn function
- Ability to measure in loss of echo situations with probe end tracking
- Suitable for API 2350
- Convenient access using USB and remote interface accessories

#### Application

The SITRANS LG series comes in four different models, depending on the applications, level of performance, and functionality required:

- SITRANS LG240 offers configuration options for your hygienic and corrosive application requirements
- SITRANS LG250 Highly flexible solution for liquid level and interface applications. Extremely versatile offering solutions for storage, separation of materials or difficult ammonia applications
- SITRANS LG260 Ideal for measuring level in medium range solids applications including; grains, plastics, and cement
- SITRANS LG270 offers configuration options for extreme conditions including high temperature and high pressure applications such as: harsh applications found in chemical, HPI and energy industries for example, LPG gas tanks, steam boilers and distillation columns

#### Configuration

##### Mounting on nozzle

##### Installation in non-metal vessel

The guided microwave principle requires a metal surface on the process fitting. Therefore, use in plastic vessels etc. an instrument version with flange (from DN 50) or place a metal sheet,  $\text{Ø} > 200$  mm (8 inch), beneath the process fitting when screwing it in. Make sure that the plate has direct contact with the process fitting

##### Mounting socket

If possible, avoid sockets, mount the sensor flush with the vessel top. If this is not possible, use short sockets with small diameter. Higher sockets or sockets with a bigger diameter can generally be used. They simply increase the upper blocking distance. Check if this is relevant for your measurement. In such cases, always carry out a false signal suppression after installation.

##### Socket must be installed flush

When welding the socket, make sure that the socket is flush to the vessel top.

Before beginning the welding work, remove the electronics module from the sensor. By doing this, you avoid damage to the electronics through inductive coupling.

##### Inflowing medium

Do not mount the instruments in or above the filling stream. Make sure that you detect the product surface, not the inflowing product.

SITRANS LG Series installation

#### Technical specifications

<b>Mode of operation</b>		<b>Design</b>	
Measuring principle	Guided wave radar measurement	Instrument weight (dependent on process fitting) - see manual for further details	Approx. 0.8 ... 8 kg (0.176 ... 17.64 lb)
Measuring range	300 ... 75 000 mm (11.81 ... 2 952.75 inch)	Materials	<ul style="list-style-type: none"> <li>Plastic housing plastic PBT (Polyester)</li> <li>Aluminum die-cast housing, aluminum die-cast AISI10 mg, powder-coated- basis: polyester</li> <li>Stainless steel housing, precision casting 316L</li> <li>Stainless steel housing, electropolished 316L</li> </ul>
<b>Output</b>		• Enclosure	• Degree of protection
mA analog output with HART digital signal	4 ... 20 mA/HART (SIL optional)	• Cable inlet	<ul style="list-style-type: none"> <li>Type 4/NEMA 4, IP65</li> <li>Plastic housing IP66/IP67</li> <li>Aluminum and stainless steel housings are IP66/68</li> </ul>
Output range	Current: minimum 3.8 mA, maximum 20.5 mA	Process connections	2 x M20 x 1.5 or 2 x ½" NPT
• Analog	Current: minimum 3.8 mA, maximum 20.5 mA	• Pipe thread, cylindrical (ISO 228 T1)	G¾" A, G1" A, G1½" A according to DIN 3852-A
• Startup current	≤ 10 mA for 5 ms after switching on, ≤ 3.6 mA	• American pipe thread, conical (ASME B1.20.1)	¾" NPT, 1" NPT, 1½" NPT
Diagnostic alarm	Failure signal current output (adjustable): last valid measured value, ≥ 21 mA, ≤ 3.6 mA	• Flanged	DIN from DN 25, ASME from 1"
Digital communication	HART Version 7 x and multidrop compatible	• Hygienic	Hygienic fittings
Modbus	Modbus RTU, Modbus ASCII	Process seal instrument side	FKM (SHS FPM 70C3 GLT), FFKM (Kalrez 6375), EPDM (A+P 70.10-02), silicone FEP coated (A+P FEPO-SEAL) or Borosilicate glass GPC 540
PROFIBUS PA	PROFIBUS PA profile 3.02	Second line of defense (glass seal) (optional)	Borosilicate glass GPC 540
FOUNDATION Fieldbus	FOUNDATION Fieldbus protocol Physical layer according to IEC 61158-2		Note: The second line of defense is a second level of the process separation in the form of a gas-tight feedthrough in the lower part of the housing, preventing product from penetrating into the housing.
<b>Performance</b>		<b>Programming</b>	
• Measuring cycle time	Process reference conditions according to DIN EN 61298-1	Local	Four button, menu-driven data entry
• Step response time	< 500 ms	Handheld communicator	Hart communicator
• Temperature Effects	≤ 3 s	PC	SIMATIC PDM, AMS, PACTware
Non-linearity	The measurement error from the process conditions is in the specified pressure and temperature range of below 1 %	<b>Power</b>	
• Coaxial		2-wire Hart version	9.6 ... 35 V DC
• Single rod probes		4-wire versions	9.6 ... 48 V DC, 20 ... 42 V AC, 50/60 Hz, and 90 ... 253 V AC, 50/60 Hz
• Interface models	See manual for more details	Modbus	8 ... 30 V DC
Resolution and repeatability	Accuracy +/- 2 mm (0.08 inch)	PROFIBUS PA	9 ... 32 V DC
Accuracy	+/- 2 mm (0.08 inch)	FOUNDATION Fieldbus	9 ... 32 V DC
• Coaxial/rod/cable probes	+/- 5 mm (0.197 inch)		Note: see manual for specific power based on ordered options
• Interface models	Note: Typical deviation, Interface measurement. See manual for full explanation.	<b>Certificates and approvals</b>	
<b>Rated operating conditions</b>		Hazardous approvals:	ATEX, FM, CSA, IECEx Note: other regional approvals are available
Ambient temperature for enclosure	-40 ... +80 °C (-40 ... +176 °F)	Hygienic approvals:	EHDG, FDA
Storage temperature	-40 ... +80 °C (-40 ... +176 °F)	Overfill protection	WHG, VlareM
LCD readable temperature range	-40 ... +80 °C (-40 ... +176 °F) with display heated option	Ship approval	ABS, CCS, GL, BV, LR
Location	Indoor/outdoor		
Installation category	II		
Pollution degree	2		
Relative Humidity	20 ... 85 %		
<b>Medium conditions</b>			
Dielectric constant	dK ≥ 1.4 (configuration dependent) Note: for measurement below 1.4 use probe end tracking.		
Process temperature range	-196 ... +450 °C (-321 ... +842 °F)		
Vessel pressure	-1 ... +400 bar (-100 ... +40 000 kPa)

##### Operating instructions

German

**M00**

English

**M01**

French

**M02**

Spanish

**M03**

##### Further designs (optional)

Please add "-Z" to Article No. and specify Order code(s).

Enter the total insertion length in plain text description

**Y01**

Enter the total length of rigid part (cable version only) range from 100 ... 1 000 mm

**Y02**

Cleaning included certificate: oil, grease and silicone free

**W01**

Remote electronic cable lengths: 2 m (6.6 ft). Only available with Housing options Q2A and Q2B

**Y10**

Remote electronic cable lengths: 5 m (16.4 ft). Only available with Housing options Q2A and Q2B

**Y11**

Remote electronic cable lengths: 10 m (32.8 ft). Only available with Housing options Q2A and Q2B

**Y12**

Identification label (measurement loop) stainless steel, 40 characters max, add in plain text. To add more than one line use a coma ",", for line break.

**Y17**

Identification Label (measurement loop) foil, 40 characters max, add in plain text. To add more than one line use a coma ",", for line break.

**Y18**

Material Inspection certificate 3.1 of EN 10204

**C05**

3.1-Inspection Certificate for instrument (EN 10204)<sup>8)</sup>

**C12**

Inspection certificate 3.1 (EN 10204, NACE MR 0175) - material<sup>8)19)</sup>

**D07**

Note: 316L probes include NACE MR 0175 and MR 0103, non 316L probes include MR 0175 only and plated flange designs are not available with NACE certificate.

3.1-Inspection Certificate for instrument with test data (EN 10204)<sup>8)</sup>

**C25**

2.2-Factory certificate for material (EN 10204)<sup>8)</sup>

**C15**

Quality and test plan<sup>8)</sup>

**C26**

Dye penetration test, results confirmed via a 3.1 certificate/instrument (EN10204)<sup>8)</sup>

**C13**

##### Further designs (optional)

Please add "-Z" to Article No. and specify Order code(s).

X-ray test + 3.1 certificate/instrument<sup>8)</sup>

**C14**

Positive material identification test + 3.1 certificate/instrument<sup>8)</sup>

**C16**

Roughness test + 3.1 certificate/instrument<sup>8)</sup>

**C18**

Pressure test + 3.1 certificate/instrument<sup>8)</sup>

**C31**

Helium leak test + 3.1 certificate/instrument<sup>8)</sup>

**C32**

Ferrite measuring accuracy to DIN 32514-1 + 3.1 certificate/instrument<sup>8)</sup>

**C60**

Pressure test according to Norsok + 3.1 certificate/instrument<sup>8)</sup>

**C61**

5 point calibration certificate (min. length 300 mm)<sup>8)</sup>

**C62**

##### Operating Instructions

All literature is available to download for free, in a range of languages, at

For applicable back up point level switch - see point level measurement section

Note: some configuration options are not available. For restriction information see the online PIA configuration tool.

- 1) Some approvals are not available with Plastic and Stainless steel (electropolished) Housing/Protection/Cable options and certain glands.
- 2) Available only with Rod  $\varnothing$  10 mm/PFA and Cable  $\varnothing$  4 mm/PFA Length options.
- 3) Available only with Supplementary electronic option A00 and Indicating/adjustment module options E00, E01.
- 4) Not available with Remote Housing/Protection/Cable options Q2A and Q2B.
- 5) Not available with Electronic option 5.
- 6) Not available with Y02.
- 7) Available only with Electronic options 0, 2, and 6.
- 8) Listed Certificates are not available with all configurations, please contact factory for more information.
- 9) Available only with Supplementary electronic option A00.
- 10) Not available with Indicating/adjustment module option E02.
- 11) Available only with Electronics options 0, 2, and 5.
- 12) Some approvals are not available with Remote or Stainless steel (electropolished) Housing/Protection/Cable options and certain glands.
- 13) Available only with Double chamber, Metallic Housing/Protection/Cable options and certain glands.
- 14) Available only with Electronics options 0, 2, 5, 6.
- 15) Available only with Electronics options 0 and 2.
- 16) Available only with Electronics options 0 ... 4.
- 17) Not available with some Seal/Process Temperature options.
- 18) Available only with Electronic options 0, 2, 3, and 4.
- 19) Available only with 316L Probes. NACE is not available with coated, plated, or hygienic connections.

Note: Please consult manual for further detail.

Enter the total insertion length in plain text description		Y01
Enter the total length of rigid part (cable version only) range from 100 ... 1 000 mm		Y02
Remote electronic cable lengths: 2 m (6.6 ft). Only available with Housing options Q2A and Q2B		Y10
Remote electronic cable lengths: 5 m (16.4 ft). Only available with Housing options Q2A and Q2B		Y11

## Level measurement

### Continuous level measurement Guided wave radar transmitters

#### SITRANS LG series

Selection and ordering data	Order code
Remote electronic cable lengths: 10 m (32.8 ft). Only available with Housing options Q2A and Q2B	<b>Y12</b>
Identification Label (measurement loop) stainless steel, 40 characters max, add in plain text. To add more than one line use a coma "," for line break.	<b>Y17</b>
Identification Label (measurement loop) foil, 40 characters max, add in plain text. To add more than one line use a coma "," for line break.	<b>Y18</b>
Material Inspection certificate 3.1 of EN 10204	<b>C05</b>
3.1-Inspection Certificate for instrument (EN 10204) <sup>30)</sup>	<b>C12</b>
Inspection certificate 3.1 (EN 10204, NACE MR 0175) - material <sup>30)</sup> <sup>31)</sup> Note: 316L probes include NACE MR 0175 and MR 0103, non 316L probes include MR 0175 only and plated flange designs are not available with NACE certificate.	<b>D07</b>
3.1-Inspection Certificate for instrument with test data (EN 10204) <sup>30)</sup>	<b>C25</b>
2.2-Factory certificate for material (EN 10204) <sup>30)</sup>	<b>C15</b>
Quality and test plan <sup>30)</sup>	<b>C26</b>
Dye penetration test, results confirmed via a 3.1 certificate/instrument (EN10204) <sup>30)</sup>	<b>C13</b>
X-ray test + 3.1 certificate/instrument <sup>30)</sup>	<b>C14</b>
Positive material identification test + 3.1 certificate/instrument <sup>30)</sup>	<b>C16</b>
Roughness test + 3.1 certificate/instrument <sup>30)</sup>	<b>C18</b>
Pressure test + 3.1 certificate/instrument <sup>30)</sup>	<b>C31</b>
Helium leak test + 3.1 certificate/instrument <sup>30)</sup>	<b>C32</b>
Pressure test according to Norsok + 3.1 certificate/instrument <sup>30)</sup>	<b>C61</b>
5 point calibration certificate (min. length 500 mm) <sup>30)</sup>	<b>C62</b>
Pressure test (acc. to ASME B31.1), incl. 3.1 Inspection certificate <sup>30)</sup>	<b>C63</b>
Certificate suitable for tropical regions with, all attachment parts of metal (2.1 factory certificate)	<b>C65</b>
<b>Operating Instructions</b>

SITRANS RD200, universal input display with Modbus conversion - see Chapter 7	<b>7ML5740-.....-..</b>
SITRANS RD300, dual line display with totalizer and linearization curve and Modbus conversion - see Chapter 7	<b>7ML5744-.....-..</b>
For applicable back up point level switch - see point level measurement section	

Note: some configuration options are not available. For restriction information see the online PIA configuration tool.

- <sup>1)</sup> Not available with Plastic and Stainless steel (electropolished) Housing/Protection/Cable options and certain glands.
- <sup>2)</sup> Available only with Metallic, Double chamber Housing/Protection/Cable options and certain glands.
- <sup>3)</sup> Not available with Remote or Stainless steel (electropolished) Housing/Protection/Cable options and certain glands.
- <sup>4)</sup> Not available with Stainless steel (electropolished) Housing/Protection/Cable options and certain glands.
- <sup>5)</sup> Not available with certain glands.
- <sup>6)</sup> Not available with Version/Material option K, L, M, N, P, Q, R, S, T, and U.
- <sup>7)</sup> Not available with Length options 3, 4, 5, R2C, and R2D.
- <sup>8)</sup> Available only with Supplementary electronic option A00.
- <sup>9)</sup> Not available with Seal/Second line of defense/Process temperature option N.
- <sup>10)</sup> Not available with Housing/Protection/Cable option Q1B.
- <sup>11)</sup> Not available with Indicating/adjustment module option E02.
- <sup>12)</sup> Not available with Process fitting/Material options O0 and O1.
- <sup>13)</sup> Available only with Electronic options 0 ... 4.
- <sup>14)</sup> Available only with glass seal options.
- <sup>15)</sup> Available only with Seal/Second line of defense/Process temperature options C, D, E, F, H, J, M, N, Q.
- <sup>16)</sup> Not Available with Housing/Protection/Cable options W, X, Y, J, Q1A, and Q1B.
- <sup>17)</sup> Not Available with Seal/Second line of defense/Process temperature option P.
- <sup>18)</sup> Available only with Single chamber, Aluminum and Stainless steel (precision casting) Housing/Protection/Cable options.
- <sup>19)</sup> Available only with Dimensions centering weight option B00.
- <sup>20)</sup> Available only with Rod mounted option C00.
- <sup>21)</sup> Not available with Dimensions centering weight option B00.
- <sup>22)</sup> Available only with Seal/Second line of defense/Process temperature option N.
- <sup>23)</sup> Not available with Version/Material options F, K, L, M, N, P, Q, R, S, and T.
- <sup>24)</sup> Not available with Seal/Process temperature options A, G, K, N, and Q.
- <sup>25)</sup> Available only with Version/Material options A ... K.
- <sup>26)</sup> Not available with Remote Housing/Protection/Cable options.
- <sup>27)</sup> Not available with some Seal/Process temperature options including glass.
- <sup>28)</sup> Not available with Supplementary electronics options.
- <sup>29)</sup> Not available with Y02.
- <sup>30)</sup> Listed Certificates are not available with all configurations, please contact factory for more information.
- <sup>31)</sup> Available only with 316L Probes. NACE is not available with coated, plated, or hygienic connections.
- <sup>32)</sup> Available only with Housing/Protection/Cable options E, F, N, Q, R, T.
- <sup>33)</sup> Available only with Housing/Protection/Cable options C, D, E, F, L, M, N, P, Q, R, S, T, U, V, Q2A, and Q2B.
- <sup>34)</sup> Available only with Double chamber, Plastic and Metallic Housing/Protection/Cable options and certain glands.
- <sup>35)</sup> Available only with Approvals options OA (CE only) and 1D.
- <sup>36)</sup> Available only with ø 4 mm PFA Length options.
- <sup>37)</sup> Not available with Probe version/Material option P.
- <sup>38)</sup> Available only with Probe version/Material options G and H.

Note: Please consult manual for further details.

For applicable back up point level switch - see point level measurement section	

Note: some configuration options are not available. For restriction information see the online PIA configuration tool.

- <sup>1)</sup> Not available with Plastic and Stainless steel (electropolished) Housing/Protection/Cable options and certain glands.
- <sup>2)</sup> Available only with Double chamber, Metallic Housing/Protection/Cable options and certain glands.
- <sup>3)</sup> Not available with Remote and Stainless steel (electropolished) Housing/Protection/Cable options and certain glands.
- <sup>4)</sup> Not available with Stainless steel (electropolished) Housing/Protection/Cable options and certain glands.
- <sup>5)</sup> Not available with Seal/Process temperature option C.
- <sup>6)</sup> Not available with Housing/Protection/Cable options W, X, Y, and U.
- <sup>7)</sup> Not available with Probe version/Material option E.
- <sup>8)</sup> Available only with certain Electronics options.
- <sup>9)</sup> Available only with Supplementary electronic option A00.
- <sup>10)</sup> Not available with Indicating/adjustment module option E02.
- <sup>11)</sup> Not available with Seal/Process temperature options B and E.
- <sup>12)</sup> Available only with Seal/Process temperature option C.
- <sup>13)</sup> Not available with Seal/Process temperature options A and D.
- <sup>14)</sup> Available only with Rod mounted option C00.
- <sup>15)</sup> Available only with Seal/Process temperature options A and D.
- <sup>16)</sup> Not available with Housing/Protection/Cable options Q2A and Q2B.
- <sup>17)</sup> Listed Certificates are not available with all configurations, please contact factory for more information.
- <sup>18)</sup> Available only with 316L Probes. NACE is not available with coated, plated, or hygienic connections.
- <sup>19)</sup> Available only with Single chamber, Aluminum and Stainless steel (precision casting) Housing/Protection/Cable options.

Note: Please consult manual for further details.

Note: some configuration options are not available. For restriction information see the online PIA configuration tool.

- 1) Not available with Version/Material options E, F, G, J, and K.
- 2) Available only with certain Electronic options.
- 3) Not available with Seal/Process temperature option D.
- 4) Not available with Stainless Steel (electropolished) Housing/Protection/Cable options and certain glands.
- 5) Available only with Supplementary electronic option A00.
- 6) Not available with Indicating/adjusting module E02.
- 7) Not available with Plastic and Stainless Steel (electropolished) Housing/Protection/Cable options and certain glands.
- 8) Available only with Double chamber, Metallic Housing/Protection/Cable options and certain glands.
- 9) Available only with Version/Material options A, B, C, D, and H.
- 10) Not available with Remote and Stainless Steel (electropolished) Housing/Protection/Cable options and certain glands.
- 11) Available only with Single chamber, Aluminum and Stainless steel (precision casting) Housing/Protection/Cable options.
- 12) Available only with Housing/Protection/Cable options N, P, V, and Q2A.
- 13) Not available with Housing/Protection/Cable options W, X, Y, and J.
- 14) Available only with Housing/Protection/Cable options C, E, L, Q.
- 15) Not available with Seal/Process temperature option C.
- 16) Available only with Dimensions centering weight option B00.
- 17) Available only with Rod mounted option C00.
- 18) Not available with Dimensions centering weight option B00.
- 19) Not available with Rod mounted option C00.
- 20) Not available with Seal/Process temperature options C and D.
- 21) Not available with Remote Housing/Protection/Cable options.
- 22) Not available with Seal/Process temperature options B and D.
- 23) Available only with Seal/Process temperature option D.
- 24) Available only with Seal/Process temperature options A, B, and C.
- 25) Not available with Order code Y02.
- 26) Accuracy is application dependent, please consult factory.
- 27) Listed Certificates are not available with all configurations, please contact factory for more information.
- 28) Available only with ASME Process fitting/Material options.
- 29) Available with Version/Material options G, L, M and Electronic options 2 and 6.
- 30) Available only with Alloy C22 Process fitting/Material options.
- 31) Available only with Version/Material option M.
- 32) Available only with some Version/Material options.
- 33) Available only with Norsok Process fitting options.
- 34) Available only with Seal/Second line of defense/Process temperature options A and B.
- 35) Available only with 316L probe Version/material options. Nace not available with coated, plated, or hygienic connections.

Note: Please consult manual for further details.

#### Overview

SITRANS LC300 is an inverse frequency shift capacitance continuous level transmitter for liquid, interface, and solid applications. It is ideal for standard industrial applications in chemical, hydrocarbon processing, food and beverage, water, wastewater, mining, aggregate, and cement industries.

#### Benefits

- Active-Shield technology so measurement is unaffected by material buildup in active shield section
- Highly accurate and reliable PFA-lined probes
- Integrated local LCD display
- 2-wire (4 to 20 mA) current loop design
- Current signaling according to NAMUR NE 43
- Push-button calibration and programming
- Stilling well (ground tube) version for low dielectric media, agitated materials, and non-metallic vessels

#### Application

SITRANS LC300 is a 2-wire level measurement instrument combining a sophisticated, yet easy-to-adjust microprocessor with field-proven probes. It is available in four versions: rod, rod with stilling well, cable with PFA insulation, and cable without PFA insulation.

Materials with low or high dielectric properties are accurately measured and Active-Shield technology helps in ignoring the effects of buildup or condensation near vessel nozzle.

- Key Applications: conductive ( $dK \geq 20$ ) and non-conductive ( $dK < 20$ ) media including: liquids and solids in standard industrial processes, bulk solids applications involving dust, and chemical processes involving vapor

#### Probe Applications

Rod version	Conductive liquids, slurries or solids
Rod version with stilling well	<ul style="list-style-type: none"> <li>• Conductive liquids or slurries in non-conductive tanks</li> <li>• Non-conductive liquids in non-conductive tanks</li> <li>• Tanks with agitation or turbulent liquids</li> <li>• Liquids with a dielectric constant below 2</li> <li>• Non-linear tanks, such as parabolic or spherical tanks</li> <li>• Interface measurements</li> </ul>
Cable version	Non-conductive solids or liquids
PFA coated cable version	Conductive or sticky liquids, slurries or solids

#### Configuration

##### Installation

Build up of material in active shield area does not affect switch operation.

Mounting on a bypass

Install probe at least 50 (2) from tank wall.  
Note angle of repose and adjust accordingly.

SITRANS LC300 installation, dimensions in mm (inch)

#### Technical specifications

<b>Input</b>	
Measuring range	1.66 ... 3 300 pF
Span	Min. 3.3 pF
<b>Output</b>	
Loop current	Continuous signal 4 ... 20 mA/20 ... 4 mA according to NAMUR 43
<b>Accuracy (transmitter)</b>	
Temperature stability	0.25 % of actual capacitance value
Non-linearity and repeatability	< 0.4 % of full scale and actual measurement value
Accuracy	Deviation < 0.5 % of actual measurement value
<b>Rated operating conditions<sup>1)</sup></b>	
Ambient conditions	
• Ambient temperature	-40 ... +85 °C (-40 ... +185 °F) <sup>2)3)</sup>
• Storage temperature	-40 ... +85 °C (-40 ... +185 °F)
• Installation category	I
• Pollution degree	4
• Ingress protection	Type 4/NEMA 4/IP65 (optional IP68)
Installation conditions	
• Location	Indoor/outdoor
• Process pressure	-1 ... +35 bar g (-14.6 ... +511 psi g)
• Process temperature	-40 ... +200 °C (-40 ... +392 °F) <sup>4)</sup>
• Min. dielectric constant $\epsilon_r$	1.5
• Min. difference in dielectric constant for interface measurement	5
<b>Design</b>	
Material	
• Enclosure	Aluminum, epoxy-coated
Probe diameter	
• Rod version	19 mm (0.75 inch) with PFA jacket
• Cable version	9 mm (0.35 inch) with PFA jacket, 6 mm (0.24 inch) without PFA jacket
Active shield length	
• Rod version	Threaded: 120 mm (4.72 inch) Flanged: 100 mm (3.94 inch)
• Cable version	Threaded: 125 mm (4.92 inch) Flanged: 105 mm (4.13 inch)
Process connection of probe	
• Threaded rod mounting	$\frac{3}{4}$ ", 1", 1 $\frac{1}{4}$ ", 1 $\frac{1}{2}$ " NPT [(Taper), ANSI/ASME B1.20.1] R $\frac{3}{4}$ ", 1", 1 $\frac{1}{2}$ " [(BSPT), EN 10226/PT (JIS-T), JIS B 0203] G $\frac{3}{4}$ ", 1", 1 $\frac{1}{2}$ " [(BSPP), EN ISO 228-1/PF (JIS-P), JIS B 0202]
• Threaded cable mounting	1 $\frac{1}{2}$ " NPT [(Taper), ANSI/ASME B1.20.1] R 1 $\frac{1}{2}$ " [(BSPT), EN 10226/PT (JIS-T), JIS B 0203] G 1 $\frac{1}{2}$ " [(BSPP), EN ISO 228-1/PF (JIS-P), JIS B 0202]
• Flange mounting	1 ... 4" ASME, DN 25 ... 100
Enclosure cable inlet	2 x $\frac{1}{2}$ " NPT or 2 x M20 x 1.5

<b>Power supply</b>	12 ... 30 V DC any polarity, 2-wire current loop circuit
<b>User Interface</b>	
Display	Local LCD, 4 digit, each 0 ... 9 and limited alpha characters
<b>Safety</b>	
Measurement current signaling	According to NAMUR NE 43, signal 3.8 ... 20.5 mA, fault $\leq 3.6$ or $\geq 21$ mA (22 mA)
<b>Certificates and approvals</b>	
General	CE, CSA <sub>US/C</sub> , FM, RCM, KCC, EAC

## Article No.

**SITRANS LC300 Capacitance level transmitter, rod design**

Continuous, contact, monitors level or interface in liquids or solids. Extension options up to 5 m (16.40 ft).

**Probe Length (from flange face or including process thread)**

Add Order code Y01 and plain text: "Insertion length ... mm"

300 ... 1 000 mm (11.81 ... 39.37 inch) **A**  
 1 001 ... 2 000 mm (39.41 ... 78.74 inch) **B**  
 2 001 ... 3 000 mm (78.78 ... 118.11 inch) **C**  
 3 001 ... 4 000 mm (118.15 ... 157.48 inch) **D**  
 4 001 ... 5 000 mm (157.52 ... 196.85 inch) **E**

Bent probes also available. Please contact a local sales person for details.

For more information, please visit [http://www.automation.siemens.com/aspa\\_app](http://www.automation.siemens.com/aspa_app).

**Thermal isolator**

Without thermal isolator **0**  
 With thermal isolator [for process connection temperatures over 85 °C (185 °F)] **1**

**Wetted seals**

FKM **0**  
 FFKM [for process temperatures above -20 °C (4 °F)<sup>2)</sup>] **1**

**Probe material**

19 mm (0.75 inch) diameter 316L stainless steel, PFA lined rod **0**

**Approvals**

General Safety (CSA, FM, CE, RCM) **A**  
 Dust Ignition Proof With IS Probe CE, RCM, ATEX II 1/2 D T100 °C **B**  
 Flame Proof Enclosure With IS Probe CE, RCM, ATEX II 1/2 G EEx d [ia] IIC T6 ... T1, ATEX II 1/2 D T100 °C **C**  
 Dust Ignition Proof With IS Probe CSA/FM Class II, Div. 1, Groups E, F, G CSA/FM Class III T4 **D**  
 Explosion Proof Enclosure With IS Probe CSA/FM Class I, Div. 1, Groups A, B, C, D CSA/FM Class II, Div. 1, Groups E, F, G CSA/FM Class III T4 **E**

**Enclosure**

Aluminum epoxy coated 2 x ½" NPT via adapter - cable inlet, IP65 **A**  
 Aluminum epoxy coated 2 x M20 x 1.5 cable inlet, IP65 **B**  
 Aluminum epoxy coated 2 x ½" NPT via adapter - cable inlet, IP68 **C**  
 Aluminum epoxy coated 2 x M20 x 1.5 cable inlet, IP68 **D**

Stainless steel, contact local sales person for details. For more information, please visit

## Level measurement Communication

### SmartLinx module

#### Overview

SmartLinx modules provide direct digital connection to popular industrial communications buses with true plug-and-play compatibility with products manufactured by Siemens.

#### Benefits

- Fast, easy installation
- Direct connection: no additional installation required
- Scalable application layer allows for optimized network bandwidth and memory requirements (for PROFIBUS DP-V0 and DeviceNet only)
- Modules available for PROFIBUS DP-V0, PROFIBUS DP-V1, PROFINET, DeviceNet, Modbus TCP/IP, and EtherNet/IP

#### Application

With the addition of a SmartLinx module, Siemens instruments can be connected to a variety of industrial communications networks.

They're fast and easy to install, and can be added at any time. The module simply plugs into the socket on any SmartLinx enabled product. They require no secondary private buses or gateways and no separate wiring. There are no extra boxes to connect to your network so there's a minimum load on engineering and maintenance staff.

SmartLinx provides all data from the instrument, including measurement and status, and allows changes to operation parameters to be done over the bus or telemetry link. The user can select which data in the application layer to transfer over the bus. This selection saves bandwidth and memory and optimizes data throughput and speeds up the network, enabling you to connect more instruments to your network.

#### Selecting a communications module: PROFIBUS DP-V0 versus PROFIBUS DP-V1

The PROFIBUS DP-V1 card was added to MultiRanger 200 HMI and HydroRanger 200 HMI to provide acyclic communication and SIMATIC PDM support over PROFIBUS and PROFINET. For backward compatibility, the PROFIBUS DP-V0 card can also be used with MultiRanger 200 HMI and HydroRanger 200 HMI.

MultiRanger 100/200, HydroRanger 200, BW500/L, and SF500 are compatible only with the PROFIBUS DP-V0 module.

#### Technical specifications

Module type	PROFIBUS DP-V0
Interface	RS 485 (PROFIBUS standard)

#### Supplied product documentation on DVD and safety instructions

The scope of delivery of the Siemens products for process instrumentation includes a multilingual instruction sheet with **safety instructions** as well as a uniform **mini DVD – Process Instrumentation and Weighing Systems**.

This DVD contains the most important manuals and certificates for the Siemens process instrumentation and weighing technology portfolio. The delivery may also contain product-specific or order-specific printed materials.

For additional information, refer to the Annex on page 10/3.

## Overview

SIPART PS2 electropneumatic positioner in polycarbonate enclosure with aluminum gauge block (optional)

SIPART PS2 electropneumatic positioner in aluminum enclosure

SIPART PS2 electropneumatic positioner in stainless steel enclosure with stainless steel gauge block (optional)

SIPART PS2 electropneumatic positioner in flameproof aluminum enclosure (Ex d) with aluminum gauge block (optional)

SIPART PS2 electropneumatic positioner in flameproof stainless steel enclosure 316L with stainless steel gauge block (optional)

The SIPART PS2 electropneumatic positioners are used to control the process valve or damper position of pneumatic linear or part-turn actuators or via positioning cylinder according to the setpoint specification. A digital input can trigger holding of the position or approach of the safety setting of the process valve.

## Benefits

SIPART PS2 positioners offer decisive advantages:

- Simple mounting and automatic commissioning
- Simple operation and configuration of the device using 3 buttons and one 2-line local display or via SIMATIC PDM
- Very high control performance
- Negligible air consumption in stationary operation
- "Tight closing" function ensures maximum positioning pressure on the process valve seat
- "Fast Open/Fast Close" function for defined approach of the end position with fast reaction to new setpoint specifications
- "Fail in Place" function: Maintain current position on failure of electrical and/or pneumatic auxiliary power
- Numerous functions can be activated by simple configuring (e.g. characteristic curves and limits)
- One device variant for linear and part-turn actuators
- Insensitive to vibrations due to few moving parts and optionally with wear-free position detection
- External non-contacting sensor as option for extreme ambient conditions

## Positioners

### SIPART PS2

#### Technical description

- "Intelligent solenoid valve": Solenoid valve function and diagnostics in one device
- Extensive diagnostic functions for process valve and actuator, e.g.:
  - Full Stroke Test
  - Multi Step Response Test
  - Valve Performance Test
  - Valve Signature, pressure sensor-aided
  - Partial Stroke Test e.g. for safety process valves (also pressure sensor-aided) for performance and maintenance evaluation of the valve
- Can be operated with natural gas, carbon dioxide, nitrogen or noble gases
- SIL (Safety Integrity Level) 2

#### Application

The SIPART PS2 positioner is used worldwide on all pneumatic actuators, in all applications and industries:

- Chemical industry
- Petrochemical industry
- Oil and gas
- Water/wastewater industry
- Power supply
- Pharmaceutical industry
- Food, beverage and tobacco industries

The devices are available in variants for:

- 4 to 20 mA
- HART communication
- PROFIBUS PA communication
- FOUNDATION Fieldbus (FF) communication
- Single- and double-acting valves in various enclosure designs and various materials (polycarbonate, aluminum and stainless steel)
- Applications without explosion protection requirements
- Hazardous applications in the versions:
  - Device protection with intrinsic safety (Ex i) for use in Zone 1, 2, 21, 22 or Class I, II, III/Division 1/Groups A-G
  - Device dust ignition protection by enclosure (Ex t) type of protection for use in Zone 21, 22 or Class II, III/Division 1/Groups E-G
  - Device protection with increased security (Ex e) for use in Zone 2 or Class I, Division 2, Groups A-D
  - Device protection with flameproof enclosure (Ex d) for use in Zone 1 or Class I, Division 1, Groups A-D

#### **Stainless steel enclosure for extreme ambient conditions**

The SIPART PS2 is available in a stainless steel enclosure for use in particularly aggressive environments (e.g. offshore operation, chlorine plants). The device functionality is not different due to the enclosure variants.

#### Design

The SIPART PS2 digital positioner comprises the following components:

- Base plate with lid with/without inspection window, depending on the variant
- Electronics with screw-type terminals:
  - 4 to 20 mA
  - 4 to 20 mA with HART
  - PROFIBUS PA according to IEC 61158-2, bus-supplied
  - FOUNDATION Fieldbus (FF) according to IEC 61158-2, bus-supplied
- Position feedback via potentiometer or non-contacting sensor (NCS)
- Pneumatic block

The pneumatic connections for supply air and actuating pressure are located on the right side of the enclosure. A gauge block, venting gauge block, booster, VDI3847 interface or a safety solenoid valve can be connected there as options. The SIPART PS2 positioner is fitted to the linear or part-turn actuator using an appropriate mounting kit.

#### **Optional expansion with modules and functions**

Optionally, SIPART PS2 can be expanded with the following modules and functions:

##### Analog Output Module (AOM)

Analog position feedback 4 to 20 mA.

##### Digital I/O Module (DIO) with 3 digital outputs and 1 digital input

- Signaling of two limits of the travel or angle. The two limits can be parameterized independently as maximum or minimum values.
- Output of an alarm if the setpoint position of the final control element is not reached in automatic mode or if a device/valve fault occurs.
- 2nd digital input for alarm signals or for triggering safety reactions, e.g. hold position or approach safety position.

##### Inductive Limit Switches (ILS)

Via the inductive switches, 2 independent limits can be set and monitored as NAMUR signal (EN 60947-5-6). The module also contains an integrated fault indicator (see "Digital I/O Module (DIO)").

##### Mechanic Limit Switches (MLS)

2 independent limits can be monitored via the mechanical switches. The module also contains an integrated fault indicator (see "Digital I/O Module (DIO)").

Valid for all modules described above:

- All signals are electrically isolated from one another and from the basic unit. The outputs indicate self-signaling faults. The modules are easy to retrofit.

#### **Separate mounting of positioner and position detection**

Separate mounting of the positioner and position detection can be implemented with SIPART PS2. Only measurement of the stroke or angle, for example, is carried out directly on the actuator. This means that the positioner can be installed at a distance in a protected area. Components are connected electrically via a cable and pneumatically via tubes or pipes. The system is often advantageous if the ambient conditions at the valve exceed the specified values for the positioner (e.g. strong vibrations, radiation, magnetism).

Separate installation of the position detection and positioner SIPART PS2

### Use for position detection

The following can be used for position detection:

SIPART PS2, NCS for strokes > 14 mm

- Non-contacting sensor (NCS)
- Position Transmitter
- Linear potentiometers
- Commercial sensors

### Non-contacting sensor (NCS)

For SIPART PS2

Left: NCS for part-turn actuator (6DR4004-N.10) mounted on mounting console 6DR4004-1D to 4D

Right: NCS for linear actuator (6DR4004-N.20) mounted with actuator-specific/customer-specific mounting solution

### Position Transmitter

With potentiometer, with NCS, with NCS and ILS or with NCS and MLS for SIPART PS2.

Mounting takes place like with SIPART PS2.

### Linear potentiometers

With 3K, 5K or 10 to 20 kΩ (e.g. pneumatic cylinder).

### Commercial sensors

With 4 to 20 mA or 0 to 10 V (only with non-ex applications).

## Function

### Monitoring functions

The SIPART PS2 has comprehensive monitoring functions with which changes on the actuator and process valve can be detected and signaled depending on the set limit. This information provides important indications on the status of the valve. Determined/monitored measuring data:

- Travel integral
- Number of changes in direction
- Alarm counter
- Self-adjusting deadband
- Process valve end position (e.g. for detection of process valve seat wear or deposits)
- Operating hours (also according to temperature and position ranges) as well as min./max. temperature
- Operating cycles of piezoelectric valves in pneumatic block
- Process valve positioning time
- Actuator leakages

### At a glance with the Diagnostics Cockpit

With the Diagnostics Cockpit, the HART variants of the SIPART PS2 provide a straightforward way of getting started with the world of diagnostic capabilities. All relevant information on the valve, such as setpoint, actual value, control deviation, status of the diagnostic system, etc., is available at a glance. Additional facts and details are just a few mouse clicks away from the Diagnostics Cockpit.

## Positioners

### SIPART PS2

#### Technical description

##### Status monitoring with 3-stage alarm concept

The intelligent electropneumatic SIPART PS2 positioner is equipped with additional monitoring functions. The status alarms derived from these monitoring functions signal active faults of the valve with grading in the form of traffic light signaling. The status alarms are symbolized by a wrench in the colors green, yellow and red (in SIMATIC PDM and Maintenance Station):

- Need for maintenance (green wrench)
- Urgent need for maintenance (yellow wrench)
- Imminent danger of valve failure or general failure (red wrench)

This allows users to put early measures into action before an acute process valve or actuator fault occurs which could result in a system shutdown. Early alarms indicate, for example, the onset of a diaphragm break in the actuator or progressive sluggishness of a valve. In this way, users can guarantee plant safety and availability with suitable maintenance strategies.

This 3-stage alarm hierarchy also allows early detection and signaling of static friction of a packing gland, wear of a process valve plug/seat, or deposits or coatings on the fittings.

These fault indications can be output either line-conducted over the alarm outputs of the positioner (maximum 3), or via communication over the HART or fieldbus interfaces. In this case, the HART, PROFIBUS and FOUNDATION Fieldbus variants of SIPART PS2 allow for differentiation of the various fault indications, as well as a trend representation and histogram function of all key process variables with regard to the valve.

The device display also displays the graded maintenance requirements, complete with identification of the source of the fault.

##### Maintenance required of control valves

The Full Stroke Test, Step Response Test, Multi Step Response Test and Valve Performance Test provide detailed information about the maintenance required of the valve. With the help of the HART communication system, you receive comprehensive test results and can identify the extent of the maintenance measures. In order to quantify the performance capability of valves, characteristic values such as step response times (T63, T86 or Txx), dead times, overshoot, hysteresis, measurement deviations and non-linearity are determined.

##### Functional Safety according to SIL 2

In the variants 6DR5.1.-0.....-Z C20, the positioner is suitable for use on single-acting valves with spring return that satisfy the special requirements in terms of functional safety up to SIL 2 according to IEC 61508 or IEC 61511. The positioner depressurizes the process valve actuator on demand/in the event of a fault (safe depressurizing) and puts the process valve in the preset safety position.

##### Valve Signature

With pressure sensor-aided Valve Signature, the characteristic curve of the valve can be recorded, saved in the device (max. 10 characteristic curves) and displayed in PDM, for example. The reference characteristic curve is recorded at the beginning directly during initialization. Based on the exportable data, friction values, spring characteristics, hysteresis, breakout pressures can be determined. If the test is regularly repeated, characteristic curves can be compared with one another and changes over time can be displayed as the basis for a predictive maintenance approach.

##### Partial Stroke Test

With the pressure sensor-aided Partial Stroke Test, the function of safety (open/close) valves can be checked reliably during operation. Up to 10 characteristic curves and important parameters are saved in the device. They can be displayed in PDM, for example. Recording of the reference characteristic curve takes place during operation and in settled state. Based on the exportable data, friction values, spring characteristics, hysteresis, breakout pressures can be determined. If the test is regularly repeated, characteristic curves can be compared with one another and changes over time can be displayed as the basis for a predictive maintenance approach.

##### Intelligent solenoid valve

The SIPART PS2 can (parameterizable) take on the function of a solenoid valve for open/close valves and also offers intelligent diagnostics for valves with the pressure sensor-aided Partial Stroke Test, for example. For devices without explosion protection and only in connection with the pressure sensor-aided diagnostics, SIPART PS2 can also be operated with 24 V, i.e. without additional wiring. All other devices must be supplied with 4 to 20 mA. SIPART PS2 takes on the function as "Intelligent solenoid valve" with additional pressure sensor-aided diagnostics and handles multiple tasks in one device:

- The positioner opens and closes the valve quickly and without control.
- In a safety scenario, during power failure, the SIPART PS2 drives the valve into the safety position "Functional Safety according to SIL 2".
- A pressure sensor-aided Partial Stroke Test can be performed automatically at regular intervals. This test keeps the valve in regular movement and prevents rusting of the valve due to corrosion or incrustation.

Solenoid valves on control valves normally cannot be tested during operation. They are therefore not necessary when using SIPART PS2 as the depressurizing is carried out on demand by SIPART PS2. This means that, on control valves, both the control function and the shut-off function can be carried out by a single device.

##### Configuring

The SIPART PS2 positioner contains the following configurations:

- Input current range 0 to 20 mA or 4 to 20 mA
- Rising or falling characteristic curve at the setpoint input
- Positioning speed limit (setpoint ramp)
- Split-range mode: Adjustable start-of-scale and full-scale values
- Response threshold (deadband); self-adjusting or fixed
- Direction of action: Rising or falling output pressure with rising setpoint
- Limits of position range, start-of-scale/full-scale value
- Limits (alarms) of the process valve position: Minimum and maximum value
- Automatic tight closing stroke adjustment in accordance with the valve process characteristic curve
- Function of the digital inputs
- Function of alarm output, etc.

## Technical specifications

Ambient temperature	In hazardous areas, observe the maximum permitted ambient temperature according to the temperature class.	Auxiliary power consumption in the controlled state	< 0.036 Nm <sup>3</sup> /h (0.158 USgpm)
• Permissible ambient temperature for operation <sup>1)</sup>	-30 ... +80 °C (-22 ... +176 °F) Optional -40 ... +80 °C (-40 ... +176 °F)	Sound pressure	L <sub>Aeq</sub> < 75 dB L <sub>Amax</sub> < 80 dB
• Altitude	≤ 2 000 m above mean sea level. At altitudes greater than 2 000 m above mean sea level, use a suitable power supply.	Sound pressure with installed Siemens booster	L <sub>Aeq</sub> < 95 dB L <sub>Amax</sub> < 98 dB
• Relative humidity	0 ... 100%	<b>Design</b>	
Type of protection <sup>2)</sup>	IP66/Type NEMA 4X	Mode of operation	
Corrosion protection according to EN ISO 9227:2012 and EN ISO 12944:1999		• Range of stroke (linear actuators)	3 ... 130 mm (0.12 ... 5.12 inch); greater stroke range on request
• 6DR5..0 Polycarbonate enclosure	C5-M medium durability	• Angle of rotation range (part-turn actuators)	30 ... 100° (up to 180° on request)
• 6DR5..3 Aluminum enclosure and 6DR5..5 Aluminum enclosure, flameproof	C5-M medium durability	Mounting type	
• 6DR5..2 Stainless steel enclosure and 6DR5..6 Stainless steel enclosure, flameproof	C5-M high durability	• On linear actuators	Using mounting kit 6DR4004-8V and where necessary with an additional lever arm 6DR4004-8L on actuators according to IEC 60534-6-1 (NAMUR) with ribs, bars or flat face.
Mounting position	Any. Electrical connections and exhaust opening not facing up in wet environment (outdoor/rain).	• On part-turn actuators	Using mounting kit 6DR4004-8D or TGX:16300-1556 on actuators with mounting plane according to VDI/VE 3845 and IEC 60534-6-2: The actuator-specific mounting console 6DR4004-1D ... 4D must be ordered separately, see the selection and ordering data.
Vibration resistance		Weight, positioner without option modules or accessories	
• Harmonic oscillations (sine) according to EN 60068-2-6/10.2008	3.5 mm (0.14"), 2 ... 27 Hz, 3 cycles/axis 98.1 m/s <sup>2</sup> (321.84 ft/s <sup>2</sup> ), 27 ... 300 Hz, 3 cycles/axis	• 6DR5..0 Glass-fiber reinforced polycarbonate enclosure	Approx. 0.9 kg (1.98 lb)
• Bumping (half-sine) according to EN 60068-2-27/02.2010	150 m/s <sup>2</sup> (492 ft/s <sup>2</sup> ), 6 ms, 1 000 shocks/axis	• 6DR5.11 Aluminum enclosure, only single-acting	Approx. 1.3 kg (2.86 lb)
• Noise (digitally controlled) according to EN 60068-2-64/04.2009	10 ... 200 Hz; 1 (m/s <sup>2</sup> ) <sup>2</sup> /Hz (3.28 (ft/s <sup>2</sup> ) <sup>2</sup> /Hz) 200 ... 500 Hz; 0.3 (m/s <sup>2</sup> ) <sup>2</sup> /Hz (0.98 (ft/s <sup>2</sup> ) <sup>2</sup> /Hz) 4 hours/axis	• 6DR5..2 Stainless steel enclosure	Approx. 3.9 kg (8.6 lb)
• Recommended continuous duty range of the complete valve	≤ 30 m/s <sup>2</sup> (98.4 ft/s <sup>2</sup> ) without resonance sharpness	• 6DR5..3 Aluminum enclosure	Approx. 1.6 kg (3.53 lb)
Climatic class	According to IEC EN 60721-3	• 6DR5..5 Aluminum, flameproof	Approx. 5.2 kg (11.46 lb)
• Storage	1K5, but -40 ... +80 °C (1K5, but -40 ... +176 °F)	• 6DR5..6 Stainless steel enclosure, flameproof	Approx. 8.4 kg (18.5 lb)
• Transport	2K4, but -40 ... +80 °C (2K4, but -40 ... +176 °F)	Material	
<b>Pneumatic data</b>		Dimensions	See "Dimension drawings"
Auxiliary power (inlet air)	Compressed air, carbon dioxide (CO <sub>2</sub> ), nitrogen (N <sub>2</sub> ), noble gases or natural gas	Device versions	
• Pressure <sup>3)</sup>	1.4 ... 7 bar (20.3 ... 101.5 psi)	• In polycarbonate enclosure 6DR5..0	Single-acting and double-acting
Air quality according to ISO 8573-1		• In aluminum enclosure 6DR5..1	Single-acting
• Solid particulate size and density	Class 3	• In aluminum enclosures 6DR5..3 and 6DR5..5	Single-acting and double-acting
• Pressure dew point	Class 3 (min. 20 K (36 °F) below ambient temperature)	• In stainless steel enclosures 6DR5..2 and 6DR5..6	Single-acting and double-acting
• Oil content	Class 3	Gauge block	
Unrestricted flow (DIN 1945)		• Type of protection with:	
• Inlet air (pressurize actuator) <sup>4)</sup>		- Pressure gauge made of plastic	IP31
- 2 bar; 0.1 KV (29 psi; 0.116 CV)	4.1 Nm <sup>3</sup> /h (18.1 USgpm)	- Gauge made of metal	IP44
- 4 bar; 0.1 KV (58 psi; 0.116 CV)	7.1 Nm <sup>3</sup> /h (31.3 USgpm)	- Pressure gauge made of stainless steel 316	IP54
- 6 bar; 0.1 KV (87 psi; 0.116 CV)	9.8 Nm <sup>3</sup> /h (43.1 USgpm)	• Vibration resistance	According to EN 837-1
• Exhaust air (depressurize actuator for all versions except fail in place) <sup>4)</sup>		Connections, electrical	
- 2 bar; 0.2 KV (29 psi; 0.232 CV)	8.2 Nm <sup>3</sup> /h (36.1 USgpm)	• Screw terminals	2.5 mm <sup>2</sup> AWG30-14
- 4 bar; 0.2 KV (58 psi; 0.232 CV)	13.7 Nm <sup>3</sup> /h (60.3 USgpm)	• Cable bushing	
- 6 bar; 0.2 KV (87 psi; 0.232 CV)	19.2 Nm <sup>3</sup> /h (84.5 USgpm)	- Without explosion protection as well as with Ex i	M20x1.5 or ½-14 NPT
• Exhaust air (depressurize actuator for fail in place version)		- With explosion protection Ex d	Ex d-certified M20x1.5; ½-14 NPT or M25x1.5
- 2 bar; 0.1 KV (29 psi; 0.116 CV)	4.3 Nm <sup>3</sup> /h (19.0 USgpm)	Connections, pneumatic	Female thread G¼ or ¼-18 NPT
- 4 bar; 0.1 KV (58 psi; 0.116 CV)	7.3 Nm <sup>3</sup> /h (32.2 USgpm)		
- 6 bar; 0.1 KV (87 psi; 0.116 CV)	9.8 Nm <sup>3</sup> /h (43.1 USgpm)		

## Positioners

### SIPART PS2

#### Technical specifications

<b>Controller</b>	
Controller unit	
• Five-point switch	Adaptive
• Deadband	
- dEbA = Auto	Adaptive
- dEbA = 0.1 ... 10%	Can be set as fixed value
Analog-to-digital converter	
• Scan time	10 ms
• Resolution	≤ 0.05%
• Transmission error	≤ 0.2%
• Temperature influence effect	≤ 0.1%/10 K (≤ 0.1%/18 °F)
<b>Certificates and approvals</b>	
Classification according to pressure equipment directive (PED 2014/68/EU)	For gases of fluid group 1, complies with requirements of article 4, paragraph 3 (sound engineering practice SEP)
CE conformity	You can find the appropriate directives and standards, including the relevant versions, in the EC Declaration of Conformity on the Internet.
UL conformity	You can find the appropriate directives and standards, including the relevant versions, in the UL-CERTIFICATE OF COMPLIANCE on the Internet.
<b>Explosion protection</b>	
Explosion protection according to ATEX/IECEX	Depending on the device version; see "Explosion protection" section
<b>Natural gas as driving medium</b>	
	For technical data using natural gas as driving medium, see operating instructions.

- 1) At ≤ -10 °C (≤ 14 °F), the refresh rate of the local display is limited. When using Analog Output Module (AOM), only T4 is permissible.
- 2) Max. impact energy 1 joule for enclosure with inspection window 6DR5..0 and 6DR5..1 or max. 2 joules for 6DR5..3.
- 3) The following applies to fail in place double acting: 3 ... 7 bar (43.5 ... 101.5 psi)
- 4) When using Ex d versions (6DR5..5-... and 6DR5..6-...), values are reduced by approximately 20%.

## SIPART PS2 with 4 ... 20 mA / HART

	Electronics without explosion protection	Electronics with Explosion protection Ex d	Electronics with explosion protection Ex i	Electronics with explosion protection Ex i, Ex e, Ex t
<b>Electrical specifications</b>				
Current input $I_W$			4 ... 20 mA	
• Rated signal range			840 V DC, 1 s	
• Test voltage			Suitable only for floating contact; max. contact load < 5 $\mu$ A at 3 V	
• Digital input BIN1 (terminals 9/10; galvanically connected to basic device)				
<u>2-wire connection (terminals 6/8)</u>				
6DR50.. and 6DR53..; 4 ... 20 mA				
6DR51.. and 6DR52..; HART				
Current to maintain the auxiliary power supply	$\geq 3.6$ mA			
Required load voltage $U_B$ (corresponds to $\Omega$ at 20 mA)				
• 4 ... 20 mA (6DR50..)				
- Typical	6.36 V (= 318 $\Omega$ )	6.36 V (= 318 $\Omega$ )	7.8 V (= 390 $\Omega$ )	7.8 V (= 390 $\Omega$ )
- Max.	6.48 V (= 324 $\Omega$ )	6.48 V (= 324 $\Omega$ )	8.3 V (= 415 $\Omega$ )	8.3 V (= 415 $\Omega$ )
• 4 ... 20 mA (6DR53..)				
- Typical	7.9 V (= 395 $\Omega$ )	-	-	-
- Max.	8.4 V (= 420 $\Omega$ )	-	-	-
• HART (6DR51..)				
- Typical	6.6 V (= 330 $\Omega$ )	6.6 V (= 330 $\Omega$ )	-	-
- Max.	6.72 V (= 336 $\Omega$ )	6.72 V (= 336 $\Omega$ )	-	-
• HART (6DR52..)				
- Typical	-	8.4 V (= 420 $\Omega$ )	8.4 V (= 420 $\Omega$ )	8.4 V (= 420 $\Omega$ )
- Max.	-	8.8 V (= 440 $\Omega$ )	8.8 V (= 440 $\Omega$ )	8.8 V (= 440 $\Omega$ )
• Static destruction limit	$\pm 40$ mA	$\pm 40$ mA	-	-
Effective internal capacitance $C_i$				
• 4 ... 20 mA	-	-	11 nF	"ic": 11 nF
• HART	-	-	11 nF	"ic": 11 nF
Effective internal inductance $L_i$				
• 4 ... 20 mA	-	-	209 $\mu$ H	"ic": 209 $\mu$ H
• HART	-	-	312 $\mu$ H	"ic": 312 $\mu$ H
For connecting to circuits with the following peak values	-	-	$U_i = 30$ V $I_i = 100$ mA $P_i = 1$ W	"ic": $U_i = 30$ V $I_i = 100$ mA "ec"/"t": $U_n \leq 30$ V $I_n \leq 100$ mA
<u>3-/4-wire connection (terminals 2/4 and 6/8)</u>				
6DR52..; HART, explosion-proof				
6DR53..; 4 ... 20 mA, not explosion-proof				
Load voltage at 20 mA	$\leq 0.2$ V (= 10 $\Omega$ )	$\leq 0.2$ V (= 10 $\Omega$ )	$\leq 1$ V (= 50 $\Omega$ )	$\leq 1$ V (= 50 $\Omega$ )
Auxiliary power $U_{Aux}$	18 ... 35 V DC	18 ... 35 V DC	18 ... 30 V DC	18 ... 30 V DC
Current consumption $I_H$	$(U_{Aux} - 7.5 \text{ V}) / 2.4 \text{ k}\Omega$ [mA]			
Effective internal capacitance $C_i$	-	-	22 nF	22 nF
Effective internal inductance $L_i$	-	-	0.12 mH	0.12 mH
For connecting to circuits with the following peak values	-	-	$U_i = 30$ V $I_i = 100$ mA $P_i = 1$ W	"ic": $U_i = 30$ V $I_i = 100$ mA "ec"/"t": $U_n \leq 30$ V $I_n \leq 100$ mA
Electrical isolation	Between $U_{Aux}$ and $I_W$	Between $U_{Aux}$ and $I_W$	Between $U_{Aux}$ and $I_W$ (2 intrinsically safe circuits)	Between $U_{Aux}$ and $I_W$
<b>HART communication</b>				
HART version			7	
PC parameterization software	SIMATIC PDM; supports all device objects. The software is not included in the scope of delivery.

<b>Electrical specifications</b>				
<u>Auxiliary power supply, bus circuit</u>				
Bus voltage	9 ... 32 V	9 ... 32 V	Bus-supplied 9 ... 24 V	9 ... 32 V
For connecting to circuits with the following peak values				
• Bus connection with FISCO supply unit			$U_i = 17.5 \text{ V}$ $I_i = 380 \text{ mA}$ $P_i = 5.32 \text{ W}$	"ic": $U_i = 17.5 \text{ V}$ $I_i = 570 \text{ mA}$ "ec"/"t": $U_n \leq 32 \text{ V}$
• Bus connection with barrier			$U_i = 24 \text{ V}$ $I_i = 250 \text{ mA}$ $P_i = 1.2 \text{ W}$	"ic": $U_i = 32 \text{ V}$ "ec"/"t": $U_n \leq 32 \text{ V}$
Effective internal capacitance $C_i$	-	-	Negligibly small	Negligibly small
Effective internal inductance $L_i$	-	-	8 $\mu\text{H}$	"ic": 8 $\mu\text{H}$
Current consumption			11.5 mA $\pm$ 10%	
Additional fault current			0 mA	
<u>Safety shutdown can be activated with "jumper" (terminals 81/82)</u>			Electrically isolated from bus circuit and digital input	
• Input resistance			> 20 k $\Omega$	
• Signal state "0" (shutdown active)			0 ... 4.5 V or unconnected	
• Signal state "1" (shutdown not active)			13 ... 30 V	
For connecting to power supply with the following peak values				
			$U_i = 30 \text{ V}$ $I_i = 100 \text{ mA}$ $P_i = 1 \text{ W}$	"ec": $U_n \leq 30 \text{ V}$ $I_n \leq 100 \text{ mA}$ "ic": $U_i = 30 \text{ V}$ $I_i = 100 \text{ mA}$
Effective internal capacitance and inductance	-	-	Negligibly small	Negligibly small
Digital input DI1 for PROFIBUS (terminals 9/10); electrically connected to the bus circuit)			Jumpered or connection to switching contact. Suitable only for floating contact; max. contact load < 5 $\mu\text{A}$ at 3 V	
Electrical isolation				
• For basic device without explosion protection and for basic device with Ex d			Electrical isolation between basic device and the input for safety shutdown, as well as the outputs of the option modules	
• For basic device Ex i			The basic device and the input to the safety shutdown, as well as the outputs of the option modules, are separate, intrinsically safe circuits.	
• For basic device Ex e, Ex t			Electrical isolation between basic device and the input for safety shutdown, as well as the outputs of the option modules	
Test voltage			840 V DC, 1 s	
<b>PROFIBUS PA communication</b>				
Communication			Layers 1 and 2 according to PROFIBUS PA, transmission technology according to IEC 61158-2; slave function; layer 7 (protocol layer) according to PROFIBUS DP, EN 50170 standard with the extended PROFIBUS functions (all data acyclic, manipulated variable, feedbacks and status also cyclic)	
C2 connections			Four connections to master class 2 are supported; automatic connection setup 60 s after break in communication	
Device profile			PROFIBUS PA profile B, version 3.02, more than 150 objects	
Response time to master message			Typically 10 ms	
Device address			126 (when delivered)	
PC parameterization software			SIMATIC PDM; supports all device objects. The software is not included in the scope of delivery.	
<b>FOUNDATION Fieldbus communication</b>				
Communications group and class			According to technical specification of the FOUNDATION Fieldbus for H1 communication	
Function blocks/functions			Group 3, Class 31PS (Publisher Subscriber) 1 Resource Block (RB2) 1 Analog Output Function Block (AO) 1 PID Function Block (PID) 1 Transducer Block (Standard Advanced Positioner Valve) Link Active Scheduler (LAS) function	
Execution times of the blocks			AO: 30 ms PID: 40 ms	
Physical layer profile			123, 511	
FF registration			Tested with ITK 6.0	
Device address			22 (when delivered)

##### Booster

###### Operating conditions

Climatic class	According to IEC EN 60721-3
• Storage	1K5, but -40 ... +80 °C (1K5, but -40 ... +176 °F)
• Transport	2K4, but -40 ... +80 °C (2K4, but -40 ... +176 °F)
Vibration resistance	
• Harmonic oscillations	According to ISA-S75.13
• Bumping (half-sine) according to EN 60068-2-27/02.2010	150 m/s <sup>2</sup> (492 ft/s <sup>2</sup> ), 6 ms, 1 000 shocks/axis

###### Design

Booster weight	
• Single-acting	
- Optional module for standard enclosure	2.9 kg (6.5 lb)
- Installed with polycarbonate enclosure	4.0 kg (8.8 lb)
- Optional module for flameproof aluminum enclosure	3.3 kg (7.3 lb)
- Installed with flameproof aluminum enclosure	7.9 kg (17.4 lb)
• Double-acting	
- Optional module for standard enclosure	4.3 kg (9.4 lb)
- Installed with polycarbonate enclosure	5.3 kg (11.7 lb)
- Optional module for flameproof aluminum enclosure	4.7 kg (10.4 lb)
- Installed with flameproof aluminum enclosure	9.3 kg (20.5 lb)
Connections	
• Pneumatic	½-14 NPT or G½

###### Pneumatic data

Auxiliary power (inlet air)	Compressed air, carbon dioxide (CO <sub>2</sub> ), nitrogen (N <sub>2</sub> ), noble gases or cleaned natural gas
• Pressure	1.4 ... 7 bar (20.3 ... 101.5 psi)
• Inlet air	According to ISO 8573-1
• Air consumption	1.2 × 10 <sup>-2</sup> Nm <sup>3</sup> /h (0.007SCFM)
Pressure gauge	Stainless steel enclosure MPa, bar, psi Type of protection IP54
Flow capacity	Cv = 2.0

### Overview

SIPART PS100 positioner with polycarbonate lid and inspection window

SIPART PS100 electropneumatic positioner in aluminum enclosure without inspection window

The SIPART PS100 electropneumatic positioner is used to control the process valve or damper position of pneumatic linear or part-turn actuators. The SIPART PS100 electropneumatic positioners control the process valve according to the setpoint value.

### Benefits

The SIPART PS100 positioners offer the following advantages:

- Fast commissioning at the push of a button
- Simple operation via the display and four buttons
- Display symbols according to NAMUR NE 107
- Negligible air consumption in stationary operation
- Setting the application profile based on predefined selection options, e.g. tight-closing valve, open/close valve, small valve
- Fast response in end positions ensures short positioning times and tight valves
- Insensitive to vibrations and steam hammer
- Leakage compensation ensures a constant actual value and protects the actuator
- Only one device version for linear and part-turn actuators
- Consistent parameter assignment with HART communication
- Safe use in hazardous areas

### Application

The SIPART PS100 positioner is used, for example, in the following industries:

- Valve manufacturing
- Chemical industry
- Power stations
- Paper and glass
- Water and wastewater
- Food and pharmaceuticals

The SIPART PS100 positioner can be used with pneumatic actuators and an analog input (AI), 4 to 20 mA.

## Positioners

### SIPART PS100

#### Technical description

#### Design

The SIPART PS100 positioner comprises the following components:

- Enclosure (base plate with lid)
- Electronics
- Wear-free, contact-free position detection
- Pneumatic block

The pneumatic block is located in the enclosure, the pneumatic connections for the inlet air and the actuating pressure on the right-hand side of the enclosure. The electrical connections are located on the left-hand side of the enclosure.

The SIPART PS100 positioner is fitted to the relevant pneumatic linear or part-turn actuator using an appropriate mounting kit.

The positioner shaft is located on the underside of the base plate. The positioner shaft is connected to the spindle of the linear actuator or the actuator shaft of the part-turn actuator using the mounting kit.

The electronics are available with the following options:

- Analog output (AO) 4 to 20 mA  
The current position of the valve is converted into a 4 to 20 mA signal.
- Digital input and digital output (DI and DQ)
  - Position limit monitoring.
  - Output of an alarm in the event of a control deviation or a device fault.
  - Approach of a defined process valve position, disabling of keys, blocking of valve process valve by means of digital input.
- HART communication on parameter assignment and information on the device status

SIPART PS100, enclosure with open lid

#### Function

Local operation is performed using the built-in display and the four buttons. It enables, for example:

- Starting automatic commissioning with the press of a button
- Configuring the device
- Switching between the operating modes:
  - AUTO: The positioner controls the valve according to the analog input (AI) 4 to 20 mA
  - MANUAL: Valve movement with the middle keys

A hallmark of the SIPART PS100 is its own extremely low consumption of air. Compressed air is only required to move the valve. In the controlled state, consumption of air is negligible.

## Technical specifications

## Input

Analog input (AI), terminals 6 and 7	
• Rated signal range	4 ... 20 mA
• Minimum current to maintain operation	3.8 mA
• Maximum load voltage	6.5 V (corresponds to 325 Ω at 20 mA)
• Static destruction limit	± 40 mA
• Type of communication	HART 7
Digital input (DI), terminals 9 and 10	
• Electrical isolation	Electrically connected to analog input Electrically isolated from the outputs
• Signal state 0, floating contact open	> 300 kΩ
• Signal state 1, floating contact closed	< 3 kΩ
• Contact load	Suitable only for floating contact; max. contact load < 20 μA, 3 V

## Output

Analog output (AO), terminals 61 and 62	
• Type of connection	2-wire connection
• Rated signal range	4 ... 20 mA
• Fault current	< 3.6 mA
• Supply voltage $U_H$	12 ... 30 V
• External load $R_B$ [kΩ]	$\leq (U_H [V] - 12 V)/I_O$ [mA]
• Resolution in relation to the nominal signal range	0.05%
• Transmission error in relation to the nominal signal range	± 0.3%
• Effect of ambient temperature	± 0.1%/10K
• Maximum residual ripple	± 0.5%
• Electrical isolation	Electrically isolated from the other electrical inputs and outputs
Digital output (DQ), terminals 31 and 32	
• Maximum supply voltage $U_H$	35 V
• External current consumption	To be limited to 50 mA
• "Conductive" state	<ul style="list-style-type: none"> <li>• Permissible rated current 50 mA</li> <li>• Maximum terminal voltage 3 V</li> <li>• Overload-proof</li> </ul>
• "Locked" state	I < 60 μA
"Locked" is also the state if the device is faulty or analog input (AI) is = 0 mA.	

## Operating conditions

Ambient conditions for operation according to IEC 60068-2	For indoor and outdoor use
Ambient temperature	
• Ambient temperature	-20 ... +80 °C (-4 ... +176 °F)
• Relative humidity	0 ... 100%
Pollution degree according to IEC 61010-1	2
Overvoltage category according to IEC 61010-1	II
Degree of protection of enclosure	
• According to IEC 60529	IP66
• 6DR711* according to UL 50 E	Type 4X
Corrosion protection according to EN ISO 9227:2012 and EN ISO 12944:1999	
• 6DR710 polycarbonate enclosure	C5-M medium durability
• 6DR711 aluminum enclosure	C5-M medium durability

## Vibration resistance

• Harmonic oscillations (sine) according to IEC 60068-2-6	3.5 mm (0.14"), 2 ... 27 Hz, 3 cycles/axis 98.1 m/s <sup>2</sup> (321.84 ft/s <sup>2</sup> ), 27 ... 300 Hz, 3 cycles/axis
• Bumping (half-sine) according to IEC 60068-2-27	150 m/s <sup>2</sup> (492 ft/s <sup>2</sup> ), 6 ms, 1 000 shocks/axis
• Noise (digitally controlled) according to IEC 60068-2-64	10 ... 200 Hz; 1 (m/s <sup>2</sup> ) <sup>2</sup> /Hz (3.28 (ft/s <sup>2</sup> ) <sup>2</sup> /Hz) 200 ... 500 Hz; 0.3 (m/s <sup>2</sup> ) <sup>2</sup> /Hz (0.98 (ft/s <sup>2</sup> ) <sup>2</sup> /Hz), 4 hours/axis

## Pneumatic data

Pneumatic operating medium	Compressed air, carbon dioxide (CO <sub>2</sub> ), nitrogen (N <sub>2</sub> ), noble gases
• Operating pressure	1.4 ... 7 bar (20.3 ... 101.5 psi)
Air quality according to ISO 8573-1	
• Solid particulate size and density	Class 3
• Pressure dew point	Class 3 (min. 20 K (36 °F) below ambient temperature) Class 3
• Oil content	
Flow	
• Pressurize process drive	
- Inlet air pressure 4 bar (58 psi)	7.1 Nm <sup>3</sup> /h (31.3 USgpm)
- Inlet air pressure 6 bar (87 psi)	9.8 Nm <sup>3</sup> /h (43.1 USgpm)
• Depressurize process drive	
- Actuating pressure 4 bar (58 psi)	13.7 Nm <sup>3</sup> /h (60.3 USgpm)
- Actuating pressure 6 bar (87 psi)	19.2 Nm <sup>3</sup> /h (84.5 USgpm)
Leakage actuator chamber (positioner portion)	< 6 · 10 <sup>-4</sup> Nm <sup>3</sup> /h (0.0026 USgpm)
Consumption at operating medium in the controlled state	< 3.6 · 10 <sup>-2</sup> Nm <sup>3</sup> /h (0.158 USgpm)
Sound pressure	L <sub>Aeq</sub> < 75 dB L <sub>Amax</sub> < 80 dB

## Design

Supported actuator types	
• Linear actuator, range of stroke	10 ... 130 mm (0.39 ... 5.12")
• Part-turn actuator, angle-of-rotation range	10 ... 100°
Weight, positioner without accessories	Approx. 1.0 kg (2.20 lb)
Material	
• Lid	<ul style="list-style-type: none"> <li>• Aluminum</li> <li>• Polycarbonate</li> </ul>
• Base plate	Aluminum
• Gauge block	Aluminum, anodized or stainless steel 316
• Pressure gauge	<ul style="list-style-type: none"> <li>• Plastic, mechanics brass</li> <li>• Stainless steel, mechanics brass nickel-plated</li> <li>• Stainless steel, mechanics stainless steel 316</li> </ul>
Torques	
• Lid fixing screws	1.5 Nm (1.1 ft lb)
• Part-turn actuator fixing screws DIN 933 M6x12-A2	5 Nm (3.7 ft lb)
• Linear actuator fixing screws DIN 933 M8x16-A2	12 Nm (8.9 ft lb)
• Gland pneumatic G <sup>1</sup> / <sub>4</sub>	15 Nm (11.1 ft lb)
• Gland pneumatic <sup>1</sup> / <sub>4</sub> -18 NPT	
- Without sealant	12 Nm (8.9 ft lb)
- With sealant	6 Nm (4.4 ft lb)
• M20 cable gland, plastic	4 Nm (3 ft lb)
• M20 cable gland, metal	6 Nm (4.4 ft lb)
• <sup>1</sup> / <sub>2</sub> -14 NPT cable gland, metal	15 Nm (11.1 ft lb)

### Overview

Process protection devices act as early warning systems to avoid costly process interruptions and breakdowns of equipment. Non-contacting motion sensors detect changes in motion and speed of conveying, reciprocating and rotating machinery.

Non-invasive acoustic sensors detect inaudible, high frequency acoustic emissions generated by friction and impact, caused by materials in motion. They can detect conditions of flow/no flow or high/low flow, to warn of blockages, product absence or equipment failure. They are located outside of the process, accurately detecting conditions without wear on the sensor.

Motion sensors can warn in case of equipment malfunction and shut down machinery in case of a slowdown or failure. They are rugged and perform even in harsh industrial conditions. Most of the MFA 4p motion sensing probes, as well as the SITRANS WM100, can be mounted up to 100 mm (4 inch) from the ferrous target, reducing the chance of damage to the probe and the equipment. The probes are not affected by moisture or dust build-up.

Motion sensing on drive shaft of rotary feeder

### Mode of operation

#### Acoustic Sensing

Acoustic sensors monitor high frequency emissions generated by friction and the impact of flowing material or mechanical parts. The sensors can also sense the turbulence of gases or liquids leaking through valves and flanges. When matter vibrates between 0 Hz and 200 kHz, it creates acoustic energy. Sound energy between 20 Hz and 20 kHz can be detected by humans. Acoustic sensors detect high-frequency acoustic energy between 75 kHz and 175 kHz. Acoustic energy travels quickly through dense materials (metal) and poorly through less dense materials (air). Because the acoustic sensors are mounted directly to the external wall of the chute work, other plant noises are well below 75 kHz and effectively ignored by the sensors.

The acoustic sensors contain a specialized piezocrystal and filter circuit that responds effectively to the high-frequency band between 75 kHz and 175 kHz. As the crystal is excited by the acoustic energy, it produces a continuous electrical signal in direct proportion to the level of acoustic energy received. The SITRANS AS100 sensor output of 0 to 10 V DC can be applied to a PLC or to an optional control unit for a programmable alarm relay or 4 to 20 mA signal output.

#### Motion sensing

Siemens Milltronics probes work on the principle of Faraday's Laws of Electromagnetic Induction. When a ferromagnetic object enters the probe's permanent magnetic field, it distorts the flux, causing its coil windings to generate a voltage. This voltage is proportional to the strength of the magnet and the number of wire turns in the coil (constant in the probes) and the speed at which the ferrous target passes through the flux. The generated voltage is also inversely proportional to the square of the distance between the target and the probe.

The robust motion sensors provide the contacts to shut down machinery whenever under-speed, over-speed or plant equipment failure occurs. On belt, drag and screw conveyors, or on bucket elevators, fans and pumps, the speed alarm option can warn instantly of equipment malfunction. Some probes may be linked to a programmable logic controller to monitor equipment.

Approvals	CE, PROFIBUS DP, and PROFIBUS PA conform, Ex protection to ATEX 1G or 1D	CE, RCM, CSA/FM Class II, Div. 1, Groups E, F, G optional, ATEX II, 2GD, 3D optional, EAC	CSA <sub>US/C</sub> , CE, RCM	CE, CSA/UL <sub>C/US</sub> , FM, EAC, RCM, KCC	CE, RCM	CSA <sub>US/C</sub> , CE, RCM

<sup>1)</sup> Extended temperature model -40 ... +125 °C (-40 ... +257 °F) available (CE version)

<sup>2)</sup> Probes available for -40 ... +260 °C (-40 ... +500 °F)

### Overview

The SITRANS DA400 acoustic diagnostic unit acoustically measures the structure-borne noise

- In the version for pump monitoring; on oscillating displacement pumps
- In the version for material flow monitoring; on pipes, conveying equipment or channels.

It comprises an electric diagnostic unit and up to four acoustic sensors.

### Benefits

#### Benefits when pump monitoring

- Increased availability of the system through:
  - Advanced maintenance planning thanks to early recognition of defective components
  - Reduced downtimes (no fault locating necessary)
  - Increased maintenance intervals
  - Greater pump reliability
- Prevention of expensive consequential damage
- Increased safety of critical applications
- Early recognition of a reduction in power
- Increased productivity

#### Benefits when material flow monitoring

- Detection of insufficient or excessive inflow of material in a liquid or gas flow
- Detection of blockages or clogging
- Reduction of down times
- Increased product quality
- Increased availability
- Guaranteed operational safety
- Increased productivity

### Application

In the version for pump monitoring, the SITRANS DA400 allows continuous, simultaneous and independent monitoring of up to four flow control valves in a pump for leaks. In addition, another four inputs are available for monitoring standard signals (e.g. diaphragm and temperature monitoring). This means that the condition of an oscillating displacement pump is monitored in every phase of its operation.

The SITRANS DA400 is used in all industries where an oscillating displacement pump is used.

The version for material flow monitoring monitors the material flow in liquids or gases that is usually as a result of impact or friction, e.g. against the pipe or channel wall.

If the acoustic diagnostic unit is used in potentially explosive areas, the sensors as well as the acoustic diagnostic unit can be installed in the Ex-zone.

If using the unit in potentially explosive areas, you have two options:

- Operation of the sensors over the safety barriers or
- Operation of the sensors over the SITRANS DA400 with explosion protection

### Function

#### Product features

Continuous and independent status monitoring:

- Of the flow control valves, for leaks
- Of the membranes, for material fatigue
- Of the temperature loading of the hydraulic oil
- Of flowing bulk solids in pipes, conveying equipment or channels

Communication of the status to superordinate control systems:

- Via digital outputs
- Digitally, via PROFIBUS DP or PROFIBUS PA

Simple to operate and parameterize:

- Locally, via digital display and keys
- PROFIBUS DP and PROFIBUS PA

#### Mode of operation

##### Principle of measurement

Leaks in the flow control valves of oscillating displacement pumps are flows in which cavitation occurs. This results in sound waves that are transmitted to the valve housing, where they are recorded by the structure-borne sound sensor in the SITRANS DA400 on the outside.

The SITRANS DA400 utilizes the fact that with both an open valve and a closed intact valve, no cavitation occurs and the measured sound level thus corresponds to the operating noise of the pump. By contrast, with a closed defective valve cavitation does occur, which can be identified by a period increase in the sound level (see figures). The measured value from the SITRANS DA400 corresponds exactly to this increase in the sound level.

In the version for material flow monitoring, SITRANS DA400 continuously detects high-frequency acoustic oscillations by means of structure-born noise sensors.

## Process Protection

### Acoustic sensors

#### SITRANS DA400 Acoustic diagnostic unit

##### Function (continued)

These oscillations are created by:

- Friction and impact of bulk solids in:
  - pipes, raceways or channels
  - chutes
  - conveyors
- Friction and impact of mechanical parts
- Bursting of bubbles
- Cavitation
- Turbulence in gas and liquid flows

The following shows an example of signal levels at an oscillating displacement pump

Signal from structure-borne sound sensor with intact valve

Signal from structure-borne sound sensor with defective valve

##### Sensor operation

The structure-borne sound sensor works on the piezoelectric principle. The structure-borne sound is injected into the sensor via the sensor base (mounting surface) and inside it is converted into an electrical voltage by a piezo-ceramic element. This is amplified in the sensor and transmitted via the cable.

The sensor frequency range lies in the ultrasonic range (> 20 kHz). The sensor is non-directional, i.e. the angle at which the sound wave impacts on the sensor base is not important.

##### Mode of operation of the safety barrier

The safety barrier comprises intrinsically-safe circuits. These circuits serve to operate intrinsically-safe components such as sensors and to isolate safety from the non-hazardous area with the SITRANS DA400 diagnostic unit.

##### Technical specifications

SITRANS DA400	Without Ex protection	With Ex protection
<b>Input</b>		
Acoustic channels	4	
• Cycle time	10 ms	
Only for connection to intrinsically safe sensors with:		
• Max. voltage $U_o$	-	$\leq 5.5$ V
• Max. current $I_o$	-	$\leq 70$ mA
• Max. power $P_o$	-	$\leq 100$ mW
• Internal capacitance $C_i$	-	$\leq 1.2$ $\mu$ F
• Internal inductance $L_i$	-	Negligible
Universal inputs	4	
• Cycle time	80 ms	
• Low pass filter time	1 s	
Universal analog current input		
• Load	$< 105$ $\Omega$	$< 12$ $\Omega$
• Resolution	0.1 %	
• Accuracy	0.5 %	
• Fault signal	$> 21$ mA or $< 3.6$ mA (at 4 ... 20 mA)	
• Alarm monitoring hysteresis	0.5 %	
• Static destruction limit	40 mA, 4 V	-
For connection with approved intrinsically safe circuits with:		
• Max. supply voltage $U_i$	-	$\leq 30$ V
• Max. short-circuit current $I_i$	-	$\leq 100$ mA
• Max. power $P_{oi}$	-	$\leq 1$ W
• Internal capacitance $C_i$	-	$\leq 11$ nF
• Internal inductance $L_i$	-	$\leq 70$ $\mu$ H
Universal input 24 V digital signal		
• Input resistance	$> 19$ k $\Omega$	
• Signal level Low	$< 4.5$ V or open	
• Signal level High	$> 7$ V	
• Hysteresis	$> 1$ V	
• Static destruction limit	$\pm 40$ V	-
For connection with approved intrinsically safe circuits with:		
• Max. supply voltage $U_i$	-	$\leq 30$ V
• Max. short-circuit current $I_i$	-	$\leq 100$ mA
• Max. power $P_{oi}$	-	$\leq 1$ W
• Internal capacitance $C_i$	-	$\leq 11$ nF
• Internal inductance $L_i$	-	$\leq 70$ $\mu$ H
Universal input closing contact		
• For connection to closing contact with the maximum values:		
- Max. voltage $U_o$	-	$\leq 10$ V
- Max. current $I_o$	-	$\leq 1$ mA
- Max. power $P_o$	-	$\leq 5$ mW
- Internal capacitance $C_i$	-	$\leq 11$ nF
- Internal inductance $L_i$	-	$\leq 70$ $\mu$ H
8.2 V source for NAMUR signal (DIN EN 60947-5-6)		
• Open circuit voltage	8.2 V $\pm$ 0.3 V, short-circuit proof	-
• Input resistance	$< 950$ $\Omega$	-
• Static destruction limit for incorrect wiring	+20 V/-10 V	-

### Overview

SITRANS AS100 is an acoustic sensor used for solids flow detection.

### Benefits

- Non-invasive
- Screw in, bolt on, weld, or bond in place
- Analog output
- High and low sensitivity range of operation

### Application

SITRANS AS100 detects changes in high frequency sound waves from equipment and materials in motion. It detects and reacts instantly to changes in solids flow to warn of blockages, product absence, or equipment failure such as burst filter bags. This allows an operator to take early preventative action and avoid costly damage.

Common applications include pellets, powders and most bulk solids in pipes, chutes, vibratory feeders, pneumatic conveyors or aerated gravity flow systems.

Operating with a SITRANS CU02 control unit, the system detects conditions of high flow, low flow or no flow. It can be added to a control loop via a 4 to 20 mA output.

Two relays are fully programmable and independent of each other and can be used to operate an alarm or control device.

With no moving parts and a type 304 or 303 stainless steel enclosure sealed against dust and moisture, this non-invasive unit requires little or no maintenance. With a dual operating range, the sensor offers an exceptionally wide range of application capabilities.

- Key applications: pipes, chutes, vibratory feeders, aerated gravity flow systems, burst filter bag detection

### Design

#### Clearance hole

Insert mounting post through hole in device being monitored and fasten with customer-supplied washers and nut.

#### Drill and tap

Screw mounting post into threaded hole in device being monitored.

#### Extension tab

Screw sensor into threaded hole of tab, and fasten onto device being monitored.

#### Mounting disc

Screw sensor into disc, after welding or bonding disc onto device being monitored.

SITRANS AS100 mounting

### Acoustic sensors

#### SITRANS AS100 Acoustic sensor

#### Circuit diagrams

##### Standard temperature range

##### \* Sensor range selection

High sensitivity range = red and green to Vsup+

Low sensitivity range = red to Vsup+, green to Vsup-

##### Extended temperature range

##### \* Sensor range selection

High sensitivity range = red and orange to Vsup+

Low sensitivity range = red to Vsup+, orange to Vsup-

##### Interconnection

The longer the cable, the more susceptible it is to noise and earth loops. It is therefore recommended to use cable with heavy gauge conductors and good RF/electrical shielding (copper braid rather than drain and foil). A proper junction box close to the sensor is an ideal location not only to extend the cable but also to configure the wiring for high or low sensitivity range operation.

The following table provides a guideline for suitable wire gauges where distances are considerable.

Max. distance between sensor and supply  
(24 V or Control Unit).

AWG	Wire size		Distance	
	mm	mm <sup>2</sup>	meters	feet
24	7 x 0.20	0.25	500	1 600
22	7 x 0.25	0.35	800	2 600
20	10 x 0.25	0.5	1 200	3 900

SITRANS AS100 connections

### Overview

SITRANS CU02 is an alarm control unit, for use with SITRANS AS100 acoustic sensor, that provides reliable continuous protection for bulk solids flow.

### Benefits

- 4 to 20 mA output
- Two programmable relays
- Adjustable independent time delay for each relay
- Adjustable start-up time delay
- DIN rail mounting provides easy installation
- Built-in password protection to parameters

### Application

SITRANS CU02 receives a 0 to 10 V DC input signal from the SITRANS AS100 sensor, providing relay and analog outputs for interface into a process.

- Key applications: with SITRANS AS100 for bulk solids flow

### Function

The system can be readily configured for set points indicating such conditions as high flow, low flow or no flow. Alternatively, it can be added to a control loop via a 4 to 20 mA isolated output for trend monitoring proportional to the signal from the sensor.

Two relays are fully programmable and independent of each other and can be used to operate an alarm or control device. Alarming may be provided above or below a setpoint or within a band. Readings are also displayed locally by the SITRANS CU02 on its LCD.

The SITRANS CU02 may be mounted up to 500 m (1 500 ft) from the sensor.

### Technical specifications

<b>Mode of operation</b>	
Measuring principle	Controller for acoustic sensing (SITRANS AS100)
Typical application	Connects to SITRANS AS100 to detect burst filter bag
<b>Input</b>	
	0 ... 10 V DC, from sensor
<b>Output</b>	
Output signal	4 ... 20 mA isolated output, 2 Form C relays - latching or non-latching - 5 amp at 250 V AC non-inductive
Sensor excitation	26 V DC
Max. load	750 Ω
<b>Rated operating conditions</b>	
Installation conditions	
• Location	Indoor
Ambient conditions	
• Ambient temperature for enclosure	-20 ... +50 °C (-4 ... +122 °F)
• Storage temperature	-20 ... +50 °C (-4 ... +122 °F)
• Relative humidity	80 % for temperatures up to 50 °C (122 °F)
• Degree of protection	IP20
• Installation category	II
• Pollution degree	2
<b>Design</b>	
Weight	550 g (18 oz)
Dimensions (W x H x D)	55 x 75 x 110 mm (2.2 x 3 x 4.4 inch)
Material enclosure	Polycarbonate
Mounting	DIN Rail (DIN 46277 or DIN EN 50022), or wall mount, up to 500 m (1 500 ft) from sensor
Cable	2 twisted pair, 24 AWG (22 mm <sup>2</sup> ), shielded. Mount up to 500 m (1 500 ft) from sensor
<b>Display</b>	
	Liquid crystal, three digits, 9 mm (0.35 inch), high and multi-segment graphic symbols for operation status
<b>Power supply</b>	
Supply voltage	100, 115, 200, 230 V AC ± 15 %, 50/60 Hz, factory set
Power consumption	Max. 10 VA
<b>Approvals</b>	
	CSA <sub>US/CA</sub> , CE, RCM, EAC, KCC

**Mounting**

Installation shall only be performed by qualified personnel and in accordance with local governing regulations. This product is susceptible to electrostatic shock. Follow proper grounding procedures.

**Interconnection**

All field wiring must have insulation suitable for at least 250 V. Relay contact terminals are for use with equipment having no accessible live parts and wiring having insulation suitable for at least 250 V. The maximum allowable working voltage between adjacent relay contacts shall be 250 V. If sensor case is grounded, do not connect shield of cable to SITRANS CU02 ground terminal.

### Motion sensors

#### Milltronics MFA 4p Motion failure alarm controller

##### Overview

MFA 4p motion failure alarm controller is a highly sensitive single setpoint motion sensor system, used with Milltronics MSP probes.

##### Benefits

- Up to 100 mm (4 inch) gap between target and probe
- Switch selectable overspeed or underspeed detection
- Setpoint adjustment 0.15 to 3 000 PPM (pulses/minute)
- Adjustable start-up time delay
- Visual indication of probe operation and relay status
- General purpose, suitable for majority of industrial applications; rugged probe designs provide unmatched reliability

##### Application

The MFA 4p detects changes in the motion and speed of rotating, reciprocating or conveying equipment. It warns of equipment malfunction and signals through contacts to shut down machinery in case of a slowdown or failure. Its reliability makes it a cost-effective way to protect valuable process equipment.

The single setpoint system suits most industrial applications. This versatile unit can be used on tail pulley shafts, driven pulleys, motor shaft sensing, belt or drag conveyors, screw conveyor flights, bucket elevators, fans and pumps.

A special feature is the adjustable 0 to 60 second time delay, allowing the monitored device to accelerate to normal running speed before monitoring begins. A wide range of probes are available to suit specific needs, including high temperatures and corrosive installations. The CE approval allows the MFA 4p to consistently meet the needs of the mining aggregate, cement and other primary and secondary industries.

- Key Applications: tail pulleys, motor shaft sensing, screw conveyor flights, bucket elevators

## Design

### Mounting for Milltronics MSP-12, MSP-3, XPP-5

**Note:** Mounting flange supplied with probe.

### Mounting for Milltronics MSP-9

Milltronics MSP-12, MSP-3, MSP-9, XPP-5 mounting, dimensions in mm (inch)

6

#### Standard Milltronics MSP-12

- Heavy-duty general purpose motion probe
- Long lasting aluminum body with internal amplifier
- Convenient mounting flange and locknut for fast installation and setup
- Temperature rating: -40 ... +60 °C (-40 ... +140 °F)
- Enclosure rating: Type/NEMA 4X, 6, IP67

#### High temperature Milltronics MSP-3

- Heavy-duty, high temperature aluminum probe designed to withstand operating temperatures from -50 ... 260 °C (500 °F)
- Cast aluminum probe with convenient mounting flange and locknut
- 1.5 m (5 ft) of high temperature PTFE cable provided. Up to 30 m (100 ft) may be used.
- Amplifier remote mounted in enclosure 140 x 140 x 100 mm (5.5 x 5.5 x 4 inch), available in cast aluminum (½" NPT conduit entry), painted steel (Type/NEMA 4, IP65 rating), or stainless steel (Type/NEMA 4X, IP65 rating)
- Amplifier temperature rating -40 ... +60 °C (-40 ... +140 °F)
- Enclosure rating: Type/NEMA 4X, 6, IP67

#### Milltronics XPP-5

- CSA hazardous approval (Class I, Div. 1, Groups A, B, C, D; Class II Div. 1, Groups E, F, G; Class III)
- Aluminum body that is fully potted
- Convenient mounting flange and locknut
- 3/4" NPT male hub connection
- Operating temperature from -40 ... 60 °C (-40 ... 140 °F)
- Enclosure rating: Type/NEMA 4X, 6, IP67

#### Stainless high temperature Milltronics MSP-9

- Heavy-duty, high temperature 304 stainless steel probe
- Special construction allows operation of probe in environment from -50 ... 260 °C (500 °F)
- 1.5 m (5 ft) special high temperature PTFE cable provided. Up to 30 m (100 ft) may be used.
- Amplifier remote mounted in enclosure 140 x 140 x 100 mm (5.5 x 5.5 x 4 inch), available in cast aluminum (½" NPT conduit entry), painted steel (Type/NEMA 4, IP65 rating), or stainless steel (Type/NEMA 4X, IP65 rating)
- Enclosure rating: Type/NEMA 4X, 6, IP67
- Amplifier temperature rating -40 ... +60 °C (-40 ... +140 °F)

#### Milltronics RMA (Remote Mounted Amplifier)

- Available for internal mounting within Probe, or in enclosure for remote mounting
- Enclosures available in cast aluminum (½" NPT entry), painted steel (Type/NEMA 4 rating) or stainless steel (Type/NEMA 4X, IP65 rating)
- Operating temp. from -40 ... +60 °C (-40 ... +140 °F)
- Enclosure rating: Type/NEMA 4X, 6, IP67

### Overview

Milltronics MSP-7 is a heavy-duty 3-wire motion sensor that provides an NPN open collector output to PLCs.

### Benefits

- Up to 100 mm (4 inch) gap between target and probe
- Corrosion resistant construction
- General purpose, suitable for majority of industrial applications; rugged probe designs provide unmatched reliability

### Application

The MSP-7 motion sensing probe can detect changes in the rotation and movement of ferrous equipment. When connected to a PLC it can warn of malfunction and signals to stop or slow down equipment, preventing costly failure or downtime. Its reliability makes it a very cost effective sensor.

The single setpoint system suits most industrial applications. This versatile unit can be used on tail pulley shafts, driven pulleys, motor shaft sensing, belt or drag conveyors, screw conveyor flights, bucket elevators, fans and pumps.

An NPN open collector 3-wire output allows for versatile connection to most PLC models and a large dynamic range ensures that the MSP-7 can detect changes in target speed for a variety of applications.

- Key Applications: tail pulleys, motor shaft sensing, screw conveyor flights, bucket elevators

### SITRANS WM300 Motion failure alarm controller

#### Overview

SITRANS WM300 MFA motion failure alarm controller is a highly sensitive dual setpoint motion sensor system, used with Milltronics MSP probes.

#### Benefits

- Up to 100 mm (4 inch) gap between target and probe.
- Over and under speed setpoint detection.
- Setpoint adjustment range 2 to 5 000 Hz (120 to 300 000 ppm).
- Adjustable start-up time delay.
- Visual indication of probe operation and relay status.
- General purpose, suitable for majority of industrial applications; rugged probe designs provide unmatched reliability.

#### Application

The SITRANS WM300 MFA detects changes in the motion and speed of rotating, reciprocating or conveying equipment. It warns of equipment malfunction and signals through contacts to shut down machinery in case of a slowdown or failure. Its reliability makes it a cost-effective way to protect valuable process equipment.

The dual setpoint system suits most industrial applications. This versatile unit can be used on tail pulley shafts, driven pulleys, motor shaft sensing, belt or drag conveyors, screw conveyor flights, bucket elevators, fans and pumps.

Multiple machines can be monitored with twin, independent probe inputs as well as an additional 2 inputs for differential speed detection (DSD) within a machine monitoring solution such as a belt conveyor comparing the head to tail pulley speeds. An optional analog output module can convert the WM300 into a non-contacting tachometer (NCT) with 2 mA outputs.

A special feature is the adjustable 0 to 60 second time delay, allowing the monitored device to accelerate to normal running speed before monitoring begins. A wide range of probes are available to suit specific needs, including high temperatures and corrosive installations. SITRANS WM300 MFA consistently meets the needs of mining aggregate, cement and other primary and secondary industries.

- Key Applications: tail pulleys, motor shaft sensing, screw conveyor flights, bucket elevators

## Process Protection

### Motion sensors

#### SITRANS WM300 Motion failure alarm controller

#### Design

##### Mounting for Milltronics MSP-3, MSP-7, MSP-12, XPP-5

**Note:** Mounting flange supplied with probe.

##### Mounting for Milltronics MSP-9

Milltronics MSP-12, MSP-3, MSP-7, MSP-9, XPP-5 mounting, dimensions in mm (inch)

##### Standard Milltronics MSP-12

- Heavy-duty general purpose motion probe
- Long lasting aluminum body with internal amplifier
- Convenient mounting flange and locknut for fast installation and setup
- Temperature rating: -40 ... +60 °C (-40 ... +140 °F)
- Enclosure rating: Type/NEMA 4X, 6, IP67

##### Standard Milltronics MSP-7

- Heavy-duty general purpose motion probe for direct connection to WM300 MFA
- Long lasting aluminum body
- Convenient mounting flange and locknut for fast installation and setup
- Temperature rating: -40 ... +60 °C (-40 ... +140 °F)
- Enclosure rating: Type/NEMA 4X, 6, IP67
- NPN, open collector output
- 24 V DC power supply

##### Milltronics XPP-5

- CSA hazardous approval (Class I, Div. 1, Groups A, B, C, D; Class II Div. 1, Groups E, F, G; Class III)
- Aluminum body that is fully potted
- Convenient mounting flange and locknut
- 3/4" NPT male hub connection
- Operating temperature from -40 ... 60 °C (-40 ... 140 °F)
- Enclosure rating: Type/NEMA 4X, 6, IP67

##### High temperature Milltronics MSP-3

- Heavy-duty, high temperature aluminum probe designed to withstand operating temperatures from -50 ... 260 °C (500 °F)
- Cast aluminum probe with convenient mounting flange and locknut
- 1.5 m (5 ft) of high temperature PTFE cable provided. Up to 30 m (100 ft) may be used.
- Enclosure rating: Type/NEMA 4X, 6, IP67

##### Stainless high temperature Milltronics MSP-9

- Heavy-duty, high temperature 304 stainless steel probe
- Special construction allows operation of probe in environment from -50 ... 260 °C (500 °F)
- 1.5 m (5 ft) special high temperature PTFE cable provided. Up to 30 m (100 ft) may be used.
- Enclosure rating: Type/NEMA 4X, 6, IP67

##### Milltronics RMA (Remote Mounted Amplifier)

- Available for internal mounted IMA in probe, or without and converting older existing applications into 3-wire NPN signals for use with WM300 MFA
- DIN rail mount
- Operating temp. from -40 ... +60 °C (-40 ... +140 °F)

## Overview

SITRANS WM100 is a heavy-duty zero-speed alarm switch. This non-contacting unit provides cost-effective equipment protection even in the harshest conditions.

## Benefits

- Up to 100 mm (4 inch) gap between SITRANS WM100 and targets
- Rugged, low maintenance suitable for tough environments
- 1 SPDT Form C relay contact
- Provides cost-effective protection
- Visual indication of target triggered pulse

## Application

This rugged unit is impervious to dust, dirt, build-up and moisture and is ideal for such primary industries as mining, aggregate, and cement. Operating where other systems are prone to failure, the non-contacting design eliminates the need for lubricating, cleaning and part replacement. Downtime and clean-up expenses associated with conveying equipment failure are reduced by the SITRANS WM100. It alarms to minimize spillage, prevent extensive damage or even fire caused by belt slippage at the head pulley, and warns against conveyor malfunction.

The SITRANS WM100 has built-in selectable start delays and 1 Form C relay contact. With an aluminum body, it operates from -40 to +60 °C (-40 to +140 °F).

- Key Applications: tail pulleys, driven pulleys, motor shaft sensing, screw conveyor flights, bucket elevators

## Design

### Mounting

The WM100 probe should be mounted, using the supplied mounting flange, onto a vibration-free structure. The gap between the probe and the target should be sufficient such that there is no danger of the target damaging the probe. The maximum allowable gap is 100 mm (4 inch) from the face of the target to the face of the probe for 4.5 x 4.5 mm (3/16 x 3/16 inch) keyway. The WM100 is sensitive to lateral disturbances to its magnetic field. If the WM100 is responding to motion from an interfering target, move the WM100 or install a ferrous plate (steel) as a shield between the WM100 and the interfering target. Where possible, the probe should be mounted such that the cable inlet is pointing downward to avoid accumulation of condensation in the casing. Connection of the probe should be made via flexible conduit for easier removal or adjustment of the probe.

SITRANS WM100 mounting, dimensions in mm (inch)

### Motion sensors

#### SITRANS WM100 Motion sensor

##### Technical specifications

Mode of operation	
Measuring principle	Disruption of magnetic field by ferrous target
Typical application	Monitors absence or presence of motion in harsh conditions
Output	
Contact	1 SPDT Form C dry relay contact, rated 5 A at 250 V AC, fail-safe operation
Time delay	Start up: 10 ... 14 seconds (5 ... 7 seconds with 12 ppm jumper installed)
Zero Speed (selected via a common jumper)	5 seconds ± 1 (minimum speed 10 ... 15 ppm) or 10 seconds ± 2 (minimum speed 5 ... 7.5 ppm)
Rated operating conditions	
Operating temperature	-40 ... +60 °C (-40 ... +140 °F)
Storage temperature	-40 ... +60 °C (-40 ... +140 °F)
Design	
Probe body	Aluminum
Process mounting	2" NPSL
Connection box	Aluminum, ¾" NPT conduit entrance, 5 screw terminals plus grounding terminal for electrical connection, max. 12 AWG (3.30 mm <sup>2</sup> ) wire size
Gasketing	Neoprene
Display	Red LED for verification of pulses
Enclosure rating	Type NEMA 4x, 6, IP67
Dynamic range	
	Minimum 6 or 12 pulses per minute Maximum 3 000 pulses per minute
Shipping weight	
	2 kg (4.4 lb)
Power supply

#### Notes:

1. Dry contacts shown in de-energized (alarm or shelf) state.
2. SITRANS WM100 is manufactured for either 115 or 230 V AC operation. Check WM100 nameplate for applicable voltage. Correct voltage must be supplied. Voltages lower than specified will result in an inoperative condition. Voltages higher than specified will severely damage unit.
3. For 5 second time delay and a minimum 12 ppm range, connect jumper across terminals 7 and 8. Without a jumper, the default is a 10 second time delay and a minimum 6 ppm range.

### Supplied product documentation on DVD and safety notes

The scope of delivery of the Siemens products for process instrumentation includes a multilingual instruction sheet with **safety notes** as well as a uniform **mini DVD – Process Instrumentation and Weighing Systems**.

This DVD contains the most important manuals and certificates for the Siemens process instrumentation and weighing technology portfolio. The delivery may also contain product-specific or order-specific printed materials.

For additional information, refer to the Annex on page 10/3.

#### Overview

Analog input 0/4 to 20 mA

The isolating power supplies are used for the intrinsically safe operation of transmitters or for connecting to intrinsically safe mA sources.

The transmitters are supplied with auxiliary power from the isolating power supplies.

HART communication signals are transmitted bidirectionally by the isolating power supplies.

#### Benefits

- Active and passive output 0/4 to 20 mA
- Universally applicable for transmitters and mA sources (4-wire transmitters)
- Narrow design – 12.5 mm wide – for single and two-channel models
- Intrinsically safe input [Ex ia] IIC
- Galvanic isolation between input, output and auxiliary power
- Installation possible in Zones 2, 22 and Div. 2
- Can be used up to SIL 2 (IEC 61508)

	Zones					
	0	1	2	20	21	22
Ex i interfaces	X	X	X	X	X	X
Installation in			X			X

#### Design

The HART isolating power supply is comprised of a compact plastic enclosure (IP30) and is equipped with push-in screw terminals.

On the front are a green LED for indicating the power supply status and a red LED for signaling errors.

## Supplementary components

### Supply units and isolation amplifiers

#### SITRANS I200

#### Overview

Analog output 0/4 to 20 mA for HART

The output isolators are used for intrinsically safe operation of valve positioners, i/p converters or indicators.

Operation of intrinsically safe HART valve positioners (e.g. SI-PART PS2) is also possible. The units transfer a superimposed HART communication signal bidirectionally.

#### Benefits

- For HART output signals 0/4 to 20 mA
- Intrinsically safe output [Ex ia] IIC
- Electrical isolation between input, output and auxiliary power
- Open-circuit and short-circuit monitoring and messaging (can be switched off)
- Installation permissible in Zone 2 and Div. 2
- Can be used up to SIL 2 (IEC 61508)

	Zones					
	0	1	2	20	21	22
Ex intrinsically safe interface	X	X	X	X	X	X
Installation in			X			X

#### Design

The isolating transformer HART consists of a compact plastic enclosure (IP30) and is equipped with push-in screw terminals.

On the front are a green LED for indicating the power supply status and a red LED for signaling errors.

The auxiliary power supply can be connected individually using push-in screw terminals or jointly for up to 40 units using pac-Bus.

SITRANS I200 output isolator, function block diagram

#### Technical specifications

##### Input

Input signal	0/4 ... 20 mA with HART
Functional range	0 ... 24 mA
Max. input current	50 mA
Input resistance (changeable switch LI)	225 Ω/550 Ω
Communication signal	Bidirectional HART transmission, 0.5 kHz ... 30 kHz

##### Ex i output

Output signal	0/4 ... 20 mA with HART
Connectable load resistance	0 ... 800 Ω
Min. load resistance for short-circuit monitoring	150 Ω
Residual ripple	≤ 50 mV
No-load voltage	≤ 25.6 V
Settling time (10% ... 90%)	≤ 100 μs
Transmission characteristics Input/output	1:1
	0 ... 20 mA → 0 ... 20 mA, 4 ... 20 mA → 4 ... 20 mA

##### Measuring accuracy

Accuracy, typical data expressed as % of calibrated span at  $U_N$ , 23 °C

Linearity error	≤ 0.1%
Offset error	≤ 0.1%
Temperature influence	≤ 0.1%/10 K
Power supply effect within voltage range	≤ 0.01%
Load resistance effect	≤ 0.02%

##### Rated conditions

Degree of protection of enclosure	IP30
Degree of protection of terminals	IP20
Ambient conditions	
• Ambient temperature	-20 °C ... +70 °C (-4 ... +158 °F) (refer to operating instructions)
• Storage temperature	-40 °C ... +80 °C (-40 ... +176 °F)
• Relative humidity (no condensation)	≤ 95%
Electromagnetic compatibility	Checked according to following standards and regulations: EN 61326-1 Use in the industrial environment

##### Design

Screw terminals	
• One-wire connection	
- Rigid	0.2 ... 2.5 mm <sup>2</sup> (0.00031 ... 0.0039 in <sup>2</sup> )
- Flexible	0.2 ... 2.5 mm <sup>2</sup> (0.00031 ... 0.0039 in <sup>2</sup> )
- Flexible with end ferrules (with-out/with plastic ferrule)	0.25 ... 2.5 mm <sup>2</sup> (0.00039 ... 0.0039 in <sup>2</sup> )
• Two-wire connection	
- Rigid	0.2 ... 1 mm <sup>2</sup> (0.00031 ... 0.00155 in <sup>2</sup> )
- Flexible	0.2 ... 1.5 mm <sup>2</sup> (0.00031 ... 0.0023 in <sup>2</sup> )
- Flexible with end ferrules	0.25 ... 1 mm <sup>2</sup> (0.00039 ... 0.00155 in <sup>2</sup> )
Weight	Approx. 160 g (0.35 lb)
Type of installation	On DIN rail according to EN 50022 (NS35/15; NS35/7.5)
Mounting position	Vertical or horizontal
Enclosure material	PA 6.6
Fire protecting class (UL-94)	V0

<b>Auxiliary power</b>	
Rated voltage $U_N$	24 V DC
Voltage range	18 ... 31.2 V
Residual ripple within voltage range	$\leq 3.6 V_{SS}$
Rated current ( $U_N$ , 20 mA)	80 mA
Power consumption ( $U_N$ , 20 mA)	1.3 W
Power loss (at $U_N$ , $R_L = 500 \Omega$ )	1.1 W
Operation indicator	Green "PWR" LED
Reverse polarity protection	Yes
Undervoltage monitoring	Yes (no faulty module/output states)
Electrical isolation	
• Test voltage according to EN 60079-11	
- Ex i output to input	1.5 kV AC
- Ex i output to auxiliary power	1.5 kV AC
- Error contact to Ex i output	1.5 kV AC
• Test voltage according to EN 50178	
- Input to auxiliary power	350 V AC
- Error contact to auxiliary power and output	350 V AC
Fault detection Ex i output	
• Open circuit	$> 10 \text{ k}\Omega$
• Short-circuit	$< 15 \Omega$
• Input characteristics	$> 6 \text{ k}\Omega$
• Open-circuit detection only for input current	$\geq 3.6 \text{ mA}$
• Settings (LF switch)	Activated/deactivated
• Error indication	Red "LF" LED
• Signaling of cable fault and auxiliary power failure	<ul style="list-style-type: none"> <li>• Contact (30 V/100 mA), closed to ground in event of fault</li> <li>• pac-Bus, floating contact (30 V/100 mA)</li> </ul>
<b>Certificates and approvals</b>	
Explosion protection ATEX	
• EC type-examination certificate	DMT 03 ATEX E 012 X
• Degree of protection	II 3 (1) G Ex nA nC [ia] IIC T4 II (1) D [Ex iaD]
Installation	In Zone 2, Div. 2 and in the safe area
Other approvals	USA (FM) Canada (CSA) Marine (DNV)
Safety specifications (CENELEC)	
• Max. voltage $U_o$	25.6 V
• Max. current $I_o$	96 mA
• Max. power $P_o$	605 mW
• Max. connectable capacitance $C_o$ for IIC/IIB	103 nF/800 nF
• Max. connectable inductance $L_o$ for IIC/IIB	1.9 mH/11 mH
• Internal capacitance $C_i$ and inductance $L_i$	Negligible
• Insulation voltage $U_m$	253 V
• Additional information and value combinations	See Certifications

### Supply units and isolation amplifiers

#### SITRANS I200

#### Dimensional drawings

SITRANS I200 output isolator HART, dimensions in mm (inch)

#### Circuit diagrams

SITRANS I200 output isolator HART, connection diagram

### Overview

EIA-485 interface for Modbus RTU, PROFIBUS RS 485-IS and BACnet MS/TP communication.

- The isolating power supplies are used for the intrinsically safe operation of 4-wire devices.
- The isolating power supply supplies the 4-wire devices with power.

### Benefits

- Suitable for 4-wire devices
- Galvanic isolation between EIA-485 and EIA-485-IS, between the power supply and EIA-485-IS, and between the power supply on the input side and the intrinsically safe power supply on the output side.
- Intrinsically safe power supply and communication [Ex ia] IIC
- Installation permissible in Zone 2 and Div. 2
- Diagnostics via LEDs
- Integrated, connectable bus termination on the non-hazardous side and the hazardous side
- Transmission rates of 1 200 bps to 1.5 Mbps

### Application

Isolating power supply for 4-wire devices in hazardous areas

### Design

The EIA-485 transmitter isolating power supply consists of a compact plastic enclosure (IP20) in the SIMATIC S7-1200 design, and is equipped with plug-in screw terminals. On the front are a green LED for indicating the auxiliary power supply status and a yellow LED for signaling communication. The push-in screw terminals are jumpered on the EIA-485 transmitter isolating power supply, allowing the power supply and primary-side communication to further SITRANS I300 devices to be looped through.

### Technical specifications

#### Power supply

Input	
• Rated voltage $U_N$	24 V DC
• Voltage range	19.2 ... 28.8 V
• Residual ripple within voltage range	$\leq 3.6 V_{SS}$
• SITRANS I300 current consumption (24 V DC)	$\leq 210 \text{ mA}$
• Power loss for a load of 1.5 W	3.3 W at 24 V DC
• Reverse polarity protection	Yes
Output	
• Rated voltage	15.6 V
• Max. current	459 mA
• Max. power	1.5 W
Galvanic isolation	Test voltage according to EN 60079-11
• EIA-485 to EIA-485-IS	1 500 V AC
• Power supply to EIA-485-IS	1 500 V AC

#### Rated conditions

Degree of protection of enclosure	IP20
Degree of protection of terminals	IP20
Ambient conditions	
• Ambient temperature	-40 ... +60 °C (-40 ... +140 °F)
• Storage temperature	-40 ... +70 °C (-40 ... +158 °F)
• Relative humidity (no condensation)	$\leq 95\%$
Electromagnetic compatibility	Tested acc. to the following standards and regulations: EN 61326-1 Use in the industrial environment

#### Construction

Dimensions in mm (width x height x depth)	70 x 100 x 75
Weight	Approx. 250 g (0.55 lbs)
Screw terminals	
• One-wire connection	
- Rigid	0.34 ... 2.5 mm <sup>2</sup> (AWG 22 ... 14)
- Flexible	0.34 ... 2.5 mm <sup>2</sup> (AWG 22 ... 14)
- Flexible with end ferrules	0.34 ... 2.5 mm <sup>2</sup> (AWG 22 ... 14)
Mounting type	<ul style="list-style-type: none"> <li>• On DIN rail acc. to EN 50022 (NS35/15; NS35/7.5)</li> <li>• Wall</li> </ul>

SITRANS I300 isolating power supply, connection diagram

## Overview

The SITRANS RD100 is a 2-wire loop powered, NEMA 4X enclosed remote digital display for process instrumentation.

## Benefits

- Easy setup
- Approved for hazardous locations
- NEMA 4X, IP67 impact-resistant enclosure
- Simple two-step calibration
- Two modes of input allow for easy servicing, with no interruption of loop required

## Application

The RD100 is very versatile. It can be installed indoors or outdoors, in hot or cold environments, and in safe or hazardous areas.

It has been approved by FM and CSA as Intrinsically Safe and non-incendive, and operates from -40 to +85 °C (-40 to +185 °F), adding only 1 V to the loop.

Calibration consists of a quick two-step process involving the adjustment of only two non-interacting potentiometers.

- Key Applications: remotely displays process variables in level, flow, pressure, temperature, and weighing applications, in a 4 to 20 mA loop.

**Overview**

The SITRANS RD150 is a remote display for 4 to 20 mA and HART devices.

**Benefits**

- Ease of use through 4 button menu driven display
- Backlit display
- HART communications
- Flexible mounting options
- Plastic, stainless steel or aluminum housings up to IP68
- Full configuration of connected sensors with optional USB Communicator and PC
- Support for multiple HART sensors with HART Multi-drop

**Application**

The versatile SITRANS RD150 can be installed remotely from your instrument, providing 4/20 mA or multiple HART variable readings in a safe and convenient location.

Easy to use, 4 button, menu driven, display for configuration of HART instruments via standard HART commands and full configuration of connected instruments via USB and computer.

- Key Applications: remotely displays process variables in level, flow, pressure, temperature, and weighing applications, in a 4 to 20 mA HART loop.

### Displays

#### SITRANS RD200

##### Overview

The SITRANS RD200 is a universal input, panel mount remote digital display for process instrumentation.

##### Benefits

- Easy setup and programming via front panel buttons or remotely using RD software
- Display readable in sunlight
- Universal input: accepts current, voltage, thermocouple, and RTD signals
- Single or dual 24 V DC transmitter power supply
- Serial communication using built in protocol or Modbus RTU
- Two optional relays for alarm indication or process control applications
- Linear or square root function supported
- Meter Copy feature to reduce setup time, cost, and errors
- RD software supports remote configuration, monitoring, and logging for up to 100 displays
- Other features include: 4 to 20 mA analog output option, pump alternation control, and optional NEMA 4 and 4X field enclosures
- 2X option for 30.5 mm (1.2 inch) high, red LED display

##### Application

The RD200 is a universal remote display for level, flow, pressure, temperature, weighing, and other process instruments.

Data can be remotely collected, logged and presented from as many as 100 displays on your local computer using the free downloadable RD Software.

The display accepts a single input of current, voltage, thermocouple, and RTD. This makes the RD200 an ideal fit for use with most field instruments.

The RD200 can be set up as a standard panel mount, or combined with optional enclosures to allow it to house up to 6 displays.

- Key Applications: tank farms, pump alternation control, local or remote display of level, temperature, flow, pressure and weighing instrument values, PC monitoring, and data logging with RD Software.

#### SITRANS RD300

##### Overview

The SITRANS RD300 is a panel mount remote digital display for process instrumentation and acts as a multi-purpose, easy to use, rate/totalizer ideal for flow rate, total, and control applications.

##### Benefits

- Easy setup and programming via front panel buttons or using free RD software available via USB drive
- Display readable in sunlight
- Input: accepts current and voltage
- Single or dual 24 V DC transmitter power supply
- Serial communication using built in protocol or Modbus RTU
- Supports up to 8 relays and 8 digital I/O for process control and alarming
- 32-Point linearization, square root or exponential linearization
- Multi-pump alternation control
- Supports total, grand total or non-resettable grand total
- 9-digit totalizer with total overflow feature
- Large dual-line, 6-digit display
- Configure, monitor, and datalog from a PC
- Dual-input option with math functions: addition, difference, average, multiplication, division, minimum, maximum, weighted average, ratio, concentration

##### Application

The RD300 is a remote display for level, flow, pressure, weighing, and other process instruments. This display also acts as a multi-purpose, easy to use rate/totalizer ideal for flow rate, total, and control applications.

Data can be remotely collected, logged and presented on your local computer using the free RD software available via USB drive.

The display accepts a single or dual input of current and voltage. This makes the RD300 an ideal fit for use with most field instruments.

The RD300 can be set up as a standard panel mount, or combined with optional enclosures to allow it to house up to 6 displays.

- Key Applications: tank farms, pump alternation control, local or remote display of level, flow, pressure and weighing instrument values, PC monitoring and data logging with RD Software.

### Technical specifications

<b>Mode of operation</b>		<b>Electrical connection</b>	
Measuring principle	Analog to digital conversion	mA output signal	2-core copper conductor, twisted, shielded, 0.82 ... 3.30 mm <sup>2</sup> (18 ... 12 AWG), Belden 8 760 or equivalent is acceptable

### WirelessHART devices

#### SITRANS AW200 WirelessHART adapter

##### Overview

SITRANS AW200 WirelessHART Adapter

The WirelessHART adapter SITRANS AW200 is a battery-powered communication component that integrates the HART and 4 to 20 mA field devices into a WirelessHART network. On the wireless communication side, the adapter supports the WirelessHART standard. HART and 4 to 20 mA field devices are connected on the field device side.

The WirelessHART adapter SITRANS AW200:

- Supports the WirelessHART standard (HART V 7.1)
- Features an extremely high degree of security for wireless data transmission.
- Integrates a 4 to 20 mA field device or up to four HART field devices (in multidrop mode) into a WirelessHART network.
- Features an intelligent energy management system for supplying connected field devices.
- Easy to configure with SIMATIC PDM.

##### Benefits

- High quality and service life
- Save on wiring costs in difficult installation conditions (e.g. for moveable components) and for temporary installations.
- Subsequent integration of an installed field device with a HART interface into maintenance and diagnostic systems if the control system does not feature the required communication mechanisms.
- Proven HART devices can continue to be used for wireless communication without any limitations.
- Field devices with 4 to 20 mA interface (without HART) can be connected.
- Intelligent energy management to achieve the best possible service life for the installed battery unit
- Optimum addition to wired communication and expansion of solution options for system solutions in process automation
- Burst mode and event notification configuration for the adapter and connected field devices.

##### Application

The WirelessHART adapter can be used in a number of different applications:

- Access to installed basis  
Diagnostic information is obtained from existing wired HART devices thanks to the permanent electrical connection of a WirelessHART adapter, and is sent to system-based asset management software.
- Status monitoring of system  
Wireless devices are mounted at critical points in the system, which are not usually connected to the control room due to difficult accessibility or extensive costs for wiring. Better data flow and diagnostics increase plant reliability, transparency and safety.
- Process optimization  
Temporary installation of a 4 to 20mA or standard HART device together with a SITRANS AW200 WirelessHART adapter allows easier monitoring and plant optimization at lower costs.
- Process monitoring  
Measured values, for example from tanks or silos, are transmitted to a higher-level system at regular intervals, together with the device and battery status.

##### Design

The SITRANS AW200 WirelessHART Adapter consists of:

- An enclosure with a fitted aerial
- Electronics
- A high-performance lithium battery unit

SITRANS AW200 Wireless-HART Adapter, assembly

The enclosure can be opened by loosening 4 screws. This enables you to access the electronics and battery unit. The battery unit is removed without the use of tools, since it is connected to the housing with clips.

## Supplementary components

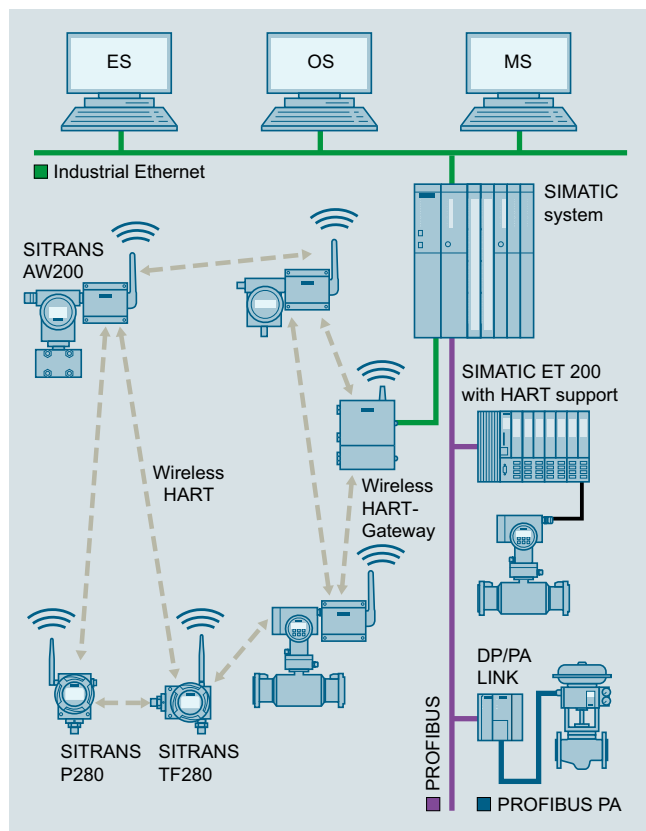

### WirelessHART devices

#### SITRANS AW200 WirelessHART adapter

On the back of the enclosure is the connector with a fixing nut onto which various different replaceable connecting pieces can be screwed to mount the adapter straight onto a field device.

On the base of the enclosure is an optional cable inlet which can be used for a cable gland. Up to 2 cables can be inserted for off-set adapter installation.

#### Function

SITRANS AW200 WirelessHART Adapter. functional diagram

Measured values and diagnostic information of connected field devices with HART communication are transmitted via a wired connection to the WirelessHART adapter. The adapter transmits this information as wireless signals to a WirelessHART gateway. From here, the information is available to the network of the system.

If a field device with a 4 to 20 mA output signal is connected to the adapter, only the measured value will be transmitted.

Following configuration and integration into a WirelessHART network, each WirelessHART adapter is able to recognize its neighbors. It notes the strength of the wireless signal, synchronizes itself, receives network information and then establishes connections to its neighbors in the wireless network. A WirelessHART network organizes itself. Manual settings for organization are not required.

Two and four-wire field devices can be connected to a WirelessHART adapter. In the case of a connected two-wire field device, voltage can be supplied by the adapter. Where multiple two-wire field devices are connected (multi drop operation), the adapter must be connected to an external power supply.

The WirelessHART adapter may also be connected in parallel to an already existing installation which consists of a power supply and a HART field device.

Connection	Wiring	Function
1	—	Power supply for the field device
2	—	HART/4 ... 20 mA
3	—	External supply/Dimensions
4	—	High-resistance HART connection
5, 7	—	High-resistance HART connection
6, 8	—	Mass, high-resistance connection

Terminal block with 6 screw connection clamps

#### Parameter assignment

SITRANS AW200 configured via HART. Configuration can be carried out using a handheld communicator or, more conveniently, with a HART modem and the SIMATIC PDM configuration software.

Initial startup of the adapter is usually carried out via SIMATIC PDM and a HART modem or a handheld communicator. During initial startup, the network ID and join key are set in the adapter. These parameters are used to integrate the adapter into an existing WirelessHART network.

Following integration into the network, the adapter and HART devices connected can be conveniently operated via the WirelessHART network or with the local HART modem.

#### Siemens HART field devices for the adapter

HART and 4...20mA field devices can be connected to the SITRANS AW200 WirelessHART adapter. Depending on the electrical data of the field devices, they can receive their power supply from the WirelessHART adapter or will require an external power supply. See <https://support.industry.siemens.com/cs/ww/en/> for FAQ with the latest information on connectivity for Siemens field devices.

#### Note

Siemens has only approved the Siemens HART field devices listed there for the adapter, and will only provide technical support for these devices.

Based on HART specifications, it is generally possible to connect devices that are not listed, however with the following restrictions:

- All warranties and liability will be excluded
- No technical support

### Remote Terminal Unit

#### SIMATIC RTU3000C

##### Overview

The devices of the RTU3000C family are compact telecontrol stations (RTU: Remote Terminal Unit) for applications with their own power supply. They are particularly suited for monitoring and control of external stations that are not connected to an energy supply network. The RTUs can independently collect data from connected sensors with time stamps, preprocess the data, and transfer it to a control center. The RTU3000C is supplied with power by a battery, an accumulator or a solar panel or by a 12 ... 24 V DC power supply unit.

The devices of the RTU3000C series are characterized by the following properties:

- Worldwide data exchange between a remote measuring point and a control center via public or private networks (WAN), e.g. mobile radio networks, Internet.
- Communication with a control center (telecontrol center) with the help of the DNP3, IEC 60870-5-104 or SINAUT ST7 telecontrol protocols
- Connection to a control center with TeleControl Server Basic
- Acquisition of process signals, alarms, count pulses, measured values or output of switching commands by means of integrated inputs as well as digital inputs and outputs
- Preprocessing of the acquired signals by a variety of function/program blocks
- FTP client functionality for transmitting data to an FTP server
- Time synchronization
  - On the basis of NTP (**N**etwork **T**ime **P**rotocol)
  - By means of the partner in the control center
  - Via the mobile radio network (RTU3030C, RTU3031C and RTU3041C)
  - Via GPS (RTU3031C and RTU3041C)
- Automatic alarm transmission per email or text message
- Use as data logger by saving the process values to SD card
- Data buffering in the substations in the event of connection failures
- LED signaling for fast diagnostics
- Compact industrial enclosure in S7-1200 design for mounting on a standard DIN rail
- Use in harsh environment thanks to extended temperature range from -40 to +70 °C and IP68 protection thanks to optional protective enclosure
- Fast commissioning thanks to easy configuration using the integrated web server

##### Additional RTU3030C and RTU3031C features:

- Integrated UMTS modem for global wireless data exchange between a remote measuring point and a control center based on the mobile radio standard UMTS (**U**niversal **M**obile **T**elecommunications**S**ystem) with data transmission rates of up to 21 Mbps in the downlink (HSDPA) and 5.76 Mbps in the uplink (HSUPA)
- UMTS operation with fixed or dynamic IP addresses, depending on telecommunication contract
- Time synchronization over the mobile radio network
- Wake-up of station from sleep mode by means of text message or call

##### Additional RTU3031C features as compared to RTU3030C:

- Support for 4 additional digital outputs designed as solid-state relays
- GPS antenna connection option for localization and time synchronization
- Function block for comparison of the setpoint/actual position

##### For RTU3041C:

- Integrated modem for global wireless data exchange between a remote measuring point and a control point on the basis of the LTE-M and NB-IoT mobile radio standards.
- With the sole exception of the mobile radio interface, the further functional scope corresponds with that of the RTU3031C.

Please note that not all network operators for LTE-M and NB-IoT support the text messaging (SMS) function.

##### **Additional functions with firmware V4.0**

- Only for RTU3041C: Power saving function eDRX (Extended Discontinuous Reception) for LTE-M and NB-IoT mobile radio networks, in order to reduce the energy consumption.
- Function block "Formula": The function block calculates the result of the specified mathematical or Boolean expression, depending on as many as four input variables.

##### **Additional functions with firmware V3.1**

- Connection of sensors via Modbus RTU (as of firmware V3.0) or HART Multidrop (as of V3.1) via the optional Extension Board HART/RS485
- Remote access to HART devices on the Extension Board HART/RS485 via SIMATIC PDM
- Remote access to Modbus devices on the Extension Board HART/RS485 via SIMATIC PDM
- Connection of the RTU3000C to a redundant DNP3 Master
- Local logging of Security and Audit events
- Central logging of Security and Audit events using syslog
- Increase the quantity structure of the function blocks and flags
- More efficient encryption mechanisms with TLS connections for HTTPS, Mail, FTP, DynDNS and VPN product versions

### Product variants

Different product versions are offered for the various applications:

- **SIMATIC RTU3010C**  
Compact RTU for variable power supply using batteries, rechargeable batteries, solar or 10.8 V DC to 28.8 V DC for connection to external industry routers; connection to control center via TeleControl Basic, DNP3, IEC60870-5-104 or SINAUT ST7 protocols, on-board I/O (8 DI, 4 DO, 4 AI), configuration and diagnostics per web interface
- **SIMATIC RTU3030C**  
Compact RTU for variable power supply using batteries, rechargeable batteries, solar or 10.8 V DC to 28.8 V DC with integrated UMTS modem; connection to control center via TeleControl Basic, DNP3, IEC60870-5-104 or SINAUT ST7 protocols, on-board I/O (8 DI, 4 DO, 4 AI), configuration and diagnostics per web interface; note country-specific approvals.
- **SIMATIC RTU3031C**  
Compact RTU for variable power supply using batteries, rechargeable batteries, solar or 10.8 V DC to 28.8 V DC with integrated UMTS modem; GPS functionality; connection to control center via TeleControl Basic, DNP3, IEC60870-5-104 or SINAUT ST7 protocols, on-board I/O (8 DI, 8 DO, 4 AI), configuration and diagnostics per web interface; note country-specific approvals.
- **SIMATIC RTU3041C**  
Compact RTU for variable power supply using batteries, rechargeable batteries, solar or 10.8 V DC to 28.8 V DC with integrated modem for LTE-M/NB-IoT; GPS functionality; connection to control center via TeleControl Basic, DNP3, IEC60870-5-104 or SINAUT ST7 protocols, on-board I/O (8 DI, 8 DO, 4 AI), configuration and diagnostics per web interface; note country-specific approvals.

In conjunction with the "TeleControl Server Basic" control room software, the RTU3000C forms a telecontrol system with additional properties:

- Connection of up to 5 000 telecontrol stations to the control center via OPC UA
- Central status monitoring of the substations
- No special provider services required for fixed IP addresses
- Wireless teleservice access to the substations
- Wake-up of substations by calling or text message

### Benefits

- **Flexible location of use**  
A flexible power supply concept allows for use of the RTU3000C at different measuring points in a widely distributed network, independent of an existing power supply network.
- **Rugged hardware**  
The rugged hardware enables reliable operation even in harsh environments with an increased temperature range (-40 °C to +70 °C).
- **Flexible connection to control centers**  
Thanks to reloadable telecontrol protocols, various applications and connection options to different control centers are supported in one device.
- **Fast and flexible data communication**  
Time- and event-driven communication ensures that the operating personnel is informed immediately and reliably about process alarms, statuses and values.
- **Simple and cost-efficient engineering**  
The integrated web server enables easy configuration using the standard web browser without additional engineering tools.
- **Remote access** to HART or Modbus devices on the Extension Board HART/RS485 via SIMATIC PDM.

- **Fully automatic time stamp**  
To enable subsequent and correct archiving of process data in the control system, all data frames are time-stamped at their place of origin.
- **Automatic buffering of process values**  
Data is buffered in the substations to prevent it getting lost in case of connection failures.
- **Secure data transmission**  
Use of OpenVPN technology and encrypted email connections ensures secure data transmission.  
The RTUs also support secure HTTPS access to the web server both over the local Ethernet interface and remotely, e.g. via mobile wireless. In addition, the FTP file transfer can also be carried out with encryption.
- **Time not lost in case of a power outage**  
A buffered real time clock ensures that the correct time is available even after a power outage.
- **Savings on travel and maintenance**  
Thanks to web-based management, configuring, diagnostics, control and monitoring can easily be performed remotely.

### Application

The telecontrol stations of the RTU3000C family can be used as a substation (Remote Terminal Unit) in telecontrol applications. Typical applications include the acquisition of measured values in plants that are spread over large geographical areas (e.g. level monitoring of water tanks in the water/wastewater industry).

- Data exchange and centralized data monitoring for automation systems spread over large geographical areas, including integrated GPS positioning functionality for RTU30x1C
  - Connection of difficult-to-access external stations without network infrastructure
  - Connection of measuring points at locations without power supply infrastructure
- These applications can be found in the most diverse industries:
- Water/wastewater treatment plants
    - Detection of leaks or water loss
    - Monitoring of pumping stations, water towers/reservoirs
    - Acquisition and monitoring of level / pressure / flow / temperature
    - Flood protection
  - Inventory management—monitoring of levels in tanks and silos
  - Agriculture—monitoring of irrigation systems or greenhouses
  - Wind power—wind measurement for designing wind turbines
  - Control and localization of mobile stations, such as monitoring of navigation buoys

## Supplementary components

### Remote Terminal Unit

#### SIMATIC RTU3000C

##### Design

The SIMATIC RTU3000C is a compact module in SIMATIC S7-1200 format:

- Rugged, compact plastic enclosure for the temperature range -40 °C to +70 °C
- Easily accessible connection and diagnostics elements
- Easy mounting on a standard DIN rail
- Four plug-in screw-type terminals for eight digital inputs (pushbutton/switch/relay contacts) of which the first two inputs can be configured as counter inputs.
- Four plug-in screw-type terminals for four analog inputs: Current /voltage (0/4 ... 20 mA, 0 ... 10 V, 0 ... 5 V) or temperature measurement (Pt1000)
- Two plug-in screw-type terminals for four digital outputs designed as relay contacts
- RTU30x1C: two additional plug-in screw terminals for four additional digital outputs, designed as solid-state relays
- The close-loop (12 V or 24 V can be selected) and switchable controller outputs X10/X11 can be used for the supply of sensors and actuators
- 5-pin, plug-in terminal strip for connection of an 12 ... 24 V DC external supply voltage; connection protected against polarity reversal
- Connection socket for battery module (up to six battery modules can be connected)
- RJ45 socket for connection to Industrial Ethernet at 10/100 Mbps
- Pushbutton for the functions wake-up, shutdown, warm restart or reset to factory settings
- Slot for an SD card (Siemens SMC, SD or SDHC)
- Installed temperature sensor for monitoring of temperature inside enclosure

RTU3030C and RTU30x1C additions:

- SMA antenna port for mobile network antenna
- Slot for a mini SIM card

RTU30x1C additions:

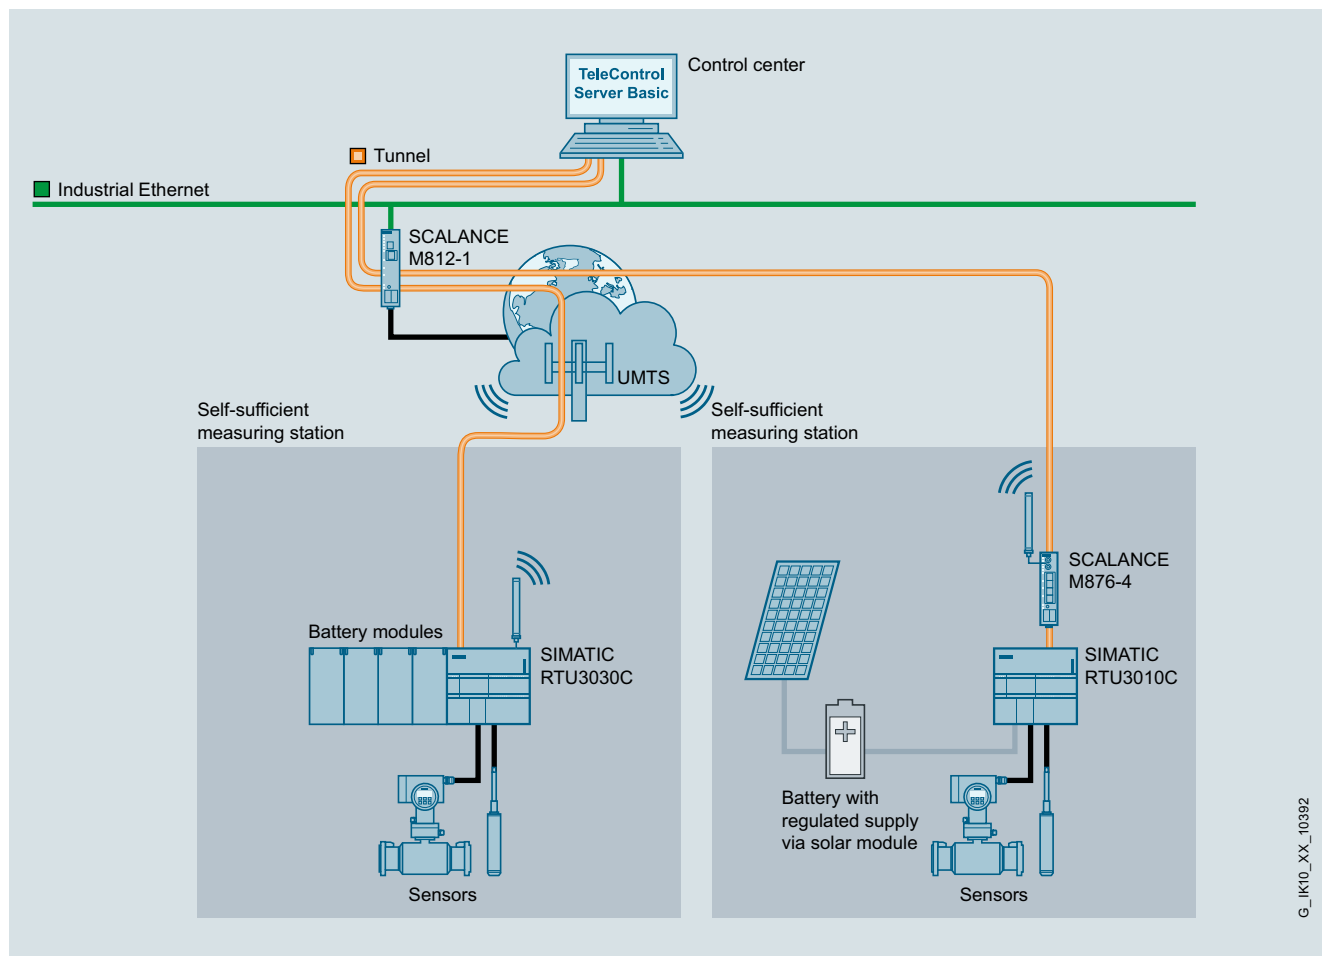

- Antenna port for GPS antenna
- Support for 4 additional digital outputs designed as solid-state relays

The telecontrol stations of the RTU3000C family can be used in stand-alone operation. The power supply can take place in independent operation by means of battery / accumulator /solar panel. The optional batteries are connected directly on the left side of the device without additional wiring. The power can also be supplied by a 5-pin terminal strip on the bottom of the module, even in combination with battery modules. The SD card tray is located on the front of the module. Removable screw-type terminals make for quick module replacement because the connected sensors must not be wired again.

### Function

The devices of the RTU3000C family are compact telecontrol stations. They enable connection of remote measuring points to TeleControl Server Basic or another control center and monitoring of these measuring points. To ensure autonomous operation the devices can also switch between four different operating modes:

- **Sleep mode** All inputs and communication functions are turned off so that energy consumption is minimal. Outputs can retain their last value.
- **Update mode** Used to query the inputs and outputs. The query cycle can be configured individually.
- **Communication mode** Mobile wireless connection or connection via LAN interface and external router and communication to the central office are active.
- **Service mode** Maintenance work can take place without loss of data.

Connection of the SIMATIC RTU3030C to TeleControl Server Basic

### Energy-independent mode

The RTU3000C stations can be operated in energy saving mode. Depending on the communication requirements and the connected type of power supply (e.g. battery, solar accumulator), independent operation can thus be guaranteed for many years to come. Power consumption can be determined by the RTU (from hardware level V2) for the diagnosis and prognosis of the battery life. The determined value can be logged and transferred to the control center.

### Data backup

Data losses are prevented by the data buffering mechanisms integrated in the product. In the event of a connection failure, time-stamped frames are buffered in the device. When the connection returns, the buffered values are automatically transferred to the control center in the right order.

### Data logging

The RTU3000C stations support the backup of process data on SD card. The retentively saved data can be sent cyclically by email and/or FTP or, if necessary, be downloaded directly using web-based management (WBM).

### Data point configuration

For data point configuration, the RTUs supports a series of data point types: Digital input, digital output, analog input, counter input. The data points can be configured with little effort using the web pages of the RTU3000C stations. A cyclic and/or event-controller transfer of measured values, setpoints or alarms can thus be implemented in only a few operations.

## Supplementary components

### Remote Terminal Unit

#### SIMATIC RTU3000C

##### Data preprocessing

Ready-to-use function and program blocks enable data preprocessing directly in the RTU. The process data can be linked by means of process blocks for basic control jobs.

Up to 44 different types are supported in the following groups:

- Blocks for logical functions (e.g. AND, OR)
- Blocks for time functions (e.g. ON and OFF delay, astronomical clock)
- Blocks for analog value functions (e.g. threshold value monitoring)
- Counter blocks: Featuring the retentivity option, which saves the current count value during restarting and reconfiguration so that it is not lost.
- Analog and digital bit memories for buffering calculation results
- Blocks for messages (text messages, email)
- Block for FTP file transfer
- Relay blocks (latching relay, pulse relay)
- Blocks for silo volume calculation
- Block for rectangular weir overflow calculation
- "Formula" function block for evaluation of mathematical and Boolean expressions of up to four input variables.

##### Time synchronization

The RTUs support time synchronization and therefore ensure that historical data is given the correct time stamp. The following synchronization mechanisms are available: via NTP, the remote control center, mobile radio and GPS, depending on type of RTU.

##### Alarms sent by email or text message

Alarm emails or, in the case of RTU3030C and RTU3031C, alarm text messages can be configured for timely communication of station statuses to service and maintenance personnel. When previously defined events (such as threshold violation) occur, application-specific information is sent automatically by email or SMS (directly or via the connected router).

##### GPS position (RTU30x1C)

The function block checks whether a predefined setpoint position has been reached.

The actual position can also be transferred to the control center as a tag.

##### Telecontrol communication using standard protocols

For communication with the control center, the RTUs support the DNP3, IEC 60870-5-104 and SINAUT ST7 telecontrol protocols. The RTUs act as a DNP3 station, as an IEC slave or, in the case of SINAUT ST7, as a station connected to an ST7 node station, e.g. TIM 1531 IRC. The RTUs can also be connected to the TeleControl Server Basic (TCSB). TCSB enables a connection to any control center software, e.g. WinCC V7 or via any OPC UA-capable client.

##### Remote maintenance

The RTU3000C stations provide remote maintenance access via WBM for access from the control center. The RTU3030C or RTU3031C can be woken from sleep mode via text message or a call. When using the "TeleControl Basic" communication protocol, the wake-up text message can be generated in the CMT of TCSB.

##### Security mechanisms

Access to the RTU3000C stations requires an authorization. Up to 20 different authorized email addresses or phone numbers can be defined in the WBM. Data is sent through an OpenVPN tunnel or a secure tunnel of the TeleControl Server Basic. Email messages can be encrypted (support of STARTTLS). FTP uploads can be performed encrypted via SSL with FTPS.

##### Diagnostics

The RTU3000C provides comprehensive diagnostic options for a quick and informative analysis of the station status. Basic diagnostic information, such as the status of the power supply, the communication connection and the inputs and outputs are signaled directly to the RTU by LEDs. The current status of the LEDs can also be retrieved through WBM.

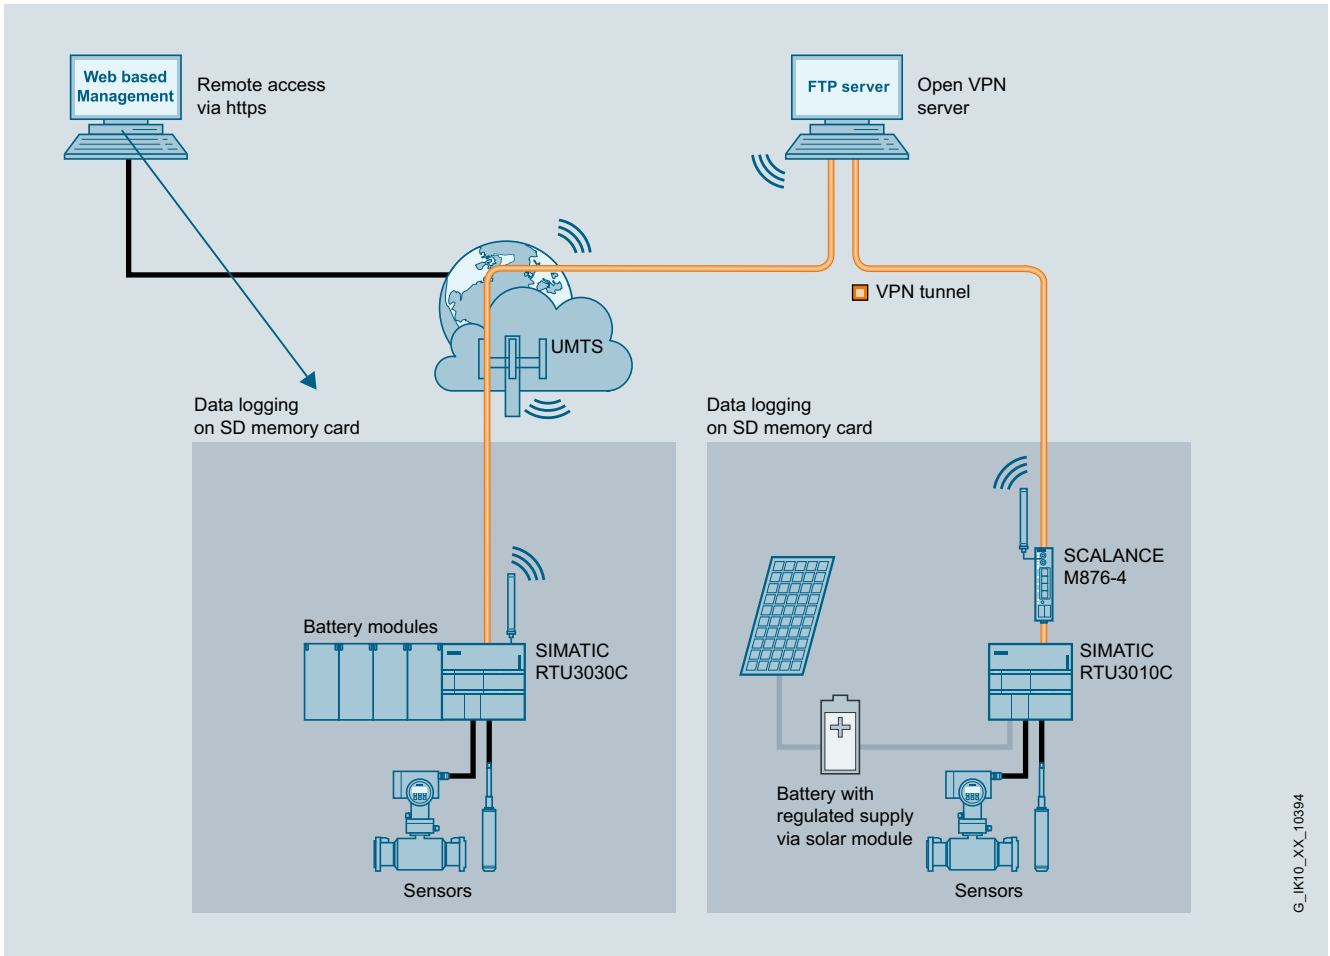

Using the web server, comprehensive information can be retrieved, such as facts about the connection history, buffer status, and the transferred measured values.

Furthermore, up to four new, freely definable tag tables are available in which an independent overview of all required tags can be composed to provide a display of all significant process values at a glance. The categorized user administration (Admin and User) ensures that only authorized persons are given access.

##### Configuration over web server

The integrated web server is accessed locally for diagnostics from a PC or remotely via the mobile wireless interface or Ethernet interface with upstream industrial router. Configuration, firmware update or configuration changes can therefore be performed remotely without additional software thereby saving time and money.

Integration

G\_IK10\_XX\_10394

#### More information

##### Technical requirements/compatibility

The following versions of the software are necessary for connection of RTU3000C to a control center with Telecontrol Server Basic: RTU3030C as of TCSB V3.0. RTU3010C as of TCSB V3.1. RTU3031C as of TCSB V3.1. + update 1 plus hardware support package (HSP). RTU3041C as of TCSB V3.1. + update 3.

Corresponding suitable industrial routers (e.g. SCALANCE M) for the connection to the control center via the Ethernet interface of the RTU3000C can be found under Remote Networks - IP-based modems and routers.

### Overview

IE/PB Link HA and IE/PB Link PN IO

IE/PB LINKs are gateways for connecting the two network types, Industrial Ethernet and PROFIBUS, i.e. they enable access to all PROFIBUS nodes connected to the lower-level PROFIBUS network.

#### Product versions

Two versions offered as gateways for Industrial Ethernet and PROFIBUS:

- **IE/PB LINK PN IO**  
Gateway with PROFINET IO functionality, S7 routing and data record routing for standard ambient conditions
- **IE/PB LINK HA**  
Gateway optimized for use in the process industry due to the possibility of deployment in harsh ambient conditions and the connection of PROFIBUS field devices to a redundant AS as PROFINET IO controller

Both product versions can be used in two operating modes:

Standard mode enables, for example, loading of programs and configuration data via PG/OP communication, data record routing for configuration and diagnostics of field devices with the SIMATIC PDM tool, S7 routing e.g. for cross-network loading of SIMATIC PLCs on PROFIBUS.

When operated as a PROFINET IO proxy, from the perspective of the PN IO controller, all PROFIBUS DP slaves connected after the IE/PB LINK are treated as PN IO devices according to the PROFINET standard, i.e. the IE/PB LINK is the proxy of the connected PROFIBUS DP slaves.

Both IE/PB LINK versions offer the possibility to use different transmission media by employing BusAdapters.

#### Benefits

- Protection of investment due to simple connection of PROFIBUS DP slaves to PROFINET IO controller. This enables a step-by-step transition to modern PROFINET networks
- Independence from individual vendors through support of the PROFINET standard for distributed field devices
- Flexible use due to different connection system and hardware; copper (RJ45, FC) and fiber-optic cables (SCRJ for POF/PCF, LC for glass fiber-optic)
- Also enables use in plants with PROFI-safe applications
- Worldwide access to data of the PROFIBUS stations via Industrial Ethernet and Internet for vertical integration
- Access to process data from all enterprise levels
- Loading of STEP 7 programs from a central location
- Easy engineering and extensive diagnostics options due to optimum TIA integration

#### IE/PB LINK HA also offers:

- High availability through redundancy mechanisms in PROFINET IO through use as S2 device
- Interruption-free plant operation in the redundant system, even when configuration changes are required during operation, through support for Configuration in Run (H-CiR)
- Easy migration of large PROFIBUS networks to PROFINET by supporting up to 125 PROFIBUS DP slaves
- Reliable operation even in harsh ambient conditions

#### Application

As an autonomous component, both IE/PB LINK versions provide a seamless transition between Industrial Ethernet and PROFIBUS.

Using the IE/PB LINK as a proxy, you can continue to use existing PROFIBUS nodes (even with PROFI-safe functionality V2.0 or higher) and integrate them into a PROFINET application.

IE/PB LINK HA additionally offers connection to a redundant PROFINET IO automation system and the functionality Configuration in Run (H-CiR).

Both IE/PB LINK versions also offers cross-network PG/OP communication by means of S7 routing. Cross-network access to data of S7 stations for visualization with S7 OPC server and S7 routing; via the IE/PB LINK, access is possible from the Industrial Ethernet (for example for HMI applications with OPC client interface) to data of the S7 stations on the PROFIBUS using the S7 OPC server.

In addition, data record routing (PROFIBUS DP) is supported. This means it is possible, for example, to use SIMATIC PDM (on the PC) on Industrial Ethernet to configure and perform diagnostics for a PROFIBUS field device via the IE/PB LINK. IE/PB LINK HA also designed for use in harsh ambient conditions.

#### Design

Both IE/PB LINK versions provide all the advantages of the SIMATIC ET 200SP design:

- Compact design; the front of the rugged plastic enclosure features:
  - Two RJ45 ports for connecting to Industrial Ethernet; the connection is made via the IE FC RJ45 plug 90 with 90° cable outlet or via a standard patch cable
  - A 9-pin sub-D socket for connection to PROFIBUS
  - A 4-pin terminal strip for connecting the external redundant supply voltage of 24 V DC (two infeeds)
  - Diagnostics LEDs
- Optional connection possibility for Industrial Ethernet via BusAdapter (BA) of the SIMATIC ET 200SP system at the front
- Easy installation on standard mounting rails
- Can be operated without a fan
- Fast device replacement in the event of a fault by using the optional C-PLUG removable data storage medium (not included in scope of supply)

## Supplementary components

### Network transitions

#### IE/PB Link

##### Function

###### Compact gateway between PROFINET and PROFIBUS

- Connection to Industrial Ethernet via integrated 2-port real-time switch with 100 Mbps full duplex connection with auto-sensing for automatic switchover
- In case of replacement part: Connection to Industrial Ethernet also with 10 Mbps half duplex
- Connection to PROFIBUS with 9.6 Kbps to 12 Mbps
- Support for MRP (Media Redundancy Protocol) using integrated Real Time Switch
- SIMATIC ET 200SP design: Use of the BusAdapter (BA) of the SIMATIC ET 200SP system for freely selecting the connection system and physical characteristics on the PROFINET side

IE/PB LINK HA also offers

- Use in ambient temperatures from -40°C to +70°C
- Conformal coating
- Support for enhanced interference immunity according to NAMUR recommendation NE21

###### Operation as PROFINET IO proxy

- Connection of PROFIBUS DP slaves to PROFINET IO controller with real-time property, according to PROFINET standard. From the viewpoint of the controller, all DP slaves are treated like devices with PROFINET interface, i.e. the IE/PB LINK PN IO is their proxy

IE/PB LINK HA also offers

- Connection of PROFIBUS DP slaves to a redundant SIMATIC S7 controller (S7-400H) as PROFINET S2 device including support for Configuration in Run (H-CiR)
- Connection of up to 125 PROFIBUS DP slaves on the single controller and up to 64 PROFIBUS DP slaves in operation as S2 device on the redundant controller

###### Additional functionality for vertical integration (standard operation or operation as PROFINET IO proxy)

- S7 routing
  - Permits cross-network PG communication, in other words, all S7 stations on Industrial Ethernet or PROFIBUS can be programmed remotely using the programming device.
  - Access can take place to visualization data of S7 stations on the PROFIBUS from HMI stations on Industrial Ethernet.
- Data record routing (PROFIBUS DP)
  - Using this option, the IE/PB LINK PN IO can be used as a router for data records that are forwarded to field devices (DP slaves). SIMATIC PDM (Process Device Manager) is a tool that creates data records of this type for parameterizing and diagnosing field devices.
  - The configuration of the IE/PB LINK PN IO for standard mode is possible via SINEC PNI (Primary Setup Tool Network Initialization) as well as STEP 7 / TIA Portal

The additional functions for vertical integration can also be used in an existing PROFIBUS application without PROFINET IO for connection to a higher-level Industrial Ethernet.

In this case, the IE/PB Link PN IO is used as an additional DP Master Class 2 on a PROFIBUS segment for coupling to Industrial Ethernet and offers the above functions.

###### Media redundancy (MRP):

- IE/PB LINK supports the media redundancy protocol MRP as an MRP client within a PROFINET network with a ring topology

##### Diagnostics

Extensive diagnostic options are available via STEP 7 or SNMP, including:

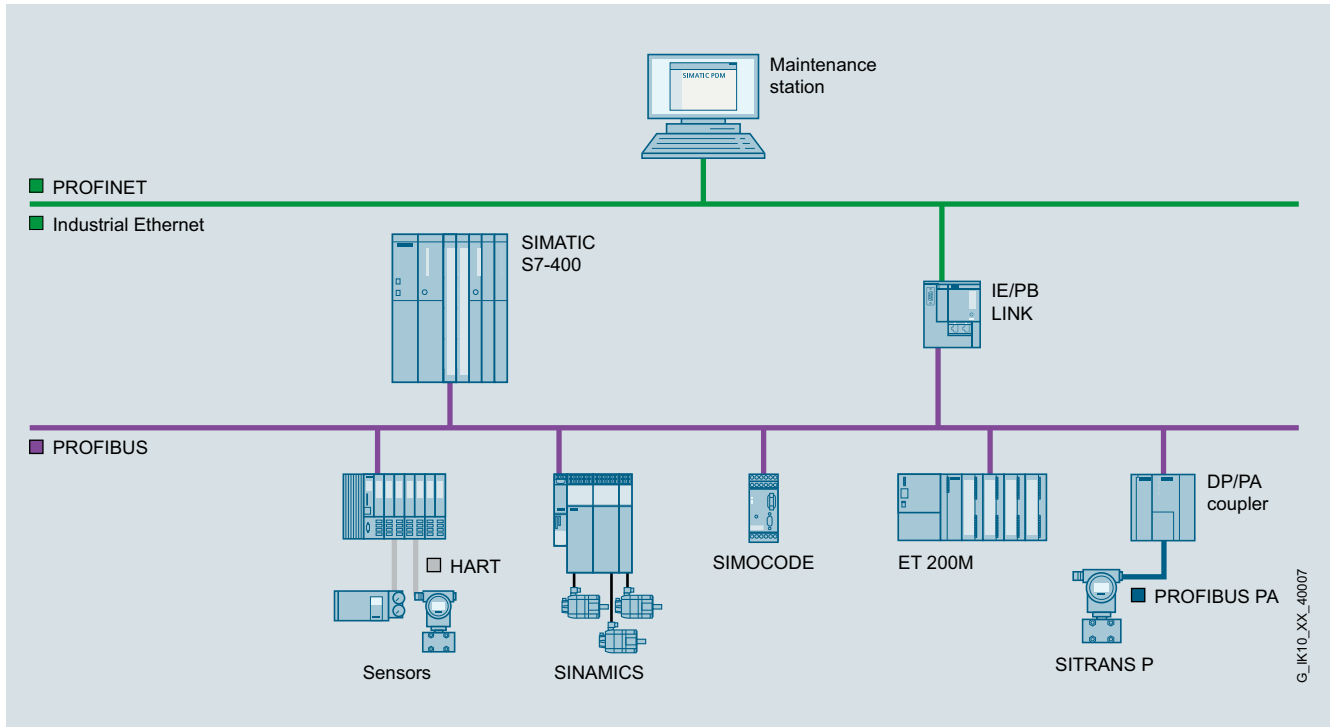

- Diagnostics of the assigned PROFIBUS field devices; using the IE/PB LINK as a proxy, the connected DP slaves can be diagnosed in the same manner as PROFINET IO devices (even in the user program of the PROFINET IO controller)
- General diagnostics and statistics functions
- Connection diagnostics
- Diagnostic buffer
- Integration into network management systems through the support of SNMP V1 MIB-II

##### Configuration

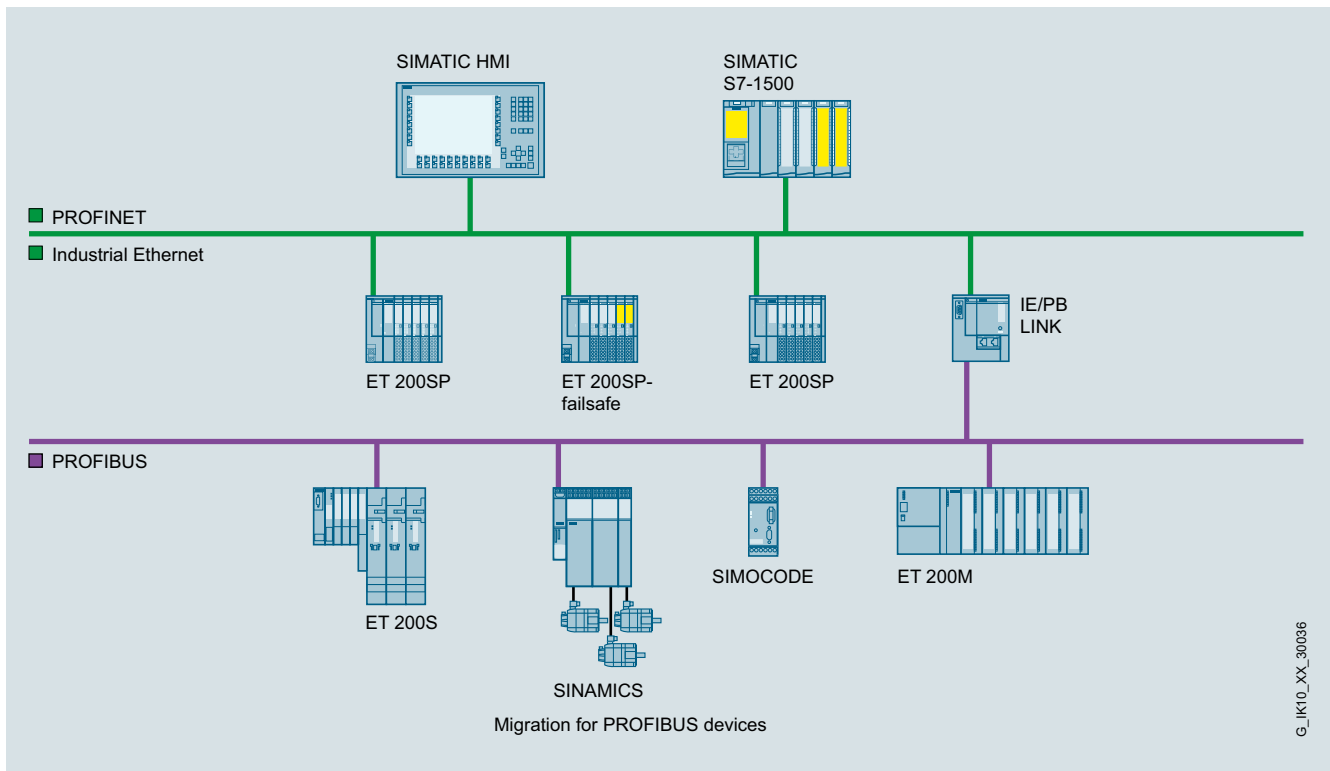

- With STEP 7 V5.x or STEP 7 Professional in the TIA Portal, all the necessary parameters, e.g. the addresses and all necessary routing information, are generated automatically
- The configuration data for PROFINET IO created with STEP 7 is saved on the IO controller. Attention must however be paid to the memory capacity.
- IE/PB LINK can be swapped in the event of failure without a programming device because the relevant configuration data is saved on the PN IO controller or on the C-PLUG.
- If the IE/PB LINK PN IO is only to be used as a gateway and not as a PROFINET IO device, the IE/PB LINK behaves like a simple network component. Accordingly, the IP and PROFIBUS parameters and the network settings can also be assigned with a STEP 7 Professional (TIA Portal) without a license
- The IP and PROFIBUS parameters as well as the network settings can also be assigned using SINEC PNI
- The initialization data for the Industrial Ethernet interface is backed up on the C-PLUG (configuration plug) removable data storage medium
- Use in networks that support an exchange of devices without programming devices on the basis of the Link Layer Discovery Protocol (LLDP)

### Network transitions

#### IE/PB Link

##### Accessories

##### C-PLUG

##### BusAdapters

BusAdapters offer a free selection of connection system and hardware for the PROFINET interface. **Alternatively**, they can be used for the Industrial Ethernet interface on the device.

The following BusAdapter versions are supported by the IE/PB LINK PN IO:

Versions PN copper interfaces (RJ45 or FastConnect (FC))

- **BA 2xRJ45** with 2 RJ45 connections
- **BA 2xFC** with 2 FastConnect connections
- **BA 2xRJ45 HA** with 2 RJ45 sockets
- **BA 2xFC HA** with 2x FastConnect connection
- **BA 2xRJ45 VD HA** with 2 RJ45 connections for variable distance
- **SIPLUS BusAdapter BA 2xRJ45** with 2 RJ45 connections
- **SIPLUS BusAdapter BA 2xFC** with 2 FastConnect connections

Versions with PN fiber-optic connections (FO)

- **BA 2xLC** with two glass fiber-optic connections (Lucent Connector) with increased potential difference
- **BA 2xSCRJ** with 2 SCRJ FO connections with increased potential difference
- **BA 2xLC HA** with LC glass fiber-optic connection
- **SIPLUS BusAdapter BA 2xLC** with LC glass fiber-optic connection
- **SIPLUS BusAdapter BA2SCRJ** with 2 x SCRJ FO connection

Media converter versions:

- **BA SCRJ / RJ45**, with one glass fiber-optic and one RJ45 connection (media converter)
- **BA LC / FC** with one glass fiber-optic and one FastConnect connection (media converter)
- **BA SCRJ / RJ45**, with one SCRJ FO and one RJ45 connection (media converter)
- **BA SCRJ / FC**, with one SCRJ FO and one FastConnect connection (media converter)
- **BA LC/RJ45 HA** with one LC FO connection and one RJ45 connection
- **BA LC/FC HA** with one LC FO connection and one FastConnect connection

The version for connecting IP67 modules of the SIMATIC ET 200AL (BA-SEND, BA 1xFC) is not supported.

## Digitalization and Communication

### Apps for Process Instrumentation

#### SITRANS SAM IQ

##### Overview

SITRANS SAM IQ (Smart Asset Management) is an app that applies diagnostics and monitoring to field device data.

##### Benefits

- One application for all field devices and protocols
- Increase plant uptime by avoiding upcoming device failures
- Reduce of maintenance costs through event driven maintenance
- Increase transparency of measurement reliability
- Assurance of product and process quality

##### Application

With the smart asset management app, SITRANS SAM IQ, you can make unused, but valuable, data available. SITRANS SAM IQ will manage all your field device data, with comprehensive possibilities of diagnostics and monitoring.

By monitoring the health state of each field device and event-based device management, SITRANS SAM IQ reduces upcoming device failures. Moreover, device-specific diagnostics of process values and customized multi-parameter dashboards allow you to validate device measurements and optimize your processes.

##### Design

The cloud based version of SITRANS SAM IQ is updated automatically. The annual license includes the update service.

##### Application versions

###### Standard

The Standard version includes the following functionality:

- Device list
- Device details

Provides an overview of all field instruments with essential device information.

- Access to device-specific KPIs.
- Track device replacements and configuration changes over the entire life-cycle of a measurement point.
- Easy comparison of actual working range with measurement range of the device (e.g. to optimize valve sizes or improve accuracy).

- Events

Detection of unauthorized device or configuration changes.

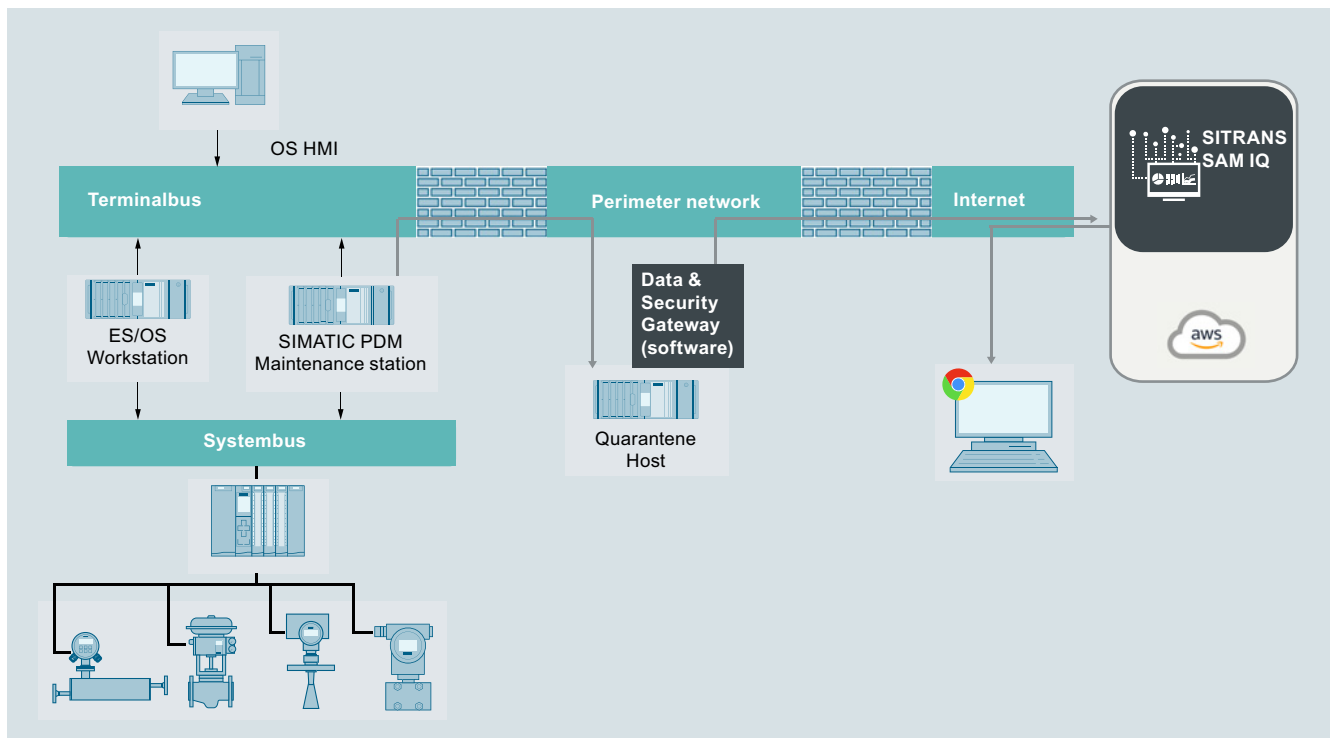

###### Advanced

The Advanced version includes the standard version and the following additional functionality:

- Analysis

Create custom dashboards to compare values between devices and share expert know-how. Perform customized plausibility checks of measurements for one or more devices.

SITRANS SAM IQ is optimized for Google Chrome on desktop, tablet, and smart phone.

SIMATIC PDM/SIMATIC PCS 7	Compatible only with data provided through SIMATIC PDM Maintenance Station (V3.0 or later) or SIMATIC PCS 7 Maintenance Station (V9.0.1 or later).		
Security	Installation of Data and Security Gateway is required in your IT infrastructure. The software will be provided together with the delivery of SITRANS SAM IQ.		

<sup>1)</sup> Smart Asset Management product sheet and specific terms and digital service agreement shall apply.

<sup>2)</sup> Integration of the device requires the parameter description and XML export files from SIMATIC PDM Maintenance station. Conditions from Smart Asset Management technical data sheet shall apply.

## Digitalization and Communication

### Apps for Process Instrumentation

#### SITRANS mobile IQ

##### Overview

SITRANS mobile IQ is an app that gives you easy access to SITRANS field devices via your smartphone or tablet.

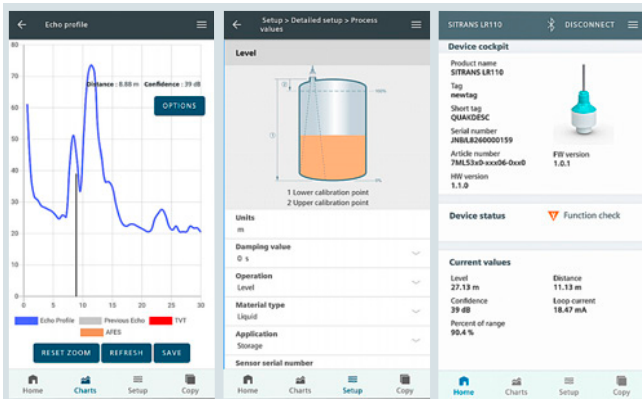

##### Benefits

- Commissioning and parameterization of field devices.
- Displays device status and measurement values.
- Helps with identifying errors and troubleshooting in case of failures.
- Direct link to manuals, certificates, FAQs, and much more.

##### Application

Commissioning and parameterization of field devices:

- **Device list**  
All supported devices in the environment are displayed.
- **Device Cockpit**  
Overview of the connected device, device status, and current measured values.
- **Setup**  
Commissioning and parameterization of the device, including graphical support.
- **Charts**  
History of selected measurement and diagnostic values.

##### Mode of operation

###### Mobile devices / operating systems

SITRANS mobile IQ is compatible with supported Android and iOS mobile devices.

SITRANS mobile IQ uses a Bluetooth interface to communicate with the field devices. Your mobile device must have a Bluetooth interface, version 4.2 or better.

Currently supported field devices are listed on SIOS (<http://www.siemens.com/os/SITRANSmobileIQ>) and in the App Store and Google Play. Additional field devices are in preparation and require a new installation of the App on your mobile device. Only the listed field devices are compatible with SITRANS mobile IQ.

**Data connection:** internet connection is required to access additional information such as manuals of supported field devices.

##### Integration

[https://play.google.com/store/apps/details?id=com.siemens.sitransmobileiq&hl=en\\_US](https://play.google.com/store/apps/details?id=com.siemens.sitransmobileiq&hl=en_US)

### Overview

SITRANS store IQ is a Siemens MindSphere based application used to monitor and manage inventories in process and discrete industries.

### Benefits

- Manage entire inventory network from a central location.
- Reduce overhead required to monitor and plan stock levels.
- Avoid unnecessary downtime and cost associated with unexpected shortages.
- Increase transparency of measurement reliability.

### Application

Inventory management is a necessary task in virtually every value chain. Inventories are required whenever material is processed, produced, or assembled. SITRANS store IQ is an inventory management app based on Siemens MindSphere, that records measurements and data from various types of instrumentation, including a level device at a process tank or scales mounted in storage shelves. SITRANS store IQ also monitors auxiliary measurements, helping to better characterize inventories, for example, with temperature readings or binaries.

SITRANS store IQ records readings and visualizes them in a customizable way, offering structuring with hierarchies, map views, and graph views. The acquired data can be used to create proactive alarms via email or SMS, exactly as required for your application. The SITRANS store IQ app can be used on a desktop computer or mobile device.

### Design

- A reliable and accurate record of inventory data from anywhere.
- A flexible structure for configuring an inventory network of any size.
- Provides a visualization of an inventory mix, with material breakdown.
- KPI thresholds to easily assess inventory levels.
- Custom alarms for proactive notifications.
- Based on MindSphere and MindSphere connectivity solutions.
- Open to virtually every measurement technology.
- Ability to monitor any process values, including humidity, temperature, digital inputs.

### **The following standard SITRANS store IQ packages are available:**

SITRANS store IQ is distributed via the MindSphere Digital Exchange: <https://www.dex.siemens.com>

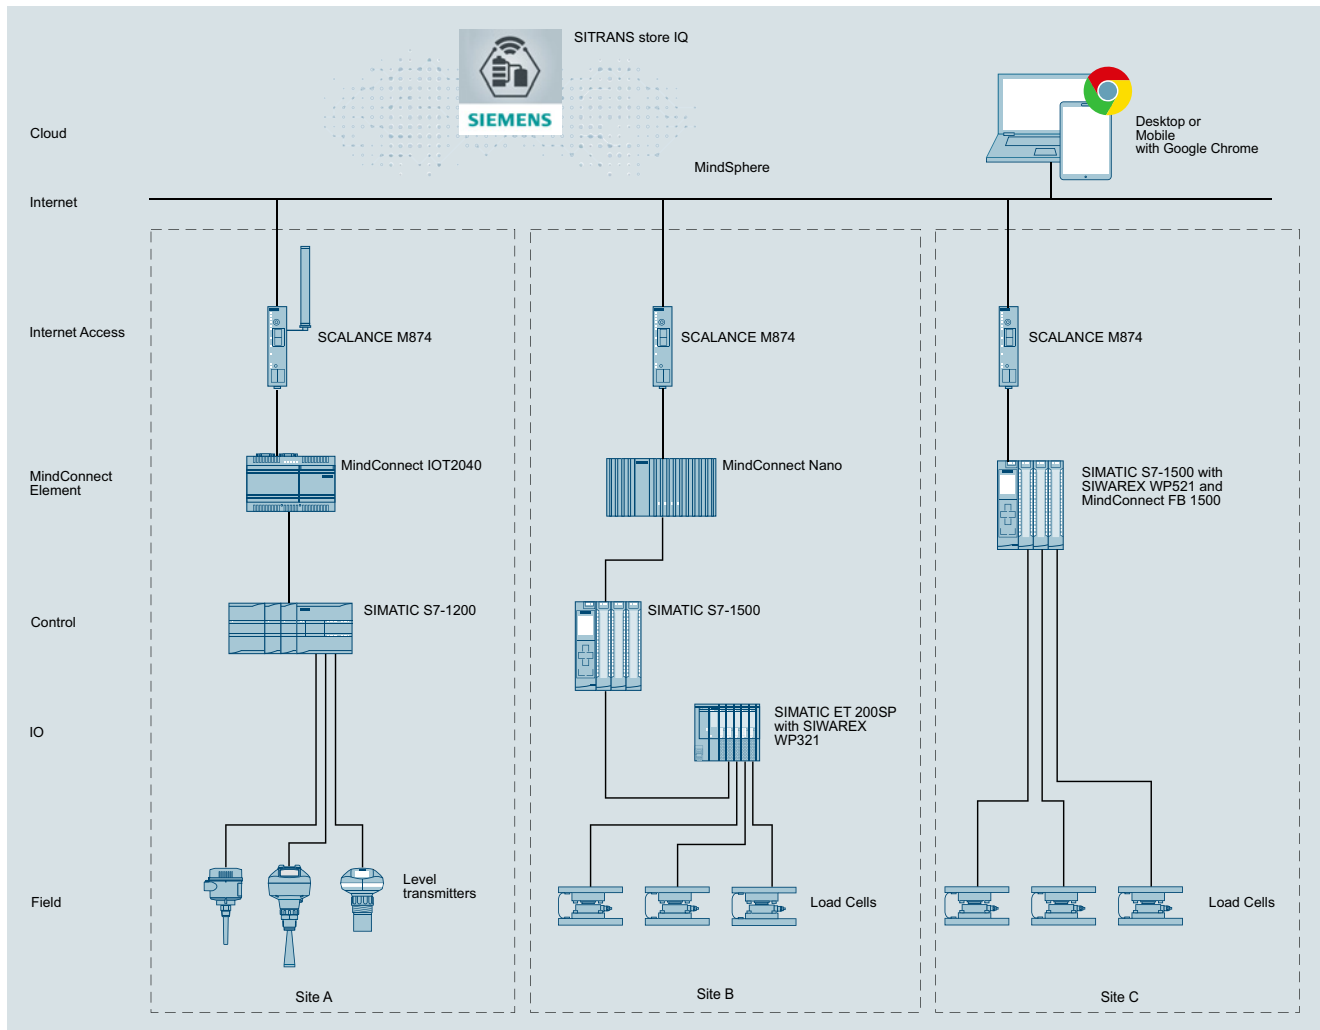

Software packages	Entry	Small	Medium
<b>MindSphere base tenant includes:</b>	✓	✓	✓
MindSphere users	2	2	5
Agents	1	2	10
Data ingest rate	0.01 kB/s	0.05 kB/s	0.1 kB/s
Data storage	0.5 GB	0.5 GB	5 GB
<b>SITRANS store IQ application includes:</b>			
Monitored assets	3	10	100
<b>License type</b>	Subscription with 12-month initial subscription term. The 12 month subscription will renew automatically if not cancelled 60 days before the end of the first subscription term.		
<b>License upgrade options</b>			
<b>Asset upgrade</b>			
Additional monitored assets	10		
Additional data ingest rate	0.1 kB/s		
Additional data storage	0.5 GB		

# Digitalization and Communication

## Apps for Process Instrumentation

### SITRANS store IQ

#### Integration

SITRANS store IQ is based on MindSphere and supports various possibilities to onboard instrumentation devices and acquire data. The figure shows several integration examples.

### Overview

SITRANS DTM provides an easy way for Field Device Tool (FDT)/ Device Type Manager (DTM) users to parameterize Siemens Instruments using international standards.

### Benefits

- Same look and feel for all Siemens field instruments
- Support for Quick start wizards and other dialog boxes
- Quick overview using table and tree views
- Online and offline configuration
- Conformity to IEC profiles for HART and PROFIBUS

### Application

Electronic Device Description (EDD) is a proven way to describe the behavior and functionality of field instruments and other automation components.

For many years, EDD-based tools such as SIMATIC PDM from Siemens or handheld communicator have been used successfully in the process industry. Some years ago, an additional technology called FDT / DTM with the same approach was introduced to the market. To support the FDT DTM Technology for Siemens devices, the software SITRANS DTM has been developed which combines both technologies, EDD and FDT.

SITRANS DTM uses EDDs as the device description and provides the DTM interface to allow the integration of our field instruments into FDT-frame applications.

The following field instruments are currently available in SITRANS DTM:

- SITRANS TH300 HART
- SITRANS TH400 PA
- SITRANS P300 HART
- SITRANS P DSIII HART
- SITRANS P F M MAGFLO MAG6000 DP/PA
- SITRANS F C MASSFLO MASS6000 PA/PA
- SITRANS PROBE LU HART 6 m, 12 m
- SITRANS LR200 HART, PA
- SITRANS LR250 HART, PA
- SITRANS LR260 HART, PA
- SITRANS LR560 HART, PA
- SIPART PS2 HART, PA

Additionally, the SIPART PS2 FF has a DTM.

### Technical specifications

Current Version	3.1
Compatible with PACTware versions	3.6, 4.0, 4.1
Compatible with Windows	XP, 7
Certified by FDT group	Yes

# Digitalization and Communication

## Field Device Instrumentation

### SIMATIC PDM

#### Overview

Configuration options with SIMATIC PDM

SIMATIC PDM (Process Device Manager) is a universal, vendor-independent tool for the configuration, parameter assignment, commissioning, diagnostics and servicing of intelligent field devices (sensors and actuators) and field components (remote I/Os, multiplexers, control-room devices, compact controllers), which in the following sections will be referred to simply as devices.

With *one* software product, SIMATIC PDM enables users to work with over 4 000 devices and device variants from Siemens and over 200 other manufacturers worldwide on a *single* homogeneous user interface.

The user interface satisfies the requirements of the VDI/VDE GMA 2187 and IEC 65/349/CD directives. Parameters and functions for all supported devices are displayed in a consistent and uniform fashion independent of their communications interface. Even complex devices with several hundred parameters can be represented clearly and processed quickly. Using SIMATIC PDM it is very easy to navigate in highly complex stations such as remote I/Os and even connected field devices.

From the viewpoint of device integration, SIMATIC PDM is the most powerful open process device manager on the global market. Devices not previously supported can be integrated in SIMATIC PDM by importing their device description packages (either EDD or FDI). This provides security for your investment and saves you investment costs, training expenses and follow-up costs.

SIMATIC PDM supports the operative system management in particular through:

- Uniform representation and operation of devices
- Uniform representation of diagnostics information
- Indicators for preventive maintenance and servicing
- Detection of changes in the project and device
- Increasing the operational reliability
- Reducing the investment, operating and maintenance costs
- Quantity options for
  - Transfer of parameters between devices
  - Transfer of parameter sets to the devices
  - Export and import functions
  - Diagnostics update

**Overview** (continued)

SIMATIC PDM can be used extremely flexibly and tailored to a specific task for field device service:

- Single-point station for point-to-point connection to field devices
- Local service and parameter assignment station with connection to fieldbus segments
- Central service and parameter assignment station with connection to plant bus
- Central HART service and parameter assignment station for HART multiplexers and WirelessHART field devices
- Integrated into the stand-alone SIMATIC PDM Maintenance Station
- Integrated into the SIMATIC PCS 7 process control system

Maintenance personnel can assign field device parameters at mobile and stationary workstations with SIMATIC PDM. Practically every workstation integrated in the production plant can be used for configuration. Service personnel are thus able to work directly at the location of the field device, while data is stored centrally in the engineering station or maintenance station. This leads to a significant shortening of maintenance and travel times. Additional device-independent system functions support higher-level maintenance stations for creating progress lists for work and servicing.

When a maintenance station is configured in the SIMATIC PCS 7 process control system, SIMATIC PDM is integrated into it and transmits parameter data, diagnostic information and processing information. You can switch directly to the SIMATIC PDM views from the diagnostics faceplates in the maintenance station to perform diagnostics and work on the device in more detail.

A SIMATIC PDM user administration system based on SIMATIC Logon is used to assign various roles with defined function privileges to users. These function privileges refer to SIMATIC PDM system functions, e.g. writing to the device.

For all devices integrated with device description packages, SIMATIC PDM provides a range of information for display and further processing on the maintenance station, for example:

- Device type information (electronic rating plate)
- Detailed diagnostics information (manufacturer information, information on error diagnostics and troubleshooting, further documentation)
- Results of internal condition monitoring functions
- Status information (for example local configuration changes), device test completed
- Information on changes (audit trail report)
- Parameter information

#### SIMATIC PDM product structure

- Product component is part of the product package
- o Optional product component for the product package; order additive
- Product component is not relevant for the product package or not available

1) For TAG definition, see "Design" section under "SIMATIC PDM TAGs"

2) In combination with SIMATIC PDM Integration in STEP 7/PCS 7

3) In combination with SIMATIC PDM Server

#### Customer-oriented product structure

The customer-oriented product structure of SIMATIC PDM provides optimal support for the named main use cases and enables you to adapt the scope of functions and performance to your individual requirements. The product range is organized as follows:

##### SIMATIC PDM Stand alone product packages

- SIMATIC PDM Single Point, a minimum configuration for single device handling
- SIMATIC PDM Basic for local service and parameter assignment stations as well as basic configuration for individual product package with optional product components
- SIMATIC PDM Service for local service and parameter assignment stations
- SIMATIC PDM Stand alone Server for central service and parameter assignment stations, e.g. for various plant units

##### SIMATIC PDM system-integrated product packages

- SIMATIC PDM S7 for local SIMATIC S7 engineering and service stations
- Various configurations for central SIMATIC PCS 7 engineering and service stations:
  - SIMATIC PDM PCS 7
  - SIMATIC PDM PCS 7 Server (enables device parameter assignment and diagnostics on clients of the PCS 7 engineering station and PCS 7 Maintenance Station)
  - SIMATIC PDM PCS 7-FF (supports the FOUNDATION Fieldbus H1)

In some circumstances, the product packages can be expanded with optional product components (for details, see the Design section).

SIMATIC PDM overview of functions and features

- Product component is part of the product package
- o Optional product component for the product package; order additive
- Product component is not relevant for the product package or not available

## Digitalization and Communication

### Field Device Instrumentation

#### SIMATIC PDM

##### Design (continued)

##### **SIMATIC PDM Stand alone product packages**

###### SIMATIC PDM Single Point V9.1

This minimum configuration with handheld functionality is intended for handling exactly *one* field device via point-to-point coupling. It cannot be expanded with functions or with SIMATIC PDM TAG or SIMATIC PDM 1 Client licenses. Upgrading to a different product variant, e.g. SIMATIC PDM Basic, or a different product version is also not possible.

Supported communication types:

- PROFIBUS DP/PA
- HART communication (modem, RS 232 and via PROFIBUS/PROFINET)
- Modbus
- Ethernet
- PROFINET

The functionality is matched accordingly. The device functions are supported as defined in the device description, for example:

- Managing the device library and unlimited device selection
- Parameter assignment and diagnostics according to the device description
- Exporting and importing of parameter data
- Device identification
- Lifelist
- Printing the parameter list

###### SIMATIC PDM Basic V9.1

SIMATIC PDM Basic is for local service and parameter assignment stations on any computers (IPC/notebook) with local connection to bus segments or direct connection to the device.

Supported communication types:

- PROFIBUS DP/PA
- HART communication (modem, RS 232 and via PROFIBUS/PROFINET)
- Modbus
- Ethernet
- PROFINET

SIMATIC PDM Basic is equipped with all basic functions required for operation and parameter assignment of devices. That is, compared to SIMATIC PDM Single Point, it has the following additional functions:

- EDD-based diagnostics in the lifelist
- Memory function (only exporting and importing of parameter data)
- Report function
- Communication with HART field devices via remote I/Os

As a basic block for an individual configuration, SIMATIC PDM Basic can be expanded with all functional SIMATIC PDM options (PDM Routing only in combination with PDM Integration in STEP 7/PCS 7 required) as well as with cumulative sets of 10, 100 or 1 000 SIMATIC PDM TAGs. Without TAG expansion, SIMATIC PDM Basic is suitable for projects with up to 4 TAGs. SIMATIC PDM 1 Client licenses (sets of 1) can also be added in combination with the SIMATIC PDM Server option.

The SIMATIC PDM Extended option allows the activation of additional SIMATIC PDM system functions (for details, see SIMATIC PDM Extended V9.1 under "Optional product components").

###### SIMATIC PDM Service V9.1

With this product package for extended service, local service and parameter assignment stations can be realized on any type of computer (IPC/notebook) with a local connection to a bus segment or direct connection to field devices.

It comprises:

- SIMATIC PDM Basic (incl. 4 SIMATIC PDM TAGs)
- 50 SIMATIC PDM TAGs

Like SIMATIC PDM Basic, SIMATIC PDM Service can be expanded with all functional SIMATIC PDM options (PDM Routing only in combination with PDM Integration in STEP 7/PCS 7 required) as well as with cumulative SIMATIC PDM TAGs (sets of 10, 100 or 1 000) (see "Optional product components"). SIMATIC PDM 1 Client licenses (sets of 1) can also be added in combination with the SIMATIC PDM Server option. It is permitted to upgrade to another product version.

**Note:** For use of gateways and for PROFINET or Ethernet communication with field devices, SIMATIC PDM TAG licenses are charged for according to the objects configured in the process device plant view as follows:

- 10 SIMATIC PDM TAGs per S7 DSGW (data record gateway) with one PROFIBUS subnet
- 20 SIMATIC PDM TAGs per S7 DSGW with more than one PROFIBUS subnet
- 10 TAGs per IE/PB Link
- 1 TAG per field device (except in the case of special specifications)

###### SIMATIC PDM stand-alone server V9.1

With the SIMATIC PDM Stand alone Server product package, you can establish central service and parameter assignment stations that operate according to the client/server principle. Portals opened on licensed SIMATIC PDM clients (SIMATIC PDM sessions) enable handling of production plant field devices via the SIMATIC PDM server on the plant bus assigned via registration. The product package can be used multiple times within a plant, e.g. for various plant units. It comprises:

- SIMATIC PDM Basic (incl. 4 SIMATIC PDM TAGs)
- SIMATIC PDM Extended
- SIMATIC PDM Server
- 2 × SIMATIC PDM 1 Client
- 100 SIMATIC PDM TAGs

SIMATIC PDM Stand alone Server can be expanded with all functional SIMATIC PDM options (PDM Routing only in combination with PDM Integration in STEP 7/PCS 7 required) as well as with cumulative sets of 10, 100 or 1 000 SIMATIC PDM TAGs and SIMATIC PDM 1-client licenses (see "Optional product components"). The portals opened on these clients (SIMATIC PDM sessions) must also be licensed with the SIMATIC PDM 1-client licenses (besides the SIMATIC PDM clients). For details about this, refer to "SIMATIC PDM 1 Client" under "Optional product components". For user management of the SIMATIC PDM clients, the SIMATIC Logon product is also required. It is possible to upgrade to another product version.

**Note:** For use of gateways and for PROFINET or Ethernet communication with field devices, SIMATIC PDM TAG licenses are charged according to the objects configured in the process device plant view (for details, see corresponding note under SIMATIC PDM Service V9.1).

### Design (continued)

#### **SIMATIC PDM system-integrated product packages**

##### SIMATIC PDM S7 V9.1

The SIMATIC PDM S7 product package designed for use in a SIMATIC S7 configuration environment is intended for setup of a local SIMATIC S7 engineering and service station. It requires the installation of STEP 7 V5.5+SP4. It includes:

- SIMATIC PDM Basic (incl. 4 SIMATIC PDM TAGs)
- SIMATIC PDM Extended
- SIMATIC PDM integration in STEP 7/PCS 7
- 100 SIMATIC PDM TAGs

SIMATIC PDM S7 can be expanded with the functional options SIMATIC PDM Routing, SIMATIC PDM Communication FOUNDATION Fieldbus, SIMATIC PDM Server, and SIMATIC PDM HART Server as well as with cumulative SIMATIC PDM TAGs (sets of 10, 100 or 1 000) (see "Optional product components"). SIMATIC PDM 1 Client licenses (sets of 1) can also be added in combination with the SIMATIC PDM Server option.

##### SIMATIC PDM PCS 7 V9.1

The SIMATIC PDM PCS 7 product package suitable for use in a SIMATIC PCS 7 configuration environment is intended for use in a central SIMATIC PCS 7 engineering and service station. It comprises:

- SIMATIC PDM Basic (incl. 4 SIMATIC PDM TAGs)
- SIMATIC PDM Extended
- SIMATIC PDM integration in STEP 7/PCS 7
- SIMATIC PDM Routing
- 100 SIMATIC PDM TAGs

SIMATIC PDM PCS 7 can be expanded with the functional options SIMATIC PDM Communication FOUNDATION Fieldbus and SIMATIC PDM Server as well as with cumulative SIMATIC PDM TAGs (sets of 10, 100 or 1000) (see "Optional product components"). SIMATIC PDM 1 Client licenses (sets of 1) can also be added in combination with the SIMATIC PDM Server option.

##### SIMATIC PDM PCS 7 Server V9.1

Instead of SIMATIC PDM PCS 7, the SIMATIC PDM PCS 7 Server product package expanded with the SIMATIC PDM Server option can also be used for a central SIMATIC PCS 7 engineering and service station. Field devices integrated using an Electronic Device Description (EDD) can then be assigned parameters on any client of the SIMATIC PCS 7 Maintenance Station as well as on local SIMATIC PDM clients. The following are components of SIMATIC PDM PCS 7 Server:

- SIMATIC PDM Basic (incl. 4 SIMATIC PDM TAGs)
- SIMATIC PDM Extended
- SIMATIC PDM integration in STEP 7/PCS 7
- SIMATIC PDM Routing
- SIMATIC PDM Server
- 100 SIMATIC PDM TAGs

SIMATIC PDM PCS 7 Server can be expanded with the functional option SIMATIC PDM Communication FOUNDATION Fieldbus as well as with cumulative sets of 10, 100 or 1 000 SIMATIC PDM TAGs and SIMATIC PDM 1-Client licenses (see "Optional product components"). The portals opened on these clients (SIMATIC PDM sessions) must also be licensed with the SIMATIC PDM 1-client licenses (besides the SIMATIC PDM clients). For details about this, refer to "SIMATIC PDM 1 Client" under "Optional product components".

##### SIMATIC PDM PCS 7-FF V9.1

Instead of SIMATIC PDM PCS 7, the SIMATIC PDM PCS 7-FF product package expanded with the SIMATIC PDM Communication FOUNDATION Fieldbus option can also be used for a central SIMATIC PCS 7 engineering and service station. This additionally supports parameter assignment of field devices on FOUNDATION Fieldbus H1. Components of SIMATIC PDM PCS 7-FF are:

- SIMATIC PDM Basic (incl. 4 SIMATIC PDM TAGs)
- SIMATIC PDM Extended
- SIMATIC PDM integration in STEP 7/PCS 7
- SIMATIC PDM Routing
- SIMATIC PDM Communication FOUNDATION Fieldbus
- 100 SIMATIC PDM TAGs

SIMATIC PDM PCS 7-FF V9.1 can be expanded with the functional option SIMATIC PDM Server as well as with cumulative sets of 10, 100 or 1 000 SIMATIC PDM TAGs (see "Optional product components"). SIMATIC PDM 1 Client licenses (sets of 1) can also be added in combination with the SIMATIC PDM Server option.

#### **Optional product components**

##### SIMATIC PDM Extended V9.1 option

The SIMATIC PDM Extended option enables you to unlock other system functions for SIMATIC PDM Basic and SIMATIC PDM, for example:

- Change log
- Calibration report
- Extended information in the Lifelist
- Export and import functions
- Print functions
- Document manager
- Comparison function
- Group operations
- Setting device IDs

This functionality is already integrated in the following product packages: SIMATIC PDM Stand alone Server, SIMATIC PDM S7, SIMATIC PDM PCS 7, SIMATIC PDM PCS 7 Server and SIMATIC PDM PCS 7-FF.

##### SIMATIC PDM Integration option in STEP 7/PCS 7 V9.1

This option is used for the integration of SIMATIC PDM in a SIMATIC S7 or SIMATIC PCS 7 configuration environment. SIMATIC PDM can then be started directly from the hardware configurator (HW Config) in STEP 7/SIMATIC PCS 7.

This functionality is already integrated in the product packages of category "SIMATIC PDM system-integrated" (SIMATIC PDM S7, SIMATIC PDM PCS 7, SIMATIC PDM PCS 7 Server, and SIMATIC PDM PCS 7-FF).

## Digitalization and Communication

### Field Device Instrumentation

#### SIMATIC PDM

##### Design (continued)

###### SIMATIC PDM Routing V9.1 option

If SIMATIC PDM is used on an engineering station, the SIMATIC PDM Routing option enables handling of every device in the field that can be configured per EDD throughout the plant and across different bus systems and remote I/Os. SIMATIC PDM Routing can be used in combination with SIMATIC PDM Integration in STEP 7/SIMATIC PCS 7.

Routing is already integrated in SIMATIC PDM PCS 7, SIMATIC PDM PCS 7 Server, and SIMATIC PDM PCS 7-FF. SIMATIC PDM Routing can be additionally installed as an option on a local SIMATIC S7 engineering and service station with SIMATIC PDM S7.

###### SIMATIC PDM Server V9.1 option

The server functionality can be activated in a local or central service station with this option. It enables parameter assignment of selected field devices on any client of the SIMATIC PCS 7 Maintenance Station as well as on local SIMATIC PDM clients. This functionality is already integrated in the SIMATIC PDM Stand alone Server and SIMATIC PDM PCS 7 Server. The SIMATIC PDM clients as well as the portals opened on these clients (SIMATIC PDM sessions) must be licensed with SIMATIC PDM 1 client licenses. For details about this, refer to "SIMATIC PDM 1 Client" under "Optional product components".

###### SIMATIC PDM Communication FOUNDATION Fieldbus V9.1 option

In a SIMATIC S7/PCS 7 configuration environment, using this option SIMATIC PDM can communicate with field devices on the FOUNDATION Fieldbus H1 via the FF link.

This functionality is already integrated in the SIMATIC PDM PCS 7-FF product package.

###### SIMATIC PDM HART Server V9.1 option

This option permits the use of HART multiplexers from various vendors in SIMATIC PDM. Furthermore, WirelessHART field devices can also be parameterized with SIMATIC PDM.

##### **SIMATIC PDM TAGs (version-independent)**

Depending on the project size, the SIMATIC PDM TAGs supplied with a product package (except SIMATIC PDM Single Point) can be cumulatively expanded with sets of 10, 100 or 1 000 SIMATIC PDM TAGs.

A SIMATIC PDM TAG corresponds to a SIMATIC PDM object that represents the individual field devices or field components within a project, e.g. measuring instruments, positioners, switching devices or remote I/Os. SIMATIC PDM TAGs are also relevant for diagnostics with the lifelist of SIMATIC PDM. In this case, TAGs are considered to be all recognized devices with diagnostics capability, whose detailed diagnostics is effected through the device description (EDD).

##### **SIMATIC PDM 1 Client (version-independent)**

SIMATIC PDM 1 Client is a cumulative single-client license for SIMATIC PDM configurations with SIMATIC PDM server, for example SIMATIC PDM stand-alone server or SIMATIC PDM PCS 7 server. The license is used to activate registered SIMATIC PDM clients and SIMATIC PDM sessions (opened portals) on these clients.

Each "SIMATIC PDM 1 Client" license activates one SIMATIC PDM client with one SIMATIC PDM session. A SIMATIC PDM session is defined as one opened portal together with the parameter views of the field devices opened from the portal. Each additional simultaneously opened SIMATIC PDM session on this client requires its own "SIMATIC PDM 1 Client" license. For larger projects, up to 30 registered SIMATIC PDM Clients are possible.

The "SIMATIC PDM 1 Client" license must be transferred to the computer with the SIMATIC PDM Server. The SIMATIC PDM Standalone Server product package comes with 2 "SIMATIC PDM 1 Client" licenses.

##### **SIMATIC PDM Software Media Package V9.1**

The current SIMATIC PDM installation software is offered without a license in the form of the SIMATIC PDM Software Media Package. Purchasing of corresponding software licenses is necessary to unlock the product-specific functionalities.

With SIMATIC PDM product packages, a SIMATIC PDM Software Media Package is supplied together with each ordering item when supplied via goods delivery (not with optional product components). Further SIMATIC PDM Software Media Packages must be ordered separately as required.

The software of the SIMATIC PDM Media Package without a license can be used for demonstration purposes in demo mode. The SIMATIC PDM functionality is limited as follows in demo mode:

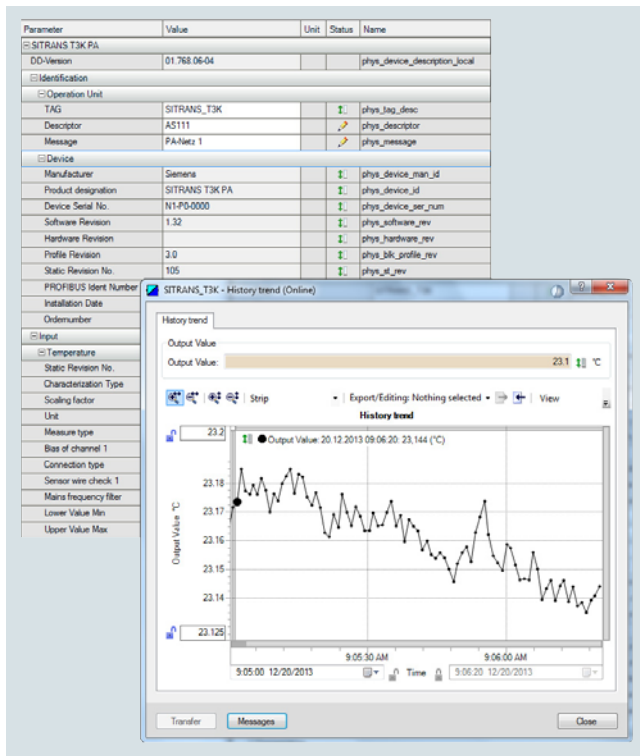

- Stand alone mode
- Storage functions disabled
- Export and import functions disabled
- Expanded functionality disabled
- Communication functions restricted

##### **Information on ordering and delivery**

Installation software for the SIMATIC PDM is provided in the form of a software media package. Software media packages and product-specific software licenses are separate packages, which are not merged into a single delivery unit for a goods delivery.

The number of delivered software media packages can be determined by the number of ordered items. You can find more information under "Delivery form package" in the "Software Media and Logistics" chapter, "PCS 7 Software Packages" section of the ST PCS 7 catalog.

### Function

SIMATIC PDM, parameter view and trend window

### SIMATIC PDM core functions

- Creation of project-specific device libraries
- Adjustment and modification of device parameters
- Comparing (e.g. project and device data)
- Plausibility testing of data input
- Device identification and testing
- Device status indication (operating modes, interrupts, states)
- Simulation
- Diagnostics (standard, detailed)
- Export/import (parameter data, logs, documents)
- Management (e.g. networks and PCs)
- Commissioning functions, e.g. measuring circuit tests of device data
- Lifecycle management functions, e.g. for device replacement
- Global and device-specific modification logbook for user operations (audit trail)
- Device-specific calibration reports
- Graphic presentations of echo envelope curves, trend displays, valve diagnosis results etc.
- Presentation of incorporated manuals
- Document manager for integration of up to 10 multimedia files

### Integration

#### Device integration

SIMATIC PDM supports all devices defined by the Electronic Device Description (EDD) and devices described by Field Device Integration Technology (FDI Technology V1.2). EDD is standardized to EN 50391 and IEC 61804. Internationally it is the most widely used standardized technology for device integration. At the same time, it is the guideline of the established organizations for

- PROFIBUS and PROFINET (PI – PROFIBUS & PROFINET International)
- HART (FCG: Field Communication Group)
- Foundation Fieldbus (FCG: Field Communication Group)

The devices are integrated directly in SIMATIC PDM through a company-specific EDD or through the libraries of the FCG. To achieve improved transparency, they can be managed in project-specific device libraries.

Field devices are described in the EDD or FDI device description packages in terms of functionality and construction using the Electronic Device Description Language (EDDL). Using this description, SIMATIC PDM automatically creates its user interfaces with the specific device data. By simply importing the manufacturer's device-specific device description packages, you can update existing devices and integrate further devices in SIMATIC PDM.

#### Technical support

If you wish to use devices which cannot be found in the SIMATIC PDM device description library, we would be pleased to help you integrate them.

#### Support Request

You can request support by service specialists at Technical Support by using a "Support Request" on the Internet:

<http://www.siemens.com/automation/support-request>

#### Contacts in the Region

The Technical Support responsible for your Region can be found on the Internet at:

<http://www.automation.siemens.com/partner>

#### Article No.

#### Article No.

##### SIMATIC PDM Stand alone product packages

##### Minimum configuration

**SIMATIC PDM Single Point V9.1** including 1 TAG; product package for operation and configuration of one field device; communication via PROFIBUS DP/PA, HART (modem, RS 232, PROFIBUS/PROFINET), Modbus, Ethernet or PROFINET

Additional functions or SIMATIC PDM TAGs are not possible

6 languages (English, German, French, Italian, Spanish, Chinese), software class A, runs on Windows 7 Ultimate 64-bit, Windows 10 Enterprise 2015 LTSC 64-bit, Windows Server 2012 R2 Standard 64-bit or Microsoft Windows Server 2016 Standard 64-bit (see SIMATIC PDM V9.1 Readme for latest information), floating license for 1 user

Without SIMATIC PCS 7 Software Media Package

- Goods delivery  
License key on USB flash drive and Certificate of License, bundle with 1 × SIMATIC PDM Software Media Package per order item
- Online delivery  
License key download and online Certificate of License combined with SIMATIC PDM Software Media Package (SIMATIC PDM and device library software download)  
Note: Email address required!

## Field Device Instrumentation

### SIMATIC PDM

#### Selection and ordering data

##### Optional product components for SIMATIC PDM

##### SIMATIC PDM Extended V9.1

For enabling additional system functions

6 languages (English, German, French, Italian, Spanish, Chinese), software class A, runs on Windows 7 Ultimate 64-bit, Windows 10 Enterprise 2015 LTSB 64-bit, Windows Server 2012 R2 Standard 64-bit or Microsoft Windows Server 2016 Standard 64-bit (see SIMATIC PDM V9.1 Readme for latest information), floating license for 1 user

Without SIMATIC PCS 7/SIMATIC PDM Software Media Package

- Goods delivery  
License key on USB flash drive and Certificate of License
- Online delivery (without SIMATIC PCS 7/SIMATIC PDM Software Media Package)  
License key download and online Certificate of License  
Note: Email address required!

6ES7658-3NX68-2YB5

6ES7658-3NX68-2YH5

##### SIMATIC PDM Integration in STEP 7/SIMATIC PCS 7 V9.1

For integration in a SIMATIC S7/SIMATIC PCS 7 configuration environment

6 languages (English, German, French, Italian, Spanish, Chinese), software class A, runs on Windows 7 Ultimate 64-bit, Windows 10 Enterprise 2015 LTSB 64-bit, Windows Server 2012 R2 Standard 64-bit or Microsoft Windows Server 2016 Standard 64-bit (see SIMATIC PDM V9.1 Readme for latest information), floating license for 1 user

Without SIMATIC PCS 7/SIMATIC PDM Software Media Package

- Goods delivery  
License key on USB flash drive and Certificate of License
- Online delivery  
License key download and online Certificate of License  
Note: Email address required!

6ES7658-3BX68-2YB5

6ES7658-3BX68-2YH5

##### SIMATIC PDM Routing V9.1

For plant-wide navigation to field devices

6 languages (English, German, French, Italian, Spanish, Chinese), software class A, runs on Windows 7 Ultimate 64-bit, Windows 10 Enterprise 2015 LTSB 64-bit, Windows Server 2012 R2 Standard 64-bit or Microsoft Windows Server 2016 Standard 64-bit (see SIMATIC PDM V9.1 Readme for latest information), floating license for 1 user

Without SIMATIC PCS 7/SIMATIC PDM Software Media Package

- Goods delivery  
License key on USB flash drive and Certificate of License
- Online delivery  
License key download, online Certificate of License  
Note: Email address required!

6ES7658-3CX68-2YB5

6ES7658-3CX68-2YH5

##### SIMATIC PDM Server V9.1

For activating the server functionality

6 languages (English, German, French, Italian, Spanish, Chinese), software class A, runs with Windows 7 Ultimate 64-bit, Windows 10 Enterprise 2015 LTSB 64-bit, Windows Server 2012 R2 Standard 64-bit or Microsoft Windows Server 2016 Standard 64-bit (see SIMATIC PDM V9.1 Readme for latest information), single license for 1 installation

Without SIMATIC PCS 7/SIMATIC PDM Software Media Package

- Goods delivery  
License key on USB flash drive, Certificate of License
- Online delivery  
License key download and online Certificate of License  
Note: Email address required!

6ES7658-3TX68-2YB5

6ES7658-3TX68-2YH5

##### SIMATIC PDM Communication FOUNDATION Fieldbus V9.1

For communication with field devices on FOUNDATION Fieldbus H1

6 languages (English, German, French, Italian, Spanish, Chinese), software class A, runs on Windows 7 Ultimate 64-bit, Windows 10 Enterprise 2015 LTSB 64-bit, Windows Server 2012 R2 Standard 64-bit or Microsoft Windows Server 2016 Standard 64-bit (see SIMATIC PDM V9.1 Readme for latest information), floating license for 1 user

Without SIMATIC PCS 7/SIMATIC PDM Software Media Package

- Goods delivery  
License key on USB flash drive and Certificate of License
- Online delivery  
License key download and online Certificate of License  
Note: Email address required!

6ES7658-3QX68-2YB5

6ES7658-3QX68-2YH5

##### SIMATIC PDM HART Server V9.1

For using HART multiplexers as well as for configuration of WirelessHART field devices

6 languages (English, German, French, Italian, Spanish, Chinese), software class A, runs on Windows 7 Ultimate 64-bit, Windows 10 Enterprise 2015 LTSB 64-bit, Windows Server 2012 R2 Standard 64-bit or Microsoft Windows Server 2016 Standard 64-bit (see SIMATIC PDM V9.1 Readme for latest information), floating license for 1 user

Without SIMATIC PCS 7/SIMATIC PDM Software Media Package

- Goods delivery  
License key on USB flash drive and Certificate of License
- Online delivery  
License key download and online Certificate of License  
Note: Email address required!

### More information

#### Update/Upgrade

Existing installations based on SIMATIC PDM V6.x or V8.x/V9.0 (including SP in each case) can be upgraded straight to V9.1 with upgrade packages.

Projects with SIMATIC PDM V7.0 can only be upgraded to version 9.1 by first upgrading to version 8.0. Two upgrade packages are offered for SIMATIC PDM V8.x/V9.0:

- SIMATIC PDM Upgrade Package Basic<sup>1)</sup> (with/without SIMATIC PDM HART Server option in each case) for configurations based on:
  - SIMATIC PDM Basic
  - SIMATIC PDM Service
  - SIMATIC PDM S7
  - SIMATIC PDM PCS 7
- SIMATIC PDM Upgrade Package Complete<sup>1)</sup> for configurations based on:
  - SIMATIC PDM PCS 7 Server
  - SIMATIC PDM PCS 7-FF

<sup>1)</sup> Optional product components for SIMATIC PDM such as PDM Extended, PDM Integration in STEP 7/PCS 7, PDM Routing, PDM Server and PDM Communication FOUNDATION Fieldbus are each included in a product package listed in the SIMATIC PDM Upgrade Package Basic or SIMATIC PDM Upgrade Package Complete and are implicitly authorized to be updated via the corresponding license. The SIMATIC PDM Upgrade Package Complete is required for use of the product components PDM Server or PDM Communication FOUNDATION Fieldbus.

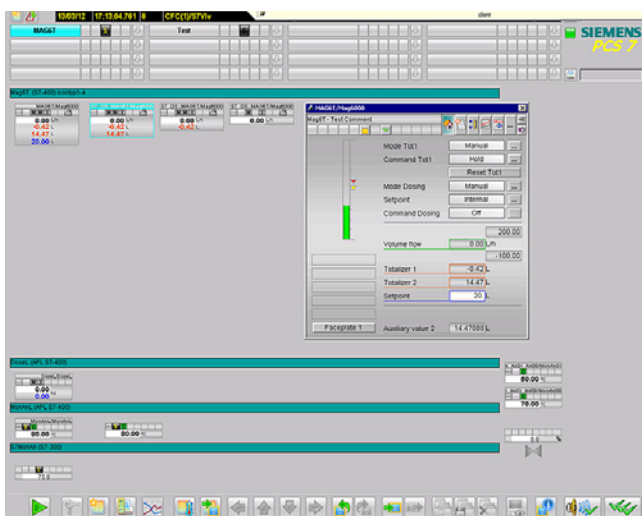

For more information, see the section "Update/upgrade packages", "Updates/upgrades asynchronous to the PCS 7 version" - "Upgrades SIMATIC PDM".

## Digitalization and Communication

### Field Device Instrumentation

#### SITRANS Library

##### Overview

The SITRANS Library for SIMATIC PCS 7 V8.0 and higher extends the standard functionality of the SIMATIC PCS 7 process control system concentrated in the SIMATIC PCS 7 Advanced Process Library (APL) with technological blocks and faceplates for device-specific functions of the SITRANS field devices.

##### Benefits

The SITRANS Library allows you to easily operate all device functions, such as the dosing of the SITRANS F M MAG6000, in a single faceplate. It also supports operator control and monitoring via Touch Panels as well as the integration of SIMATIC S 7 applications (only SITRANS F M MAG6000). The SITRANS Library is based on the modern design of the Advanced Process Library (APL). Together with the APL, the SITRANS Library enables you to create harmonic overall solutions with a consistent look & feel and optimum use of the functions of the SITRANS field devices in many industries.

It helps accelerate the engineering process, reduces the time-to-market, and simplifies process control. In addition, operator functions (such as "dosing") and process-related diagnostic information (such as empty pipe detection and flow direction) are provided.

##### Note:

SITRANS Library can only be used in combination with SIMATIC PCS 7 V8.0 or higher.

##### Application

The SITRANS Library is best used in combination with SIMATIC PCS 7 and SITRANS field devices.

A current list of SITRANS field devices and the supported SIMATIC PCS 7 versions is available at <https://support.industry.siemens.com/cs/ww/de/view/85285872>

The SITRANS Library can be used for all core sectors of the process industry. These are:

- Chemical industry
- Pharmaceutical industry
- Water and wastewater
- Glass and solar
- Oil & gas
- Food and beverage industry
- Minerals and mining

##### Design

The product structure is geared toward the operational environment in the SIMATIC PCS 7 process control system. Consequently, SITRANS Library is offered in the form of an engineering component:

- SITRANS Library engineering software with engineering license
- SITRANS Library Runtime license for one automation project (SIMATIC PCS 7 automation systems of all designs and S7-300 controllers)

The SITRANS Library product component enables you to perform configuration work on a SIMATIC PCS 7 engineering station.

The SITRANS Library product component allows you to run blocks from a library on an automation system.

When using function blocks from SITRANS Library in SIMATIC PCS 7 automation systems, please note that SIMATIC PCS 7 AS Runtime POs are also booked.

##### Function

##### **SITRANS Library for SIMATIC PCS 7/SIMATIC S7**

Sublibrary for the functional expansion of the SIMATIC PCS 7 Advanced Process Library with:

- Function blocks and faceplates for SITRANS field devices
- Function blocks and faceplates for SITRANS field devices for S7-400 and SIMATIC S7-300 with WinCC

The function blocks are configured in CFC.

Operator control and monitoring from a panel is configured with the panel interface blocks for the SITRANS F M MAG 6000 DP. Taking operating rights and hierarchical operating concepts (multi-control room operation) into consideration, the technological function can then be operated from both an operator station and a Touch Panel.

For detailed information on which field devices, which systems and system versions are supported as well as on the free download, see:

<https://support.industry.siemens.com/cs/ww/de/view/85285872>

##### Selection and ordering data Article No.

##### **SITRANS Library**

Block library for SIMATIC PCS 7 as of V8.0 and SIMATIC S7 with function blocks and faceplates as well as electronic documentation

Engineering software, software class A, two languages (English, German), can be run under the following operating systems:

- Windows XP Professional 32 bit
- Windows 7 Ultimate 32/64 bit
- Windows Server 2003 R2 Standard 32-bit
- Windows Server 2008 R2 Standard 64-bit

Engineering license for one customer plant  
Type of delivery: free download

## Overview

SITRANS CC240 is the industrial gateway connecting HART devices (via SITRANS MX300 multiplexer) to the IT environment.

## Benefits

- Reads out data from HART devices, including versions 5, 6, and 7.
- Reads data from existing installations or stand alone.
- Uses an onboard web application for configuration and asset monitoring purposes.
- Publishes data using OPC UA information model based on Namur Open Architecture.
- Publishes data to Siemens MindSphere using MindConnect Library.
- Publishes data via a .csv file export function.

## Application

**When used in combination with SITRANS MX300, SITRANS CC240 can:**

- Establish a second data channel to existing installations to read out identification, diagnostic and configuration parameters.
- Provide data from process field devices to the IT environment using standard technologies such as OPC UA.
- Connect process field devices to Siemens Mindsphere, for example, to provide SITRANS store IQ with inventory management data.

### SITRANS CC240

#### Technical specifications

SITRANS CC240	
<b>Installation type/mounting (characteristics)</b>	
Design	IoT Gateway, built-in unit
<b>Processor</b>	
Processor type	Intel Quark X1020, 400 MHz
<b>Drives</b>	
Hard disk	1x microSD card slot; populated with 32 GB SDHC hosting OS and application
<b>Memory</b>	
Type of memory	DDR3-SDRAM
Main memory	1 GB RAM
Capacity of main memory max.	1 GB RAM
<b>Ambient conditions</b>	
Ambient temperature during operation	0 ... 50 °C (32 ... 122 °F)
Relative humidity	Tested according to IEC 60068-2-78, IEC 60068-2-30
• Operation	5 ... 85 % at 30 °C (86 °F), (no condensation)
• Storage/transport	5 ... 95 % at 25 ... 55 °C (77 ... 131 °F), (no condensation)
Degree of protection	
• IP degree of protection	IP20
• IP degree of protection (at the front)	IP20
<b>Design</b>	
Dimensions (W x H x D)	144 x 90 x 53 mm (5.7 x 3.5 x 2.1 inch)
Material	
• Enclosure	<ul style="list-style-type: none"> <li>Plastic enclosure</li> <li>Resistant to vibrations and shocks</li> <li>High electromagnetic compatibility, suitable for industrial environments.</li> </ul>
<b>Interfaces</b>	
Ethernet interface	2 x LAN 10/100 Mbps Ethernet interface (RJ 45)
Serial interface	<ul style="list-style-type: none"> <li>1 x COM port RS 485, for connection to SITRANS MX300 multiplexor</li> <li>Sub-D9 connected to X30 interface</li> </ul>
<b>Integrated Functions</b>	
Monitoring functions	
• Temperature monitoring	No
• Watchdog	Yes
• Status LEDs	Yes
• Fan	No

<b>EMC<sup>1)</sup></b>	
Interference immunity against discharge of static electricity	<ul style="list-style-type: none"> <li>± 4 kV contact discharge acc. to IEC 61000-4-2;</li> <li>± 8 kV air discharge acc. to IEC 61000-4-2</li> </ul>

#### Selection and ordering data Article No.

<b>SITRANS CC240</b>	<b>7MP2200-1CC15-2AA0</b>
The Industrial gateway that connects up to 8 SITRANS MX300 with up to 64 HART field devices.	

## Overview

SITRANS MX300 is a HART multiplexer for use with the industrial gateway SITRANS CC240. Used in combination, these devices can read and acquire data from HART networks of up to 64 instruments.

## Benefits

- Connect up to 8 HART devices of revisions 5, 6, or 7, in any combination.
- Combine up to 8 SITRANS MX300 devices with one SITRANS CC240, using the backplane connection to conveniently read up to 64 HART devices
- Operate each channel selectively in slave mode (where there is an existing HART master) or in stand-alone mode (where there is no existing HART master), configurable using switches, 250  $\Omega$  for connection in series to the field devices or no load for the connection in parallel.
- Galvanically isolated channels allow the device to interface with different networks.
- Supports HART multidrop.
- Small footprint supports retrofitting of existing installations.

## Application

### ***When used in combination with SITRANS CC240, SITRANS MX300 can:***

- Establish a second data channel for existing HART installations to read out identification, diagnostic and configuration parameters.
- Establish a physical connection to the HART device, ensuring proper handling of the HART communication protocol and avoid communication conflicts with additional HART masters that may be present on the 4 to 20 mA loop.

### SITRANS MX300

#### Technical specifications

SITRANS MX300	
<b>Installation type/mounting (characteristics)</b>	
Mounting type	Rail mounting
<b>Input current</b>	
Current consumption (rated value)	10 mA (24 V)
Current consumption, max.	20 mA
<b>Analog inputs</b>	
Number of analog inputs	8
Permissible input current (destruction limit)	30 mA
Reverse polarity protection	Yes, for power supply, not applicable for HART inputs
<b>Input ranges (rated values)</b>	
0 ... 20 mA	Yes
• Input resistance (0 ... 20 mA)	250 Ω, switchable
4 ... 20 mA	Yes
• Input resistance (4 ... 20 mA)	250 Ω, switchable
<b>Ambient conditions</b>	
Ambient temperature during operation	-40 ... +50 °C (-40 ... +122 °F)
Horizontal installation	-40 ... +60 °C (-40 ... +140 °F)
Vertical installation	-40 ... +50 °C (-40 ... +122 °F)
Relative humidity	Tested according to IEC 60068-2-78, IEC 60068-2-30
• Operation	5 ... 80 % at 30 °C (86 °F) (no condensation)
• Storage/transport	5 ... 80 % at 25 ... 55 °C (77 ... 131 °F) (no condensation)
<b>Design</b>	
Dimensions (W x H x D)	144 x 90 x 53 mm (5.7 x 3.5 x 2.1 inch)
Weight	100 g (0.2 lb), without connectors
Material	
• Enclosure	<ul style="list-style-type: none"> <li>Plastic enclosure</li> <li>Resistant to vibrations and shocks</li> <li>High electromagnetic compatibility, suitable for industrial environments</li> </ul>
Degree and class of protection	
• IP degree of protection	IP20
• IP degree of protection (at the front)	IP20
<b>Cable length</b>	
Shielded, max.	200 m
<b>Electrical isolation</b>	
Between the channels	Yes
Between the channels and backplane bus/RS 485	Yes
Between the channels and load voltage L+	Yes
Isolation tested	1 500 V DC/1 min., type test

<b>SITRANS MX300</b>	<b>7MP2200-1AD10-2AA0</b>
HART multiplexer, 8 channels to connect up to 8 HART devices, 24 V DC supply voltage, rail mounting.	

### Overview

HART is a widely used communication standard for field devices. HART devices are specified by the FieldComm Group.

The HART standard expands the analog 4 to 20 mA signal to modulated, industry-tested, digital signal transmission.

### Benefits

- Tried-and-tested analog measured value transmission
- Simultaneous digital communication with bidirectional data transfer
- Possibility to transfer multiple measured variables from a field device (e.g. diagnostics, maintenance and process information)
- Connection to higher-level systems such as PROFIBUS DP.
- Easy installation and commissioning

Benefits in connection with SIMATIC PDM

- Manufacturer-neutral operation of all HART devices through standardized parameter sets
- HART field devices described by HART DLL are integrated in SIMATIC PDM via the Fieldcomm catalog. HART-DD (Device Description) in SIMATIC PDM standardized, manufacturer-neutral and very widely used. Additional field devices are integrated in SIMATIC PDM via EDD (Electronic Device Description)
- Simple operation and commissioning of field devices, even in usage locations that are difficult to access
- Advanced diagnostics, evaluating and logging functions

### Application

Devices can be connected in different ways:

- Through the distributed I/O
  - SIMATIC ET 200M, ET 200SP
  - SIMATIC ET 200iSP with the HART modules or with analog modules 4 to 20 mA and HART Handheld Communicator,
- via a HART modem with which a point-to-point connection between the PC or Engineering System and the HART device can be established
- via HART multiplexers which are contained in the HART server of the HCF.

### Integration

Siemens field devices listed in this catalog for process automation that can be controlled with HART:

## Digitalization and Communication

### Communication

#### PROFIBUS

##### Overview

Today, distributed automation solutions based on open fieldbuses are standard in many areas of the manufacturing industry and in process engineering. It is only with fieldbuses that the functional benefits of digital communication can be put to full use, e.g. better resolution of measured values, diagnostics options and remote parameterization.

Today, PROFIBUS is the most successful open fieldbus with a large installed base for a wide range of applications. Standardization according to IEC 61158 / EN 50170 provides you with future protection for your investment.

##### Benefits

- Fully modular system, from the sensor through to the control level, permits new plant concepts
- Problem-free exchangeability of field devices, including from different manufacturers, that comply with the standard profile
- Networking of transmitters, valves, actuators, etc.
- Implementation of intrinsically safe applications through use of the field bus in hazardous areas
- Easy installation of 2-wire cables for joint power supply and data transfer
- Reduced cabling costs through savings of material and installation time
- Reduced configuration costs through central, simple engineering of the field devices (PROFIBUS PA and HART with SIMATIC PDM, also with multi-vendor support)
- Fast and error-free installation
- Lower service costs thanks to simpler wiring and plant structure plus extensive diagnostics options
- Greatly reduced commissioning costs through simplified loop check
- Scaling/digitizing of the measured value in the field device already, hence no rescaling necessary in SIMATIC PCS 7

##### Application

PROFIBUS is suitable for fast communication with distributed I/O (PROFIBUS DP) in production automation as well as for communication tasks in process automation (PROFIBUS PA). It is the first fieldbus system that meets the demands of both areas with identical communication services.

The transfer technology of PROFIBUS PA is tailored to the requirements of the process industry. The standardized communications services guarantee interoperability between multi-vendor field devices and remote configuration of the field devices during operation.

With SIMATIC PDM (Process Device Manager), a universal tool that is not manufacturer-specific and is used for configuring, parameterizing, commissioning and diagnosing intelligent process devices on PROFIBUS, a variety of process devices of different manufacturers can be configured using a uniform graphic user interface.

PROFIBUS PA can be used both in standard environments and in hazardous areas. For use in hazardous areas, PROFIBUS PA and all connected devices have to be designed with type of protection Ex [i].

The uniform protocol of PROFIBUS DP and PROFIBUS PA enables the linking of both networks and thus the combination of timing performance and intrinsically safe transmission technology.

##### Function

PROFIBUS PA expands PROFIBUS DP with process-level components for direct connection of actuators and sensors. With PROFIBUS PA, the RS 485 transmission method is replaced by a different transmission method optimized for intrinsically safe applications. Both methods are standardized internationally in IEC 61158.

PROFIBUS PA uses the same communication protocol as DP; communication services and frames are identical.

With PROFIBUS PA, the information and energy supply for supplying the field devices can be conducted via a 2-wire cable.

##### Integration

### Overview

Today, distributed automation solutions based on open field buses are state-of-the-art in large areas of the process engineering industry. It is only with fieldbuses that the functional benefits of digital communication can be put to full use, e.g. better resolution of measured values, diagnostics options and remote parameterization.

Like PROFIBUS PA, the FF bus (FOUNDATION Fieldbus) is an open field bus with a large installed base for a wide range of application. Standardization according to IEC 61158 / EN 50170 provides you with future protection for your investment.

### Benefits

- A uniform modular system from the sensor to the connection to the control level enables new plant concepts
- Problem-free exchangeability of field devices, including from different manufacturers, that comply with the standard profile
- Networking of transmitters, valves, actuators, etc.
- Implementation of intrinsically safe applications through use of the field bus in hazardous areas
- Easy installation of 2-wire cables for joint energy supply and data transfer
- Reduced cabling costs through savings of material and installation time
- Reduced configuration costs through central, simple engineering of the field devices, also cross-vendor
- Fast and error-free installation
- Lower service costs thanks to simpler wiring and plant structure plus extensive diagnostics options
- Greatly reduced commissioning costs through simplified loop check
- Scaling/digitizing of the measured values in the field device already, hence no rescaling necessary in SIMATIC PCS 7

### Application

The transfer technology of the FOUNDATION Fieldbus is tailored to the needs of the process industry. Interoperability between field devices from different manufacturers and remote parameterization of the field devices during operation are guaranteed by the standardized communication services.

FOUNDATION Fieldbus can just as readily be used in standard environments as in hazardous areas. For use in hazardous areas, FOUNDATION Fieldbus and all connected devices have to be designed with type of explosion protection Ex [i].

### Function

FOUNDATION Fieldbus enables the direct connection of actuators and sensors.

FOUNDATION Fieldbus is based on a transfer optimized for intrinsically safe application. The transfer technology is internationally standardized in IEC 61158.

For FOUNDATION Fieldbus the data and energy supply for the field devices can be directed through a 2-wire cable.

FOUNDATION Fieldbus enables device-to-device communication ("control in the field").

### Integration

## Services for Process Instrumentation

Siemens Digital Enterprise Services

### Overview

#### ***Siemens Digital Enterprise Services***

As an industry partner, we offer you an unrivaled range of services and support based on our extensive technology and industry know-how. With our offer, you gain a high level of reliability and shape the digital future of your company. Our services cover the complete life cycle of your machines and plants and help you to increase their profitability and efficiency and to take advantage of the opportunities for digitalization while simultaneously reducing your total cost of ownership.

Learn more about Siemens Digital Enterprise Services online at:  
<https://new.siemens.com/global/en/products/services/industry.html>

### Overview

The following section gives an overview of the specific Lifecycle Services for process instrumentation – a component of Siemens Digital Enterprise Services.

Lifecycle Services contract for process instrumentation

When it comes to making operating costs predictable and optimizing them continuously, protecting investments and thus ensuring plant availability, the key criterion for success is the serviceability of your instrumentation. That is the reason for our reactive, proactive and preventive Lifecycle Services for process instrumentation, which ensure the serviceability of instruments in modern plants at optimized costs throughout their life cycle. These individual services can be easily integrated on a product-specific basis into service programs or even into customized service contracts that are tailored to your specific requirements.

The standardized, yet flexible structure of our services for process instrumentation provides a future-proof basis for:

- Protection of your investment
- Assurance of plant availability
- Long-term predictability of maintenance costs
- Cost-optimized modernizations

## Services for Process Instrumentation

### Lifecycle Services

#### Calibration Services

##### Overview

Our comprehensive Calibration Services offer a large spectrum of calibration and verification services that assure maximum reliability and precision for your process measuring equipment.

##### **Calibration services performed at the factory (off-site)**

Make sure that your measuring instruments conform to industry standards and maintain operational readiness during the lifecycle. Our accredited laboratory is in accordance with ISO 17025 and is fully equipped with state-of-the-art precision instruments which offer a wide range of calibrations for dimensioning, electronic and process devices.

##### **Calibration services provided on site (on-site)**

Timely maintenance and calibration of measuring instruments is critical during the operating phase of the plant life cycle. We can also supply our calibration services directly to your facility in order to ensure that your processes do not suffer from extended downtimes.

	Pressure	Temperature	Flow rate	Weighing technology
Off-site calibration according to ISO 9001	✓	✓	✓	
Off-site calibration according to ISO 17025	✓	✓	✓	
Internal state calibration (cold water, flow for heat/cold quantity)	✓	✓		✓
On-site calibration according to ISO 9001			✓	

##### More information

More information is available on the Internet at:  
<http://www.siemens.com/piscv>

##### **Re-calibration ordered in three simple steps**

An order is initiated online on the WebLogX SIRENT web page. Use of the WebLogX "SIRENT Instrument and Tools Management" home page requires a personal login. Register on the following website:

<https://www.weblogx.siemens.com/tools/DesktopDefault.aspx>

On this web page, you will find the required calibration questionnaire as well as additional information.

##### 1. Fill out the calibration questionnaire

- For flow meters: Send the completed calibration questionnaire to the following e-mail address:  
[sirent-calibration.flow.industry@siemens.com](mailto:sirent-calibration.flow.industry@siemens.com)
- For pressure, temperature, vacuum, relative humidity, dew point temperature, conductivity, vibration, sound, speed, send the completed form to the following e-mail address:  
[sirent-calibration.industry@siemens.com](mailto:sirent-calibration.industry@siemens.com)

##### 2. SIRENT- quotation

Shortly after you have submitted the calibration questionnaire, you will receive a quotation with all the necessary details.

##### 3. Shipping

Send us your flow meter with the decontamination declaration to the following address:

Siemens AG  
 SIRENT calibration service  
 c/o HDS GmbH  
 Gundelfinger Str. 20  
 90451 Nuremberg  
 Germany

##### Benefits

##### **Reasons for calibration of field instruments**

- Periodic calibration for quality assurance according to ISO 9000
- Compliance with standards, guidelines or legal requirements
- Verification of custody transfer measurements (cold water, flow for heat/cooling quantity)
- Early detection of errors in measuring equipment
- Determination of the operational safety of the measuring equipment

### Overview

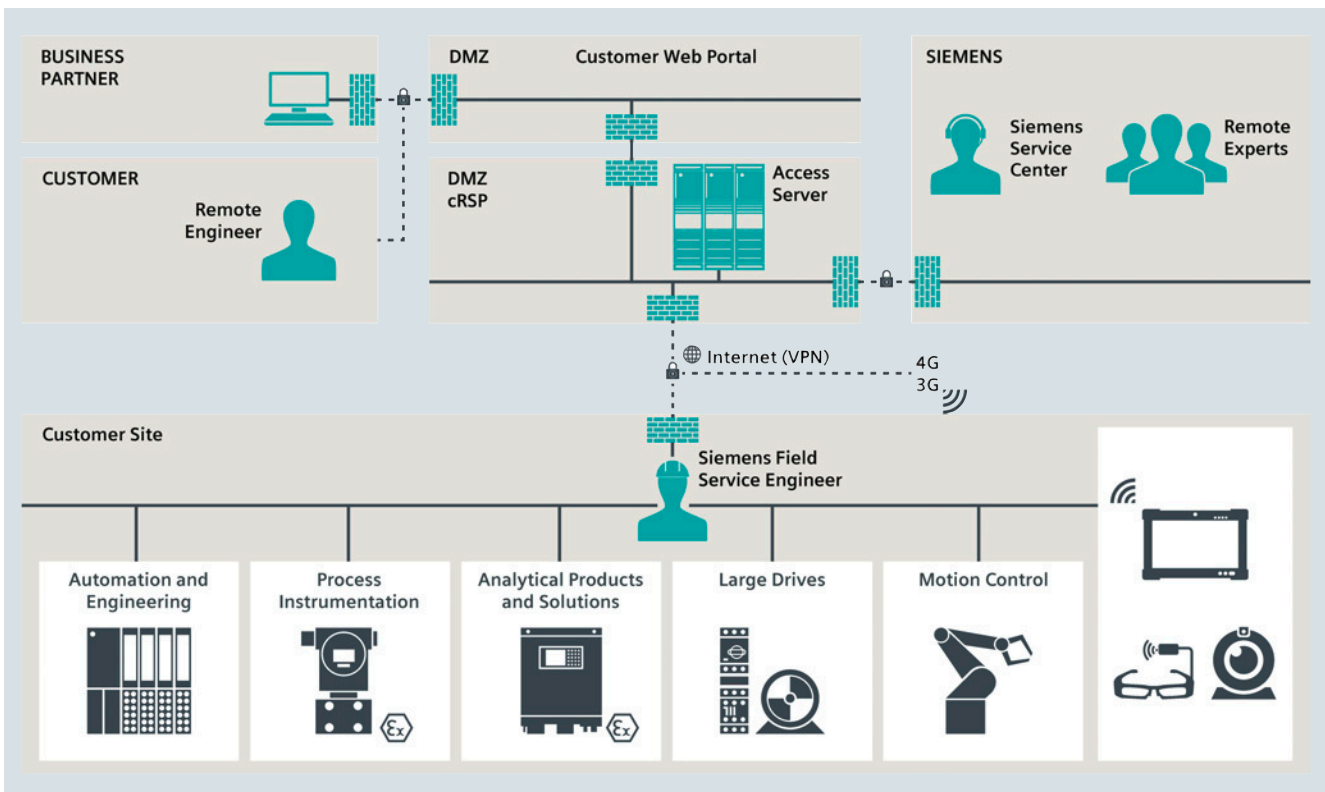

The engineering, commissioning and maintenance of automation systems involves significant amounts of both time and personnel resources, regardless of whether in a hazardous area or not. It is precisely these service tasks which can be optimally supported and even carried out remotely using powerful, modern communication media. It is imperative here that the growing IT security requirements are met and that remote activities can be accounted for.

With our offering of platform-based remote services, our customers around the world can access centrally available expert knowledge of product manufacturers 24/7.

The "Remote Access Services" (so-called "connectivity packages") are required once per installation and enable communication between the customer system and Siemens IT infrastructure (cRSP = common Remote Service Platform); they consist of different hardware and software components.

Remote Services for process instrumentation

In the context of remote services, a distinction is made between "Remote Desktop Sharing" and "Remote Assisted Collaboration".

**Remote Desktop Sharing** allows the Siemens expert to access the configuration software and via this, to access the connected systems and field devices.

**Remote Assisted Collaboration** supports the service technician on site with a Siemens expert from a distance using the **SIPIX SD Service Tablet**. Video images can be transmitted and communication via audio and live chat is possible via an independent VPN channel. In addition, the use of **data goggles** allows hands-free work on field devices.

### Benefits

- Secure remote connection of your automation system to the SIMATIC TechSupport IT Infrastructure
- Global, direct connection to the network of the Siemens system experts
- Provision of remote IT infrastructure including support and maintenance
- Complete transparency due to central administration of all system accesses
- Compatible with generally valid Industrial Security concepts
- TÜV/CERT certification of Siemens cRSP infrastructure

# Services for Process Instrumentation

## Lifecycle Services

### Lifecycle Management Suite

#### Overview

The Lifecycle Management Suite optimizes plant maintenance with regard to the planning, execution and documentation of all service activities. The pre-configured, COMOS MRO-based system provides standard operating procedures (SOP) which are assigned to the SIMATIC PCS 7 system components already entered.

#### "Mobilization" module

In the "Mobilization" module, an initial setup is carried out for detailed information on the products and systems used, as well as their lifecycle status and the existing maintenance processes and plant documentation. The execution of this module is a prerequisite and therefore an integral component for all further configuration modules.

#### "Suite Hosting" module

This module contains the COMOS MRO Hosting – cloud-based or on-premises – with support and Software Update Service.

- Option: Integration of the SIPIX Service Tablet

#### "Asset Integration" module

In addition to the "Suite Hosting" module, this module includes the integration of the installed base (iBase), the maintained product master data, and the availability of obsolescence information.

- Option: Analyzer integration (Autom. Check points).
- Reports: Lifecycle Information Services | Trends

#### "Maintenance Services Management" module

In addition to the "Asset Integration" module, this module contains the integration of standard operation procedures for Lifecycle Services, for instance, service checkpoints that have to be performed regularly. Together with the imported project data and parts lists from SIMATIC PCS 7 installations, service work schedules can be automatically generated on this basis.

- Reports: Service SOP Reports | Trends

#### Benefits

- Pre-configured CMMS system with assets and service checkpoints entered
- Consistent data maintenance through integration in a data platform creates transparency and traceability
- Mobile data access on site with maintenance information and documentation in real time

## Services for Process Instrumentation

### Lifecycle Services

#### Inventory Baseline Services

##### Overview

It is essential to make the right decisions when planning modernizations or when budgeting for necessary maintenance measures. The basis for such decisions is an in-depth knowledge of the installed system base. This requires:

- Uniform and complete inclusion of all installed automation components
- Information collection using the least possible time and money.
- Documentation of results in standardized reports

With its Inventory Baseline Services, Siemens offers modern data-driven services that use new methods and tools to help you plan maintenance of machines and plants even more efficiently.

Making an inventory gives you an overview of the currently installed plant equipment and the spare parts in stock. The inventory results serve as a decision-making aid when planning future measures for maintenance and modernization.

Inventory Baseline Services offer transparency with regard to the installed automation components of machines and plants and provide the data for additional Lifecycle Services such as SIMATIC System Audit, Lifecycle Information Services and Asset Optimization Services.

##### Benefits

- Cost-efficient and standardized inventory of all of the installed automation components
- Valid decision-making aid for planned plant expansions, modernizations as well as for preparation for updates/upgrades
- Solid basis for planning and implementation of other Lifecycle Services

##### Selection and ordering data

Article No.

##### Inventory Baseline Service for process instrumentation

Complete service by headquarters only in Germany for devices for process instrumentation

- Automatic collection of data
- Onsite
- Manual recording of unconfigured devices for process instrumentation
- Adding manually recorded devices to the Inventory Tool
- Data evaluation
- Report creation
- Adding the data to the Siemens database (GSP)
- Consultation with the customer
- Travel expenses are not included in the price
- Provision of the data according to specifications in the manual
- Evaluation of the collected data
- Report creation
- Saving data in the Siemens database (GSP)
- Return of the report to the customer with discussion of the report
- Travel expenses are not included in the price

**9LA1110-8AJ00-1AB0**

**9LA1110-8AJ00-2AB0**

##### More information

More information is available online at:  
<http://www.siemens.com/ibs>

#### Overview

For planning your maintenance strategy, Lifecycle Information Services periodically provide you with detailed information on the product life cycle of the utilized components. The Lifecycle Information Services have a modular structure so that you need only request information that you actually require. Each of the following three methods returns a plant-specific report as result. You can decide for yourself how comprehensive you want this report to be.

#### **Basic Information**

Product Lifecycle Status focusing on analysis of functional obsolescence.

#### **Extended Analysis**

"Basic Information" module and analysis of product-related statistical mean time between failures (MTBF).

#### **Comprehensive Operation**

"Extended" module supplemented with plant-specific information on updates/upgrades and general recommendations.

#### Benefits

- Proactive, periodic service information for reduction of obsolescence risks
- Assurance of plant availability through specific service recommendations
- Prevention of unscheduled downtimes or cost-intensive supply bottlenecks
- Evaluation of new technological innovations

# Services for Process Instrumentation

## Lifecycle Services

### Lifecycle Information Services

#### Selection and ordering data

	Article No.		Article No.
<b>Lifecycle Information Services Basic</b> Based on data provided by the customer an analysis of the equipment is conducted. More information is available online at:  
<http://www.siemens.com/lis>

#### Overview

Managed System Services offer competent and efficient support through a dedicated support manager. This central contact person ensures an efficient exchange of information between all parties involved. The "Dedicated Support Manager" brings together, coordinates and prioritizes all activities, is familiar with the customer's plant, knows the maintenance processes and the installed base and, if necessary, uses remote access for diagnostics and troubleshooting purposes.

#### Benefits

- Quicker processing and resolution of complex support requests
- Simplification of requests by means of central coordination and an exclusive "incoming" channel
- Higher "first-time-fix-rate"
- Avoidance of expensive on-site service calls
- Greater transparency through active support management and regular status reports

#### Selection and ordering data

	Article No.
<b>Managed System Services Extention</b>	<b>9LA1110-1BL00</b>
Expansion of an existing Managed System Services contract by additional hours for the technical processing of service requests and coordination by the support manager.	
<ul style="list-style-type: none"> <li>• Limited to 25 hours of support.</li> <li>• Subscription cycle, number of reports and access to online information system remain unchanged according to the Managed System Services package.</li> </ul>

## Services for Process Instrumentation

### Lifecycle Services

#### Preventive System Analysis

##### Overview

Preventive System Analysis identifies potential system risks and displays the plant situation transparently. Special software tools record extensive diagnostics data and system information which are in turn analyzed using algorithms. Professional evaluation of the results by our experts round off your SIMATIC PCS 7 system assessment. Regular evaluation of the system state, data-based inspections and automated weak-point analysis ensure optimal maintenance and avoid unplanned plant downtimes.

##### Benefits

- Fast data acquisition
- Intensive data analysis
- Transparent reporting

##### More information

More information is available online at:  
<http://www.siemens.com/psa>

#### Overview

High plant availability with optimal spare parts supply - Asset Optimization Services provide a structured and systematic procedure for the holistic optimization of the supply of spare parts. The 4 phases of Asset Optimization Services are coordinated with one other but can also be used independently.

#### Phase I: Analysis

Determination of the current spare parts situation on site: availability, product life cycle, spare part delivery times

#### Phase II: Concept

The concept phase consists of an analysis of the actual requirements and the development of a spare parts concept.

#### Phase III: Implementation

Based on the results of the concept phase, the required warehouse structures, storage locations and spare parts are set up.

#### Phase IV: Operation

The optimized and continuous supply of spare parts is an essential contribution to high plant availability. Depending on the specific contractual agreements, cyclic inventory analysis and a regular exchange of information also take place.

#### Benefits

- Creates transparency about the actual spare parts requirements
- Ensures spare parts availability over the entire life cycle of the machine or plant and therefore fulfills an important prerequisite for improved serviceability
- Shift to external inventory keeping and continuous supply with necessary spare parts

#### Selection and ordering data

	Article No.
<b>Asset Optimization Services Analysis (max. 100 article numbers)</b> Based on the customer data provided, an analysis and a comparison between the plant and warehouse inventory. This includes the availability and the product life-cycle with discontinuations and delivery times of the respective products. The result of the analysis is a standardized, product-oriented report that is very important for warehouse optimization and maintenance.	9LA1110-8AE10-1AA0
<b>Asset Optimization Services Concept (max. 3 days)</b> Based on the results of the analysis phase, a detailed optimization plan is developed in collaboration with the customer. A risk assessment of the components can be performed in consultation with the customer. With this concept, optimized target stock can be determined. Identification of surplus stock and lack of spare parts. Recommendations for the next steps are given.	9LA1110-8AE10-2AA0
<b>Asset Optimization Services implementation (for operation)</b> Based on results of concept phase 9LA1110-8AE10-2AA0 and an individual quotation, optimization measures are implemented in a defined time frame. Objective: Create the basis for the Asset Optimization Services Operation.	9LA1110-8AE10-3AA0
<b>Asset Optimization Services Operation spare parts supply</b> Provision of a defined spare parts package based on an individual customer quotation. The spare parts are owned by Siemens. Service content is the supply of components in a defined delivery time and place of delivery for an agreed period of time. Cyclic and standardized analysis of the inventory to take into account the product life cycle.	9LA1110-8AE10-4AA0
<b>Asset Optimization Services Operation spare parts management</b> Management of a defined spare parts package based on an individual customer quotation. The spare parts are owned by the customer. Service content is the supply of components in a defined delivery time and place of delivery for an agreed period of time. Cyclic and standardized analysis of the inventory to take into account the product life cycle.	9LA1110-8AE10-4BA0
<b>Asset Optimization Services Time Extension</b> An additional 500 article numbers for the analysis of extensive stocks with more than 100 different article numbers can be ordered in packages of 500 article numbers.	9LA1110-8AE10-8AA0

## Services for Process Instrumentation

### Lifecycle Services

#### Asset Optimization Services

	Article No.
<b>Asset Optimization Services Time Extension</b> An additional 1 day for analysis and planning; This option can be ordered for a number of days, for example, for extensive planning (> 3 days) and on-site presentation of the analysis results.	<b>9LA1110-8AE10-8BA0</b>

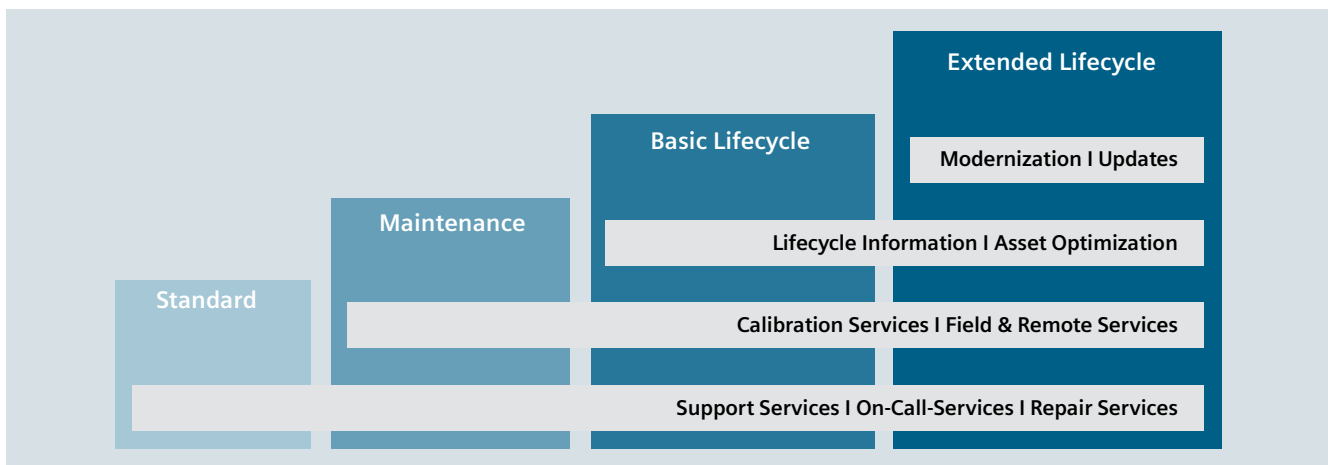

#### More information

More information is available online at:  
<http://www.siemens.com/aos>

#### Overview

The service elements introduced in the preceding sections form the basis for customized SIMATIC PCS 7 Lifecycle Service Contracts. Additional specific contract parameters, so-called service KPIs (e.g. terms of payment) can be agreed upon individually. A prerequisite for entering into a Lifecycle Service Contract is detailed information on the installed system base.

Typical characteristics of a Lifecycle Service Contract are:

- Standard - mainly contains reactive service elements, such as technical support, on-call or even repair services
- Maintenance - includes the "Standard" profile with added services such as preventive inspection and maintenance
- Basic Lifecycle - includes the "Maintenance" profile with added Lifecycle Information Services and Asset Optimization Services
- Extended Lifecycle - includes the "Basic Lifecycle" profile with added comprehensive modernizations as well as updates and upgrades

#### **Long-term investment protection with predictable costs**

A reactive service concept increases the risk of obsolescence – operating expenses and unplanned standstills can fluctuate and are hard to predict. The investment pressure increases until an upgrade becomes necessary. Long-term maintenance planning is extremely difficult, the risks are difficult to assess and the overall costs cannot be clearly calculated.

With a proactive service concept, however, the management of obsolescence risks and modernizations can be planned consistently. The continuous maintenance of the plant keeps the obsolescence risk low; the optimized costs for maintenance and modernization (OPEX) are mostly consistent and therefore predictable.

## Services for Process Instrumentation

### Lifecycle Services

#### Lifecycle Service Contracts

##### Benefits

- Long-term investment protection
- Planning capability for modernization and maintenance costs at the time of the investment across the entire lifetime of up to 15 years (TCO - Total Cost of Ownership)
- Increased plant availability, for example, through guaranteed arrival times for service, secured spare part supply and preventive maintenance measures
- Ensure service capability through active obsolescence management for hardware and software components
- Securing system manufacturer know-how
- Professional project management from a single source for the entire subscription cycle

### PIA Life Cycle Portal

#### Engineering, Ordering, Installation and Operation Tool

#### Overview

The PIA Life Cycle Portal provides the appropriate functionality in all stages of the Product Life Cycle for products of Process Instrumentation, Process Analytics and Weighing Technology.

The application guides you through Engineering & Selection, supports you at the Order and provides tools and information for Installation and Operation.

- **Phase 1:** Selection & Planning
- **Phase 2:** Ordering
- **Phase 3:** Installation & Operation
- **Additional features:** e. g. PIA Mobile

#### Phase 1: Selection & Planning

##### Selection

Achieve product solutions that meet your requirements by specifying relevant parameters according to the measuring point by using the *guided selection* or select the product directly in the *product and accessories tree*.

##### Configuration

Configure a selected product step by step and use the integrated configuration knowledge to avoid errors. Product configurations which cannot be ordered are blocked.

##### Sizing & calculation

*Sizing & calculation* tools for Gas Analyzers, Weighing and Batching Systems and Flow measurement instruments.

#### Phase 2: Ordering

##### Bulk upload

Verify several part numbers in one step by uploading a simple text file.

##### Watchlist & projects

Collect products in a *watch list* and save it as a *project* for later use.

##### Interface to the Industry Mall

Order the selected products with the ordering system for Siemens' automation and drive solutions.

#### Phase 3: Installation & Operation

##### Spare parts

Find appropriate *spare parts* for selected products or corresponding product families.

##### After sales support

Go to the *Service and Support Portal* to access manuals, certificates and further information concerning service & support.

##### Device information and history

Serial number specific product information for installed devices

#### Additional features

##### Personalize

Register in order to customize the application to your personal needs.

##### PIA Mobile

Use the product *selection, configuration and device information and history* with the version optimized for mobile devices.  
[www.siemens.com/piamobile](http://www.siemens.com/piamobile)

##### Product details

Find all relevant product information at a single glance: commercial and technical data, certificates, images and documents etc.

#### More information

PIA Life Cycle Portal  
Ostliche Rheinbrückenstraße 50  
76187 Karlsruhe, Germany  
Tel.: +49 (721) 595 2114  
E-Mail: [support.pia-portal@siemens.com](mailto:support.pia-portal@siemens.com)  
[www.siemens.com/pia-portal](http://www.siemens.com/pia-portal)

## Overview

### Delivery times

Standard delivery times for our products are shown in the Selection and Ordering data.

### Quick Ship and Stock Items delivery

If you need a product quickly, it is possible to choose between defined Stock Items delivery (▶ identifier) and the Quick Ship Program (● identifier) when ordering. Delivery times are then displayed at the end of the configuration overview

#### Note

In order to obtain special delivery times, only products with the same identifier may be combined (all Stock Item symbols or all Quick Ship Program symbols).  
It is not possible to combine Stock Item/Quick Ship Program options.

All other information without identifiers is available with the current delivery times, which can be found in the "Basic Data" tab of the PIA Life Cycle Portal.

### Example for Stock Items delivery in the PIA Life Cycle Portal

### Partner

#### Partner at Siemens

At your service locally, around the globe for consulting, sales, training, service, support, spare parts on the entire portfolio of Digital Industries.

Your partner can be found in our Personal Contacts Database at: [www.siemens.com/automation-contact](http://www.siemens.com/automation-contact)

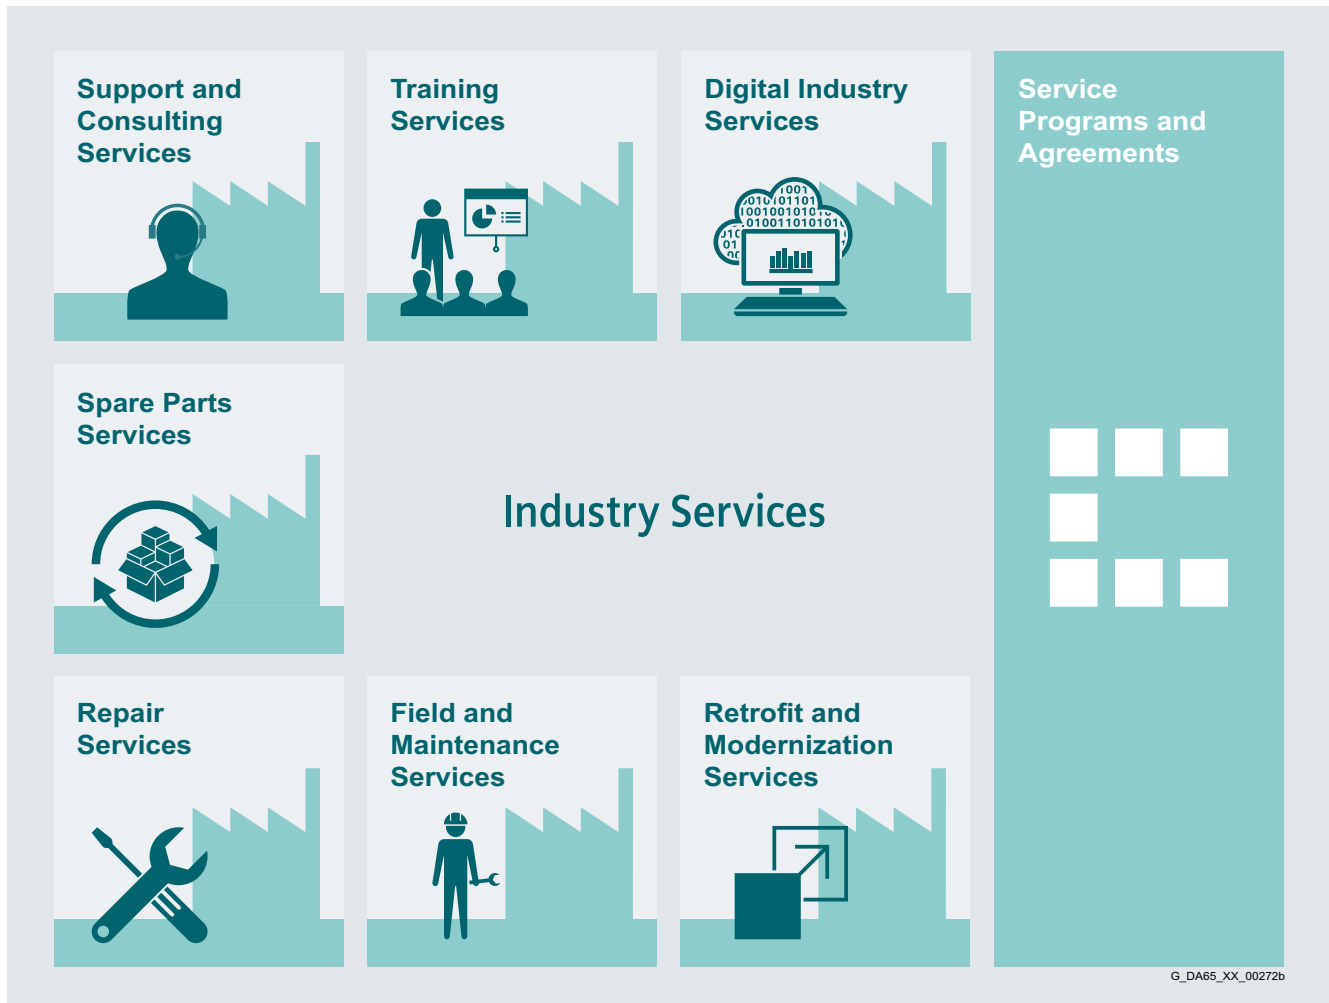

You start by selecting

- the required competence,
- products and branches,
- a country and a city

or by a

- location search or free text search.

**Overview**

**Keep your business running and shaping your digital future – with Industry Services**

Optimizing the productivity of your equipment and operations can be a challenge, especially with constantly changing market conditions. Working with our service experts makes it easier. We understand your industry's unique processes and provide the services needed so that you can better achieve your business goals.

You can count on us to maximize your uptime and minimize your downtime, increasing your operations' productivity and reliability. When your operations have to be changed quickly to meet a new demand or business opportunity, our services give you the flexibility to adapt. Of course, we take care that your production is protected against cyber threats. We assist in keeping your operations as energy and resource efficient as possible and reducing your total cost of ownership. As a trendsetter, we ensure that you can capitalize on the opportunities of digitalization and by applying data analytics to enhance decision making: You can be sure that your plant reaches its full potential and retains this over the longer lifespan.

You can rely on our highly dedicated team of engineers, technicians and specialists to deliver the services you need – safely, professionally and in compliance with all regulations. We are there for you, where you need us, when you need us.

### Industry Services

#### Industry Services – Portfolio overview

##### Overview

#### Digital Industry Services

Digital Industry Services make your industrial processes transparent to gain improvements in productivity, asset availability, and energy efficiency.

Production data is generated, filtered and translated with intelligent analytics to enhance decision-making.

This is done whilst taking data security into consideration and with continuous protection against cyber-attack threats.

#### Support and Consulting Services

**Industry Online Support** site for comprehensive information, application examples, FAQs and support requests.

**Technical and Engineering Support** for advice and answers for all inquiries about functionality, handling, and fault clearance. The Service Card as prepaid support for value added services such as Priority Call Back or Extended Support offers the clear advantage of quick and easy purchasing.

**Information & Consulting Services**, e.g. SIMATIC System Audit; clarity about the state and service capability of your automation system or Lifecycle Information Services; transparency on the lifecycle of the products in your plants.

<https://support.industry.siemens.com/cs/ww/en/sc/2235>

#### Training Services

From the basics and advanced to specialist skills, SITRAIN courses provide expertise right from the manufacturer – and encompass the entire spectrum of Siemens products and systems for the industry.

Worldwide, SITRAIN courses are available wherever you need a training course in more than 170 locations in over 60 countries.

<https://support.industry.siemens.com/cs/ww/en/sc/2226>

#### Spare Parts Services

Spare Parts Services are available worldwide for smooth and fast supply of spare parts – and thus optimal plant availability. Genuine spare parts are available for up to ten years. Logistic experts take care of procurement, transport, custom clearance, storage and order management. Reliable logistics processes ensure that components reach their destination as needed.

Since not all spare parts can be kept in stock at all times, Siemens offers a preventive measure for spare parts provisioning on the customer's premises with optimized **Spare Parts Packages** for individual products, custom-assembled drive components and entire integrated drive trains – including risk consulting.

**Asset Optimization Services** help you design a strategy for parts supply where your investment and carrying costs are reduced and the risk of obsolescence is avoided.

<https://support.industry.siemens.com/cs/ww/en/sc/2110>

#### Overview (continued)

##### Repair Services

Repair Services are offered on-site and in regional repair centers for fast restoration of faulty devices' functionality.

Also available are extended repair services, which include additional diagnostic and repair measures, as well as emergency services.

<https://support.industry.siemens.com/cs/ww/en/sc/2154>

##### Retrofit and Modernization Services

Provide a cost-effective solution for the expansion of entire plants, optimization of systems or upgrading existing products to the latest technology and software, e.g. migration services for automation systems.

Service experts support projects from planning through commissioning and, if desired over the entire extended lifespan, e.g. Retrofit for Integrated Drive Systems for an extended lifetime of your machines and plants.

<https://support.industry.siemens.com/cs/ww/en/sc/2286>

##### Field and Maintenance Services

Siemens specialists are available globally to provide expert field and maintenance services, including commissioning, functional testing, preventive maintenance and fault clearance. All services can be included in customized service agreements with defined reaction times or fixed maintenance intervals.

<https://support.industry.siemens.com/cs/ww/en/sc/2265>

##### Service Programs and Agreements

A technical Service Program or Agreement enables you to easily bundle a wide range of services into a single annual or multi-year agreement.

You pick the services you need to match your unique requirements or fill gaps in your organization's maintenance capabilities.

Programs and agreements can be customized as KPI-based and/or performance-based contracts.

<https://support.industry.siemens.com/cs/ww/en/sc/2275>

## Online Support

### Overview

Online Support – fast, intuitive, whenever you want, wherever you need

**Web**

[support.industry.siemens.com](http://support.industry.siemens.com)

**App**

Scan the QR code for information on our Online Support app.

- FAQ / Application examples**  
Information about industrial products, programming and configuration as well as application examples
- Technical information**  
Videos, documentation, manuals, updates, product notes, compatibility tool, certificates, planning data such as dimensional drawings, product data, 3D models
- Forum**  
Exchange information and experience with other users and experts

## Online Support for Siemens Industry Products

Siemens Industry and Online Support with some 1.7 million visitors per month is one of the most popular web services provided by Siemens. It is the central access point for comprehensive technical know-how about products, systems and services for automation and drives applications as well as for process industries.

In connection with the challenges and opportunities related to digitalization you can look forward to continued support with innovative offerings.

### Time for learning

Today's demands on our knowledge are every bit as diverse and dynamic as our profession itself. We keep learning more and longer – for our work, for our career and for ourselves. Advancing digitalization entails new topics and is also changing the way we absorb and process knowledge. SITRAIN – Digital Industry Academy offers the right source of knowledge here, which we can use anytime in just the way we need it. The time for learning is now.

### Knowledge for every need

With its three areas – SITRAIN open, SITRAIN access and SITRAIN personal – SITRAIN offers you an all-encompassing range of options for an ongoing expansion of your knowledge and skills, suited for every type of learner. And SITRAIN uses advancing digitalization to continuously expand content and offer new training methods.

### SITRAIN – Digital Industry Academy Customer Support Germany

Tel.: +49 911 895-7575

Email: [sitrain.digital.industry.academy.de@siemens.com](mailto:sitrain.digital.industry.academy.de@siemens.com)

### Knowledge you can always find

SITRAIN open bundles useful information, worthwhile data and up-to-date expert knowledge about Siemens products for industry. Search it anytime, find anything – and always the right stuff.

### Knowledge that gets you ahead

SITRAIN access is learning in the digital age. It offers you individualized ways to build your knowledge and access to exclusive digital training courses. Take advantage of sustainable learning success with a wide range of learning methods. Improve your skills – whether working in groups with others, or by yourself. Whenever, wherever and however you need to.

### Knowledge you can experience

We all want to learn from the best. And SITRAIN personal's training courses let you benefit from our well-practiced trainers' expert knowledge, along with direct access to our training equipment. That's the best way to convey knowledge – whether at your company or in our training classrooms.

## Appendix

### Product documentation

#### Supplied product documentation, QR Code, SIOS

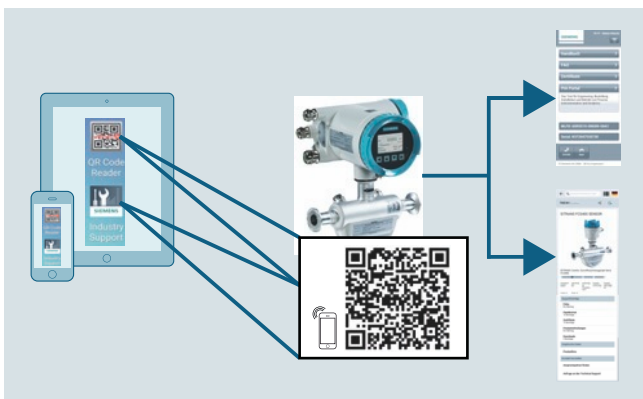

#### Supplied product documentation on DVD and safety instructions

Siemens products for process instrumentation will be delivered with a multi-language **Safety note** and a **Mini DVD "Process Instrumentation and Weighing Systems"**.

On the DVD, customers can find many important operating instructions and certificates of our Siemens portfolio for process instrumentation and weighing systems. As well, product or order-specific print material may be part of the delivery.

#### QR Code – Easy access to product information

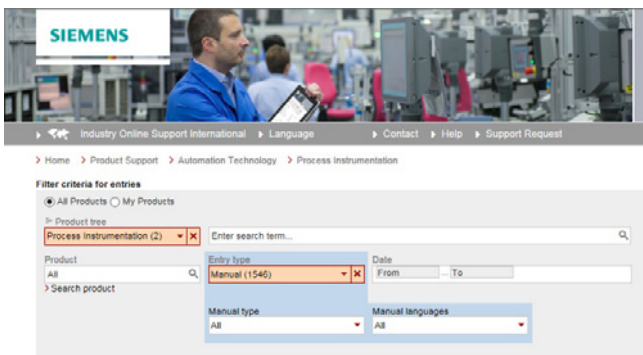

For easy identification, our devices are fitted with a QR code which can be read with the Siemens Industry Support App or any other QR code reader.

This not only enables simple access to article and serial numbers, it also provides you with a direct link to the product documentation, certificates, FAQs and videos.

You can find the Siemens Industry Support App or other QR code reader in your App Store for iOS, Android or Windows mobile.

#### Siemens Industry Online Support Portal (SIOS)

For the complete portfolio, customers can download product documentation for free using the following links to our Siemens Industry Online Support Portal (SIOS):

<http://www.siemens.com/processinstrumentation/documentation>

By entering the product names as **Search term** and selecting the field **Entry type**, you can find all operating instructions, current catalogs and brochures, certificates, product software (EDDs, calculation tools), product notes and other useful information.

10

#### Overview

#### Siemens Solution and Approved Partner – Partners for your success

#### Highest competence in automation and drive technology

Siemens works closely together with selected partner companies around the world in order to ensure that customer requirements for all aspects of automation and drives are fulfilled as best as possible – wherever you are, and whatever the time.

We place great value on our customers acting in accordance with the same ideals which characterize Siemens as a whole: Competence, professionalism and quality. That is why continuous development through qualification and certification measures in line with global standards is a central aspect of our Partner Program. This means that with our partners, you benefit from the same high quality standards all over the world. The partner emblem is the symbol for tried and tested quality.

#### The partner network for industry

The Siemens Partner Program offers you expertise and experience close at hand.

Within our global network, we distinguish between Solution Partners and Approved Partners. We currently work with more than 1,500 Solution Partners around the world. Our network of over 150 Approved Partners continues to grow. In more than 80 countries worldwide

#### Siemens Solution Partner – Automation Drives

At present we are working with more than 1,500 **Solution Partners** worldwide. They are characterized by extensive application, system and sector knowledge, as well as proven project experience, and are able to implement future-proof tailored solutions of the highest quality, based on our product and system portfolio.

#### Siemens Approved Partner – Value Added Reseller

With their detailed technical knowledge, **Siemens Approved Partners – Value Added Resellers** offer a combination of products and services that range from specialist technologies and customized modifications to the provision of high-quality system and product packages. They also provide qualified technical support and assistance.

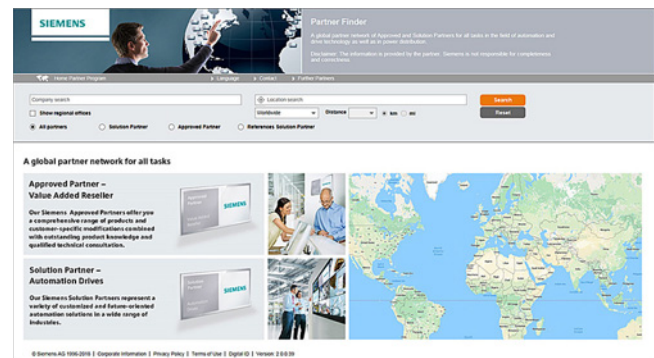

#### Siemens Approved Partner – Industry Services

**Siemens Approved Partner – Industry Services** put their unique expertise entirely at the service of enhancing your productivity and can be instrumental in ensuring the availability of your plants.

#### Partner Finder

The ideal partner for your task is just a mouse click away!

In the Siemens global Solution Partner program, customers are certain to find the optimum partner for their specific requirements – with no great effort. The Partner Finder is basically a comprehensive database that showcases the profiles of all our partners.

#### Easy selection:

Set filters in the search screen form according to the criteria that are relevant to you. You can also directly enter the name of an existing partner.

#### Skills at a glance:

Gain a quick insight into the specific competencies of any particular partner with the reference reports.

#### Direct contact option:

Use our electronic query form:

[www.siemens.com/partnerfinder](http://www.siemens.com/partnerfinder)

Additional information of the Siemens Partners for industry is available online at:

[www.siemens.com/partnerprogram](http://www.siemens.com/partnerprogram)

## Appendix

### Pressure Equipment Directive (2014/68/EU)

#### General

The pressure equipment directive **2014/68/EU** applies to the alignment of the statutory orders of the European member states for pressure equipment. Such equipment in the sense of the directive includes vessels, pipelines and accessories with a maximum permissible pressure of more than **0.5 bar** above atmospheric.

#### Classification according to hazard potential

The classification of the devices according to the pressure equipment directive takes place according to the hazard potential (medium/pressure/volume/nominal width) in the categories I to IV or article 4 paragraph 3.

The following criteria are decisive for assessing the hazard potential; they are also listed in diagrams 1 to 4 and 6 to 9:

• Fluid group	Group 1 or 2
• Aggregate state	Liquid, gaseous
• Type of pressurized equipment	
- Vessel	Product of pressure and volume (PS * V [barL])
- Pipeline	Nominal diameter, pressure or product of pressure and nominal diameter (PS * DN)

The fired or otherwise heated pressure equipment is listed separately in diagram 5.

#### Note:

Liquids according to Article 4 are those liquids whose steam pressure is **not** more than **0.5 bar** above standard atmospheric pressure (1013 mbar) at the maximum permissible temperature.

The **maximum permissible temperature** for the used liquids is the maximum process temperature which can occur, as defined by the user. This must be within the limits defined for the equipment.

#### Classification of the media (liquid/gas) into fluid groups\*

"Fluids" are gases, liquids and vapors in pure phase as well as their mixtures; fluids can include a suspension of solid matter; fluids are classified into the following fluid groups according to article 13 of the pressure equipment directive 2014/68/EU.

#### Paragraph a

##### Group 1

Group 1 consisting of substances and mixtures, as defined in points 7 and 8 of article 2 of Regulation (EC) No. 1272/2008, that are classified as hazardous in accordance with the following physical or health hazard classes laid down in parts 2 and 3 of annex I to that Regulation:

- i) unstable explosive substances/mixtures or explosive substances/ mixtures of divisions 1.1, 1.2, 1.3, 1.4 and 1.5
- ii) flammable gases, categories 1 and 2
- iii) oxidizing gases, category 1
- iv) liquids, category 1 and 2
- v) flammable liquids, category 3 where the maximum permissible temperature is above the flash point
- vi) flammable solids, category 1 and 2
- vii) self-reactive substances and mixtures, type A to F
- viii) pyrophoric liquids, category 1
- ix) pyrophoric solids, category 1
- x) substances and mixtures which in contact with water emit flammable gases, category 1, 2 and 3

- xi) oxidizing liquids, category 1, 2 and 3
- xii) oxidizing solids, category 1, 2 and 3
- xiii) organic peroxides, types A to F
- xiv) acute oral toxicity, category 1 and 2
- xv) acute dermal toxicity, category 1 and 2
- xvi) acute inhalation toxicity, category 1, 2 and 3
- xvii) specific target organ toxicity - single exposure, category 1

Group 1 comprises also substances and mixtures in pressure equipment with a maximum allowable temperature TS which exceeds the flash point of the fluid.

#### Paragraph b

##### Group 2

All fluids that are not included in Group 1.

\* from: "-DIRECTIVE 2014/68/EU OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 15 May 2014 on the harmonisation of the laws of the Member States relating to the making available on the market of pressure equipment (recast)"

#### Conformity assessment

Pressure equipment of category I to IV must meet the safety requirements set out in annex II and carry a CE marking.

They must meet a conformity assessment procedure set out in annex III of the Directive.

Pressure equipment to article 4 paragraph 3 shall be designed and manufactured in accordance with the sound engineering practice of a Member State and must not have a CE marking (CE markings from other Directives are not affected).

Siemens has (as long as the device is not subject to article 4 paragraph 3) conducted a conformity assessment for its products, given a CE marking and provided a declaration of conformity.

Monitoring of the design, dimensioning, testing and production takes place according to module H (full quality assurance).

#### Notes:

- Equipment designed for media with a high danger potential (e.g. gases of fluid group 1) may also be used for media with a lower danger potential (e.g. gases of fluid group 2, or liquids of fluid groups 1 and 2).
- The pressure equipment directive according to Article 1 Paragraph 2 does not apply to equipment such as e.g. mobile offshore plants, ships, aircraft, water supply and waste water networks, nuclear plants, rockets and pipelines outside industrial plants.

Diagrams

- Gases of fluid group 1
- Vessels in accordance with article 4 paragraph 1 letter a number i first dash
- Exception: unstable gases belonging to Categories I and II must be included in Category III.

- Gases of fluid group 2
- Vessels in accordance with article 4 paragraph 1 letter a number i second dash
- Exception: fire extinguishers and bottles for breathing apparatus: at least Category III.

- Liquids of fluid group 1
- Vessels in accordance with article 4 paragraph 1 letter a number ii first dash

- Liquids of fluid group 2
- Vessels in accordance with article 4 paragraph 1 letter a number ii second dash
- Exception: modules for producing warm water

- Fuelled pressure equipment or equipment heated in another manner above 110 °C and liable to overheating.
- Pressure equipment in accordance with article 4 paragraph 1 letter b
- Exception: pressure cooker, test procedure at least according to Category III.

## Appendix

### Pressure Equipment Directive (2014/68/EU)

- Gases of fluid group 1
- Piping in accordance with article 4 paragraph 1 letter c number i first dash
- Exception: unstable gases belonging to Categories I and II must be included in Category III.

- Gases of fluid group 2
- Piping in accordance with article 4 paragraph 1 letter c number i second dash
- Exception: liquids at temperatures > 350 °C belonging to Category II must be included in Category III.

- Liquids of fluid group 1
- Piping in accordance with article 4 paragraph 1 letter c number ii first dash

- Liquids of fluid group 2
- Piping in accordance with article 4 paragraph 1 letter c number ii second dash

### Overview

#### Functional safety

Functional safety is a strong tradition at Siemens. Werner von Siemens realized as early as 1880 that safety in automated processes is not only a human obligation, it also makes economic sense. In the process industry, hazards for humans, plants and the environment must be minimized without affecting the production process. With Safety Integrated for Process Automation from Siemens, you benefit from a comprehensive product and service offering for safe, fault-tolerant applications.

#### What is the Safety Integrity Level (SIL)?

The Safety Integrity Level is a term from the field of functional safety. It helps you assess electrical/electronic/programmable electronic systems in terms of the reliability of their safety functions. The goal is to minimize the risk of malfunction of the system and thereby increase the protection of the employed personnel, the environment and property.

The international standard IEC 61508 describes the type of risk assessment as well as measures for designing appropriate safety functions ranging from sensors, logic processing and extending to actuators. The requirements for the process industry are further specified in IEC 61511-1.

Since the standards IEC 61508 and IEC 61511 for functional safety have been in effect, the demand for process instrumentation equipment conforming to SIL classification has continually increased. For this reason, the product portfolio is constantly expanded to include devices that meet the SIL standard.

You will find the current list of SIL devices from Siemens for process instrumentation available today at:

[www.siemens.com/SIL](http://www.siemens.com/SIL)

#### Additional information

Brochure: "Functional Safety in Process Instrumentation with SIL Rating"

Website: "Functional Safety"

<http://www.industry.siemens.com/topics/global/en/safety-integrated>

## Appendix

### Software licenses

#### Overview

##### Software types

Software requiring a license is categorized into types. The following software types have been defined:

- Engineering software
- Runtime software

##### Engineering software

This includes all software products for creating (engineering) user software, e.g. for configuring, programming, parameterizing, testing, commissioning or servicing.

Data generated with engineering software and executable programs can be duplicated for your own use or for use by third-parties free-of-charge.

##### Runtime software

This includes all software products required for plant/machine operation, e.g. operating system, basic system, system expansions, drivers, etc.

The duplication of the runtime software and executable programs created with the runtime software for your own use or for use by third-parties is subject to a charge.

You can find information about license fees according to use in the ordering data (e.g. in the catalog). Examples of categories of use include per CPU, per installation, per channel, per instance, per axis, per control loop, per variable, etc.

Information about extended rights of use for parameterization/configuration tools supplied as integral components of the scope of supply can be found in the readme file supplied with the relevant product(s).

##### License types

Siemens Industry Automation & Drive Technologies offers various types of software license:

- Floating license
- Single license
- Rental license
- Rental floating license
- Trial license
- Demo license
- Demo floating license

##### Floating license

The software may be installed for internal use on any number of devices by the licensee. Only the concurrent user is licensed. The concurrent user is the person using the program. Use begins when the software is started. A license is required for each concurrent user.

##### Single license

Unlike the floating license, a single license permits only one installation of the software per license.

The type of use licensed is specified in the ordering data and in the Certificate of License (CoL). Types of use include for example per instance, per axis, per channel, etc.

One single license is required for each type of use defined.

##### Rental license

A rental license supports the "sporadic use" of engineering software. Once the license key has been installed, the software can be used for a specific period of time (the operating hours do not have to be consecutive).

One license is required for each installation of the software.

##### Rental floating license

The rental floating license corresponds to the rental license, except that a license is not required for each installation of the software. Rather, one license is required per object (for example, user or device).

##### Trial license

A trial license supports "short-term use" of the software in a non-productive context, e.g. for testing and evaluation purposes. It can be transferred to another license.

##### Demo license

The demo license support the "sporadic use" of engineering software in a non-productive context, for example, use for testing and evaluation purposes. It can be transferred to another license. After the installation of the license key, the software can be operated for a specific period of time, whereby usage can be interrupted as often as required.

One license is required per installation of the software.

##### Demo floating license

The demo floating license corresponds to the demo license, except that a license is not required for each installation of the software. Rather, one license is required per object (for example, user or device).

##### Certificate of License (CoL)

The CoL is the licensee's proof that the use of the software has been licensed by Siemens. A CoL is required for every type of use and must be kept in a safe place.

##### Downgrading

The licensee is permitted to use the software or an earlier version/release of the software, provided that the licensee owns such a version/release and its use is technically feasible.

##### Delivery versions

Software is constantly being updated. The following delivery versions

- PowerPack
- Upgrade

can be used to access updates.

Existing bug fixes are supplied with the ServicePack version.

##### PowerPack

PowerPacks can be used to upgrade to more powerful software. The licensee receives a new license agreement and CoL (Certificate of License) with the PowerPack. This CoL, together with the CoL for the original product, proves that the new software is licensed.

A separate PowerPack must be purchased for each original license of the software to be replaced.

##### Upgrade

An upgrade permits the use of a new version of the software on the condition that a license for a previous version of the product is already held.

The licensee receives a new license agreement and CoL with the upgrade. This CoL, together with the CoL for the previous product, proves that the new version is licensed.

A separate upgrade must be purchased for each original license of the software to be upgraded.

**Overview****ServicePack**

ServicePacks are used to debug existing products. ServicePacks may be duplicated for use as prescribed according to the number of existing original licenses.

**License key**

Siemens Industry Automation & Drive Technologies supplies software products with and without license keys.

The license key serves as an electronic license stamp and is also the "switch" for activating the software (floating license, rental license, etc.).

The complete installation of software products requiring license keys includes the program to be licensed (the software) and the license key (which represents the license).

**Software Update Service (SUS)**

As part of the SUS contract, all software updates for the respective product are made available to you free of charge for a period of one year from the invoice date. The contract will automatically be extended for one year if it is not canceled three months before it expires.

The possession of the current version of the respective software is a basic condition for entering into an SUS contract.

You can download explanations concerning license conditions from [https://mall.industry.siemens.com/legal/ww/en/terms\\_of\\_trade\\_en.pdf](https://mall.industry.siemens.com/legal/ww/en/terms_of_trade_en.pdf)

## Appendix

### Conditions of sale and delivery

#### 1. General Provisions

By using this catalog you can purchase products (hardware, software and services) described therein from Siemens Aktiengesellschaft subject to the following Terms and Conditions of Sale and Delivery (hereinafter referred to as "T&C"). Please note that the scope, the quality and the conditions for supplies and services, including software products, by any Siemens entity having a registered office outside Germany, shall be subject exclusively to the General Terms and Conditions of the respective Siemens entity. The following T&C apply exclusively for orders placed with Siemens Aktiengesellschaft, Germany.

##### 1.1 For customers with a seat or registered office in Germany

For customers with a seat or registered office in Germany, the following terms and conditions apply subordinate to T&C:

- for products, which include specific terms and conditions in the description text, these specific terms and conditions shall apply and subordinate thereto,
- for installation work the "General Conditions for Erection Works – Germany"<sup>1)</sup> ("Allgemeine Montagebedingungen – Deutschland" (currently only available in German)) and/or
- for stand-alone software products and software products forming a part of a product or project, the "General License Conditions for Software Products for Automation and Drives for Customers with a Seat or registered Office in Germany"<sup>1)</sup> and/or
- for consulting services the "General Terms and Conditions for Consulting Services of the Division DF – Germany"<sup>1)</sup> and/or
- for other supplies and/or services the "General Conditions for the Supply of Products and Services of the Electrical and Electronics Industry"<sup>1)</sup>.

In case such supplies and/or services should contain Open Source Software, the conditions of which shall prevail over the "General Conditions for the Supply of Products and Services of the Electrical and Electronics Industry"<sup>1)</sup>, a notice will be contained in the scope of delivery in which the applicable conditions for Open Source Software are specified. This shall apply mutatis mutandis for notices referring to other third party software components.

##### 1.2 For customers with a seat or registered office outside Germany

For customers with a seat or registered office outside Germany, the following terms and conditions apply subordinate to T&C:

- for products, which include specific terms and conditions in the description text, these specific terms and conditions shall apply and subordinate thereto,
- for services the "International Terms & Conditions for Services"<sup>1)</sup> supplemented by "Software Licensing Conditions"<sup>1)</sup> and/or
- for consulting services the "General Terms and Conditions for Consulting Services of the Division DF – Germany"<sup>1)</sup> and/or
- for other supplies of hard- and software the "International Terms & Conditions for Products"<sup>1)</sup> supplemented by "Software Licensing Conditions"<sup>1)</sup>

##### 1.3 For customers with master or framework agreement

To the extent our supplies and/or services offered are covered by an existing master or framework agreement, the terms and conditions of that agreement shall apply instead of T&C.

#### 2. Prices

The prices are in € (Euro) ex point of delivery, exclusive of packaging.

The sales tax (value added tax) is not included in the prices. It shall be charged separately at the respective rate according to the applicable statutory legal regulations.

Prices are subject to change without prior notice. We will charge the prices valid at the time of delivery.

To compensate for variations in the price of raw materials (e.g. silver, copper, aluminum, lead, gold, dysprosium and neodym), surcharges are calculated on a daily basis using the so-called metal factor for products containing these raw materials. A surcharge for the respective raw material is calculated as a supplement to the price of a product if the basic official price of the raw material in question is exceeded.

The metal factor of a product indicates the basic official price (for those raw materials concerned) as of which the surcharges on the price of the product are applied, and with what method of calculation.

An exact explanation of the metal factor can be downloaded at:

[https://mall.industry.siemens.com/legal/ww/en/terms\\_of\\_trade\\_en.pdf](https://mall.industry.siemens.com/legal/ww/en/terms_of_trade_en.pdf)

To calculate the surcharge (except in the cases of dysprosium and neodym), the official price from the day prior to that on which the order was received or the release order was effected is used.

To calculate the surcharge applicable to dysprosium and neodym ("rare earths"), the corresponding three-month basic average price in the quarter prior to that in which the order was received or the release order was effected is used with a one-month buffer (details on the calculation can be found in the explanation of the metal factor).

#### 3. Additional Terms and Conditions

The dimensions are in mm. In Germany, according to the German law on units in measuring technology, data in inches apply only to devices for export.

Illustrations are not binding.

Insofar as there are no remarks on the individual pages of this catalog – especially with regard to data, dimensions and weights given – these are subject to change without prior notice.

<sup>1)</sup> The text of the Terms and Conditions of Siemens AG can be downloaded at  
[https://mall.industry.siemens.com/legal/ww/en/terms\\_of\\_trade\\_en.pdf](https://mall.industry.siemens.com/legal/ww/en/terms_of_trade_en.pdf)

#### 4. Export Regulations

We shall not be obligated to fulfill any agreement if such fulfillment is prevented by any impediments arising out of national or international foreign trade or customs requirements or any embargoes and/or other sanctions.

Export may be subject to license. We shall indicate in the delivery details whether licenses are required under German, European and US export lists.

Our products are controlled by the U.S. Government (when labeled with "ECCN" unequal "N") and authorized for export only to the country of ultimate destination for use by the ultimate consignee or end-user(s) herein identified. They may not be resold, transferred, or otherwise disposed of, to any other country or to any person other than the authorized ultimate consignee or end-user(s), either in their original form or after being incorporated into other items, without first obtaining approval from the U.S. Government or as otherwise authorized by U.S. law and regulations.

The export indications can be viewed in advance in the description of the respective goods on the Industry Mall, our online catalog system. Only the export labels "AL" and "ECCN" indicated on order confirmations, delivery notes and invoices are authoritative.

Products labeled with "AL" unequal "N" are subject to European / national export authorization. Products without label, with label "AL:N" / "ECCN:N", or label "AL:9X9999" / "ECCN: 9X9999" may require authorization from responsible authorities depending on the final end-use, or the destination.

If you transfer goods (hardware and/or software and/or technology as well as corresponding documentation, regardless of the mode of provision) delivered by us or works and services (including all kinds of technical support) performed by us to a third party worldwide, you must comply with all applicable national and international (re-)export control regulations.

If required for the purpose of conducting export control checks, you (upon request by us) shall promptly provide us with all information pertaining to the particular end customer, final disposition and intended use of goods delivered by us respectively works and services provided by us, as well as to any export control restrictions existing in this relation.

The products listed in this catalog may be subject to European/German and/or US export regulations. Any export requiring approval is therefore subject to authorization by the relevant authorities.

Errors excepted and subject to change without prior notice.

## Appendix

### Notes

10

## Selection and ordering at Siemens Industry Mall, downloading and ordering catalogs

### Easy product selection and ordering: Industry Mall

### Industry Mall

The Industry Mall is a Siemens AG Internet ordering platform. It provides you with online access to a comprehensive product spectrum that is presented in an informative, well-organized way.

Powerful search functions help you select the required products, while configurators enable you to configure complex product and system components quickly and easily. CAX data are also available for you to use.

Data transfer allows the entire procedure, from selection through ordering to tracking and tracing, to be carried out online. Availability checks, individual customer discounting, and quotation preparation are also possible.

[www.siemens.com/industrymall](http://www.siemens.com/industrymall)

### Downloading catalogs

### Siemens Industry Online Support

You can download catalogs and brochures in PDF format from Siemens Industry Online Support without having to register.

The filter box makes it possible to perform targeted searches.

## Security information

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, systems, machines and networks.

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens' products and solutions constitute one element of such a concept.

Customers are responsible for preventing unauthorized access to their plants, systems, machines and networks. Such systems, machines and components should only be connected to an enterprise network or the internet if and to the extent such a connection is necessary and only when appropriate security measures (e.g. firewalls and/or network segmentation) are in place.

For additional information on industrial security measures that may be implemented, please visit <https://www.siemens.com/industrialsecurity>

Siemens' products and solutions undergo continuous development to make them more secure. Siemens strongly recommends that product updates are applied as soon as they are available and that the latest product versions are used. Use of product versions that are no longer supported, and failure to apply the latest updates may increase customer's exposure to cyber threats.

To stay informed about product updates, subscribe to the Siemens Industrial Security RSS Feed under <https://www.siemens.com/industrialsecurity>
