# How to optimize processes with our automation and instrumentation portfolio

High-quality processes are crucial in the process industry. Only then do you get the required results. And it is only then that plants work efficiently and therefore productively.

Process instrumentation and analytics as well as weighing technology all play a crucial role here. They measure, analyze, regulate, and control industrial processes and thus contribute to increasing the efficiency of process plants and improving their product quality.

Benefit from the versatility of our holistic solutions for your process tasks – with integrated solutions from a single source. Benefit from the openness of the systems. And from constant innovation and comprehensive services.

In the areas of process instrumentation and process analytics as well as weighing and dosing systems, our main focus is on the process industries, such as the chemicals, oil and gas and hydrocarbon processing, water and wastewater, pharmaceuticals, mining, aggregates, cement, pulp and paper, food and beverage, and shipbuilding industries.

# How to increase process efficiency and product quality

In field instrumentation, maximum precision and absolutely reliable measurement results are key. Only then can you increase the efficiency of your process plants and improve their product quality. Whether you're dealing with pressure, temperature, flow, or level, we offer you a globally unique range of transmitters for field instrumentation. Our comprehensive portfolio also includes weighing and batching systems, pneumatic valve positioners, process controllers, and process recorders.

# Pressure measurement without any “ifs” and “buts”: SITRANS P

SITRANS P is a complete range of measurement instruments for measuring relative pressure, differential pressure, and absolute pressure. In addition to high measuring accuracy and ruggedness, the modular system features superb operating convenience and functionality as well as a perfect safety concept.

**SITRANS P320/420** – the first pressure transmitter for remote commissioning of functional safety

- Time and effort savings due to remote commissioning of SIL devices
- Developed in accordance with the IEC 61508 standard for use in SIL 2/3
- Reduced response time increases process efficiency by speeding up the control system's response to changing process conditions
- Ready for plant digitalization with the HART 7 pressure transmitter: data logging functions and event control deliver users in-depth control and analysis
- User-friendly display due to clear display and diagnostic icons in accordance with NAMUR NE107
- Maintenance cost reduction due to proof test interval up to 10 years
- The transmitter is FM-approved

#### SITRANS P500

- Deviations from the characteristic curve of less than 0.03% of the calibrated measuring range for different pressure and level requirements
- Design of the measuring cells allows for use with media temperatures of up to 125 °C even without the use of a remote seal system
- Fast step response time (T63) of only 88 ms ensures plant safety in critical applications
- Graphics-enabled display shows curve and trend diagrams for goal-oriented process monitoring

#### SITRANS LH100/LH300

- Suitable for applications ranging from drinking water or wastewater to corrosive liquids thanks to stainless steel enclosure
- Rugged submersible sensors for hydrostatic level measurement
- Installation possible in pipes with 1" inner diameter

#### SITRANS P200/210/220

- Single-range transmitter for relative, absolute, and hydrostatic pressure
- Pressure sensors: Stainless steel sensors (SITRANS P210 and SITRANS P220) as well as sensors with ceramic membrane (SITRANS P200)
- Conversion of measured pressure into either 4–20 mA or 0–10 V signal

#### SITRANS P compact

- Analog transmitter for absolute and relative pressure
- Hygienic design in accordance with EHEDG, FDA, and GMP recommendations
- Stainless steel process connections and enclosure
- Measurement deviation  $\leq 0.2\%$

### SITRANS P300

- More than 90 different process connection variants offer the highest degree of flexibility
- Versatile communication connection via HART protocol, PROFIBUS PA, or FOUNDATION Fieldbus
- Fulfills EHEDG, FDA, and 3A requirements
- Maximum measurement deviation of 0.075%
- Can be combined with flush-mounted absolute or relative pressure measuring cells

# Because every degree matters: SITRANS T

SITRANS T products are the temperature measurement professionals, even in extreme conditions. Whether used in hot, cold, or hazardous environments – the communicative SITRANS T meets all expectations. And whether you're looking for sensors or transmitters for head, rail, or field mounting – all are available individually or as complete measuring points. Our cost-effective SITRANS T transmitters offer high precision in every application and are quick and easy to connect to thermocouples or resistance thermometers. The SIMATIC PDM intelligent software package permits parameterization in just minutes, and input errors are avoided.

**SITRANS TS500** – temperature sensors for pipes and vessels – from simple applications to solutions for harsh environments

- Modular system with thermowell made of tubular or barstock material, extension, connection head, and optional transmitter or display
- Version for intrinsic safety, flameproof, and nonsparking are available

## Transmitters for head mounting

### SITRANS TH100

- Pt100 single input transmitter
- Diagnostics LED
- Supports four-wire Pt100
- 4–20 mA
- Low-cost and compact

### SITRANS TH320

- Universal single input transmitter
- Diagnostics LED
- Supports four-wire RTD/TC/mV and resistances
- Supports Callendar-van-Dusen
- HART 7 + SIL 2/3 (IEC 61508)
- 4–20 mA
- Interface for local HMI

### SITRANS TH420

- Universal dual input transmitter
- Hot backup function
- Diagnostics LED
- Supports two four-wire RTD/TC/mV and resistances
- Supports Callendar-van-Dusen
- HART 7 + SIL 2/3 (IEC 61508)
- Interface for local HMI

### SITRANS TH400

- Fieldbus transmitter
- For PROFIBUS PA or FOUNDATION Fieldbus
- Configurable with SIMATIC PDM (PA) or AMS (FF)
- Extensive diagnostics and simulation functions
- Transmission of important device and process data via the bus cable

## Transmitters for rail mounting

### SITRANS TR320

- Universal and single input transmitter
- Diagnostics LED
- Supports four-wire RTD/TC/mV and resistances
- Supports Callendar-van-Dusen
- HART 7 + SIL 2/3 (IEC 61508)
- 4–20 mA

### SITRANS TR420

- Universal dual input transmitter
- Hot backup function
- Diagnostics LED
- Supports two four-wire RTD/TC/mV and resistances
- Supports Callendar-van-Dusen
- HART 7 + SIL 2/3 (IEC 61508)

## SITRANS TS temperature sensors

## Transmitters for field installation

**SITRANS TF with TH400**

- IP66/67/68 degree of protection
- Used where there is excessive heat or vibration at the measuring point
- PA/FF communication

**SITRANS TF320/420** **NEW**

- Stainless steel or aluminum enclosure
- Temperature field transmitter for multiple applications
- Configurable via local display
- Full redundancy via hot backup function (TF420)
- SIL 2/3 certified
- HART 7
- 4–20mA
- Combined types of protection available, e.g., Ex d + Ex i

**SITRANS TS100**

- For multiple applications
- Supplied with directly installed cable
- ATEX and IEC EX approvals; can be operated in Zone 0
- Wide range of options thanks to modular principle

**SITRANS TS200 compact design**

- For multiple applications
- Compact design with directly installed fixed connection (M12, Lemo, etc.)
- ATEX and IEC EX approvals; can be operated in Zone 0
- Wide range of options thanks to modular principle

**SITRANS TS300**

- Clamp-on temperature sensor
- Design meets EHEDG recommendations and is therefore suitable for use in the food and beverage and pharmaceutical industries
- Replaceable measuring inserts

**SITRANS TS Thermowell**

- Wide range of lengths and materials
- Comprehensive coverage of applications
- Customer-specific options are possible
- High stability by high-quality materials
- Comprehensive material and quality controls available

## Transmitters for fiber-optic temperature measurement

### SITRANS TO500

- Fiber-optic temperature transmitter
- Diameter of sensor measuring probe < 2 mm
- Up to 48 measuring points per sensor measuring probe
- Simple and low-cost installation thanks to rolled sensor measuring probe

# Everything flows: SITRANS F

Whether measuring gases, liquids, or steam – choosing the right flowmeter is decisive for productivity. This is where the SITRANS F line comes in. Our portfolio contains the fitting flowmeter for every application and medium, with five different flow technologies available to suit a wide range of operating conditions: Coriolis, electromagnetic, ultrasonic, vortex, and differential pressure.

## Transmitter SITRANS FCT070 Coriolis flowmeter solution

- Full control and parameterization via the control system
- Direct integration into SIMATIC S7, TIA Portal and PCS 7
- Coriolis technology modul for ET 200SP
- Selection via TIA Selector (secures easy integration in SIMATIC)
- Fast digital signal to sensor with 10 ms update rate
- Full advanced transmitter functionality via automation control
- Over PROFINET, the measure data are transmitted to the automation in real time
- Full hazardous area solutions with use of SITRANS I300 barrier
- Advanced batch control integrated
- Advanced fraction measurements
- Integration function blocs available for all Siemens automation systems

### SITRANS FC

Coriolis mass flowmeters SITRANS FC multivariable devices measure the direct mass flow rate of liquids and gases in almost any application. They deliver reliable and repeatable information on mass flow, volume flow, temperature, density, and concentration (e.g., Brix or Plato).

They are available in sensor sizes DN 1,5 to 150 mm with different flowmeter transmitter versions to fulfill requirements for high performance in oil and gas, chemicals, food and beverage, pharmaceuticals, and automotive applications.

### Full range of digital transmitters

The uniform sensor and transmitter platform offers solutions for sizes from Di 1,5 to DN 150 mm with three different transmitters

### FCT010 single digital channel transmitter

- Full multiparameter Modbus output ideal for PLC integration
- Robust aluminum housing mounted directly on the different sensors, for most sensor sizes
- Small in size, ideal for skids and compact machines
- Full performance in a cost-efficient solution

### FCT030 advanced full range transmitter

- Available as compact, remote field-mount and remote wall mounting enclosures
- Multi 4 I/O channels, freely configurable and programmable
- Full package of communication: HART, PROFIBUS PA and DP; Modbus
- Advanced large size graphical display including trend curve and multilevel display views
- Integrated data logger, ideal for diagnostics on advanced applications
- Advanced diagnostic functionality
- Build in programmable settings for optimizing pulsating flow and aerated flow
- Integrated 16+ unique fractions tables for concentration measurements
- Build-in-batch controller for two-stage batch applications

### SITRANS FCS300

- Innovative and user-friendly transmitters FCT030, FCT010, or FCT070 with audit trails, trend curves, data logger, and advanced diagnostic functionalities
- Dual splitflow design in sizes from DN 15 to DN 150 in different versions, wetted material in AISI 316 as well as nickel alloy
  - Remote- or compact-mounted
  - Available with broad range of transmitter FCT030, FCT010, and FCT070
  - Solid performance with mass flow accuracy of 0.1% or 0.2% and density accuracy of down to 2 kg/m<sup>3</sup>
  - Robust frame and housing isolates from external vibrations, creating an ideal measurement in difficult environment
  - Ideal for the chemical, petrochemical and oil and gas industry

### SITRANS FCS low flow

Single tube in sizes from DI 1.5 to DI 15, with a wide selection of available connections

- High-performance accuracy: 0.1% on massflow and down to 0.5 kg/m<sup>3</sup> density
- Available with broad range of transmitter FCT030, FCT010, and FCT070
- DN 4 design withstands pressure rates up to 1000 bar
- Ideal for a broad range of low-flow applications within the automotive, chemicals, and food and beverage industries
- Easy installation using a plug and play interface
- Optimal hygiene, safety, and CIP cleanability for the food and beverage industry as well as pharmaceutical applications, thanks to single-tube construction without internal welds, reductions, or flow splitters

### SITRANS FCS400

- Dual splitflow design in sizes DN 15 to DN 50
- Market's most compact design
- Available with all common process connections including a variety of sanitary common connections
- Available with broad range of transmitter FCT030, FCT010, and FCT070
- High-performance accuracy: 0.1% on massflow and down to 0.5 kg/m<sup>3</sup> density
- Ideal for OEM, skids, machine builder, marine and sanitary applications

## SITRANS F M electromagnetic flowmeters

The task of an electromagnetic flowmeter from the SITRANS F M product family is to measure flow volume of electrically conducting fluids such as water, chemicals, food and beverage, slurries, sludge, paper stock, and mining slurries with magnetic particles.

### Modular pulsed DC meters: SITRANS F M MAG (DN 2 to DN 2200)

- Full transmitter program includes MAG 5000/MAG 6000/MAG 6000 I; compact- or remote-mounted
- Multiple I/O as standard and communication modules PROFIBUS PA/DP
- DeviceNet, FOUNDATION Fieldbus, HART, and Modbus RTU are available
- MAG 5100 W sensor for water and wastewater applications
- MAG 3100 P sensor for process industries and the harsh requirements in the chemical industry
- MAG 3100 P as quick ship variant available
- MAG 3100/MAG 3100 HT sensor for general process industries
- MAG 1100/1100 HT sensor for general process industries
- MAG 1100 F sensor for food and beverage and pharmaceutical industries

### Battery-operated water meters: MAG 8000/MAG 8000 CT (DN 25 to DN 1200)

- Battery lifetime up to 15 years\*
- IP68 (NEMA 6P) enclosure and sensor painting in accordance with ISO 12944 class C4M corrosivity for burial and submerged applications
- Easy installation without straight inlet/outlet
- Rich add-on communication modules: Modbus RTU, encoder card, 3G/UMTS module

### MAG 8000 with 3G/UMTS module

- Rich data transmission protocols supported by 3G module: SMS, secured e-mail, and secured FTP
- Built-in Remote Qualification Certificate enables comprehensive device diagnostics and off-site audits
- Configurable analog input for external ratiometric pressure transmitter in parallel with flow measurement (2-in-1 solution), or 4–20 mA alarm signal input for external tamper and flooding detector
- MAG 8000 clock synchronization with Internet NTP server featuring
- Adjustable time zone setting ensures measurement data is always accurately time-stamped
- Single SMS synchronizes the data transmission time for all MAG 8000 devices in field
- Real-time SMS notification for MAG 8000 alarms

\*for 4 D-cell external battery pack

### High-powered AC meters: TRANSMAG 2 / (DN 15 to DN 1000)

- Specially designed for heavy mining slurries with or without magnetic particles as well
- Also suitable for the most difficult applications in the pulp and paper industry
- Low conductive medias  $\geq 1 \mu\text{S}/\text{cm}$  ( $0.1 \mu\text{S}/\text{cm}$  depending on medium)
- No movable parts
- Stable zero point/pulsed alternating field for accurate flow signal and excellent signal strength
- SmartPLUG concept
- Comprehensive self-diagnostics

### Threaded SITRANS FM100: Making engineering and design even simpler **NEW**

- Measuring and monitoring small and medium flows. Robust stainless steel design (threaded: 1/2", 3/4", 1", 2")
- Generation of two process values, simultaneous flow and temperature measurement
- Dosing function with external control input
- Four optical buttons, easy local operation in the field with gloves possible
- The display can be electronically rotated in 90° steps
- Bidirectional measurement
- Integration in many standard applications possible, as there are two individually configurable outputs (pulse/frequency/ alarm and analog output)
- Total and partial volume counters to track flow rates
- IO-Link communication available

## SITRANS F S inline ultrasonic flowmeters

Our ultrasonic flowmeters deliver extremely accurate results for a wide range of conductivities, viscosities, temperatures, densities, and pressures. This makes them an optimal choice for measuring homogenous conductive and non-conductive liquids within a wide variety of process industry applications.

### SITRANS F S SONO 3100/SONO 3300

- Suitable for water applications in sizes DN 50 to DN 500
- Available as 1- or 2-path systems in combination with SITRANS FUS060 transmitter
- Option between mild steel and stainless steel on request
- Sensors can be exchanged without interrupting operation

### SITRANS F S SONOKIT

- The SONOKIT system is designed for inline retrofitting on existing water pipelines up to DN 1200 as a 1- or 2-track flowmeter
- For use with the dedicated SITRANS FUS060 transmitter (up to DN 500) or battery-powered FUS080 transmitter (up to DN 1200)
- The unique design enables installation on empty pipes or pipes under pressure without process shutdown
- Robust version can be buried and withstands constant flooding
- Outstanding accuracy; the bigger the pipe, the more accurate the result

### SITRANS FUS380 and FUE380

- For the utility industry, the 2-track FUS380 and FUE380 are designed to measure water flow in district heating plants, local networks, boiler stations, substations, and other general water applications
- Also suitable for chiller plants (including glycol mixes without type approval)
- Custody transfer approvals for district heating custody transfer applications (MID MI-004). Sizes range from DN 50 to DN 1200
- Battery or mains power enables installation where needed. Battery lifetime up to 6 years
- Ideal for energy metering together with the SITRANS FUE950 energy calculator
- With heatmeter type approval (MID MI-004)

### SITRANS F S clamp-on ultrasonic flowmeters

The externally mounted sensors of SITRANS F S clamp-on ultrasonic flowmeters are quickly and easily installed on the outside of a pipe, making them the perfect choice for existing applications or where corrosive, toxic, or high-pressure fluids rule out the option of cutting the pipe. The cost-efficient technology provides highly accurate measurement of liquids in pipes ranging from DN 6 to DN 10000 in size.

#### SITRANS FS230

- Digitally based system featuring market-leading accuracy of 0.5% to 1% of flow rate
- Best-in-class 100 Hz data update rate reliably detects even the smallest changes in flow
- WideBeam® transit-time technology allows for measurement of virtually any liquid, even those with high levels of aeration or suspended solids
- Large graphical display with intuitive navigation, multiple setup wizards and patented pipe configuration menu
- SensorFlash® microSD card stores all operational data for easy device transfer and servicing
- Application examples include raw and potable water, effluent, district heating and cooling, hydroelectricity, and nuclear feed water

#### SITRANS FS220

- Cost-efficient system offering the most commonly required measurement functions
- Consistently high accuracy of 1% of flow rate and 0.25% repeatability in accordance with ISO 11631
- Enhanced zero stability results in minimal need to set a zero point
- WideBeam® transit-time technology allows for measurement of virtually any liquid, even those with high levels of aeration or suspended solids
- Large graphical display with intuitive navigation, multiple setup wizards and patented pipe configuration menu
- SensorFlash® microSD card stores all operational data for easy device transfer and servicing
- Suitable for multiple sectors requiring budget-conscious liquid flow instrumentation, including water and wastewater, power, HVAC, and chemical industries

### SITRANS FP differential pressure flow measurement

The SITRANS FP product line offers a complete solution for differential pressure flow measurements. SITRANS FP330 as well as the SITRANS FPS230 both are suitable for a vast range of different applications under various process conditions and parameters

#### SITRANS FPS230/FP330 **NEW**

- Flexible mounting
- One pressure transmitter for all applications
- Single source supplier for the hole measuring point
- Pre-mounted flowmeter delivered in "one box"
- Easy traceability throughout the ordering process
- Direct technical feedback and possibility to order

#### Differential pressure flowmeters: SITRANS F O

- Universal flow measurement for liquids, gases, and vapors
- Always provide accurate results even with large bores, high temperature and extreme pressure

### SITRANS FX330

- Accurate measurement of steam, gas, and both conductive and non-conductive liquids
- Available in sizes DN 15 to DN 300 mm
- Integrated pressure and temperature compensation for lower installation costs and increased accuracy
- Integrated reduction of nominal diameter results in a large turndown ratio, reducing installation costs and potential for leakage
- Provides redundant storage of all calibration and configuration data within the display memory and the electronics module
- Designed from the ground up to be fully compliant with the IEC 61508 SIL 2 safety standard
- Cost-efficient energy calculation including net heat measurement
- Remote version available with cable length up to 50 m

# Always on the level

Indispensable in numerous applications in the process industries: Whether point level detection or continuous level measurement, our comprehensive offering has the right solution for your application.

SITRANS LR100 series – **NEW**  
for hassle-free level measurement

- Compact 80 GHz radar transmitter for liquids and solids applications
- Featuring Bluetooth® wireless technology for easy and quick setup with Siemens SITRANS mobile IQ App
- Ideal for chemical storage vessels, bulk solids hoppers, produced water, and drilling mud

### Continuous level measurement

Continuous level measurement constantly monitors dynamic processes. The measurements are transmitted as an analog signal or digital value. We offer a wide range of transmitters based on a variety of technologies, including ultrasonic, radar, guided wave radar, capacitance, gravimetric, and hydrostatic.

### Process intelligence

The signal processing technologies differentiate between the true echo from the material and false echoes from obstructions or electrical noise. The sophisticated software is supported by field data gained from more than a million applications. This in-depth knowledge and experience is built into the software's advanced algorithms to provide intelligent processing of echo profiles. The result is a repeatable, fast, and reliable measurement.

### Radar level measurement with intelligent signal processing

- Non-contacting and low-maintenance
- Microwaves require no carrier medium for precise measurements even under harsh process conditions
- High performance and easy implementation using just a few parameter entries

#### SITRANS LR560 –

The world's first 78 GHz level transmitter

- 2-wire, 78 GHz FMCW for ranges up to 100 m (328 ft)
- Very narrow 4-degree beam angle with 3" lens antenna
- Aiming flanges with purge, easy to install
- Process Intelligence integrated and plug and play performance

#### SITRANS LR250

- 2-wire, 25 GHz pulse radar level transmitter up to a range of 20 m
- For liquids and slurries in storage and process vessels with high temperatures and pressures
- Horns, FEA, HEA and PLA antenna options offer versatility on field applications

#### SITRANS LR200

- 2-wire, 6 GHz pulse radar level transmitter for liquids with a range of up to 20 m
- Ideal for process vessels with turbulence and heavy deposit, as well as with high temperatures and pressures with a range of up to 20 m

### Ultrasonic level measurement

Our market-leading ultrasonic level measurement is an extremely cost-effective solution. The self-cleaning face makes it suitable for harsh environmental conditions. The non-contacting technology is used in numerous industries to monitor liquids, bulk solids, and slurries.

### SITRANS Probe LU240

Cost-effective, compact, intelligent level solution for liquid chemical inventory, monitoring small process vessels, and level monitoring measurement in the environmental industry.

### Level controllers

Our product portfolio of level controllers feature intuitive navigation via the local user interface and are ideal for applications in all industries. Whether you need the world's highest accuracy in your open channels, rugged wet well pump control, or dual point monitoring, Siemens ultrasonics has you covered.

### Echomax transducers

- Fully encapsulated robust ultrasonic transducers for use with Siemens ultrasonic controllers
- Various approvals for use in hazardous applications
- Self-cleaning face for harsh applications with buildup

### Continuous capacitance

Our unique inverse frequency shift approach to capacitance technology ensures accurate, reliable, and repeatable measurements, even in dusty, turbulent, and vaporous environments or in situations with product buildup. Because even a small level change creates a large change in frequency, our instruments provide better resolution and consistently outperform conventional devices. With special features such as Active-Shield technology, they protect the measurement from the effects of moisture, vapors, foam, temperature and pressure variations, and buildup. Together with the modular probe options available on various models, they offer practical solutions to a wide variety of continuous level and interface applications.

### SITRANS LC300 **NEW**

- Ideal for standard and industrial applications in the chemicals, hydrocarbon processing, food and beverage, mining, aggregate, and cement industries

## SITRANS LG series

### Guided wave radar

SITRANS LG guided wave radar transmitter for a range of contact level and interface applications from general to harsh conditions and everything in between. Little to no configuration, you'll be operational in minutes, saving you time and money.

Extreme process conditions don't stand a chance, and these transmitters feature SIL options for applications requiring functional safety. Advanced diagnostics including trending, profiles, and event logging give you the data you need at every step of your process. Rapid response times and advanced echo processing deliver accurate and reliable readings over the full application range, even in small containers and in low dielectric constant material. And with field-replaceable and adjustable probes, if your process changes, your measurement device can, too.

### SITRANS LG240

- For use in hygienic and corrosive applications

### SITRANS LG250

- Highly flexible solution for liquid level and interface applications. Extremely versatile for many applications

### SITRANS LG260

- Ideal for measuring the level in medium-range solids applications, including grains, plastics, and cement

### SITRANS LG270

- Offers configuration options for extreme conditions, including high-temperature and high-pressure applications

### All versions include:

- Automatic buildup adjustment
- Remote display and electronics options
- 2 mm accuracy
- Backlight with full graphic display, top- or side-mountable
- SIL 2/3 approval options
- Field-replaceable probes
- Quick setup wizards
- USB service port option

## Hydrostatic

Low-cost level measurement for direct mounting or mounting with remote seals on tanks and vessels

### SITRANS LH100 and SITRANS P DS III

- Suitable for a wide range of applications in the chemical and petrochemical industries
- Highly resistant to extreme chemical and mechanical loads as well as electromagnetic interference

### Gravimetric (see catalog WT 10)

Gravimetric level measurement with SIWAREX weighing technology offers highly precise measurement without material contact independent of medium temperature, tank shape, built-in parts, or material characteristics.

### SIWAREX WP321 (see catalog WT 10)

- Technology module for the SIMATIC ET 200SP distributed I/O system
- For level measurements in silos and bunkers; convenient and seamless integration of platform scales directly into the automation environment

### Point level detection

We offer you a comprehensive portfolio for extremely reliable and precise point level detection. Our wide selection includes ultrasonic, rotating, and vibrating level switches as well as RF capacitance switches with inverse frequency shift technology that are cost-effective and suitable for point level, interface detection, dry run, and safety back-up applications including bulk solids, liquids, and slurries.

### Vibrating, rotary paddle

- Especially suitable for low bulk density applications
- Ideal for use in harsh and abrasive environments, thanks to their rugged design
- For detecting high, low, and demand levels in solids, liquids, and slurry applications
- A wide variety of configuration options makes them suitable for any environment
- Simple to use with no complicated setup or configuration
- Stainless steel, aluminum, and plastic enclosure options and high-grade steel process connections provide exceptional resistance to mechanical forces, a long service life, and low cost of ownership
- Options for SIL 2/redundant SIL 3

### SITRANS LPS200

- Rotary paddle switch that detects solids with densities as low as 15 g/l
- Motor protection
- SIL 2 certification for best-in-class reliability and performance
- Options for fail-safe rotation monitoring and alarming

### SITRANS LVL100 and LVL200

- Vibrating level switches for liquid and slurry applications, including high, low, and demand level alarms and pump protection
- Wide application range including high temperatures and pressures, hygienic versions, large variety of enclosure materials, SIL 2/redundant SIL 3 options and remote testing

### SITRANS LVS100, LVS200 and LVS300

- Vibrating level switches that detect solids with densities as low as 5 g/l
- Best-in-class sensitivity detection
- Ability to handle and monitor buildup
- Options to detect solids interface within a liquid

### Pointek ULS200 Ultrasonic

- Non-contacting ultrasonic level switch with two switch points
- Ideal for sticky materials and an effective solution for bulk solids, liquids, and slurries

### RF Capacitance

Pointek RF capacitance point level switches measure interfaces, solids, liquids, slurries, and foam. The inverse frequency shift technology provides accurate and reliable measurement results even in dusty, turbulent, and vaporous environments or in applications with product buildup. Small changes in level create large changes in frequency. Consequently, Pointek devices have greater sensitivity and consistently outperform conventional devices. With their rugged aluminum or chemically resistive plastic enclosures and wide variety of process connections, Siemens Pointek switches are compatible with most applications.

### Pointek CLS200 and CLS300

- Suitable for level detection in demanding conditions with high pressures and temperatures
- Suitable for aggressive applications including very high temperatures and pressures
- SIL 2 options
- Smart PROFIBUS versions with digital display
- Remote operation via PROFIBUS for status and function testing
- Remote detection of buildup and monitoring of other process condition changes

### Pointek CLS100

- Suitable for level detection in constricted spaces
- Sensguard protection of probe for harsh and abrasive environments and chemically resistive probe types available
- Compact 2-wire or 4-wire switch

# Always in pole position: SIPART Positioners

As the interface between control system and valves, positioners play an important role in ensuring reliability and optimal performance in process plants around the world. Our proven portfolio with the SIPART PS2 precisely controls the entire range of valves and masters even special tasks with absolute reliability. In addition, we have now introduced our new SIPART PS100 – to precisely meet your application requirements.

SIPART PS100 – easy to use, fast in commissioning and simply robust **NEW**

- One-push initialization: fast commissioning at the push of a button
- Application parameter to select different modes of valve positioning, e.g., exact, fast, on-off, or booster
- Internal non-contacting sensor: non-wearing and vibration-resistant
- Non-corrosive sound absorber for use in harsh environments
- Plain-text display with status icons in accordance with NAMUR NE107 and four operation buttons

### SIPART PS2 – the all-around positioner

The SIPART PS2 has grown to become the most widely used positioner for linear and part-turn actuators. It is constructed to meet a wide variety of requirements:

- Polycarbonate, aluminum, or stainless steel enclosure
- 316L stainless steel enclosure for nearshore, offshore as well as oil and gas applications in hazardous areas
- Ex d explosion-proof version
- Communication via PROFIBUS PA, FOUNDATION Fieldbus, or HART
- Integrated booster option for quick control of large drives
- Low operating costs thanks to minimal air consumption

### SIPART PS2 – more functions, more possibilities

The SIPART PS2 comes with an extensive range of functions and diagnostic capabilities, which we improved even further:

- Optional pressure sensors: improved valve diagnostics and parameter monitoring
- Ready for digitalization: Fast and predictive determination of valve maintenance requirements using the valve monitoring app
- Regular partial stroke tests: ensured movement of emergency shutdown (ESD) valves and other open/close valves in the event of an emergency
- Fail in Place: the valve remains in its last position upon loss of electrical and/or pneumatic power
- Fail Safe: the valve moves to the safety position; also suitable for SIL2 applications
- Valve performance tests (VPT): immediate, on-site assessment of valve maintenance requirements

### Positioner with remote control electronics

- Suitable for use in environmental conditions with high-energy radiation

### Positioner with various external position transmitters

- Easier access to positioner for valves at not easily accessible locations

# Early detection protects your process

Process protection devices can be used as early-warning systems to avoid costly interruptions and breakdowns of equipment. They detect flow problems, blockages, screen faults, machinery slowdowns, or burst filter bags. Their rugged construction makes them impervious to dust, dirt, buildup, and moisture.

**SITRANS AS100** – acoustic sensor used for solids flow detection, featuring a compact, stainless steel construction for harsh environments and non-invasive mounting

- Detection of high-frequency acoustic emissions from friction or the impact of dust, powders, granulates, and other solids
- Signaling of flow/no flow or high/low flow
- Compatible with SITRANS CU02, which processes signals from the sensor
- Provision of relay and analog outputs for connection into a process, or direct connection to a PLC analog output

### Acoustic sensors

Non-invasive acoustic sensors detect inaudible, high-frequency acoustic emissions generated by friction and impact, caused by materials in motion.

#### SITRANS DA400

- Acoustic analyzer for the condition monitoring of oscillating displacement pumps
- Simultaneous and continuous monitoring of up to four independent delivery valves
- Easy system operation and configuration either locally by LCD and keyboard or via PROFIBUS DP/PA

### Motion sensors

Non-contacting motion sensors detect changes in motion and speed of conveying, reciprocating, and rotating machinery.

#### SITRANS WM300 MFA **NEW**

- Motion failure alarm (MFA), differential speed detection (DSD), and non-contacting tachometer (NCT)
- Multiple alarming powered by 4 relays for overspeed or under-speed conditions from the sensors
- Intuitive programming thanks to a simple menu structure, along with an on-board display and push buttons

#### Milltronics MFA 4p

- Plant protection through the detection of absence of motion, as well as underspeed or overspeed conditions
- Probes usable in hazardous, high-temperature, and harsh conditions, thanks to their superior design
- With MSP or XPP probes

#### SITRANS WM100

- For detecting the absence or presence of motion of rotating, reciprocating, and conveying equipment
- Heavy-duty alarm switch

### Process controllers

(see catalog MP 31)

SIPART DR controllers are outstanding thanks to their extreme reliability and ease of use. Various software packages are available to make their handling easy and intuitive and to extend their scope of application. The standard version already offers comprehensive controller hardware that can be upgraded quickly and easily for specific applications by means of a large number of optional input and output modules. Plug-in modules for communications over RS 232/RS 485 or PROFIBUS DP are also available.

### Process recorders

(see catalog MP 20)

SIREC D200, 300, and 400 display recorders are used for continuous monitoring of process quantities, plant maintenance, process optimization, or troubleshooting. Our complete range of process recorders offers state-of-the-art solutions for the most demanding requirements.

# Expand as you go

Integrated communication down to the field level is becoming an increasingly important factor for the success of our customers. Availability of the instruments in automation solutions at all times is necessary to gather information about the state of the plant from existing data, and to derive the correct maintenance measures with regard to time and scope. This is not a problem with our modern solutions. Even proven plants that have been running for many years can be expanded with a small investment in such a way that the most important data is available – not only locally, but with secure worldwide access if required.

**SIMATIC 3010C/RTU3030C** – The compact remote terminal units monitor remote measuring points, even in locations where no power supply exists.

- Easy configuration using a web browser instead of programming
- Flexible power supply from batteries, solar energy, or 24 V DC
- Energy-optimized operation and integrated energy management for connected analog and digital sensors
- Secure communication (TeleControl Basic protocol, SINAUT ST7, DNP3, and IEC 60870-5-104) via the integrated UMTS modem (RTU3030C) or via LAN port (RTU3010C) in addition to a SCALANCE S or SCALANCE M
- Extended temperature range from  $-40\text{ }^{\circ}\text{C}$  to  $+70\text{ }^{\circ}\text{C}$  as well as an optional enclosure meeting the IP68 standard

### Remote digital display

The universal remote digital displays allow remote display of and access to measurement data from a convenient location. Our advanced range of remote displays include options for pump control with communications including HART and Modbus RTU with flexible output options.

#### SITRANS RD100

- Loop-powered display
- Suitable for level, flow, pressure, temperature, and weighing applications
- Can be used in a large variety of environments (low/high temperatures, hazardous areas)
- Simple setup and installation

#### SITRANS RD150 **NEW**

- Remote display for 4 to 20 mA and HART devices
- Easy-to-use basic configuration of HART instruments using HART commands
- Ease of use through the backlit 4-button menu-driven display and flexible mounting options

#### SITRANS RD200 and RD300

- Universal and full-featured versions
- Ideal for flow rate, total, and control applications as well as for use with most field devices
- Data logged and displayed on the PC with the free RD software
- Sunlight-readable display
- Standard serial communications output (Modbus RTU)
- Pump alternation control, linearization and square root and math functions

### WirelessHART components

WirelessHART enables the integration of measuring points that could not be implemented before due to the operating environment or for economic reasons. In addition to the SITRANS TF280 transmitters for temperature measurement and SITRANS P280 for pressure measurement, the SITRANS AW210 and SITRANS AW200 WirelessHART adapters integrate instruments with HART capability as well as analog devices that do not support HART communication. Access to diagnostic data can be implemented with these adapters at low costs in most cases, especially when the control system does not support integrated HART communication.

#### SITRANS AW200

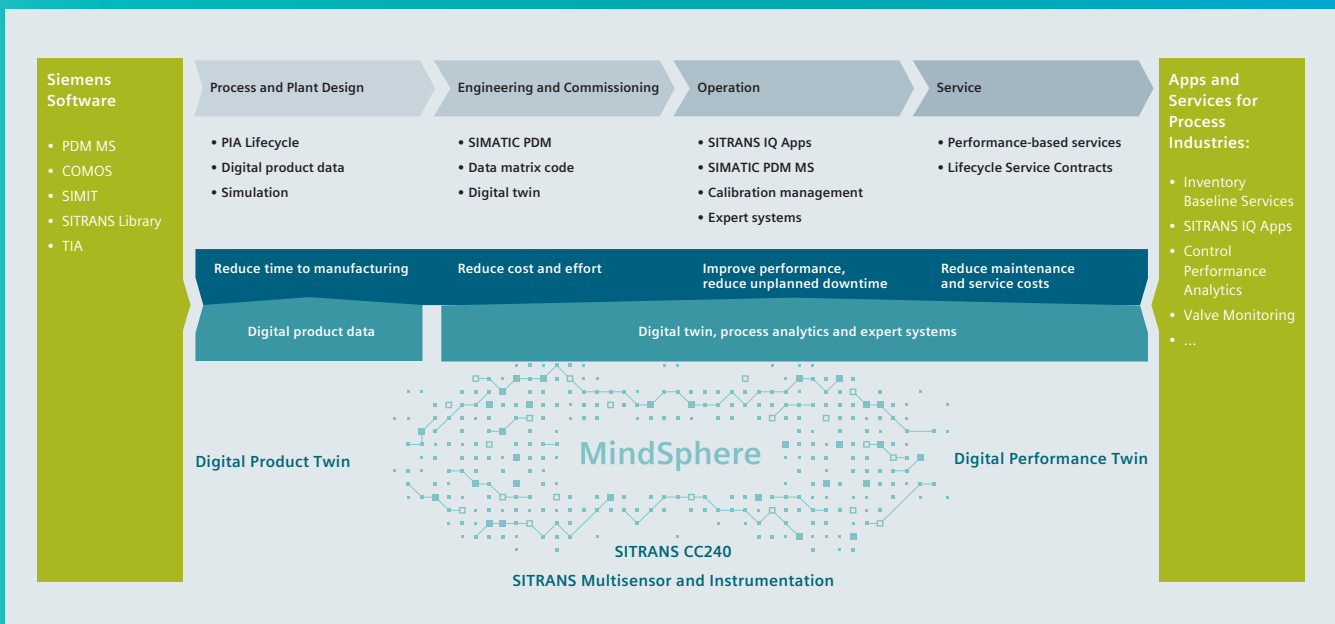

- Connection option of up to four HART devices in multi-drop mode
- Support of 4–20 mA devices without HART
- Power supply of the connected field device via an integrated battery

#### IE/PB Link PN IO

- Can constitute the gateway between PROFINET and PROFIBUS
- From the IO-controller viewpoint, all DP slaves are treated like IO devices with a PROFINET interface
- Use as a data records router for the parameter assignment of field devices via SIMATIC PDM (Process Device Manager) in all plants with PROFIBUS DP

# Digitalize your process

From design and commissioning to operations and performance monitoring – Siemens provides the software, tools, and services for the digitalization of every phase of a plant's lifecycle. End-to-end digitalization from a single source optimizes plant operations to reduce downtime and maximize cost efficiency.

## Siemens supports your digitalization over the entire lifecycle

During each of the main steps of the lifecycle of a plant, Siemens supports you with a set of software tools, apps, and services in order to improve the uptime and performance of your plant while reducing your maintenance and service costs.

## Process and plant design

In order to support you while designing the plant, Siemens Instrumentation provides you with ample information via its PIA Portal ([www.pia-portal.automation.siemens.com](http://www.pia-portal.automation.siemens.com)). When using engineering tools like COMOS, all digital product data can be imported directly. And if you are using SIMIT to train your staff, the process instrumentation is certainly included with simulation objects.

### Engineering

When using state-of-the-art process automation like PCS 7, engineering is made easy with the SIMATIC PCS 7 Industry Library and especially the SITRANS Library for Field Instruments. Here, the faceplates provide the full potential of the instrumentation.

### Commissioning and operation

New plants usually have communication down to the field level with HART, PROFIBUS, or PROFINET, ensuring transparency of secondary data of the field devices. Stand-alone or integrated parameterization tools like SIMATIC PDM are able to access or forward this data for further processing in apps, with no disruption to plant operations. They allow an upload or download of parameter assignments during commissioning of field devices based on an always-synchronized, central database and known network topology.

### Service

In the future, monitoring of plant assets via Siemens Apps, such as SITRANS SAM IQ – Smart Asset Management, will allow the plant operator to pinpoint service needs and to make plant maintenance more efficient, thus reducing costs and increasing uptime. In addition, many support services are available, such as QR codes on each PI device, which allow you to easily download the specific information of an instrument on site.

Contact our experts directly for assistance with data troubleshooting and other services.

# Online support for customers with SIOS and the industry support app

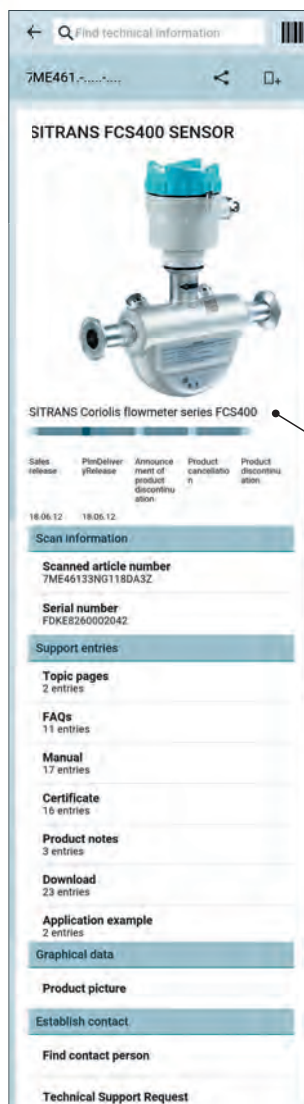

Access to accurate information is a huge asset in the field. Siemens Industry Online Support (SIOS) provides up-to-date information about specific products quickly and easily. Available in the online portal or in the downloadable smartphone app for maximum convenience.

## SIOS Portal

24 hrs a day, 365 days a year – this portal provides comprehensive information on the entire portfolio of Siemens for process and discrete industries. Find information on automation, communication, and process instrumentation under:

- Product support: handbooks, manuals, FAQ, product notes, certificates
- Services: the service portfolio
- Support request: help – just state your issue and we will contact you within 4 working hours
- My support: activate notifications according to your needs

## Industry Support App

- Download and install the app on your smartphone
- Scan the QR code of any device in the field
- Access comprehensive information including device-specific information like handbooks, Manuals, FAQ, product notes
- Submit a support request and we will contact you within 4 working hours (even quicker with a premium service contact)

# Integrated tools for engineering efficiency

Empower your data! Clever, integrated tools and solutions such as COMOS and SIMIT let you take control – and greatly increase the efficiency of processing and manufacturing plants.

## PIA Lifecycle Portal

This portal helps you select, size and configure your ideal piece of instrumentation.

Interfaces to COMOS and exports to the online ordering portal of Siemens: the Industry Mall ([mall.industry.siemens.com](http://mall.industry.siemens.com))

You are able to track the lifecycle of your instrument, see warranty and extended exchange option information as well additional information such as factory certificates (e.g., for calibration or validation).

## COMOS

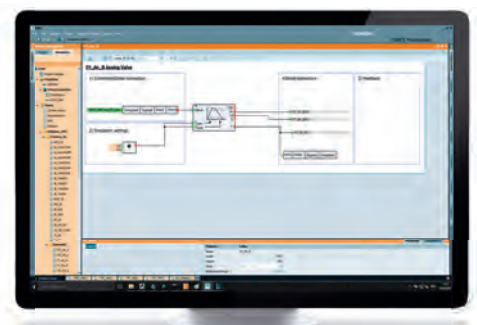

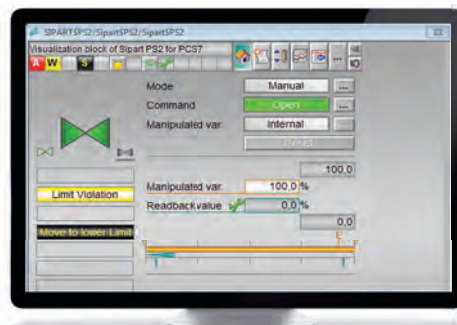

COMOS is the engineering tool from Siemens for the entire lifecycle of your plant. With the direct integration of our PIA Lifecycle Portal we guarantee the seamless integration of our field devices in the engineering environment. We can offer field devices best suited to your processes, properties, and measuring requirements.

## SIMIT

The simulation platform SIMIT enables comprehensive tests of automation applications and provides a realistic training environment for operators even before the real startup. This creates opportunities for process optimization and know-how retention which results in reduced commissioning time and significantly shortened time-to-market.

## SITRANS Library

- Easy use of device-specific functions and data from devices of the SITRANS and SIPART product families, such as dosing or totalizer functions in solutions with SIMATIC PCS 7
- Library with device-specific function blocks, block symbols, and faceplates
- Fully compatible with SIMATIC PCS 7 Standard Advanced Process Library (APL) through the entire lifecycle, from engineering to running of the plant

# SITRANS IQ **NEW**

Our digital field device platform for performance, efficiency, and less downtime across the lifecycle

## SITRANS field devices

The full portfolio of flow, temperature, pressure and level, as well as weighing and pneumatic valve positioners is well established in many industries. Reliable and accurate, they measure the primary measurement value and often provide secondary data which allows you to assess e.g. the status of a valve.

Multisensors will in future also detect additional non-cyclic information like vibration, temperature or magnetism, for example. Some instruments such as the MAG 8000 even send their data directly using mobile networks.

Connectivity down to the field devices is not given in the majority of the brownfield plants. Therefore connectivity elements will allow you to access the stranded data below to the classic, non-transparent I/O modules of older automation systems. SITRANS CC240 will in future allow to access these stranded HART data.

And last but not least, the Remote Terminal Unit RTU3041c will collect measurement data from highly distributed remote measurements and send it via encrypted e-mail to a SITRANS serve IQ – that forwards the collected measurement data into SCADA Systems or APPs.

## SITRANS IQ Apps

Data connectivity via SIMATIC PDM Maintenance Station or SITRANS CC240 allows you to collect stranded data from the field. But deriving value from the data, recognizing patterns or even predict potential failures is a challenge.

With co-creating customers, Siemens is developing apps that support you in monitoring your plant. These apps provide life lists, inform you when devices have been changed. They visualize patterns, monitor limits (e.g. wear), and much more.

## Digital Services

If the app detects an issue, an expert is easily available to support you. They are ready to remotely analyze the data together with your plant operators and service staff. And if requested, they are ready to support you with further services.

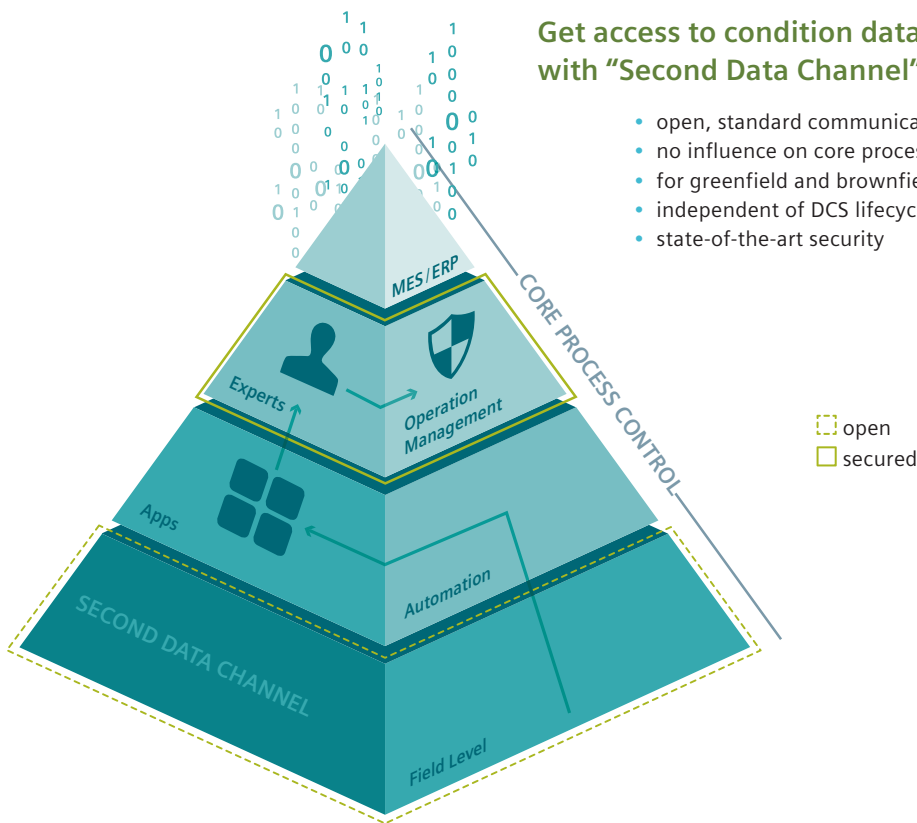

# NAMUR Open Architecture will enable new business cases in MRO applications

The open architecture and second communication channel allow innovative solutions for new and existing plants to be implemented quickly while leaving the process control core unaffected.

## Get access to condition data with "Second Data Channel"

- open, standard communication
- no influence on core process
- for greenfield and brownfield
- independent of DCS lifecycle
- state-of-the-art security

## Process instrumentation as part of core process control

The instrumentation is the source of all information to run your plant efficiently and safely. Instruments are your eyes and ears in the plant. To bring this information to the automation systems, PI runs on many different communication standards, from very cost-effective 4-to-20mA-only devices, to HART communication, PROFIBUS and in future also PROFINET devices.

## Process instrumentation as part of monitoring and optimization

The core process instrumentation measures the critical values to run your application like e.g. flow, temperature, pressure, level. But also their secondary KPIs contain valuable information on e.g. the degradation of valves or temperatures of the transmitter electronics.

## Multisensors as part of the monitoring and optimization

The multisensors measure indirect values such as vibration, and other. They usually monitor the state of selected assets and are outside the core automation pyramid. By recognizing deviations of the machines, valves, and the plant itself in daily operation, multisensors are able to predict potential failures or necessary maintenance of the plant in time. This leads to better planning of the maintenance process and a reduction in unplanned shutdowns.

## Information model and security

It is absolutely essential, while collecting data from the plant, that the automation and process control remain untouched. The security must be incorporated by design. Likewise, any insights and possible optimization measures are reviewed by experts and the plant operator, before being fed back into the automation – it is always the plant operator who is in control.

## Apps

Siemens is developing its apps within the framework of Digitalization Enterprise Labs, ensuring a consistent framework of state-of-the-art functionality for all Siemens apps.

As our automation works seamlessly with all instrumentation available on the market, apps like Valve Monitoring and SITRANS SAM IQ – Smart Asset Management cover your entire installed base (though we would prefer, you would choose Siemens in the first place).

# Our services support you

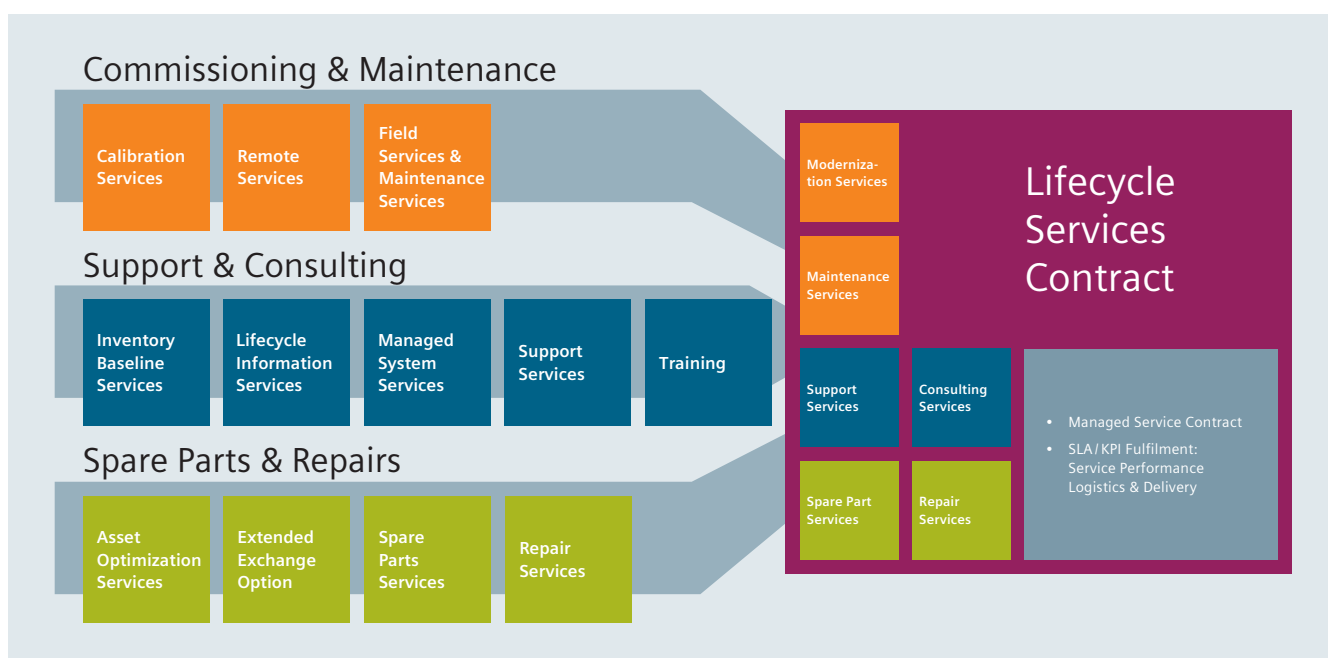

To thrive in today's competitive markets, industrial companies must extract maximum value from their assets. Our extensive range of services provide customers with the tools and knowledge they need to minimize lifecycle costs while increasing performance. Thanks to our dedicated service people all around the world, we can deliver the services you need tailored to the individual challenges of your industry.

The Industry Services portfolio includes corrective, preventive, predictive services – as well as Digital Industry Services – through the entire lifecycle of products, machines, and plants. Whether making system states transparent or reliably monitoring machines and plants while also protecting them with security concepts, Siemens Industry Services enables your machines and plants to perform at their best.

# Industry Services for process instrumentation

In the process industries, communication with field devices is key to managing costs while ensuring safety, security, and quality. The comprehensive and modular range of Industry Services for Process Instrumentation from Siemens provides valuable tools for optimizing operations and protecting the long-term viability of your plant.

## Commissioning and maintenance

Commissioning and maintaining field instruments is time-consuming, labor-intensive, and – depending on whether it's performed inside or outside explosion-risk zones – involves a substantial outlay. In addition, the ever-growing demands for IT security play an increasingly important role. Our range of on-site services, platform-based remote services, and comprehensive calibration services support you in all your activities, from engineering and commissioning to maintenance.

## Support and consulting

Siemens' Inventory Baseline Services and Lifecycle Information Services provide convenient and powerful portfolio elements for your installed base. We offer a comprehensive training program for design, operation and maintenance personnel that can take place either at the Siemens Training Center or on your premises. Managed System Services are focused on the efficient, centrally coordinated processing of complex support requests. They not only make all service and support activities transparent, they also significantly reduce service time.

## Spare parts and repairs

Asset Optimization Services take a structured, systematic approach to the comprehensive optimization of your supply of spare parts. With the Extended Exchange Option, you can protect any Siemens process instrumentation products you order from unforeseeable repair costs.

## Lifecycle services contracts

A modular lifecycle services contract is composed of defined service elements and contract-specific parameters. Long-term investment protection and the assurance of serviceability are the essential benefits of a contract solution.

# Remotely assisted by experts – in real time and wherever you are

Our Remote Services for Process Instrumentation ensure optimal reactive support for all the field devices used. Remote access is via Siemens' own IT infrastructure (cRSP = common Remote Service Platform). Our offering guarantees smooth commissioning, rapid troubleshooting, and comprehensive consulting related to your field devices, control loops, and plant.

## Maintenance

- Maintenance is generally covered by inspection and maintenance services according to DIN 31051:
  - such as inspecting the field instrument's condition for a transparent view of the system status and implementation of preventive measures

## Parameterization

- SIMATIC Process Device Manager
- Professional software for parameter assignment, visualization, or error tracing for every kind of instrumentation – either from Siemens or any other supplier
- The same usability – no matter whether you access the device on site or remotely from the engineering station
- In use worldwide for more than a decade

## Commissioning

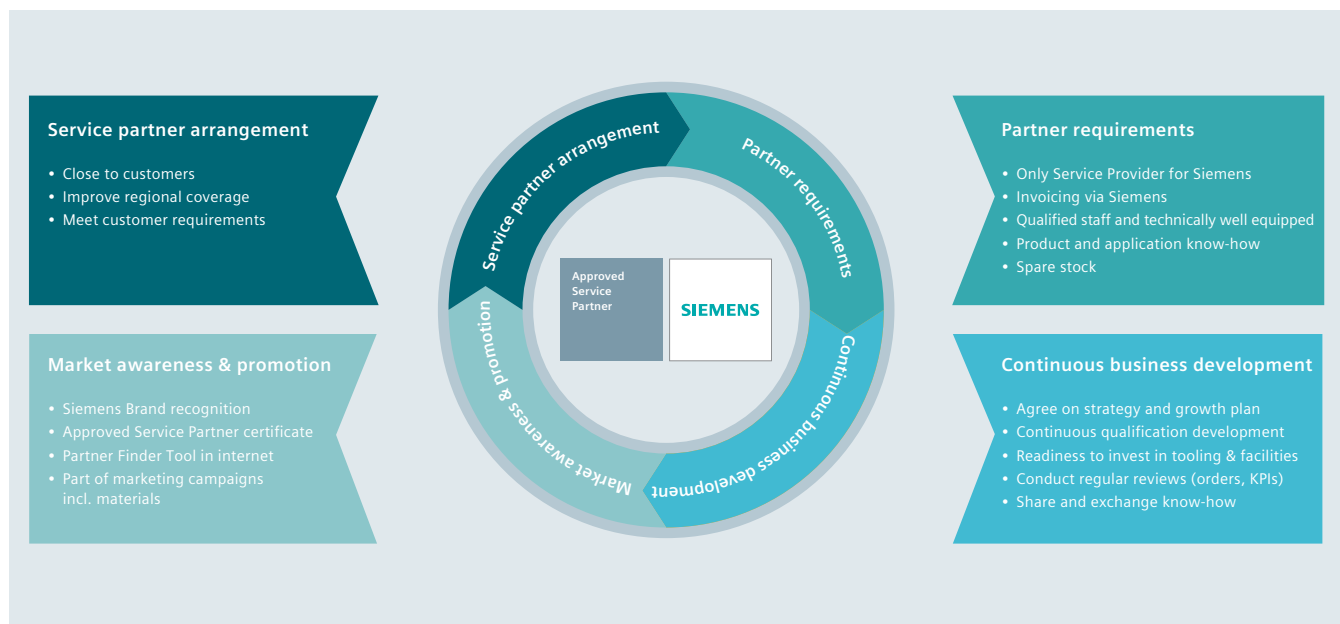

- Service Tablet PC SIPIX SD
- Siemens common Remote Service Platform (cRSP)
- High-performance industry tablet PCs
- Designed for use in harsh industrial environments
- ATEX approval for Zone 1 and Zone 2
- Configured with all necessary service applications, for Siemens and all common foreign devices
- Access via HART Bluetooth Modem or HART USB cable
- A graduated security and access concept, secure and monitored communication
- Absence of feedback effects thanks to the separation of the different networks (DMZ). Compatibility with general industrial security concepts, certification under ISO 27001 / CERT

## Your benefit

- Reliable access to your process instrumentation
- Safe access either at the device directly or from the first remote I/O
- Fast and worldwide availability of expert know-how directly from the product manufacturer
- Technical assistance also during the configuration, commissioning, and maintenance phases

# Approved and certified partners – near you

Siemens partners stand for proven expertise and excellent customer support. The companies we accept as partners have proven their capabilities and been certified in accordance with rigorous standards. At the same time, we support our partners with the same criteria we apply to the training of our own employees.

## Role of partners

- Act as a competent service delivery on behalf of Siemens
- Regional on-site support
- Bring expertise and service capability
- Together with Siemens secure ongoing development of new service offerings
- Win new service customers

## Siemens delivers quality

- Based on shared interest (Siemens and partner)
- Partners attend Siemens training programs on a regular basis
- Build on existing long-term relationships between Siemens and partners
- An extensive certification process ensures that Siemens requirements for competence profile and tooling are maintained

## Your benefits

- Competent service delivery
- Close to customers (short reaction time)
- Fast access to critical spares (partner stock)
- Increased flexibility
- Partners typically enjoy a high degree of regional acceptance

## Pressure Measurement

1/3 **Product overview****Single-range transmitters for general applications**

- 1/6 SITRANS P200 for gauge and abs. pressure
- 1/12 SITRANS P210 for gauge pressure
- 1/17 SITRANS P220 for gauge pressure  
Transmitter for hydrostatic level
- 1/23 - SITRANS LH100
- 1/28 - SITRANS LH300
- 1/34 SITRANS P Compact for gauge and absolute pressure

**Pressure transmitters for food, pharmaceuticals and biotechnology**

- 1/43 SITRANS P300 for gauge and abs. pressure
- 1/65 SITRANS P300 Accessories/Spare parts
- 1/66 SITRANS P300 - Factory-mounting of valve manifolds on transmitters

**Pressure transmitters for gauge pressure for the paper industry**

- SITRANS P300 and DS III for gauge pressure with PMC connection
- 1/68 Technical description  
Technical specifications, ordering data, dimensional drawings
- 1/73 - SITRANS P DS III with PMC connection
- 1/79 - SITRANS P300 with PMC connection

**Pressure transmitters for applications with advanced requirements (Advanced)**SITRANS P320/420

- 1/86 Technical description  
Technical specifications, ordering data, dimensional drawings
- 1/91 - for gauge pressure (pressure series)
- 1/100 - for gauge pressure (differential pressure series)
- 1/109 - for gauge and absolute pressure, flush-mounted diaphragm
- 1/121 - for absolute pressure (pressure series)
- 1/129 - for absolute pressure (differential pressure series)
- 1/138 - for differential pressure and flow
- 1/152 - for level

SITRANS P DS III

- 1/166 Technical description  
Technical specifications, ordering data, dimensional drawings
- 1/173 - for gauge pressure
- 1/183 - for gauge and absolute pressure with front-flush diaphragm
- 1/196 - for absolute pressure (from gauge pressure series)
- 1/206 - for absolute pressure (from differential pressure series)
- 1/217 - for differential pressure and flow
- 1/233 - for level
- 1/247 Accessories/Spare parts
- 1/253 Factory-mounting of valve manifolds on transmitters
- 1/257 SITRANS P410  
Technical description  
Technical specifications, ordering data, dimensional drawings
- 1/263 - for gauge pressure
- 1/275 - for differential pressure and flow
- 1/294 Accessories/Spare parts

**Pressure transmitters for applications with highest requirements (Premium)**SITRANS P500

- 1/297 Technical description  
Technical specifications, ordering data, dimensional drawings
- 1/297 - for differential pressure and flow
- 1/310 - for level
- 1/319 Accessories/Spare parts
- 1/321 Factory-mounting of valve manifolds on transmitters

### Remote seals for pressure transmitters

#### SITRANS P320/420

- 1/324 Technical description
- Diaphragm seals of sandwich design
- 1/338 - with flexible capillary
- Diaphragm seals of flange design
- 1/345 - with flexible capillary
- 1/353 - mounted directly on transmitter
- 1/360 - mounted directly and with capillary
- Diaphragm seal, screwed design
- 1/367 - mounted directly or/and with capillary
- 1/372 Quick-release diaphragm seals
- 1/377 Miniature diaphragm seals
- 1/379 Inline seals in sandwich design
- 1/385 Quick-release inline seals
- 1/390 Flushing rings for diaphragm seals
- 1/395 Measuring setups
- 1/396 - with remote seals
- 1/398 - without remote seals

#### SITRANS P300, P DS III, P410, P500

- 1/401 Technical description
- Diaphragm seals of sandwich design
- 1/414 - with flexible capillary
- Diaphragm seals of flange design
- 1/420 - with flexible capillary
- 1/427 - mounted directly on transmitter
- 1/432 - mounted directly and with capillary
- Diaphragm seal, screwed design
- 1/438 - mounted directly or/and with capillary
- 1/442 Quick-release diaphragm seals
- 1/448 Miniature diaphragm seals
- 1/450 Inline seals in sandwich design
- 1/455 Quick-release inline seals
- 1/459 Flushing rings for diaphragm seals
- 1/464 Measuring setups
- 1/465 - with remote seals
- 1/467 - without remote seals

### Fittings

- 1/470 Technical description
- 1/471 Selection aid
- Shut-off valves for gauge and absolute pressure transmitters
- 1/473 - Shut-off valves to DIN 16270, DIN 16271 and DIN 16272
- 1/475 - Angle adapter
- 1/476 - Shut-off valves/Double shut-off valves
- 1/478 - Accessories for shut-off valves/double shut-off valves
- Shut-off valves for differential pressure transmitters
- 1/479 - 2-, 3- and 5-spindle valve manifolds DN 5
- 1/482 - Multiway cocks PN 100
- 1/484 - 3-way and 5-way valve manifolds DN 5
- 1/487 - 3-way valve manifold DN 8
- 1/490 - Valve manifold combination DN 5/DN 8
- 1/492 - Valve manifold combination DN 8
- 1/494 - 2-, 3- and 5-spindle valve manifolds for protective box
- 1/498 - 3- and 5-spindle valve manifold for vertical angular diff. pressure lines
- 1/501 - Low-pressure multiway cock
- 1/503 Accessories

You can download all instructions, catalogs and certificates for SITRANS P free of charge at the following Internet address: [www.siemens.com/sitransp](http://www.siemens.com/sitransp)

### Overview

### Supplied product documentation on DVD and safety instructions

The scope of delivery of the Siemens products for process instrumentation includes a multilingual instruction sheet with **safety instructions** as well as a uniform **mini DVD – Process Instrumentation and Weighing Systems**.

This DVD contains the most important manuals and certificates for the Siemens process instrumentation and weighing technology portfolio. The delivery may also contain product-specific or order-specific printed materials.

For additional information, refer to the Annex on page 10/3.

## Pressure Measurement

Pressure transmitters

Single-range transmitters for general applications

### SITRANS P200 for gauge and absolute pressure

1

#### Overview

The SITRANS P200 pressure transmitter measures the gauge and absolute pressure of liquids, gases and vapors.

- Ceramic measuring cell
- Gauge and absolute measuring ranges 1 to 60 bar (15 to 1000 psi)
- For general applications

#### Benefits

- High measuring accuracy
- Rugged stainless steel enclosure
- High overload withstand capability
- For aggressive and non-aggressive media
- For measuring the pressure of liquids, gases and vapors
- Compact design

#### Application

The SITRANS P200 pressure transmitter for gauge and absolute pressure is used in the following industrial areas:

- Mechanical engineering
- Shipbuilding
- Power engineering
- Chemical industry
- Water supply

#### Design

##### **Device structure without explosion protection**

The pressure transmitter consists of a piezoresistive measuring cell with a diaphragm installed in a stainless steel enclosure. It can be used with a connector per EN 175301-803-A (IP65), a device plug M12 (IP67), a cable (IP67) or a Quickon cable quick screw connection (IP67) connected electrically. The output signal is between 4 and 20 mA or 0 and 10 V.

##### **Device structure with explosion protection**

The pressure transmitter consists of a piezoresistive measuring cell with a diaphragm installed in a stainless steel enclosure. It can be used with a connector per EN 175301-803-A (IP65) or a device plug M12 (IP67) connected electrically. The output signal is between 4 and 20 mA.

#### Function

The pressure transmitter measures the gauge and absolute pressure of liquids and gases as well as the level of liquids.

##### **Mode of operation**

SITRANS P200 pressure transmitters (7MF1565-...), functional diagram

The ceramic measuring cell has a thick-film resistance bridge to which the operating pressure  $p$  is transmitted through a ceramic diaphragm.

The voltage output from the measuring cell is converted by an amplifier into an output current of 4 to 20 mA or an output voltage of 0 to 10 V DC.

The output current and voltage are linearly proportional to the input pressure.

### Technical specifications

## Pressure Measurement

Pressure transmitters

Single-range transmitters for general applications

### SITRANS P210 for gauge pressure

1

#### Overview

The pressure transmitter SITRANS P210 measures the gauge pressure of liquids, gases and vapors.

- Stainless steel measuring cell
- Measuring ranges 100 to 600 mbar (1.45 to 8.7 psi) relative
- For low-pressure applications

#### Benefits

- High measuring accuracy
- Rugged stainless steel enclosure
- High overload withstand capability
- For aggressive and non-aggressive media
- For measuring the pressure of liquids, gases and vapors
- Compact design

#### Application

The pressure transmitter SITRANS P210 for gauge pressure is used in the following industrial areas:

- Mechanical engineering
- Shipbuilding
- Power engineering
- Chemical industry
- Water supply

#### Design

##### **Device structure without explosion protection**

The pressure transmitter consists of a piezoresistive measuring cell with a diaphragm installed in a stainless steel enclosure. It can be used with a connector per EN 175301-803-A (IP65), a device plug M12 (IP67), a cable (IP67) or a Quickon cable quick screw connection (IP67) connected electrically. The output signal is between 4 and 20 mA or 0 and 10 V.

##### **Device structure with explosion protection**

The pressure transmitter consists of a piezoresistive measuring cell with a diaphragm installed in a stainless steel enclosure. It can be used with a connector per EN 175301-803-A (IP65) or a device plug M12 (IP67) connected electrically. The output signal is between 4 and 20 mA.

#### Function

The pressure transmitter measures the gauge pressure of liquids and gases as well as the level of liquids.

##### **Mode of operation**

SITRANS P210 pressure transmitters (7MF1566-...), functional diagram

The stainless steel measuring cell has a thin-film resistance bridge to which the operating pressure  $p$  is transmitted through a stainless steel diaphragm.

The voltage output from the measuring cell is converted by an amplifier into an output current of 4 to 20 mA or an output voltage of 0 to 10 V DC.

The output current and voltage are linearly proportional to the input pressure.

## Overview

The pressure transmitter SITRANS P220 measures the gauge pressure of liquids, gases and vapors.

- Stainless steel measuring cell, fully welded
- Measuring ranges 2.5 to 1000 bar (36.3 to 14500 psi) relative
- For high-pressure applications and refrigeration technology division

## Benefits

- High measuring accuracy
- Rugged stainless steel enclosure
- High overload withstand capability
- For aggressive and non-aggressive media
- For measuring the pressure of liquids, gases and vapors
- Compact design
- Gasket-less

## Application

The pressure transmitter SITRANS P220 for gauge pressure is used in the following industrial areas:

- Mechanical engineering
- Shipbuilding
- Power engineering
- Chemical industry
- Water supply

## Design

### Device structure without explosion protection

The pressure transmitter consists of a piezoresistive measuring cell with a diaphragm installed in a stainless steel enclosure. It can be used with a connector per EN 175301-803-A (IP65), a device plug M12 (IP67), a cable (IP67) or a Quickon cable quick screw connection (IP67) connected electrically. The output signal is between 4 and 20 mA or 0 and 10 V.

### Device structure with explosion protection

The pressure transmitter consists of a piezoresistive measuring cell with a diaphragm installed in a stainless steel enclosure. It can be used with a connector per EN 175301-803-A (IP65) or a device plug M12 (IP67) connected electrically. The output signal is between 4 and 20 mA.

## Function

The pressure transmitter measures the gauge pressure of liquids and gases as well as the level of liquids.

### Mode of operation

SITRANS P220 pressure transmitters (7MF1567-...), functional diagram

The stainless steel measuring cell has a thick-film resistance bridge to which the operating pressure  $p$  is transmitted through a stainless steel diaphragm.

The voltage output from the measuring cell is converted by an amplifier into an output current of 4 to 20 mA or an output voltage of 0 to 10 V DC.

The output current and voltage are linearly proportional to the input pressure.

Connection with current output and connector per EN 175301 (Ex)

Connection with current output and device plug M12x1 (Ex)

## Overview

The pressure transmitter SITRANS LH100 is a submersible sensor for hydrostatic level measurement.

The pressure transmitter measures the liquid levels in tanks, containers, channels and dams. The SITRANS LH100 pressure transmitters are available for various measuring ranges and with explosion protection as an option.

A junction box and a cable hanger are available as accessories for simple installation.

## Benefits

- Compact design
- Simple installation
- Small error in measurement (0.3 %)
- Degree of protection IP68

## Application

SITRANS LH100 pressure transmitters are used in the following branches, for example:

- Shipbuilding
- Water/waste water supply
- For use in unpressurized/open vessels and wells

## Design

The pressure transmitter has a built-in ceramic sensor which is equipped with a Wheatstone resistance bridge.

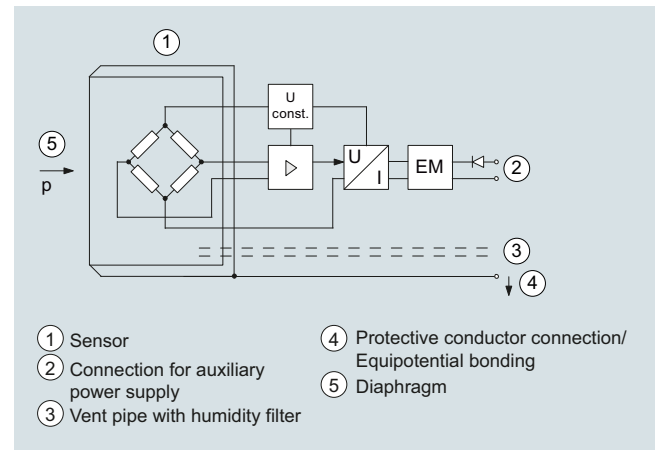

These pressure transmitters are equipped with an electronic circuit fitted together with the sensor in a stainless steel enclosure. In addition, the connecting cable contains a vent pipe which is equipped with a humidity filter to prevent the build-up of condensation.

The diaphragm is protected against external influences by a protective cap.

The sensor, the electronics and the connecting cable are housed in an enclosure with small dimensions.

The pressure transmitter is temperature-compensated for a wide temperature range.

## Function

SITRANS LH100 pressure transmitter, mode of operation and connection diagram

On one side of the sensor (1), the diaphragm (5) is exposed to the hydrostatic pressure which is proportional to the submersion depth. This pressure is compared with atmospheric pressure. Pressure compensation is carried out using the vent pipe (3) in the connecting cable. The vent pipe is equipped with a humidity filter which prevents the build-up of condensation in the vent pipe.

The hydrostatic pressure of the liquid column acts on the diaphragm of the sensor and transmits the pressure to the Wheatstone resistance bridge in the sensor.

The output voltage of the sensor is applied to the electronic circuit where it is converted into an output current of 4 to 20 mA.

The protective conductor connection/equipotential bonding (4) is connected to the enclosure.

## Integration

It is generally recommended that the connecting cable of the SITRANS LH100 transmitter is connected to the cable box, which can be ordered separately, and secured with the anchoring clamp, also available separately. The junction box has to be installed near the measuring point.

If the medium is anything other than water, it is also necessary to check compatibility with the specified materials of the transmitter.

## Dimensional drawings

SITRANS LH100 pressure transmitter, dimensions in mm (inch)

Junction box, dimensions in mm (inch)

Cable hanger, dimensions in mm (inch)

## More information

**Establishing the measuring range for water as process medium**

Calculation of the measuring range:

$$p = \rho \times g \times H$$

with:

 $\rho$  = density of medium $g$  = local acceleration due to gravity $H$  = maximum level

Example:

Medium: Water,  $\rho = 1\,000 \text{ kg/m}^3$ Acceleration due to gravity:  $9.81 \text{ m/s}^2$ 

Lower range value: 0 m

Maximum level: 6.0 m

Cable length: 10 m

Calculation:

$$p = 1\,000 \text{ kg/m}^3 \times 9.81 \text{ m/s}^2 \times 6.0 \text{ m}$$

$$p = 58\,860 \text{ N/m}^2$$

$$p = 589 \text{ mbar}$$

Transmitter to be ordered:

**7MF1572-1FA10**

Plus, if required, junction box 7MF1572-8AA and cable hanger 7MF1572-8AB

## Pressure Measurement

Pressure transmitters

Single-range transmitters for general applications

### SITRANS LH300 Transmitter for hydrostatic level

1

#### Overview

The pressure transmitter SITRANS LH300 is a submersible sensor for hydrostatic level measurement with cap made of PPE (left), stainless steel (mid) and ETFE (right).

The pressure transmitter measures the liquid levels in tanks, containers, channels and dams. The SITRANS LH300 pressure transmitters are available for various measuring ranges and with explosion protection as an option.

A junction box and a cable hanger are available as accessories for simple installation.

#### Benefits

- Compact design
- Simple installation
- Small error in measurement (0.15 % typical)
- Degree of protection IP68

#### Application

SITRANS LH300 pressure transmitters are used in the following branches, for example:

- Shipbuilding
- Water/waste water supply
- Drinking water facilities
- For use in unpressurized/open vessels and wells
- Desalination plants

#### Design

The pressure transmitter has a built-in ceramic sensor which is equipped with a Wheatstone resistance bridge.

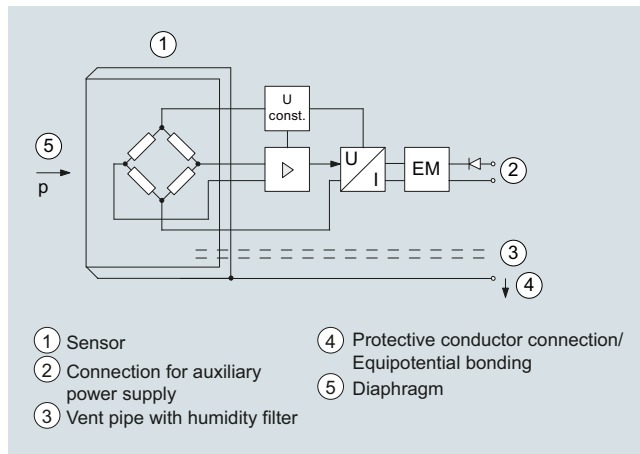

These pressure transmitters are equipped with an electronic circuit fitted together with the sensor in a stainless steel enclosure. In addition, the connecting cable contains a vent pipe which is equipped with a humidity filter to prevent the build-up of condensation.

The diaphragm is protected against external influences by a protective cap.

The sensor, the electronics and the connecting cable are housed in an enclosure with small dimensions.

The pressure transmitter is temperature-compensated for a wide temperature range.

#### Function

SITRANS LH300 pressure transmitter, mode of operation and connection diagram

On one side of the sensor (1), the diaphragm (5) is exposed to the hydrostatic pressure which is proportional to the submersion depth. This pressure is compared with atmospheric pressure. Pressure compensation is carried out using the vent pipe (3) in the connecting cable. The vent pipe is equipped with a humidity filter which prevents the build-up of condensation in the vent pipe.

The hydrostatic pressure of the liquid column acts on the diaphragm of the sensor and transmits the pressure to the Wheatstone resistance bridge in the sensor.

The output voltage of the sensor is applied to the electronic circuit where it is converted into an output current of 4 to 20 mA.

The protective conductor connection/equipotential bonding (4) is connected to the enclosure.

#### Integration

It is generally recommended that the connecting cable of the SITRANS LH300 transmitter is connected to the cable box, which can be ordered separately, and secured with an anchoring clamp, also available separately. The cable plug is to be installed near the measuring point, but outside the medium.

Likewise, in the case of media other than water the compatibility with the specified materials of the transmitter, cable and seal must be checked.

Junction box 7MF1575-8AA, open, schematic diagram

## More information

**Determination of the measuring range for medium water**

Calculation of the measuring range:

$$p = \rho \times g \times H$$

with:

 $\rho$  = density of medium $g$  = local acceleration due to gravity $H$  = maximum level

Example:

Medium: Water,  $\rho = 1\,000 \text{ kg/m}^3$ Acceleration due to gravity:  $9.81 \text{ m/s}^2$ 

Lower range value: 0 m

Maximum level: 6.0 m

Cable length: 10 m

Calculation:

$$p = 1\,000 \text{ kg/m}^3 \times 9.81 \text{ m/s}^2 \times 6.0 \text{ m}$$

$$p = 58\,860 \text{ N/m}^2$$

$$p = 589 \text{ mbar}$$

Transmitter to be ordered:

**7MF1575-1FA10**

Plus, if required, junction box 7MF1575-8AA and cable hanger 7MF1575-8AB

## Pressure Measurement

Pressure transmitters

Single-range transmitters for general applications

### SITRANS P Compact for gauge and absolute pressure

1

#### Overview

The SITRANS P Compact pressure transmitter is designed for the special requirements of the food, pharmaceutical and biotechnology industries.

The use of high-grade materials guarantees compliance with hygiene regulations.

Particular value has been placed on a high surface quality. The system can be electropolished in addition.

A further important feature is the hygiene-based design of the process connection by means of various aseptic connections.

The completely welded stainless steel enclosure can be designed up to degree of protection IP67.

Using appropriate thermal decouplers, the SITRANS P Compact pressure transmitter can be used for process temperatures up to 200 °C (392 °F).

#### Benefits

- Measuring ranges from 0 to 160 mbar (0 to 2.32 psi) to 0 to 40 bar (0 to 580 psi)
- Linearity error including hysteresis < +0.2 % of the end value
- Piezo-resistive measurement system, vacuum-proof and overload-proof
- Hygiene-based design according to EHEDG, FDA and GMP recommendations
- Material and surface quality according to hygiene requirements
- Wetted parts made of stainless steel; completely welded
- Signal output 4 to 20 mA (0 to 20 mA as option)
- Stainless steel enclosure with degree of protection IP65 (IP67 as option)
- Process temperature up to 200 °C (392 °F)
- Explosion protection II 2G Ex [ib] IIC T6 to ATEX
- Easy and safe to clean

#### Application

The SITRANS P Compact pressure transmitter is designed for the special requirements of the food, pharmaceutical and biotechnology industries.

The use of high-grade materials guarantees compliance with hygiene regulations.

The SITRANS P Compact pressure transmitter is available in many versions. Exact adaptation of the pressure transmitter to conditions at the place of use is thus possible

#### Design

The electronics is potted to protect it against moisture, corrosive atmospheres and vibration.

#### Notes on operating the pressure transmitter

##### Compensation of internal atmospheric pressure

Compensation of the internal atmospheric pressure of the SITRANS P Compact pressure transmitters is performed as follows:

- in the plug versions by means of the screwed gland (IP65)
- in the field enclosures by means of an integral sintered filter (IP65) or a vented cable (IP67)
- in versions with cable outlet by means of a vented cable (IP67)

In the absolute pressure range there is no need for compensation with respect to atmospheric pressure.

**Note:** These degrees of protection are only achieved under the following conditions:

- if the pressure transmitter is installed correctly
- if the screwed glands are securely tightened
- if the cable diameters agree with the nominal diameters of the gaskets in the enclosure

**Note:** The integral EMC measures are only effective if the earth connection is made correctly.

##### CE marking

The CE marking of the pressure transmitter certifies compliance with the guidelines of the European Council (9/336/EC), the EMC law (13.11.1992), as well as the applicable generic standards.

Interference-free operation in systems and plants is achieved only if the specifications for shielding, earthing, cable routing and electrical isolation are observed during installation and assembly.

##### Hazardous areas

**Note:** Electrical equipment in hazardous areas must only be installed and operated by trained personnel.

Modifications to units and connections result in cancellation of the explosion protection and guarantee.

With intrinsically-safe circuits, make sure that equipotential bonding exists throughout the complete cabling inside and outside of the hazardous area. The limits specified in the ATEX approval must be observed.

**Function**

The process pressure acts on a piezo-resistive semiconductor measuring bridge through a remote seal and a transmission liquid. The pressure transmitter converts the pressure values into a load-independent current.

A compensation network makes the output signal largely independent of the ambient temperature. As a result of a specially adapted remote seal connection with minimized volume, the influence of the process temperature on the output signal is greatly reduced compared to a conventional screw connection.

The pressure transmitters can be powered with a non-regulated DC voltage of 10 to 30 V. Output signals common to measuring technology are available.

**Technical specifications****Pressure transmitters for food, pharmaceuticals and biotechnology****Mode of operation**

Measuring principle	piezo-resistive
---------------------	-----------------

**Input**

Measured variable	gauge or absolute pressure
Measuring range	0 ... 160 mbar (0 ... 2.32 psi) ... 0 ... 40 bar (0 ... 580 psi)

**Output**

Output signal	
• 2-wire system	4 ... 20 mA
• Three-wire system	0 ... 20 mA

**Measuring accuracy**

Acc. to IEC 60770-1	
Error in measurement at limit setting incl. hysteresis and reproducibility	≤ 0.2 % of upper range value
Adjustment accuracy	≤ ± 0.2 % of upper range value
Step response time	< 20 ms
<b>Influence of ambient temperature</b>	
On the enclosure	
• Zero point	< 0.2 %/10 K of upper range value
• Measuring span	< 0.2 %/10 K of upper range value
On the process connection (remote seals)	
• Flange remote seal	Zero error (depends on design)
- DN 25 / 1"	4.8 mbar/10 K (0.069 psi/10 K)
- DN 32 / 1¼"	2.3 mbar/10 K (0.033 psi/10 K)
- DN 40 / 1½"	1.6 mbar/10 K (0.023 psi/10 K)
- DN 50 / 2"	0.6 mbar/10 K (0.009 psi/10 K)
• Inline seal	
- DN 25 / 1"	9.5 mbar/10 K (0.14 psi/10 K)
- DN 32 / 1¼"	4.1 mbar/10 K (0.06 psi/10 K)
- DN 40 / 1½"	3.9 mbar/10 K (0.05 psi/10 K)
- DN 50 / 2"	3.9 mbar/10 K (0.05 psi/10 K)

The zero error specified for the process connection should be considered as a guideline for a standard design. We will produce a detailed system calculation on request. Systems with reduced remote seal errors are available on request.

**Operating conditions**

Installation conditions	
• Mounting position	Any, vertical as standard
Ambient conditions	
• Ambient temperature	-10 ... +70 °C (14 ... 158 °F)
• Storage temperature	-10 ... +90 °C (14 ... 194 °F)
• Process temperature	Max. 200 °C (392 °F), depending on design
Vacuum-resistant	0 mbar (0 psi) absolute at max. 50 °C. Higher process temperatures on request.
• Degree of protection (to EN 60529)	IP65, optional IP67
• Electromagnetic Compatibility	
- Emitted interference	To EN 50081 Part 1, issue 1993 (residential and industrial areas). The unit has no own emissions.
- Noise immunity to	EN 50082 Part 2, issue March 1995 (industrial areas)

**Design**

Weight (without remote seal)	
• Field enclosure	≈ 460 G (≈ 1.01 lb)
• Enclosure with plug	≈ 200 g (≈ 0.44 lb)
Enclosure	
• Designs	• Field enclosure IP65 or IP67, with screwed gland • Angled plug DIN 43650, IP65 • Cable connection, IP67 • Device plug M12, IP65
• Material	Stainless steel, mat. no. 1.4404/316L/1.4305
Material of union nut	Polyamide (with electrical connection using plug or cable) Electronics unit potted with silicone Internal ventilation for measuring ranges < 16 bar (< 232 psi), through enclosure thread or connection cable depending on design
Process connection	
• Versions	See ordering data
• Material of coupling	Stainless steel, mat. no. 1.4404/316L

**Power supply**

Terminal voltage on transmitter	10 ... 30 V DC
Rated voltage	24 V DC

**Certificates and approvals**

Classification according to pressure equipment directive (PED 2014/68/EU)	
• For 7MF8010-1... (with diaphragm seal)	For gases of fluid group 1 and liquids of fluid group 1; complies with requirements of article 4, paragraph 3 (sound engineering practice)
• For 7MF8010-2... (with inline seal)	For gases of fluid group 1 and liquids of fluid group 1; complies with the requirements of article 4, paragraph 1 (appendix 1); assigned to category III, conformity evaluation module H by the TÜV Nord

**Explosion protection**

• Intrinsic safety "i"	TÜV 03 ATEX 2099 X
- Marking	Ex II 2G Ex ib IIC T6

### Schematics

SITRANS P Compact, connection diagram

## Overview

The SITRANS P300 is a digital pressure transmitter for relative and absolute pressure. The conventional thread versions are available as process connections, as are flush-mounted versions. A large number of the flush-mounted versions are suitable for food and pharmaceutical applications, and satisfy the EHEDG and 3A hygiene requirements.

The output signal is a load-independent direct current from 4 to 20 mA or a PROFIBUS PA or FOUNDATION signal, which is linearly proportional to the input pressure. Communication is via HART protocol or PROFIBUS PA interface. Convenient buttons for easy local operation of the basic settings of the pressure transmitter.

The SITRANS P300 has a single-chamber stainless steel enclosure. The pressure transmitter is approved with "intrinsically safe" type of protection. It can be used in zone 1 or zone 0.

## Benefits

- High quality and service life
- High reliability even under extreme chemical and mechanical loads
- Extensive diagnosis and simulation functions
- Minimum conformity error
- Small long-term drift
- Wetted parts made of high-grade materials (such as stainless steel, Hastelloy)
- Measuring range 0.008 bar to 400 bar (0.1 psi to 5802 psi)
- High measuring accuracy
- Parameterization over control keys and HART or PROFIBUS PA or FOUNDATION Fieldbus

## Application

The pressure transmitter is available in versions for gauge pressure and for absolute pressure. The output signal is always a load-independent direct current from 4 to 20 mA or a PROFIBUS PA or FOUNDATION Fieldbus signal, which is linearly proportional to the input pressure. The pressure transmitter measures aggressive, non-aggressive and hazardous gases, as well as vapors and liquids.

It can be used for the following measurement types:

- Gauge pressure
- Absolute pressure

With appropriate parameter settings, it can also be used for the following additional measurement types:

- Level
- Volume
- Mass

The "intrinsically-safe" Ex version of the transmitter can be installed in hazardous areas (zone 1). The transmitters are provided with an EC type examination certificate and comply with the respective harmonized European standards of ATEX.

### Gauge pressure

This variant measures aggressive, non-aggressive and hazardous gases, vapors and liquids.

The smallest measuring span is 0.01 bar (0.15 psi), the largest is 400 bar (5802 psi).

### Level

With appropriate parameter settings, the gauge pressure variant measures the level of aggressive, non-aggressive and hazardous liquids.

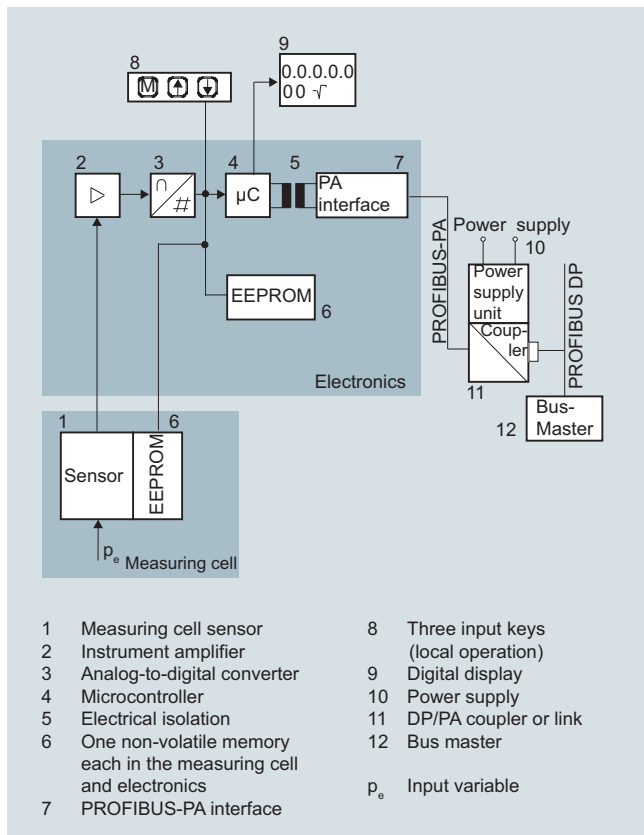

For measuring the level in an open container you require one device; for measuring the level in a closed container, you require two devices and a process control system.

### Absolute pressure

This variant measures the absolute pressure of aggressive, non-aggressive and hazardous gases, vapors and liquids.

The smallest measuring span is 0.008 bar a (0.12 psi a), the largest is 30 bar a (435 psi a).

**Operation of electronics with PROFIBUS PA communication**

Function diagram of electronics

The input pressure is converted into an electrical signal by the sensor (1). This signal is amplified by the measuring amplifier (2) and digitalized in an analog-to-digital converter (3). The digital signal is analyzed in a microcontroller (4) and corrected according to linearity and thermal characteristics. It is then made available at the PROFIBUS PA over an electrically isolated PROFIBUS PA interface (7). The data specific to the measuring cell, the electronic data and parameter settings are stored in two non-volatile memories (6). The first memory is linked to the measuring cell, the second to the electronics.

The buttons (8) can be used to call up individual functions, so-called modes. If you have a device with a display (9), you can use this to track mode settings and other messages. The basic mode settings (12) can be changed with a computer over the bus master.

**Operation of electronics with FOUNDATION Fieldbus communication**

Function diagram of electronics

The bridge output voltage created by the sensor (1, Figure "Function diagram of electronics") amplified by the measuring amplifier (2) and digitalized in the analog-to-digital converter (3). The digital information is evaluated in the microcontroller, its linearity and temperature response corrected, and provided on the FOUNDATION Fieldbus through an electrically isolated FOUNDATION Fieldbus interface (7).

The data specific to the measuring cell, the electronics data, and the parameter data are stored in the two non-volatile memories (6). The one memory is coupled to the measuring cell, the other to the electronics. As the result of this modular design, the electronics and the measuring cell can be replaced separately from each other.

Using the three input buttons (8) you can parameterize the pressure transmitter directly at the measuring point. The input buttons can also be used to control the view of the results, the error messages and the operating modes on the display (9).

The results with status values and diagnostic values are transferred by cyclic data transmission on the FOUNDATION Fieldbus. Parameterization data and error messages are transferred by acyclic data transmission. Special software such as National Instruments Configurator is required for this.

**Mode of operation of the measuring cells**

The process connections available include the following:

- G $\frac{1}{2}$
- $\frac{1}{2}$ -14 NPT
- Flush-mounted diaphragm:
  - Flanges to EN
  - Flanges to ASME
  - NuG and pharmaceutical connections

## Pressure Measurement

Pressure transmitters  
for food, pharmaceuticals and biotechnology

### SITRANS P300 for gauge and absolute pressure

#### Measuring cell for gauge pressure

Measuring cell for gauge pressure, function diagram

The input pressure ( $p_e$ ) is transferred to the gauge pressure sensor (6) via the seal diaphragm (4) and the filling liquid (5), displacing its measuring diaphragm. The displacement changes the resistance value of the four piezo resistors in the measuring diaphragm in a bridge circuit. The change in the resistance causes a bridge output voltage proportional to the input pressure.

Transmitters with measuring spans  $\leq 63$  bar ( $\leq 926.1$  psi) measure the input pressure compared to atmospheric, transmitters with measuring spans of  $\geq 160$  bar ( $\geq 2352$  psi) compared to a vacuum.

#### Measuring cell for absolute pressure

Measuring cell for absolute pressure, function diagram

The input pressure ( $p_e$ ) is transferred to the absolute pressure sensor (5) via the seal diaphragm (3) and the filling liquid (4), displacing its measuring diaphragm. The displacement changes the resistance value of the four piezo resistors in the measuring diaphragm in a bridge circuit. The change in the resistance causes a bridge output voltage proportional to the input pressure.

#### Measuring cell for gauge pressure, front-flush diaphragm

Measuring cell for gauge pressure, front-flush diaphragm, function diagram

## Pressure transmitters for food, pharmaceuticals and biotechnology

### SITRANS P300 for gauge and absolute pressure

1

The input pressure ( $p_e$ ) is transferred to the absolute pressure sensor (5) via the seal diaphragm (3) and the filling liquid (4), displacing its measuring diaphragm. The displacement changes the resistance value of the four piezo resistors in the measuring diaphragm in a bridge circuit. The change in the resistance causes a bridge output voltage proportional to the input pressure.

#### Parameterization

Depending on the version, there are a range of options for parameterizing the pressure transmitter and for setting or scanning the parameters.

#### Parameterization using the input buttons (local operation)

With the input buttons you can easily set the most important parameters without any additional equipment.

#### Parameterization using HART communication

Parameterization using HART communication is performed with a HART communicator or a PC.

Communication between a HART communicator and a pressure transmitter

When parameterizing with the HART communicator, the connection is made directly to the 2-wire cable.

HART communication between a PC communicator and a pressure transmitter

When parameterizing with a PC, the connection is made through a HART modem.

The signals needed for communication in conformity with the HART 5.x or 6.x protocols are superimposed on the output current using the Frequency Shift Keying (FSK) method.

#### Adjustable parameters on SITRANS P300 with HART communication

### SITRANS P300 for gauge and absolute pressure

#### Parameterization through PROFIBUS PA interface

Fully digital communication through PROFIBUS PA, profile 3.0, is particularly user-friendly. The PROFIBUS connects the SITRANS P300 PA to a process control system, e.g. SIMATIC PSC 7. Communication is possible even in a potentially explosive environment.

For parameterization through PROFIBUS you need suitable software, e.g. SIMATIC PDM (Process Device Manager).

#### Parameterization through FOUNDATION Fieldbus interface

Fully digital communication through FOUNDATION Fieldbus is particularly user-friendly. Through the FOUNDATION Fieldbus the P300 is connected to a process control system. Communication is possible even in a potentially explosive environment.

For parameterization through the FOUNDATION Fieldbus you need suitable software, e.g. National Instruments Configurator.

#### Adjustable parameters for SITRANS P300 with PROFIBUS PA and FOUNDATION Fieldbus

Adjustable parameters	Input keys	PROFIBUS PA and FOUNDATION Fieldbus interface
Electrical damping	x	x
Zero adjustment (correction of position)	x	x

#### Hygiene version

In the case of the SITRANS P300 with 7MF812-... front-flush diaphragm, selected connections comply with the requirements of the EHEDG or 3A. You will find further details in the order form. Please note in particular that the seal materials used must comply with the requirements of 3A. Similarly, the filling liquids used must be FDA-compliant.

$(0.25 \cdot r) \%$  in 5 years

Effect of mounting position (in pressure per change in angle)

0.4 mbar/0.04 kPa/0.006 per 10° inclination  
(zero point correction is possible with position error compensation)

Effect of auxiliary power supply  
(in percent per change in voltage)

0.005 % per 1 V

Measuring value resolution for PROFIBUS PA and FOUNDATION Fieldbus

$3 \cdot 10^{-5}$  of the nominal measuring range

#### Gauge pressure, with front-flush diaphragm

#### Absolute pressure, with front-flush diaphragm

**SITRANS P300 for gauge and absolute pressure****Operating conditions**Installation conditions

Ambient temperature

- Measuring cell with silicone oil

Observe the temperature class in areas subject to explosion hazard.

-40 ... +85 °C (-40 ... +185 °F)

- Measuring cell with Neobee oil (FDA-compliant, with flush-mounted diaphragm)

-10 ... +85 °C (14 ... +185 °F)

- Measuring cell with inert liquid

-40 ... +85 °C (-40 ... +185 °F)

- Display readable

-30 ... +85 °C (-22 ... +185 °F)

- Storage temperature

-50 ... +85 °C (-58 ... +185 °F)

(for Neobee: -20 ... +85 °C (-4 ... +185 °F))

(for temperature oil: -10 ... +85 °C (14 ... +165 °F))

Climatic class

Condensation

Relative humidity 0 ... 100 %

Condensation permissible, suitable for use in the tropics

Degree of protection

- according to EN 60529

IP65, IP68

- according to NEMA 250

IP65, IP68, Type 4X, enclosure cleaning, resistant to lyes, steam to 150 °C (302 °F)

Electromagnetic Compatibility

- Emitted interference and interference immunity

Acc. to IEC 61326 and NAMUR NE 21

Medium conditions

Temperature of medium

- Measuring cell with silicone oil

-40 ... +100 °C (-40 ... +212 °F)

- Measuring cell with silicone oil (FDA-compliant, with flush-mounted diaphragm)

-40 ... +150 °C (-40 ... +302 °F)

- Measuring cell with Neobee oil "Measuring cell with Neobee oil (FDA-compliant, with flush-mounted diaphragm)

-10 ... +150 °C (-14 ... +302 °F)

- Measuring cell with silicone oil, with temperature decoupler (only for gauge pressure version with flush-mounted diaphragm)

-40 ... +200 °C (-40 ... +392 °F)

- Measuring cell with Neobee oil, with temperature decoupler (only for gauge pressure version with flush-mounted diaphragm)

-10 ... +200 °C (14 ... +392 °F)

- Measuring cell with inert liquid

-20 ... +100 °C (-4 ... +212 °F)

- Measuring cell with high-temperature oil (only for gauge pressure version with flush-mounted diaphragm)

-10 ... +250 °C (14 ... 482 °F)

**Design (standard version)**

Weight (without options)

Approx. 800 g (1.8 lb)

Enclosure material

Stainless steel, mat. no. 1.4301/304

Material of parts in contact with the medium

- Connection shank

Stainless steel, mat. no. 1.4404/316L or Hastelloy C276, mat. no. 2.4819

- Oval flange

Stainless steel, mat. no. 1.4404/316L

- Seal diaphragm

Stainless steel, mat. no. 1.4404/316L or Hastelloy C276, mat. no. 2.4819

- Measuring cell filling

- Silicone oil
- Inert filling liquid

Process connection

- G $\frac{1}{2}$ B to EN 837-1
- Female thread  $\frac{1}{2}$ -14 NPT
- Oval flange PN 160 (MAWP 2320 psi) with fastening thread:
  - $\frac{7}{16}$ -20 UNF to IEC 61518/DIN EN 61518
  - M10 as per DIN 19213

### SITRANS P300 for gauge and absolute pressure

#### SITRANS P300 for gauge and absolute pressure

##### Design (version with front-flush diaphragm)

Weight (without options)	approx. 1 ... 13 kg (2.2 ... 29 lb)
Enclosure material	Stainless steel, mat. no. 1.4301/304
Material of parts in contact with the medium	
• Process connection	Stainless steel, mat. no. 1.4404/316L
• Seal diaphragm	Stainless steel, mat. no. 1.4404/316L
• Measuring cell filling	<ul style="list-style-type: none"> <li>• Silicone oil</li> <li>• Inert filling liquid</li> <li>• FDA compliant fill fluid (Neobee oil)</li> </ul>
Process connection	<ul style="list-style-type: none"> <li>• Flanges as per EN and ASME</li> <li>• F&amp;B and pharmaceutical flanges</li> </ul>
Surface quality touched-by-media	$R_a$ -values $\leq 0.8 \mu\text{m}$ (32 $\mu\text{-inch}$ )/welds $R_{a1} \leq 1.6 \mu\text{m}$ (64 $\mu\text{-inch}$ ) (Process connections acc. to 3A; $R_a$ -values $\leq 0.8 \mu\text{m}$ (32 $\mu\text{-inch}$ )/welds $R_a \leq 0.8 \mu\text{m}$ (32 $\mu\text{-inch}$ ))

##### Power supply $U_H$

	HART	PROFIBUS PA/FOUNDATION Fieldbus
Terminal voltage on transmitter	10.5 ... 42 V DC for intrinsically safe operation: 10.5 ... 30 V DC	
Power supply	-	Supplied though bus
Separate supply voltage	-	Not necessary
Bus voltage		
• Without Ex	-	9 ... 32 V
• With intrinsically-safe operation	-	9 ... 24 V
Current consumption		
• Max. basic current	-	12.5 mA
• Start-up current $\leq$ basic current	-	Yes
• Max. fault current in the event of a fault	-	15.5 mA
Fault disconnection electronics (FDE) available	-	Yes

SITRANS P300 for gauge and absolute pressure		
Certificates and approvals	HART	PROFIBUS PA/ FOUNDATION Fieldbus

## Pressure Measurement

Pressure transmitters  
for food, pharmaceuticals and biotechnology

### SITRANS P300 for gauge and absolute pressure

1

#### HART Communication

HART communication	230 ... 1100 Ω
Protocol	HART Version 5.x
Software for computer	SIMATIC PDM

#### PROFIBUS PA communication

Simultaneous communication with master class 2 (max.)	4
The address can be set using	Configuration tool or local operation (standard setting Address 126)
Cyclic data usage	
• Output byte	5 (one measured value) or 10 (two measured values)
• Input byte	0.1 or 2 (totalizer mode and reset function for dosing)
• Internal preprocessing	
Device profile	PROFIBUS PA Profile for Pro- cess Control Devices Version 3.0, class B
Function blocks	2
• Analog input	
- Adaptation to customer-specific process variables	Yes, linearly rising or falling characteristic
- Electrical damping adjustable	0 ... 100 s
- Simulation function	Input /Output
- Failure function	parameterizable (last good value, substitute value, incorrect value)
- Limit monitoring	Yes, one upper and lower warning limit and one alarm limit respectively
• Register (totalizer)	Can be reset, preset, optional direction of counting, simulation function of register output
- Failure mode	parameterizable (summation with last good value, continuous summation, summation with incorrect value)
- Limit monitoring	One upper and lower warning limit and one alarm limit respectively
• Physical block	1
Transducer blocks	2
• Pressure transducer block	
- Can be calibrated by applying two pressures	Yes
- Monitoring of sensor limits	Yes
- Specification of a container characteristic with	Max. 30 nodes
- Simulation function for measured pressure value and sensor temperature	Constant value or over parameterizable ramp function

#### FOUNDATION Fieldbus communication

Function blocks	3 function blocks analog input, 1 function block PID
• Analog input	
- Adaptation to customer-specific process variables	Yes, linearly rising or falling characteristic
- Electrical damping, adjustable	0 ... 100 s
- Simulation function	Output/input (can be locked within the device with a bridge)
- Failure mode	parameterizable (last good value, substitute value, incorrect value)
- Limit monitoring	Yes, one upper and lower warning limit and one alarm limit respectively
- Square-rooted characteristic for flow measurement	Yes
• PID	Standard FOUNDATION Fieldbus function block
• Physical block	1 resource block
Transducer blocks	1 transducer block Pressure with calibration, 1 transducer block LCD
• Pressure transducer block	
- Can be calibrated by applying two pressures	Yes
- Monitoring of sensor limits	Yes
- Simulation function: Measured pressure value, sensor temperature and electronics temperature	Constant value or over parameterizable ramp function

Item line: 7MF8023-1DB24-1AB7-Z  
B line: A02 + Y01 + Y21  
C line: Y01: 1 ... 10 bar (14.5 ... 145 psi)  
C line: Y21: bar (psi)

- When also ordering the quality test certificate (factory calibration) according to IEC 60770-2 for transmitters with mounted diaphragm seals: Order this certificate only together with the remote seals. The measuring accuracy of the total combination is certified here.
- If the inspection certificate 3.1 is ordered for the transmitter with mounted diaphragm seals this certificate must also be ordered with the respective remote seals.
- Special seal in Viton included in the scope of delivery (FKM; temperature range -20 ... +200 °C (-4 ... +392 °F))
- Cannot be combined with Order code P00. Can only be ordered with silicone oil measuring cell filling.
- The weldable socket can be ordered under accessories.
- 3A compliance ensured only when 3A compliant sealing rings are used.
- Conformity according to 3A and EHEDG. The maximum permissible temperatures of the medium depend on the respective cell fillings (see medium conditions).
- Measuring accuracies for PROFIBUS PA transmitters with Option Y01 are calculated in the same way as for HART devices.
- Preset values can only be changed over SIMATIC PDM.

### SITRANS P300 - Factory-mounting of valve manifolds on transmitters

#### Overview

The SITRANS P300 transmitter for gauge and absolute pressure can be delivered factory-fitted with the following valve manifolds:

- 7MF9011-4EA and 7MF9011-4FA valve manifolds for gauge pressure and absolute pressure transmitters

#### Design

The 7MF9011-4EA valve manifolds are sealed with PTFE gaskets between the transmitter and the valve manifold as standard. Soft iron, stainless steel and copper gaskets are also available for sealing purposes if preferred.

The 7MF9011-4FA valve manifolds are sealed with PTFE sealing tape between the transmitter and the valve manifold.

The complete unit is checked for leaks under pressure after assembly (air pressure 6 bar (87 psi)) and certified with a factory certificate according to EN 10204 - 2.2.

All valve manifolds should preferably be secured with the corresponding mounting brackets. The transmitters are mounted on the valve manifold and not on the unit itself.

If you order a mounting bracket when choosing the option "Factory mounting of valve manifolds", you will receive a mounting bracket for the valve manifold instead of a bracket for mounting the transmitter.

If you order an inspection certificate 3.1 to EN 10204 after choosing the option "Factory mounting of valve manifolds", a separate certificate is provided for the transmitter and for the valve manifold.

### SITRANS P DS III and P300 with PMC connection - Technical description

#### Overview

The SITRANS P300 and DS III pressure transmitters have been fitted with special process connections for the paper industry. With the two process connection threads 1½" and 1" flush at the front, the SITRANS P300 and DS III transmitters can be used for all processes in the paper industry.

SITRANS P300 and SITRANS PDS III series pressure transmitters are digital pressure transmitters featuring extensive user-friendliness and high accuracy. The parameterization is performed using control keys via HART, PROFIBUS-PA or FOUNDATION Fieldbus interface.

Extensive functionality enables the pressure transmitter to be precisely adapted to the plant's requirements. Operation is very simple in spite of the numerous setting options.

Transmitters with type of protection "Intrinsic safety" and "Explosion-proof" may be installed within potentially explosive atmospheres (zone 1) or in zone 0. The transmitters are provided with an EC type examination certificate and comply with the corresponding harmonized European standards (ATEX).

Various versions of the pressure transmitters are available for measuring:

- Gauge pressure
- Level
- Mass level
- Volume level

#### Benefits

- High quality and service life
- High reliability even under extreme chemical and mechanical loads, e.g. abrasion.
- For aggressive and non-aggressive gases, vapors and liquids
- Extensive diagnosis and simulation functions
- Minimum conformity error
- Small long-term drift
- Wetted parts made of Hastelloy
- Infinitely adjustable measuring spans from 0.03 bar to 16 bar (0.43 psi to 232 psi) for DS III with HART interface
- Nominal measuring range from 1 bar to 16 bar (14.5 psi to 232 psi) for DS III with PROFIBUS PA and FOUNDATION Fieldbus interface
- Infinitely adjustable measuring spans from 0.03 bar to 16 bar (0.43 psi to 232 psi) for SITRANS P300 with HART interface
- Nominal measuring range from 1 bar to 16 bar (14.5 psi to 232 psi) for SITRANS P300 with PROFIBUS PA interface
- High measuring accuracy
- Parameterization over control keys and HART Communication, or over PROFIBUS PA or FOUNDATION Fieldbus interface (DS III only).

#### Application

The pressure transmitters of the DS III series, can be used in industrial areas with extreme chemical and mechanical loads. Electromagnetic compatibility in the range 10 kHz to 1 GHz makes the DS III pressure transmitters suitable for locations with high electromagnetic emissions.

Pressure transmitters with type of protection "Intrinsic safety" and "Explosion-proof" may be installed within potentially explosive atmospheres (zone 1) or in zone 0. The pressure transmitters are provided with an EC type examination certificate and comply with the corresponding harmonized European standards (ATEX).

Pressure transmitters with the type of protection "Intrinsic safety" for use in zone 0 may be operated with power supply units of category "ia" and "ib".

The transmitters can be equipped with various designs of remote seals for special applications such as the measurement of highly viscous substances.

The pressure transmitter can be operated locally over 3 control keys or programmed externally over HART or over PROFIBUS-PA or FOUNDATION Fieldbus interface (only DS III).

#### **SITRANS P, DS III series**

Measured variable: Gauge pressure of aggressive and non-aggressive gases, vapors and liquids.

##### Measuring span (infinitely adjustable)

For DS III with HART: 0.03 ... 16 bar (0.433 ... 232 psi)

##### Nominal measuring range

For DS III with PROFIBUS PA or FOUNDATION Fieldbus: 1 ... 16 bar (14.5 ... 232 psi)

#### **SITRANS P300**

##### Measuring span (infinitely adjustable)

For DS III with HART: 0.03 ... 16 bar (0.433 ... 232 psi)

##### Nominal measuring range

For DS III with PROFIBUS PA or FOUNDATION Fieldbus: 1 ... 16 bar (14.5 ... 232 psi)

# Pressure Measurement

## Pressure transmitters for gauge pressure for the paper industry

### SITRANS P DS III and P300 with PMC connection - Technical description

1

#### Design

##### SITRANS P DS III

Device front view, SITRANS P DS III

The transmitter consists of various components depending on the order. The possible versions are listed in the ordering information. The components described below are the same for all transmitters.

The rating plate (7, Figure "Device front view") with the Article No. is located on the side of the enclosure. The specified number together with the ordering information provide details on the optional design details and on the possible measuring range (physical properties of built-in sensor element).

The approval label is located on the opposite side.

The enclosure is made of die-cast aluminium or stainless steel precision casting. A round cover is screwed on at the front and rear of the enclosure. The front cover (2) can be fitted with a viewing pane so that the measured values can be read directly on the display. The inlet (8) for the electrical connection is located either on the left or right side. The unused opening on the opposite side is sealed by a blanking plug. The protective earth connection is located on the rear of the enclosure.

The electrical connections for the power supply and screen are accessible by unscrewing the rear cover. The bottom part of the enclosure contains the measuring cell with process connection (5). The measuring cell is prevented from rotating by a locking screw (4). As the result of this modular design, the measuring cell and the electronics can be replaced separately from each other. The set parameter data are retained.

At the top of the enclosure is a plastic cover (1), which hides the input keys.

#### Example for an attached measuring point label

##### SITRANS P300

The device comprises:

- Electronics
- Enclosure
- Measuring cell

Perspective view of the SITRANS P300

The enclosure has a screw-on lid (5) and, depending on the version, is with or without an inspection window. The electrical terminal enclosure, the buttons for operation of the device are located under this lid and, depending on the version, the display. The connections for the auxiliary power UH and the shield are in the terminal enclosure. The cable gland is on the side of the enclosure. The measuring cell with the process connection (2) is located on the bottom of the enclosure. The measuring cell with the process connection may differ from the one shown in the diagram, depending on the device version.

## Pressure Measurement

Pressure transmitters  
for gauge pressure for the paper industry

### SITRANS P DS III and P300 with PMC connection - Technical description

#### Function

##### Operation of electronics with HART communication

Function diagram of electronics

The bridge output voltage created by the sensor (1, Figure "Function diagram of electronics") is amplified by the measuring amplifier (2) and digitized in the analog-to-digital converter (3). The digital information is evaluated in a microcontroller, its linearity and temperature response corrected, and converted in a digital-to-analog converter (5) into an output current of 4 to 20 mA.

The diode circuit (10) protects against incorrect polarity.

The data specific to the measuring cell, the electronics data, and the parameter data are stored in the two non-volatile memories (6). The one memory is coupled to the measuring cell, the other to the electronics. As the result of this modular design, the electronics and the measuring cell can be replaced separately from each other.

Using the 3 input keys (8) you can parameterize the pressure transmitter directly at the measuring point. The input buttons can also be used to control the view of the results, the error messages and the operating modes on the display (9).

The HART modem (7) permits parameterization using a protocol according to the HART specification.

The pressure transmitters with measuring measuring spans  $\leq 63$  bar (914 psi) measure the input pressure compared to atmosphere, the transmitters with measuring measuring spans 160 bar (2320 psi) measure compared to vacuum.

##### Operation of electronics with PROFIBUS PA communication

Function diagram of electronics

The bridge output voltage created by the sensor (1, Figure "Function diagram of electronics") is amplified by the measuring amplifier (2) and digitized in the analog-to-digital converter (3). The digital information is evaluated in the microcontroller, its linearity and temperature response corrected, and provided on the PROFIBUS PA through an electrically isolated PA interface (7).

The data specific to the measuring cell, the electronics data, and the parameter data are stored in the two non-volatile memories (6). The first memory is linked with the measuring cell, the second with the electronics. This modular design means that the electronics and the measuring cell can be replaced separately from one another.

Using the three input buttons (8) you can parameterize the pressure transmitter directly at the measuring point. The input buttons can also be used to control the view of the results, the error messages and the operating modes on the display (9).

The results with status values and diagnostic values are transferred by cyclic data transmission on the PROFIBUS PA. Parameterization data and error messages are transferred by acyclic data transmission. Special software such as SIMATIC PDM is required for this.

**Operation of electronics with FOUNDATION Fieldbus communication**

Function diagram of electronics

The bridge output voltage created by the sensor (1, Figure "Function diagram of electronics") is amplified by the measuring amplifier (2) and digitized in the analog-to-digital converter (3). The digital information is evaluated in the microcontroller, its linearity and temperature response corrected, and provided on the FOUNDATION Fieldbus through an electrically isolated FOUNDATION Fieldbus interface (7).

The data specific to the measuring cell, the electronics data, and the parameter data are stored in the two non-volatile memories (6). The one memory is coupled to the measuring cell, the other to the electronics. As the result of this modular design, the electronics and the measuring cell can be replaced separately from each other.

Using the three input buttons (8) you can parameterize the pressure transmitter directly at the measuring point. The input buttons can also be used to control the view of the results, the error messages and the operating modes on the display (9).

The results with status values and diagnostic values are transferred by cyclic data transmission on the FOUNDATION Fieldbus. Parameterization data and error messages are transferred by acyclic data transmission. Special software such as National Instruments Configurator is required for this.

**Mode of operation of the measuring cell****Measuring cell for gauge pressure with front-flush diaphragm**

Measuring cell for gauge pressure, with front-flush diaphragm for paper industry, function diagram

The pressure  $p_e$  is applied through the process connection (2, Figure "Measuring cell for gauge pressure, with front-flush diaphragm for paper industry, function diagram") to the measuring cell (1). This pressure is subsequently transmitted further through the seal diaphragm (3) and the filling liquid (4) to the silicon pressure sensor (5) whose measuring diaphragm is then flexed. This changes the resistance of the four piezo-resistors fitted in the diaphragm in a bridge circuit. This change in resistance results in a bridge output voltage proportional to the absolute pressure.

**Parameterization**

Depending on the version, there are a range of options for parameterizing the pressure transmitter and for setting or scanning the parameters.

**Parameterization using the input buttons (local operation)**

With the input buttons you can easily set the most important parameters without any additional equipment.

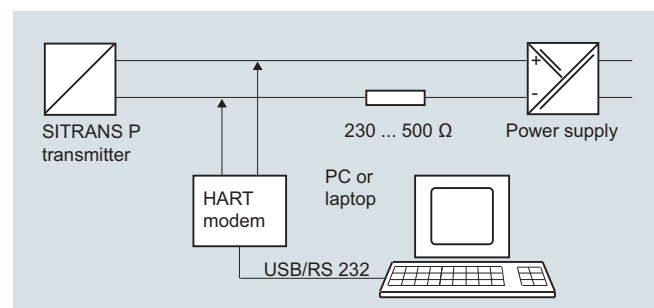

**Parameterization using HART**

Parameterization using HART is performed with a HART Communicator or a PC.

Communication between a HART Communicator and a pressure transmitter

When parameterizing with the HART Communicator, the connection is made directly to the 2-wire cable.

HART communication between a PC communicator and a pressure transmitter

## Pressure Measurement

Pressure transmitters  
for gauge pressure for the paper industry

### SITRANS P DS III and P300 with PMC connection - Technical description

When parameterizing with a PC, the connection is made through a HART modem.

The signals needed for communication in conformity with the HART 5.x or 6.x protocols are superimposed on the output current using the Frequency Shift Keying (FSK) method.

#### Adjustable parameter DS III with HART and P300 with HART

Parameters	Input keys	HART communication
Lower range value	x	x
Upper range value	x	x
Electrical damping	x	x
Lower range value without application of a pressure ("Blind setting")	x	x
Upper range value without application of a pressure ("Blind setting")	x	x
Zero adjustment	x	x
current transmitter	x	x
Fault current	x	x
Disabling of buttons, write protection	x	x <sup>1)</sup>
Type of dimension and actual dimension	x	x
Characteristic (linear)	x	x
Input of characteristic		x
Freely-programmable LCD		x
Diagnostic functions		x

<sup>1)</sup> Cancel apart from write protection

#### Diagnostic functions for DS III with HART and P300 with HART

- Zero correction display
- Event counter
- Limit transmitter
- Saturation alarm
- Slave pointer
- Simulation functions
- Maintenance timer

#### Available physical units of display for DS III with HART and P300 with HART

Physical variable	Physical dimensions
Pressure (setting can also be made in the factory)	Pa, MPa, kPa, bar, mbar, torr, atm, psi, g/cm <sup>2</sup> , kg/cm <sup>2</sup> , inH <sub>2</sub> O, inH <sub>2</sub> O (4 °C), mmH <sub>2</sub> O, ftH <sub>2</sub> O (20 °C), inHg, mmHg
Level (height data)	m, cm, mm, ft, in
Volume	m <sup>3</sup> , dm <sup>3</sup> , hl, yd <sup>3</sup> , ft <sup>3</sup> , in <sup>3</sup> , US gallon, Imp. gallon, bushel, barrel, barrel liquid
Mass	g, kg, t, lb, Ston, Lton, oz
Temperature	K, °C, °F, °R
Miscellaneous	%, mA

#### Parameterization through PROFIBUS PA interface

Fully digital communication through PROFIBUS PA, profile 3.0, is particularly user-friendly. The PROFIBUS connects the DS III PA to a process control system, e.g. SIMATIC PSC 7. Communication is possible even in a potentially explosive environment.

For parameterization through PROFIBUS you need suitable software, e.g. SIMATIC PDM (Process Device Manager).

#### Parameterization through FOUNDATION Fieldbus interface

Fully digital communication through FOUNDATION Fieldbus is particularly user-friendly. Through the FOUNDATION Fieldbus the DS III with FOUNDATION Fieldbus is connected to a process control system. Communication is possible even in a potentially explosive environment.

For parameterization through the FOUNDATION Fieldbus you need suitable software, e.g. National Instruments Configurator.

#### Adjustable parameters for DS III with PROFIBUS PA and FOUNDATION Fieldbus, and P300 with PROFIBUS PA and FOUNDATION Fieldbus

Adjustable parameters	Input keys	PROFIBUS PA and FOUNDATION Fieldbus interface
Electrical damping	x	x
Zero adjustment (correction of position)	x	x
Buttons and/or function disabling	x	x
Source of measured-value display	x	x
Physical dimension of display	x	x
Position of decimal point	x	x
Bus address	x	x
Adjustment of characteristic	x	x
Input of characteristic		x
Freely-programmable LCD		x
Diagnostic functions		x

#### Diagnostic functions for DS III with PROFIBUS PA and FOUNDATION Fieldbus, and P300 with PROFIBUS PA and FOUNDATION Fieldbus

- Event counter
- Slave pointer
- Maintenance timer
- Simulation functions
- Display of zero correction
- Limit transmitter
- Saturation alarm

#### Physical dimensions available for the display

Physical variable	Physical dimensions
Pressure (setting can also be made in the factory)	MPa, hPa, kPa, Pa, bar, mbar, torr, atm, psi, g/cm <sup>2</sup> , kg/cm <sup>2</sup> , mmH <sub>2</sub> O, mmH <sub>2</sub> O (4 °C), inH <sub>2</sub> O, inH <sub>2</sub> O (4 °C), ftH <sub>2</sub> O, mmHg, inHg
Level (height data)	m, cm, mm, ft, in, yd
Mass	g, kg, t, lb, Ston, Lton, oz
Volume	m <sup>3</sup> , dm <sup>3</sup> , hl, yd <sup>3</sup> , ft <sup>3</sup> , in <sup>3</sup> , US gallon, Imp. gallon, bushel, barrel, barrel liquid
Temperature	K, °C, °F, °R
Miscellaneous	%

### Technical specifications

#### SITRANS P, DS III series for gauge pressure with PMC connection for the paper industry

Input		Gauge pressure			
		HART	PROFIBUS PA/ FOUNDATION Fieldbus		
		Measuring span	Nominal measuring range	Max. operating pressure MAWP (PS)	Max. perm. test pressure
Measured variable		0.01 ... 1 bar 1 ... 100 kPa 0.15 ... 14.5 psi	1 bar 100 kPa 14.5 psi	4 bar 400 kPa 58 psi	6 bar 600 kPa 87 psi
Measuring span (infinitely adjustable) or nominal measuring range, max. operating pressure and max. test pressure		0.04 ... 4 bar 4 ... 400 kPa 0.58 ... 58 psi	4 bar 400 kPa 58 psi	7 bar 0.7 MPa 102 psi	10 bar 1 MPa 145 psi
		0.16 ... 16 bar 16 ... 1600 kPa 2.3 ... 232 psi	16 bar 1600 kPa 232 psi	21 bar 2.1 MPa 305 psi	32 bar 3.2 MPa 464 psi
Lower measuring limit (For PMC-Style Minibolt no measuring span < 500 mbar adjustable)		100 mbar a/10 kPa a/1.45 psi a			
Upper measuring limit		100% of max. measuring span			
Output		HART	PROFIBUS PA/ FOUNDATION Fieldbus		
Output signal		4 ... 20 mA	Digital PROFIBUS PA and FOUNDATION Fieldbus signal		
• Lower limit (infinitely adjustable)		3.55 mA, factory preset to 3.84 mA	-		
• Upper limit (infinitely adjustable)		23 mA, factory preset to 20.5 mA or optionally set to 22.0 mA	-		
Load		$R_B \leq (U_H - 10.5 \text{ V})/0.023 \text{ A in } \Omega$ $U_H$ : Power supply in V	-		
• Without HART communication			-		
• With HART communication		$R_B = 230 \dots 500 \Omega$ (SIMATIC PDM) or $R_B = 230 \dots 1100 \Omega$ (HART-Communicator)	-		
Physical bus		-	IEC 61158-2		
Protection against polarity reversal		Protected against short-circuit and polarity reversal. Each connection against the other with max. supply voltage.			
Electrical damping (step width 0.1 s)		Set to 2 s (0 ... 100 s)			
Measuring accuracy		Acc. to IEC 60770-1			
Reference conditions (All error data refer always refer to the set span)		<ul style="list-style-type: none"> <li>Increasing characteristic</li> <li>Lower range value 0 bar/kPa/psi</li> <li>Stainless steel seal diaphragm</li> <li>Silicone oil filling</li> <li>Room temperature 25 °C (77 °F)</li> </ul>			
Measuring span ratio r (spread, Turn-Down)		$r = \text{max. measuring span/set measuring span or nom. pressure range}$			
Error in measurement at limit setting incl. hysteresis and reproducibility		<ul style="list-style-type: none"> <li>Linear characteristic</li> <li>- <math>r \leq 5</math> <math>\leq 0.075 \%</math></li> <li>- <math>5 &lt; r \leq 100</math> <math>\leq (0.005 \cdot r + 0.05) \%</math></li> </ul>			
Influence of ambient temperature (in percent per 28 °C (50 °F))		$\leq (0.08 \cdot r + 0.16) \%$			
Long-term stability (temperature change $\pm 30 \text{ }^\circ\text{C}$ ( $\pm 54 \text{ }^\circ\text{F}$ ))		$\leq (0.25 \cdot r) \%$ in 5 years			
Effect of mounting position		$\leq 0.1 \text{ mbar}/0.01 \text{ kPa}/0.00145 \text{ psi}$ per 10° inclination (zero point correction is possible with position error compensation)			
Effect of auxiliary power supply (in percent per change in voltage)		0.005 % per 1 V			
Measuring value resolution for PROFIBUS PA and FOUNDATION Fieldbus		$3 \cdot 10^{-5}$ of nominal measuring range

## Pressure transmitters for gauge pressure for the paper industry

### SITRANS P DS III with PMC connection

1

<b>HART communication</b>		<b>FOUNDATION Fieldbus communication</b>	
HART communication	230 ... 1100 Ω	Function blocks	3 function blocks analog input, 1 function block PID
Protocol	HART Version 5.x	• Analog input	Yes, linearly rising or falling characteristic
Software for computer	SIMATIC PDM	- Adaptation to customer-specific process variables	0 ... 100 s
<b>PROFIBUS PA communication</b>		- Electrical damping, adjustable	Output/input (can be locked within the device with a bridge)
Simultaneous communication with master class 2 (max.)	4	- Simulation function	parameterizable (last good value, substitute value, incorrect value)
The address can be set using	Configuration tool or local operation (standard setting address 126)	- Failure mode	Yes, one upper and lower warning limit and one alarm limit respectively
Cyclic data usage		- Limit monitoring	Yes
• Output byte	5 (one measured value) or 10 (two measured values)	- Square-rooted characteristic for flow measurement	Standard FOUNDATION Fieldbus function block
• Input byte	0, 1, or 2 (register operating mode and reset function for metering)	• PID	1 resource block
Internal preprocessing		• Physical block	1 transducer block Pressure with calibration, 1 transducer block LCD
Device profile	PROFIBUS PA Profile for Process Control Devices Version 3.0, class B	Transducer blocks	
Function blocks	2	• Pressure transducer block	
• Analog input		- Can be calibrated by applying two pressures	Yes
- Adaptation to customer-specific process variables	Yes, linearly rising or falling characteristic	- Monitoring of sensor limits	Yes
- Electrical damping, adjustable	0 ... 100 s	- Simulation function: Measured pressure value, sensor temperature and electronics temperature	Constant value or over parameterizable ramp function
- Simulation function	Input /Output		
- Failure mode	parameterizable (last good value, substitute value, incorrect value)		
- Limit monitoring	Yes, one upper and lower warning limit and one alarm limit respectively		
• Register (totalizer)	Can be reset, preset, optional direction of counting, simulation function of register output		
- Failure mode	parameterizable (summation with last good value, continuous summation, summation with incorrect value)		
- Limit monitoring	One upper and lower warning limit and one alarm limit respectively		
• Physical block	1		
Transducer blocks	2		
• Pressure transducer block			
- Can be calibrated by applying two pressures	Yes		
- Monitoring of sensor limits	Yes		
- Specification of a container characteristic with	Max. 30 nodes		
- Square-rooted characteristic for flow measurement	Yes		
- Gradual volume suppression and implementation point of square-root extraction	Parameterizable		
- Simulation function for measured pressure value and sensor temperature	Constant value or over parameterizable ramp function

**ordering example**

Item line: 7MF4133-1DB20-1AB7-Z  
B line: C11 + Y01 + Y21  
C line: Y01: 1 ... 10 bar (14.5 ... 145 psi)  
C line: Y21: bar (psi)

<sup>1)</sup> Measuring accuracies for PROFIBUS PA transmitters with Option Y01 are calculated in the same way as for HART devices.  
<sup>2)</sup> Preset values can only be changed over SIMATIC PDM.

<sup>1)</sup> When the additional ex option is selected, the ATEX marking on the device is omitted. Only the Ex option selected via the Z option is marked.

## SITRANS P DS III with PMC connection

### Dimensional drawings

- ① Electronics side, local display (longer overall length for cover with inspection window)<sup>1)</sup>
- ② Connection side<sup>1)</sup>
- ③ Electrical connection:
  - M20 x 1,5 screw gland
  - ½-14 NPT screw gland
  - M12 device plug

- ④ Cover over buttons
- ⑤ Blanking plug
- ⑥ Safety catch (only for "flameproof enclosure" type of protection; not shown in the drawing)
- ⑦ Process connection: PMC standard

<sup>1)</sup> In addition, allow approx. 20 mm (0.79 inch) for the thread length  
<sup>2)</sup> 92 mm (3.62 inch) minimum distance for rotating with indicator

SITRANS P DS III pressure transmitters for gauge pressure, with PMC connection, dimensions in mm (inch)

The diagram shows a SITRANS P DS III with an example of a flange. In this drawing the height is subdivided into H<sub>1</sub> and H<sub>2</sub>.

H<sub>1</sub> = Height of the SITRANS P DS III up to a defined cross-section

H<sub>2</sub> = Height of the flange up to this defined cross-section

Only the height H<sub>2</sub> is indicated in the dimensions of the flanges.

PMC Style Standard (left) and PMC Style Minibolt (right) weldable sockets, dimensions in mm (inch)

Material: Stainless steel, Mat. No. 1.4404/316L

#### PMC Style standard

DN	PN	ØD	H <sub>2</sub>
		40.9 mm (1.6")	approx. 36.8 mm (1.4")

#### PMC Style minibolt

DN	PN	ØD	H <sub>2</sub>
		26.3 mm (1.0")	approx. 33.1 mm (1.3")

#### Operating conditions

##### Installation conditions

Ambient temperature	Observe the temperature class in areas subject to explosion hazard.
• Measuring cell with silicone oil	-40 ... +85 °C (-40 ... +185 °F)
• Display readable	-30 ... +85 °C (-22 ... +185 °F)
• Storage temperature	-50 ... +85 °C (-58 ... +185 °F)
Climatic class	
Condensation	Relative humidity 0 ... 100 % Condensation permissible, suitable for use in the tropics
Degree of protection	
• according to EN 60529	IP65, IP68
• according to NEMA 250	Type 4X, enclosure cleaning, resistant to lyes, steam to 150 °C (302 °F)
Electromagnetic Compatibility	
• Emitted interference and interference immunity	Acc. to IEC 61326 and NAMUR NE 21
<u>Medium conditions</u>	
Temperature of medium	
• Measuring cell with silicone oil	-40 ... +100 °C (-40 ... +212 °F)

#### Design

Weight (without options)	Approx. 1 kg (2.2 lb)
Enclosure material	Stainless steel, mat. no. 1.4301/304
Material of parts in contact with the medium	
• Seal diaphragm	Hastelloy C276, mat. no. 2.4819
• Measuring cell filling	Silicone oil
Surface quality touched-by-media	Ra-values ≤ 0.8 μm (32 μ inch)/welds Ra ≤ 1.6 μm (64 μ inch)

#### Power supply U<sub>H</sub>

	HART	PROFIBUS PA/ FOUNDATION Fieldbus
Terminal voltage on transmitter	10.5 ... 42 V DC for intrinsically safe operation: 10.5 ... 30 V DC	
Power supply		Supplied through bus
Separate supply voltage	-	Not necessary
Bus voltage		
• Without Ex	-	9 ... 32 V
• With intrinsically-safe operation	-	9 ... 24 V
Current consumption		
• Max. basic current	-	12.5 mA
• Start-up current ≤ basic current	-	Yes
• Max. fault current in the event of a fault	-	15.5 mA
Fault disconnection electronics (FDE) available	-	Yes

## Pressure Measurement

Pressure transmitters  
for applications with advanced requirements (Advanced)  
SITRANS P320/P420

### Technical description

1

#### Overview

SITRANS P320/P420 pressure transmitters are digital pressure transmitters featuring extensive user-friendliness and high accuracy. The parameter assignment is performed using input buttons or the HART interface.

The comprehensive functionality makes for precise adjustment of the pressure transmitter to the requirements of the plant. Operation is very user-friendly in spite of the numerous setting options.

Due to their advanced diagnostic functionalities according to NAMUR NE107, the SITRANS P320/P420 pressure transmitters are very suitable for use in chemical plants. Thanks to the advanced diagnostic functions and the process value storage, the SITRANS P420 is "Ready for Digitalization".

The "Remote Safety Handling" function saves customers significant amounts of time and money, because the SIL function can be switched on and validated remotely via SIMATIC PDM. This eliminates travel times and on-site operation via the local display or keyboard.

Parameter assignment using the HART protocol is very easy and quick thanks to the innovative EDD with integrated Quick Start wizard.

The transmitters can be equipped with various types of remote seals for special applications such as the measurement of highly viscous substances.

SITRANS P320/P420 pressure transmitters are available in various versions for measuring:

- Gauge pressure
- Absolute pressure
- Differential pressure
- Level
- Volume flow
- Mass flow

#### Benefits

- Diagnostic functions in accordance with NAMUR recommendation NE107
- SIL devices developed according to IEC 61508
- SIL validation on the device or remotely with SIMATIC PDM
- Reduction of internal inductance for Ex applications to LI = 0
- Step response time for pressure type T63 = 105 ms and for differential pressure type 135 ms.
- Minimal conformity error
- Very low temperature influence
- Very good long-term stability
- High quality and service life
- High reliability even under extreme chemical and mechanical loads
- For corrosive and non-corrosive gases, vapors and liquids
- Extensive diagnostics and simulation functions
- Separate replacement of measuring cell and electronics without recalibration
- Wetted parts made of high-grade materials (e.g., stainless steel, alloy, gold, Monel, tantalum)
- Infinitely adjustable measuring spans from 0.01 bar to 700 bar (0.15 psi to 10153 psi)
- Convenient parameterization over 4 input buttons and HART interface

#### Application

SITRANS P320/P420 pressure transmitters can be used in industrial areas with extreme chemical and mechanical loads.

The pressure transmitters can be used in zone 1 or zone 0 with the corresponding Ex approval.

The transmitters can be equipped with various designs of remote seals for special applications such as the measurement of highly viscous substances.

The pressure transmitter can be operated locally over 4 input buttons or programmed externally over HART interface.

#### **Pressure transmitter for gauge pressure**

Measured variable:

- Gauge pressure of corrosive and non-corrosive gases, vapors and liquids.

Measuring span (infinitely adjustable)

- For SITRANS P320/P420 with HART: 0.01 bar to 700 bar (0.15 psi to 10153 psi)

There are two series:

- Gauge pressure series
- Differential pressure series

#### **Pressure transmitters for absolute pressure**

Measured variable:

- Absolute pressure of corrosive and non-corrosive gases, vapors and liquids.

Measuring span (infinitely adjustable)

- For SITRANS P320/P420 with HART: 8.3 mbar a to 100 bar a (0.12 to 1450 psi a)

There are two series:

- Gauge pressure series
- Differential pressure series

**Pressure transmitters for differential pressure and flow**

Measured variables:

- Differential pressure
- Small positive or negative overpressure
- Flow  $q \sim \sqrt{\Delta p}$  (together with a primary differential pressure transducer (see section "Flow meters"))

Measuring span (infinitely adjustable)

- For SITRANS P320/P420 with HART: 1 mbar to 30 bar (0.0145 to 435 psi)

**Pressure transmitters for level**

Measured variable:

- Level of corrosive and non-corrosive liquids in open and closed vessels.

Measuring span (infinitely adjustable)

- For SITRANS P320/P420 with HART: 25 mbar to 5 bar (0.363 to 72.5 psi)

Type of the mounting flange:

- EN 1092-1 flanges
- ASME B16.5 flanges
- J.I.S. flanges
- Diverse range of sealing surface forms available

**Design**

Depending on the customer-specific order, the device comprises different parts.

- ① Cover over buttons and nameplate with general information
- ② Cover (front) with glass pane (optional)
- ③ Display (optional)
- ④ Safety catch (front)
- ⑤ Locking screw for locking the enclosure
- ⑥ Process connection
- ⑦ Approval label with approval information
- ⑧ Cable inlet, optionally with cable gland

- ⑨ Locking screw for the cover over the buttons
- ⑩ Cover (rear) for electrical terminal compartment
- ⑪ Electrical terminal compartment
- ⑫ Safety catch (back)
- ⑬ Ground terminal
- ⑭ Nameplate with information on the remote seal
- ⑮ Blanking plug

**Device front view**

- The electronics enclosure is made of die cast aluminum or precision cast stainless steel.
- The enclosure has a removable circular cover at the front and the back.
- Depending on the device version, the front cover (2) may be designed as an inspection window.
- The cable inlet (8) to the electrical terminal compartment is at the side; either the left or right-hand one can be used. The unused opening is closed with a blanking plug (15).
- The ground terminal (13) is located on the side.

- The electrical terminal compartment (11) for the auxiliary power and shield is accessible when you remove the back cover (10).
- The measuring cell with process connection (6) is located in the bottom part of the enclosure. The measuring cell is prevented from rotating by a locking screw (5).
- Thanks to the modular design of the pressure transmitter, the measuring cell and application electronics or terminal compartment can be replaced if required.
- The cover over buttons (1), under which there are 4 buttons, is located on the upper face of the enclosure. The nameplate with general information is located on the cover over the buttons.

## Technical description

### Nameplates

#### Nameplate

The nameplate with the article no. and other important information, such as design details and technical data, is located on the cover over the buttons.

The nameplate contains the following information:

- 1: Article number (7MF0320-\*\*\*\*-\*\*\*\*-Z)
- 2: Firmware and hardware identification (FW: 1.00.07 HW: 1.00.00)
- 3: QR code to the mobile website with device-specific information
- 4: Conformity with country-specific directives (FM, SP, ENEC, CE)
- 5: Note operating instructions, certificates and approvals
- 6: Protection class (IP66)
- 7: Permitted ambient temperature for the hazardous area of the corresponding temperature class (-40°C ≤ Ta ≤ +85°C)
- 8: Maximum allowable operating pressure / maximum allowable test pressure (4 bar/6 bar)
- 9: Minimum/maximum measuring span (8.3 mbar/250 mbar)
- 10: Material: connection, diaphragm, O-ring, oil (CONNEC. DIAPHR. O-RING FILLING SILICONE OIL)
- 11: Serial number (SIN: N1LN110047\*\*\*\*)
- 12: Order supplement (options, order code) (E60+E84)

#### Approval label with approval information

The approval label with approval information is located on the front of the enclosure.

The approval label contains the following information:

- Ex symbol
- II 1/2 G Ex ia IIC T4/T5/T6 Ga
- II 1/2 G Ex Ib IIC T4/T5/T6 Gb
- VH: DC 10.5 ... 45 V outp.: 4 ... 20 mA from certified intrinsically safe power source
- VI ≤ 30 V; II ≤ 100 mA; PI ≤ 0.75 W
- LI ≤ 0.4 mH; CI ≤ 6 nF
- PTB XX ATEX XXXX
- Note test certificate I
- 40°C ≤ Ta ≤ +60°C (T6) / +85°C (T4)

Breakdown of the label components:

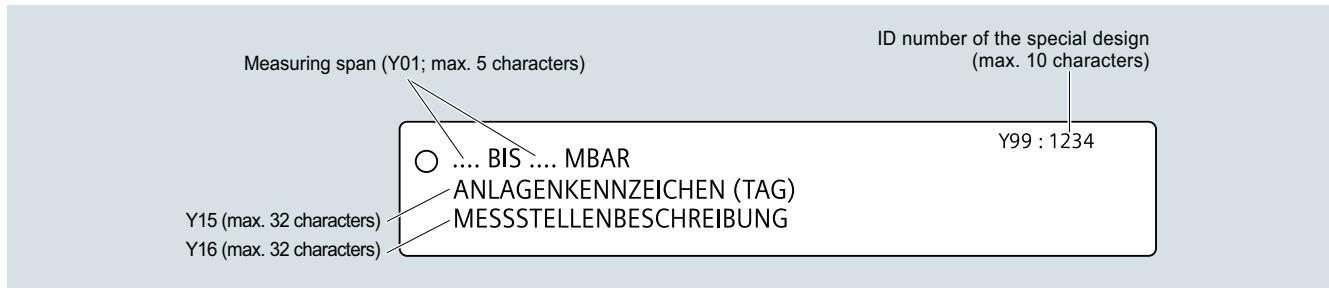

- 1: Characteristics of the hazardous area (II 1/2 G)
- 2: Type of protection (Ex ia)
- 3: Group (gas, dust) (IIC)
- 4: Maximum surface temperature (temperature class) (T4/T5/T6)
- 5: Device protection level (Ga)

- ① Characteristics of the hazardous area
- ② Type of protection
- ③ Group (gas, dust)
- ④ Maximum surface temperature (temperature class)
- ⑤ Device protection level

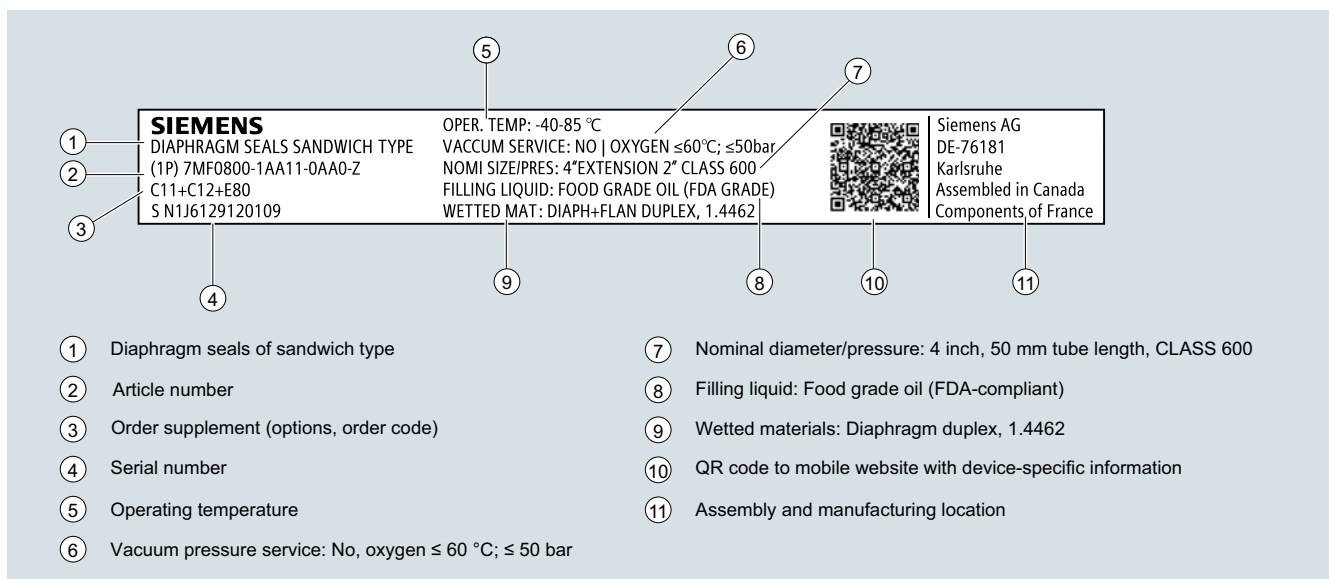

Measuring point label

The measuring point label is located under the front cover.

Nameplate with information on the remote seals

The nameplate with information on the remote seals is located on the back of the enclosure.

- |   |   |
|---|---|
| ① Diaphragm seals of sandwich type                      | ⑦ Nominal diameter/pressure: 4 inch, 50 mm tube length, CLASS 600 |
| ② Article number  | ⑧ Filling liquid: Food grade oil (FDA-compliant)                  |
| ③ Order supplement (options, order code)                | ⑨ Wetted materials: Diaphragm duplex, 1.4462                      |
| ④ Serial number   | ⑩ QR code to mobile website with device-specific information      |
| ⑤ Operating temperature                                 | ⑪ Assembly and manufacturing location                             |
| ⑥ Vacuum pressure service: No, oxygen ≤ 60 °C; ≤ 50 bar |   |

	0.7 ... 70 MPa	80 MPa	80 MPa
	102 ... 10153 psi	11603 psi	11603 psi
Measuring limits	For 250 mbar/25 kPa/3.6 psi measuring cells, the lower measuring limit is 750 mbar a/75 kPa a/10.8 psi a. The measuring cell is vacuum-resistant up to 30 mbar a/3 kPa a/0.44 psi a.		
• Low measuring limit	30 mbar a/3 kPa a/0.44 psi a		
- Measuring cell with silicone oil filling	30 mbar a/3 kPa a/0.44 psi a		
- Measuring cell with inert oil	100 mbar a/10 kPa a/1.45 psi a		
- Measuring cell with FDA-compliant oil	100% of the max. measuring span (for oxygen measurement max. 100 bar/10 MPa/ 1450 psi and 60 °C (140 °F) ambient temperature/temperature of medium)		
• Upper measuring limit	Between the measuring limits (infinitely adjustable)		
• Lower range value			

**Output**

Output signal	<b>HART</b> 4 ... 20 mA
• Low saturation limit (infinitely adjustable)	3.55 mA, factory preset to 3.8 mA
• High saturation limit (infinitely adjustable)	22.8 mA, factory-set to 20.5 mA or optionally 22.0 mA
• Ripple (without HART communication)	$I_{pp} \leq 0.5\%$ of max. output current
Adjustable damping	0 ... 100 s, continuously adjustable over remote operation 0 ... 100 s, in increments of 0.1 s, adjustable over display
• Current transmitter	3.55 ... 22.8 mA
• Failure signal	3.55 ... 22.8 mA (factory preset to 3.55 mA)
Load	Resistor R [ $\Omega$ ]
• Without HART communication	$R = (U_H - 10.5 \text{ V})/22.8 \text{ mA}$ , $U_H$ : Power supply in V
• With HART communication	$R = 230 \dots 1100 \Omega$ (HART communicator (handheld)) $R = 230 \dots 500 \Omega$ (SIMATIC PDM)
Characteristic curve	<ul style="list-style-type: none"> <li>• Linearly increasing or linearly decreasing</li> <li>• Linear increase or decrease or according to the square root (only for differential pressure and flow)</li> </ul>

Step response time  $T_{63}$  (without electrical damping)

$\leq 0.105$  s

Effect of mounting position (in pressure per change of angle)

$\leq 0.05$  mbar/0.005 kPa/0.000725 psi per 10° incline  
(zero point correction is possible with position error compensation)

Effect of auxiliary power (in % per voltage change)

0.005% per 1 V

**SITRANS P320 / SITRANS P420 for gauge pressure (pressure series)****Operating conditions**

Temperature of medium

- Measuring cell with silicone oil filling -40 ... +100 °C (-40 ... +212 °F)
- Measuring cell with inert oil
  - 1 bar/100 kPa/14.5 psi -40 ... +100 °C (-40 ... +212 °F)
  - 4 bar/400 kPa/58 psi
  - 16 bar/1.6 MPa/232 psi
  - 63 bar/6.3 MPa/914 psi
  - 160 bar/16 MPa/2321 psi -20 ... +100 °C (-4 ... +212 °F)
  - 400 bar/40 MPa/5802 psi
  - 700 bar/70 MPa/10152 psi
- Measuring cell with FDA-compliant oil -10 ... +100 °C (14 ... +212 °F)

Ambient conditions

- Ambient temperature/enclosure
  - Measuring cell with silicone oil filling Observe the temperature class in areas subject to explosion hazard.
  - Measuring cell with inert oil for gauge pressure measuring cells: -40 ... +85 °C (-40 ... +185 °F)
  - 1 bar/100 kPa/14.5 psi
  - 4 bar/400 kPa/58 psi
  - 16 bar/1.6 MPa/232 psi
  - 63 bar/6.3 MPa/914 psi
  - Measuring cell with inert oil -40 ... +85 °C (-40 ... +185 °F)
  - Measuring cell with FDA-compliant oil -10 ... +85 °C (14 ... +185 °F)
  - Display -20 ... +80 °C (-4 ... +176 °F)
- Storage temperature -50 ... +85 °C (-58 ... +185 °F) (with FDA-compliant oil: -20 ... +85 °C (-4 ... +185 °F))
- Climatic class in accordance with IEC 60721-3-4 4K4H
- Degree of protection
  - According to IEC 60529 IP66, IP68
  - According to NEMA 250 Type 4X
- Electromagnetic compatibility
  - Emitted interference and interference immunity According to IEC 61326 and NAMUR NE 21

**Design**

Weight

Approx. 2.3 kg (5.07 lb) with aluminum enclosure  
 Approx. 4.2 kg (9.25 lb) for stainless steel enclosure

Material

- Wetted parts materials
  - Process connection Stainless steel, material no. 1.4404/316L or Alloy C22, material no. 2.4602
  - Oval flange Stainless steel, mat. no. 1.4404/316L
  - Seal diaphragm Stainless steel, material no. 1.4404/316L or Alloy C276, material no. 2.4819
- Non-wetted parts materials
  - Electronics enclosure
    - Low-copper die-cast aluminum GD-AISI 12 or stainless steel precision casting, mat. no. 1.4409/ CF-3M
    - Standard: Powder coating with polyurethane
    - Option: 2 coats: Coat 1: epoxy-based; coat 2: Polyurethane
    - Stainless steel type plate (1.4404/316L)
  - Mounting bracket Electrogalvanized steel or stainless steel

Process connection

- Connection shank G1/2A according to DIN EN 837-1
- Female thread ½-14 NPT
- Male thread M20 x 1.5 and ½-14 NPT
- Oval flange (PN 160 (MWP 2320 psi g)) with fastening screw thread:
  - 7/16-20 UNF according to EN 61518
  - M10 according to DIN 19213
- Oval flange (PN 420 (MWP 2320 psi g)) with fastening screw thread:
  - 7/16-20 UNF according to EN 61518
  - M12 according to DIN 19213
- Male thread M20 x 1.5 and ½-14 NPT

Electrical connection

- Cable entry via the following screwed glands:
- M20 x 1.5
  - ½-14 NPT
  - Device plug Han 7D/Han 8D<sup>1)</sup>
  - Device plug M12

**Displays and controls**

Keys

4 keys for operation directly on the device

Display

- With or without integrated display (optional)
- Cover with inspection window (optional)

<b>Shut-off valves, valve manifolds</b>	
With mounted valve manifold 7MF9011-4EA, process connection at transmitter G½ shank, PTFE sealing ring and pressure test certified in in factory certificate (EN 10204-2.2)	<b>T02</b>
With mounted valve manifold 7MF9011-4FA, process connection at transmitter female thread ½-14 NPT, sealing tape. With PTFE sealing ring and pressure test certified in factory certificate (EN 10204-2.2)	<b>T03</b>
With mounted valve manifold 7MF9411-5AA, process connection at transmitter oval flange with PTFE gasket, steel mounting screws, pressure test certified in factory certificate (EN 10204-2.2)	<b>T05</b>
With mounted valve manifold 7MF9411-5AA, process connection at transmitter oval flange with PTFE gasket, stainless steel mounting screws, pressure test certified in factory certificate (EN 10204-2.2)	<b>T06</b>

Options	Order code
Append "-Z" to Article No., add order code and plain text or entry from drop-down list.	
<b>Device settings</b>	
Measuring span	<b>Y01</b>
Lower range value (max. 5 characters), upper range value (max. 5 characters), unit [mbar, bar, kPa, MPa, psi, ...], example: -0.5 ... 10.5 psi	
Input field 1 and input field 2: max. 5 characters and numbers only; decimal places as dot (comma is automatically converted to dot).	
Drop-down list: Pa, MPa, kPa, hPa, bar, mbar, psi, g/cm <sup>2</sup> , kg/cm <sup>2</sup> , kgf/cm <sup>2</sup> , inH <sub>2</sub> O, inH <sub>2</sub> O (4°C), ftH <sub>2</sub> O, mmH <sub>2</sub> O, mmH <sub>2</sub> O (4°C), mH <sub>2</sub> O (4°C), mmHg, inHg, atm, torr	
TAG (on stainless steel plate and device parameters, max. 32 characters)	<b>Y15</b>
Input field: Free text, max. 32 characters	
Measuring point description (on stainless steel plate and device parameters, max. 32 characters)	<b>Y16</b>
Input field: Free text, max. 32 characters	
TAG short (device parameters, max. 8 characters)	<b>Y17</b>
Input field: Free text, max. 8 characters	
Local display [Pressure, Percent], reference [None, Absolute, Relative], example: Pressure gauge	<b>Y21</b>
Drop-down list: Percent, pressure unit, pressure unit abs., pressure unit gauge	
Local display Scaling with standard units [m <sup>3</sup> /s, l/s, m, inch, ...], example 1 ... 5 m	<b>Y22</b>
Input field 1 and input field 2: max. 5 characters and numbers only; decimal places as dot (comma is automatically converted to dot).	
Drop-down list: m, cm, mm, in, ft, m <sup>3</sup> , l, hl, in <sup>3</sup> , ft <sup>3</sup> , yd <sup>3</sup> , gal, gal (UK), bu, bbl, bbl (US), SCF, Nm <sup>3</sup> , Ni.	
Local display Scaling with user-specific units (max. 12 characters), example 1 ... 5 m	<b>Y23</b>
Input field 1 and input field 2: max. 5 characters and numbers only; decimal places as dot (comma is automatically converted to dot).	
Input field 3: Free text, max. 8 characters	
Saturation limits instead of 3.8 ... 20.5 mA, example: 3.8 ... 22.0 mA	<b>Y30</b>
Drop-down list 1: 3.9, 4	
Drop-down list 2: 20.8, 22	
Fault current instead of 3.6 mA [22.5 mA, 22.8 mA]	<b>Y31</b>
Drop-down list: 3.75; 21.75; 22.5; 22.6	
Damping in seconds instead of 2 s (0.0 ... 100.0 s)	<b>Y32</b>
Input field: max. 4 characters and numbers only; decimal places as dot (comma is automatically converted to dot); min. value = 0; max. value = 100.	
ID number of special version	<b>Y99</b>
Input field: max. 4 characters and only natural numbers from 0 ... 9999

## Technical specifications

### SITRANS P320 / SITRANS P420 for gauge pressure (differential pressure series)

Input			
Measured variable	Gauge pressure		
Measuring span (infinitely adjustable) or measuring range and maximum operating pressure (pursuant to Pressure Equipment Directive 2014/68/EU)	Measuring span	Max. permissible operating pressure MAWP (PS)	Maximum permissible test pressure
	1 ... 20 mbar	160 bar	240 bar
	0.1 ... 2 kPa	16 MPa	24 MPa
	0.4019 ... 8.037 inH <sub>2</sub> O	2320 psi	3481 psi
	1 ... 60 mbar	160 bar	240 bar
	0.1 ... 6 kPa	16 MPa	24 MPa
	0.4019 ... 24.11 inH <sub>2</sub> O	2320 psi	3481 psi
	2.5 ... 250 mbar	160 bar	240 bar
	0.2 ... 25 kPa	16 MPa	24 MPa
	1.005 ... 100.5 inH <sub>2</sub> O	2320 psi	3481 psi
	6 ... 600 mbar	160 bar	240 bar
	0.6 ... 60 kPa	16 MPa	24 MPa
	2.41 ... 241.1 inH <sub>2</sub> O	2320 psi	3481 psi
	16 ... 1600 mbar	160 bar	240 bar
	1.6 ... 160 kPa	16 MPa	24 MPa
	6.43 ... 643 inH <sub>2</sub> O	2320 psi	3481 psi
	50 ... 5000 mbar	160 bar	240 bar
	5 ... 500 kPa	16 MPa	24 MPa
	20.09 ... 2009 inH <sub>2</sub> O	2320 psi	3481 psi
	0.3 ... 30 bar	160 bar	240 bar
	0.03 ... 3 MPa	16 MPa	24 MPa
	4.35 ... 435 psi	2320 psi	3481 psi
	5 ... 100 bar	160 bar	240 bar
	0.5 ... 10 MPa	16 MPa	24 MPa
	76.9 ... 1450 psi	2320 psi	3481 psi
Measuring limits			
• Low measuring limit			
- Measuring cell with silicone oil filling	30 mbar a/3 kPa a/0.44 psi a		
- Measuring cell with inert oil	30 mbar a/3 kPa a/0.44 psi a		
- Measuring cell with FDA-compliant oil	100 mbar a/10 kPa a/1.45 psi a		
• Upper measuring limit	100% of the max. measuring span (for oxygen measurement max. 100 bar/10 MPa/ 1450 psi and 60 °C (140 °F) ambient temperature/temperature of medium)		
• Lower range value	Between the measuring limits (infinitely adjustable)		
Output		HART	
Output signal	4 ... 20 mA		
• Low saturation limit (infinitely adjustable)	3.55 mA, factory preset to 3.8 mA		
• High saturation limit (infinitely adjustable)	22.8 mA, factory-set to 20.5 mA or optionally 22.0 mA		
• Ripple (without HART communication)	$I_{pp} \leq 0.5\%$ of max. output current		
Adjustable damping	0 ... 100 s, continuously adjustable over remote operation		
	0 ... 100 s, in increments of 0.1 s, adjustable over display		
• Current transmitter	3.55 ... 22.8 mA		
• Failure signal	3.55 ... 22.8 mA		
Load	Resistor R [ $\Omega$ ]		
• Without HART communication	$R = (U_H - 10.5 \text{ V})/22.8 \text{ mA}$ , $U_H$ : Power supply in V		
• With HART communication	$R = 230 \dots 1100 \Omega$ (HART communicator (handheld)) $R = 230 \dots 500 \Omega$ (SIMATIC PDM)		
Characteristic curve	<ul style="list-style-type: none"> <li>• Linearly increasing or linearly decreasing</li> <li>• Linear increase or decrease or according to the square root (only for differential pressure and flow)</li> </ul>		
Physical bus	-		
Polarity-independent	-		

**SITRANS P320 / SITRANS P420 for gauge pressure (differential pressure series)****Measuring accuracy**

## Reference conditions

- According to EN 60770-1
- Rising characteristic curve
- Lower range value 0 bar/kPa/psi
- Seal diaphragm stainless steel
- Measuring cell with silicone oil filling
- Room temperature 25 °C (77 °F)

Conformity error at limit point setting, including hysteresis and repeatability

Measuring span ratio  $r$  (spread, Turn-Down)

$r = \text{max. measuring span/set measuring span and nominal measuring range}$

## • Linear characteristic

- 20 mbar/2 kPa/8.031 inH<sub>2</sub>O

$r \leq 5: \leq 0.075\%$

- 60 mbar/6 kPa/24.09 inH<sub>2</sub>O

$5 < r \leq 20: \leq (0.005 \cdot r + 0.05)\%$

- 250 mbar/25 kPa/3.6 psi

In 5 years  $\leq (0.25 \cdot r)\%$

## • 100 bar/10 MPa/1450 psi

Step response time  $T_{E3}$  (without electrical damping)

• 20 mbar/2 kPa/8.031 inH<sub>2</sub>O

Approx. 0.160 s

• 60 mbar/6 kPa/24.09 inH<sub>2</sub>O

Approx. 0.150 s

## • 250 mbar/25 kPa/3.6 psi

Approx. 0.135 s

600 mbar/60 kPa/240.9 inH<sub>2</sub>O

1600 mbar/160 kPa/642.4 inH<sub>2</sub>O

5000 mbar/500 kPa/2008 inH<sub>2</sub>O

30 bar/3 MPa/435 psi

## • 100 bar/10 MPa/1450 psi

Approx. 0.145 s

Effect of mounting position (in pressure per change of angle)

$\leq 0.7$  mbar/0.07 kPa/0.010 psi per 10° incline  
(zero offset is possible with position error compensation)

Effect of auxiliary power (in % per voltage change)

0.005% per 1 V

**Operating conditions**

Temperature of medium

## • Measuring cell with silicone oil filling

- Measuring cell 30 bar (435 psi)

-40 ... +100 °C (-40 ... +212 °F)

- Measuring cell 100 bar (1450 psi)

-20 ... +100 °C (-4 ... +212 °F)

## • Measuring cell with inert oil

-20 ... +100 °C (-4 ... +212 °F)

## • In conjunction with dust explosion protection

-20 ... +100 °C (-4 ... +212 °F)

-40 ... +85 °C (-4 ... +185 °F)

Ambient conditions

## • Ambient temperature/enclosure

Observe the temperature class in areas subject to explosion hazard.

- Measuring cell with silicone oil filling

-40 ... +85 °C (-40 ... +185 °F)

- Measuring cell with inert oil

-40 ... +85 °C (-40 ... +185 °F)

- Display

-20 ... +80 °C (-4 ... +176 °F)

## • Storage temperature

-50 ... +85 °C (-58 ... +185 °F)

## • Climatic class in accordance with IEC 60721-3-4

4K4H

## • Degree of protection

- According to IEC 60529

IP66, IP68

- According to NEMA 250

Type 4X

## • Electromagnetic compatibility

- Emitted interference and interference immunity

According to IEC 61326 and NAMUR NE 21

# Pressure Measurement

Pressure transmitters  
for applications with advanced requirements (Advanced)  
SITRANS P320/P420

## for gauge pressure (differential pressure series)

### SITRANS P320 / SITRANS P420 for gauge pressure (differential pressure series)

#### Design

Weight	Approx. 3.9 kg (8.5 lb) with aluminum enclosure Approx. 5.8 kg (12.7 lb) with stainless steel enclosure
Material	
<ul style="list-style-type: none"> <li>• Wetted parts materials           <ul style="list-style-type: none"> <li>- Seal diaphragm</li> </ul> </li> <li>- Process flanges and sealing plugs</li> <li>- O-ring</li> <li>• Non-wetted parts materials           <ul style="list-style-type: none"> <li>- Electronics enclosure</li> </ul> </li> <li>- Pressure flange screws</li> <li>- Mounting bracket</li> </ul>	Stainless steel, mat. no. 1.4404/316L, Alloy C276, mat. no. 2.4819, Monel, mat. no. 2.4360, tantalum or gold Stainless steel, mat. no. 1.4408 to PN 160, mat. no. 1.4571/316Ti for PN 420, Alloy C22, 2.4602 or Monel, mat. no. 2.4360 FPM (Viton) or optionally: PTFE, FEP, FEPM and NBR <ul style="list-style-type: none"> <li>• Low-copper die-cast aluminum GD-AISi 12 or stainless steel precision casting, mat. no. 1.4409/ CF-3M</li> <li>• Standard: Powder coating with polyurethane               <ul style="list-style-type: none"> <li>Option: 2 coats: Coat 1: epoxy-based; coat 2: Polyurethane</li> </ul> </li> <li>• Stainless steel type plate (1.4404/316L)</li> </ul> Stainless steel ISO 3506-1 A4-70 Steel, electrogalvanized steel, or stainless steel
Process connection	1/4-18 NPT female thread and flat connection with 7/16-20 UNF fastening screw thread in accordance with EN 61518 or M10 fastening screw thread in accordance with DIN 19213 (M12 for PN 420 (MWP 6092 psi))
Electrical connection	Screw terminals Cable entry via the following screwed glands: <ul style="list-style-type: none"> <li>• M20 x 1.5</li> <li>• 1/2-14 NPT</li> <li>• Device plug Han 7D/Han 8D<sup>1)</sup></li> <li>• Device plug M12</li> </ul>

#### Displays and controls

Keys	4 keys for operation directly on the device
Display	<ul style="list-style-type: none"> <li>• With or without integrated display (optional)</li> <li>• Cover with inspection window (optional)</li> </ul>

#### Auxiliary power $U_H$

Terminal voltage on pressure transmitter	10.5 ... 45 V DC 10.5 ... 30 V DC in intrinsically safe mode
Ripple	$U_{SS} \leq 0.2 \text{ V}$ (47 ... 125 Hz)
Noise	$U_{eff} \leq 1.2 \text{ mV}$ (0.5 ... 10 kHz)
Auxiliary power	-
Separate supply voltage	-

#### Certificates and approvals

Classification according to pressure equipment directive (PED 2014/68/EU)	For gases of fluid group 1 and liquids of fluid group 1; complies with requirements of article 4, paragraph 3 (sound engineering practice)
Drinking water

<sup>2)</sup> Not with "flameproof enclosure" type of protection

<sup>3)</sup> Not with type of protection "FM + CSA" [is + XP]"

SITRANS P320/P420 pressure transmitter for relative pressure (differential pressure series), dimensions in mm (inch)

## Technical specifications

### SITRANS P320 / SITRANS P420 for gauge and absolute pressure, with flush-mounted diaphragm

#### Input of gauge pressure, with flush-mounted diaphragm

Measured variable	Gauge pressure		
Measuring span (infinitely adjustable) or measuring range, max. operating pressure and max. test pressure	Measuring span	Max. permissible operating pressure MAWP (PS)	Maximum permissible test pressure
	0.01 ... 1 bar	Refer to the information on the nameplate of the pressure transmitter and the data on the mounting flange <sup>1)</sup>	
	1 ... 100 kPa		
	0.15 ... 14.5 psi		
	0.04 ... 4 bar		
	4 ... 400 kPa		
	0.58 ... 58 psi		
	0.16 ... 16 bar		
	0.016 ... 1.6 MPa		
	2.3 ... 232 psi		
	0.6 ... 63 bar		
	0.063 ... 6.3 MPa		
	9.1 ... 914 psi		
Measuring limits			
• Low measuring limit			
- Measuring cell with silicone oil filling	100 mbar a/10 kPa a/1.45 psi a		
- Measuring cell with inert oil	100 mbar a/10 kPa a/1.45 psi a		
- Measuring cell with FDA-compliant oil	100 mbar a/10 kPa a/1.45 psi a		
• Upper measuring limit	100% of max. measuring span		

#### Input of absolute pressure, with flush-mounted diaphragm

Measured variable	Absolute pressure				
Measuring span (infinitely adjustable) or measuring range, max. operating pressure and max. test pressure	Measuring span	Max. permissible operating pressure MAWP (PS)	Maximum permissible test pressure		
	43 ... 1300 mbar a	Refer to the information on the nameplate of the pressure transmitter and the data on the mounting flange <sup>1)</sup>			
	4.3 ... 130 kPa a				
	17 ... 525 inH <sub>2</sub> O a				
	166 ... 5000 mbar a				
	16.6 ... 500 kPa a				
	2.41 ... 72.5 psi a				
	1 ... 30 bar a				
	0.1 ... 3 MPa a				
	14.5 ... 435 psi a				
	Depending on the process connection, the measuring span may differ from these values.				
Measuring limits					
• Low measuring limit					
- Measuring cell with silicone oil filling	0 bar a/0 kPa a/0 psi a				
• Upper measuring limit	100% of max. measuring span				
Lower range value	Between the measuring limits (infinitely adjustable)				

#### Output

Output signal	<b>HART</b>
• Low saturation limit (infinitely adjustable)	4 ... 20 mA
• High saturation limit (infinitely adjustable)	3.55 mA, factory preset to 3.8 mA
• Ripple (without HART communication)	22.8 mA, factory-set to 20.5 mA or optionally 22.0 mA
Adjustable damping	$I_{pp} \leq 0.5\%$ of max. output current
	0 ... 100 s, continuously adjustable over remote operation
	0 ... 100 s, in increments of 0.1 s, adjustable over display
• Current transmitter	3.55 ... 22.8 mA
• Failure signal	3.55 ... 22.8 mA
Load	Resistor R [ $\Omega$ ]
• Without HART communication	$R = (U_H - 10.5 \text{ V})/22.8 \text{ mA}$ , $U_H$ : Power supply in V
• With HART communication	$R = 230 \dots 1100 \Omega$ (HART communicator (handheld)) $R = 230 \dots 500 \Omega$ (SIMATIC PDM)
Characteristic curve	<ul style="list-style-type: none"> <li>• Linearly increasing or linearly decreasing</li> <li>• Linear increase or decrease or according to the square root (only for differential pressure and flow)</li> </ul>
Physical bus	-
Polarity-independent	-

SITRANS P320/P420

## for gauge and absolute pressure, flush-mounted diaphragm

1

### SITRANS P320 / SITRANS P420 for gauge and absolute pressure, with flush-mounted diaphragm

#### Gauge pressure measuring accuracy, with flush-mounted diaphragm

Reference conditions

- According to EN 60770-1
- Rising characteristic curve
- Lower range value 0 bar/kPa/psi
- Seal diaphragm stainless steel
- Measuring cell with silicone oil filling
- Room temperature 25 °C (77 °F)

Conformity error at limit point setting, including hysteresis and repeatability

Measuring span ratio  $r$  (spread, Turn-Down)

$r$  = maximum measuring span/set measuring span or nominal measuring range

• Linear characteristic

- 1 bar/100 kPa/14.5 psi
- 4 bar/400 kPa/58 psi
- 16 bar/1.6 MPa/232 psi
- 63 bar/6.3 MPa/914 psi

$r \leq 5$ :  $\leq 0.075\%$   
 $5 < r \leq 100$ :  $\leq (0.005 \cdot r + 0.05)\%$

Influence of ambient temperature in % per 28 °C (50 °F)

- 1 bar/100 kPa/14.5 psi
- 4 bar/400 kPa/58 psi
- 16 bar/1.6 MPa/232 psi
- 63 bar/6.3 MPa/914 psi

$\leq (0.08 \cdot r + 0.16)\%$

Influence of the temperature of medium (in pressure per temperature unit)

- Temperature difference between temperature of medium and ambient temperature

3 mbar/0.3 kPa/0.04 psi per 10 K

Long-term stability at  $\pm 30$  °C ( $\pm 54$  °F)

- 1 bar/100 kPa/14.5 psi
- 4 bar/400 kPa/58 psi
- 16 bar/1.6 MPa/232 psi
- 63 bar/6.3 MPa/914 psi

In 5 years  $\leq (0.25 \cdot r)\%$

In 5 years  $\leq (0.125 \cdot r)\%$

Step response time  $T_{63}$  (without electrical damping)

$\leq 0.105$  s

Effect of mounting position (in pressure per change of angle)

0.4 mbar/0.04 kPa/0.006 per 10° incline  
(zero point correction is possible with position error compensation)

Effect of auxiliary power (in % per voltage change)

0.005% per 1 V

#### Absolute pressure measuring accuracy with flush diaphragm

Reference conditions

- According to EN 60770-1
- Rising characteristic curve
- Lower range value 0 bar/kPa/psi
- Seal diaphragm stainless steel
- Measuring cell with silicone oil filling
- Room temperature 25 °C (77 °F)

Conformity error at limit point setting, including hysteresis and repeatability

Measuring span ratio  $r$  (spread, Turn-Down)

$r$  = maximum measuring span/set measuring span or nominal measuring range

• Linear characteristic

- All measuring cells

$r \leq 10$ :  $\leq 0.2\%$   
 $10 < r \leq 30$ :  $\leq 0.4\%$

Influence of ambient temperature in % per 28 °C (50 °F)

- All measuring cells

$\leq (0.16 \cdot r + 0.24)\%$

Influence of the temperature of medium (in pressure per temperature unit)

- Temperature difference between temperature of medium and ambient temperature

3 mbar/0.3 kPa/0.04 psi per 10 K

Long-term stability at  $\pm 30$  °C ( $\pm 54$  °F)

- All measuring cells

In 5 years  $\leq (0.25 \cdot r)\%$

Step response time  $T_{63}$  (without electrical damping)

$\leq 0.105$  s

Effect of mounting position (in pressure per change of angle)

0.4 mbar/0.04 kPa/0.006 per 10° incline  
(zero point correction is possible with position error compensation)

Effect of auxiliary power (in % per voltage change)

0.005% per 1 V

**SITRANS P320 / SITRANS P420 for gauge and absolute pressure, with flush-mounted diaphragm****Operating conditions**Temperature of medium<sup>2)</sup>

- Measuring cell with silicone oil filling  
-40 ... +150 °C (-40 ... +302 °F)  
-40 ... +200 °C (-40 ... +392 °F) with cooling extension
- Measuring cell with inert oil  
-20 ... +100 °C (-4 ... +212 °F)
- Measuring cell with FDA-compliant oil  
-10 ... +150 °C (14 ... +302 °F)

Ambient conditions

- Ambient temperature/enclosure
  - Measuring cell with silicone oil filling  
-40 ... +85 °C (-40 ... +185 °F)
  - Measuring cell with inert oil (different pressure classes)  
1 bar/100 kPa/14.5 psi      -40 ... +85 °C (-40 ... +185 °F)  
4 bar/400 kPa/58 psi  
16 bar/1.6 MPa/232 psi  
63 bar/6.3 MPa/914 ps
  - Measuring cell with FDA-compliant oil  
-10 ... +85 °C (14 ... +185 °F)
  - Display  
-20 ... +80 °C (-4 ... +176 °F)
- Storage temperature  
-50 ... +85 °C (-58 ... +185 °F) (with FDA-compliant oil: -20 ... +85 °C (-4 ... +185 °F))
- Climatic class in accordance with IEC 60721-3-4  
4K4H
- Degree of protection
  - According to IEC 60529  
IP66, IP68
  - According to NEMA 250  
Type 4X
- Electromagnetic compatibility
  - Emitted interference and interference immunity  
According to IEC 61326 and NAMUR NE 21

**Design**

Weight (pressure transmitter without mounting flange)

Material

- Wetted parts materials
  - Process connection  
Stainless steel, mat. no. 1.4404/316L
  - Seal diaphragm  
Stainless steel, material no. 1.4404/316L or Alloy C276, material no. 2.4819
- Non-wetted parts materials
  - Electronics enclosure
    - Low-copper die-cast aluminum GD-AISI 12 or stainless steel precision casting, mat. no. 1.4409/ CF-3M
    - Standard: Powder coating with polyurethane  
Option: 2 coats: Coat 1: epoxy-based; coat 2: Polyurethane
    - Stainless steel type plate (1.4404/316L)
  - Mounting bracket  
Steel, electrogalvanized steel, or stainless steel

Process connection

- Flanges according to EN and ASME
- F&B and pharmaceutical flanges
- BioConnect/BioControl
- PMC style

Electrical connection

- Cable entry via the following screwed glands:
- M20 x 1.5
  - ½-14 NPT
  - Device plug Han 7D/Han 8D<sup>3)</sup>
  - Device plug M12

**Displays and controls**

Keys

4 keys for operation directly on the device

Display

- With or without integrated display (optional)
- Cover with inspection window (optional)

**Auxiliary power U<sub>H</sub>**

Terminal voltage on pressure transmitter

10.5 ... 45 V DC  
10.5 ... 30 V DC in intrinsically safe mode

Ripple

U<sub>ss</sub> ≤ 0.2 V (47 ... 125 Hz)

Noise

U<sub>eff</sub> ≤ 1.2 mV (0.5 ... 10 kHz)

Auxiliary power

-

Separate supply voltage

-

- 1) The MAWP value of the pressure transmitter can be lower than the PN value of the mounting flange and vice versa.  
To determine the maximum permissible operating pressure and the maximum permissible test pressure, use the lowest value as reference.
- 2) Observe the temperature limits in the process connection standards (e.g. DIN 32676 and DIN 11851) for the maximum temperature of medium for flush-mounted process connections.
- 3) Han 8D is identical to Han 8U.

SITRANS P320/P420 pressure transmitter, with flush-mounted diaphragm, dimensions in mm (inch)

This figure consists of a SITRANS P320/P420 with an example flange.  
In this figure, the height is divided into  $H_1$  and  $H_2$ .

$H_1$  = Height of the SITRANS P320/P420 up to a defined cross-section

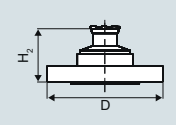

$H_2$  = Height of the flange up to this defined cross-section

Only the height  $H_2$  is indicated in the dimensions of the flanges.

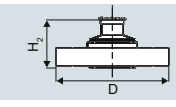

**Flanges according to EN and ASME**

## Flange according to EN

EN 1092-1					
	Order code	DN	PN	∅D	H <sub>2</sub>
	M03	50	16	165 mm (6.5")	Approx. 52 mm (2")
	M05	80	16	200 mm (7.9")	
	M10	25	40	115 mm (4.5")	
	M12	40	40	150 mm (5.9")	
	M13	50	40	165 mm (6.5")	
	M15	80	40	200 mm (7.9")	
	M22	40	100	170 mm (6.7")	

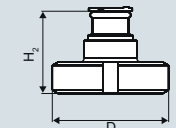

## Flanges according to ASME

ASME B16.5					
	Order code	DN	Class	∅D	H <sub>2</sub>
	M30	1"	150	110 mm (4.3")	Approx. 52 mm (2")
	M31	1½"	150	125 mm (4.9")	
	M32	2"	150	150 mm (5.9")	
	M33	3"	150	190 mm (7.5")	
	M34	4"	150	230 mm (9.1")

# Pressure Measurement

Pressure transmitters  
for applications with advanced requirements (Advanced)  
SITRANS P320/P420

for absolute pressure (pressure series)

1

## SITRANS P320 / SITRANS P420 for absolute pressure (pressure series)

### Measuring accuracy

Reference conditions

- According to EN 60770-1
- Rising characteristic curve
- Lower range value 0 bar/kPa/psi
- Seal diaphragm stainless steel
- Measuring cell with silicone oil filling
- Room temperature 25 °C (77 °F)

Conformity error at limit point setting, including hysteresis and repeatability

Measuring span ratio  $r$  (spread, Turn-Down)

$r$  = maximum measuring span/set measuring span or nominal measuring range

- Linear characteristic (all measuring cells)

-  $r \leq 10$

$\leq 0.1\%$

-  $10 < r \leq 30$

$\leq 0.2\%$

Influence of ambient temperature  
(in % per 28 °C (50 °F))

- 250 mbar a/25 kPa a/3.6 psi a
- 1300 mbar a/130 kPa a/18.8 psi a
- 5 bar a/500 kPa a/72.5 psi a
- 30 bar a/3000 kPa a/435 psi a
- 160 bar a/16 MPa a/2321 psi a
- 400 bar a/40 MPa a/5802 psi a
- 700 bar a/70 MPa a/10153 psi a

$\leq (0.15 \cdot r + 0.1)\%$

$\leq (0.08 \cdot r + 0.16)\%$

Long-term stability at  $\pm 30$  °C ( $\pm 54$  °F)

In 5 years  $\leq (0.25 \cdot r)\%$

Step response time  $T_{63}$  (without electrical damping)

Approx. 0.105 s

Effect of mounting position (in pressure per change of angle)

$\leq 0.05$  mbar/0.005 kPa/0.000725 psi per 10° incline  
(zero point correction is possible with position error compensation)

Effect of auxiliary power (in % per voltage change)

0.005% per 1 V

### Operating conditions

Temperature of medium

- Measuring cell with silicone oil filling
- Measuring cell with inert filling fluid

-40 ... +100 °C (-40 ... +212 °F)

-20 ... +100 °C (-4 ... +212 °F)

Ambient conditions

- Ambient temperature/enclosure
  - Measuring cell with silicone oil filling
  - Measuring cell with inert filling fluid
  - Display
- Storage temperature
- Climatic class in accordance with IEC 60721-3-4
- Degree of protection
  - According to IEC 60529
  - According to NEMA 250
- Electromagnetic compatibility
  - Emitted interference and interference immunity

Observe the temperature class in areas subject to explosion hazard.

Type 4X

According to IEC 61326 and NAMUR NE 21

**SITRANS P320 / SITRANS P420 for absolute pressure (pressure series)****Design**

Weight	Approx. 2.3 kg (5.07 lb) with aluminum enclosure Approx. 4.2 kg (9.25 lb) for stainless steel enclosure
Material	
• Wetted parts materials	
- Process connection	Stainless steel, material no. 1.4404/316L or Alloy C22, material no. 2.4602
- Oval flange	Stainless steel, mat. no. 1.4404/316L
- Seal diaphragm	Stainless steel, material no. 1.4404/316L or Alloy C276, material no. 2.4819
• Non-wetted parts materials	
- Electronics enclosure	<ul style="list-style-type: none"> <li>• Low-copper die-cast aluminum GD-AISI 12 or stainless steel precision casting, mat. no. 1.4409/ CF-3M</li> <li>• Standard: Powder coating with polyurethane Option: 2 coats: Coat 1: epoxy-based; coat 2: Polyurethane</li> <li>• Stainless steel type plate (1.4404/316L)</li> </ul>
- Mounting bracket	Electrogalvanized steel or stainless steel
Process connection	<ul style="list-style-type: none"> <li>• Connection shank G1/2A according to DIN EN 837-1</li> <li>• Female thread 1/2-14 NPT</li> <li>• Male thread M20 x 1.5 and 1/2-14 NPT</li> <li>• Oval flange (PN 160 (MWP 2320 psi g)) with fastening screw thread: <ul style="list-style-type: none"> <li>- 7/16-20 UNF according to EN 61518</li> <li>- M10 according to DIN 19213</li> </ul> </li> <li>• Oval flange (PN 420 (MWP 2320 psi g)) with fastening screw thread: <ul style="list-style-type: none"> <li>- 7/16-20 UNF according to EN 61518</li> <li>- M12 according to DIN 19213</li> </ul> </li> <li>• Male thread M20 x 1.5 and 1/2-14 NPT</li> </ul>
Electrical connection	<p>Cable entry via the following screwed glands:</p> <ul style="list-style-type: none"> <li>• M20 x 1.5</li> <li>• 1/2-14 NPT</li> <li>• Device plug Han 7D/Han 8D<sup>1)</sup></li> <li>• Device plug M12</li> </ul>

**Displays and controls**

Keys	4 keys for operation directly on the device
Display	<ul style="list-style-type: none"> <li>• With or without integrated display (optional)</li> <li>• Cover with inspection window (optional)</li> </ul>

**Auxiliary power U<sub>H</sub>**

Terminal voltage on pressure transmitter	10.5 ... 45 V DC 10.5 ... 30 V DC in intrinsically safe mode
Ripple	$U_{SS} \leq 0.2 \text{ V}$ (47 ... 125 Hz)
Noise	$U_{eff} \leq 1.2 \text{ mV}$ (0.5 ... 10 kHz)
Auxiliary power	-
Separate supply voltage	-

**Certificates and approvals**

Classification according to pressure equipment directive (PED 2014/68/EU)	For gases of fluid group 1 and liquids of fluid group 1; complies with requirements of article 4, paragraph 3 (sound engineering practice)
Drinking water	
• WRAS (England)	No.: 1903094 (option E83)
• ACS (France)	No.: 18 ACC LY 277 (option E85)
• NSF (USA)	No.: 20180920-MH61350 (option E84)
CRN (Canada)	No.: 0F9863.5C (option E60)
Explosion protection acc. to NEPSI (China)	No.: GYJ19.1058X (option E27)
Explosion protection acc. to INMETRO (Brazil)	No.: BRA-18-GE-0035X (option E25)
Explosion protection	
• Intrinsic safety "i"	
- Marking	II 1/2 G Ex ia/ib IIC T4/T6 Ga/Gb
- Permissible ambient temperature	-40 ... +80 °C (-40 ... +176 °F) temperature class T4 -40 ... +70 °C (-40 ... +158 °F) temperature class T6
- Permissible temperature of measuring medium	-40 ... +100 °C (-40 ... +212 °F) temperature class T4 -40 ... +70 °C (-40 ... +158 °F) temperature class T6
- Connection	To certified intrinsically safe circuits with peak values: $U_i = 30 \text{ V}$ , $I_i = 101 \text{ mA}$ , $P_i = 760 \text{ mW}$ $U_i = 29 \text{ V}$ , $I_i = 110 \text{ mA}$ , $P_i = 800 \text{ mW}$ $L_i = 0.24 \text{ } \mu\text{H}/C_i = 3.29 \text{ nF}$
- Effective internal inductance/capacitance	
• Flameproof enclosure "d"	
- Marking	Ex II 1/2 G Ex ia/db IIC T4/T6 Ga/Gb
- Permissible ambient temperature	-40 ... +80 °C (-40 ... +176 °F) temperature class T4 -40 ... +70 °C (-40 ... +158 °F) temperature class T6
- Permissible temperature of measuring medium	-40 ... +100 °C (-40 ... +212 °F) temperature class T4 -40 ... +70 °C (-40 ... +158 °F) temperature class T6
- Connection	To a circuit with the operating values: $U_n = 10.5 \text{ to } 45 \text{ V}$ , $4 \text{ ... } 20 \text{ mA}$

<b>Process flanges, gaskets (instead of standard gaskets FKM (FPM))</b>	
Seal (EN 837-1) material Fe (soft iron)	<b>K60</b>
Seal (EN 837-1) material 1.4571	<b>K61</b>
Seal (EN 837-1) material Cu	<b>K62</b>
<b>Process connection</b>	
Process connection male thread G½, bore hole 11 mm	<b>K80</b>
<b>Shut-off valves, valve manifolds</b>	
With mounted valve manifold 7MF9011-4EA, process connection at transmitter G½ shank, PTFE sealing ring and pressure test certified in in factory certificate (EN 10204-2.2)	<b>T02</b>
With mounted valve manifold 7MF9011-4FA, process connection at transmitter female thread ½-14 NPT, sealing tape. With PTFE sealing ring and pressure test certified in factory certificate (EN 10204-2.2)	<b>T03</b>
With mounted valve manifold 7MF9411-5AA, process connection at transmitter oval flange with PTFE gasket, steel mounting screws, pressure test certified in factory certificate (EN 10204-2.2)	<b>T05</b>
With mounted valve manifold 7MF9411-5AA, process connection at transmitter oval flange with PTFE gasket, stainless steel mounting screws, pressure test certified in factory certificate (EN 10204-2.2)	<b>T06</b>

Options	Order code
Append "-Z" to Article No., add order code and plain text or entry from drop-down list.	
<b>Device settings</b>	
Measuring span	<b>Y01</b>
Lower range value (max. 5 characters), upper range value (max. 5 characters), unit [mbar, bar, kPa, MPa, psi, ...], example: -0.5 ... 10.5 psi	
Input field 1 and input field 2: max. 5 characters and numbers only; decimal places as dot (comma is automatically converted to dot).	
Drop-down list: Pa, MPa, kPa, hPa, bar, mbar, psi, g/cm <sup>2</sup> , kg/cm <sup>2</sup> , kgf/cm <sup>2</sup> , inH <sub>2</sub> O, inH <sub>2</sub> O (4°C), ftH <sub>2</sub> O, mmH <sub>2</sub> O, mmH <sub>2</sub> O (4°C), mH <sub>2</sub> O (4°C), mmHg, inHg, atm, torr	
TAG (on stainless steel plate and device parameters, max. 32 characters)	<b>Y15</b>
Input field: Free text, max. 32 characters	
Measuring point description (on stainless steel plate and device parameters, max. 32 characters)	<b>Y16</b>
Input field: Free text, max. 32 characters	
TAG short (device parameters, max. 8 characters)	<b>Y17</b>
Input field: Free text, max. 8 characters	
Local display [Pressure, Percent], reference [None, Absolute, Relative], example: Pressure gauge	<b>Y21</b>
Drop-down list: Percent, pressure unit, pressure unit abs., pressure unit gauge	
Local display Scaling with standard units [m <sup>3</sup> /s, l/s, m, inch, ...], example 1 ... 5 m	<b>Y22</b>
Input field 1 and input field 2: max. 5 characters and numbers only; decimal places as dot (comma is automatically converted to dot).	
Drop-down list: m, cm, mm, in, ft, m <sup>3</sup> , l, hl, in <sup>3</sup> , ft <sup>3</sup> , yd <sup>3</sup> , gal, gal (UK), bu, bbl, bbl (US), SCF, Nm <sup>3</sup> , NI.	
Local display Scaling with user-specific units (max. 12 characters), example 1 ... 5 m	<b>Y23</b>
Input field 1 and input field 2: max. 5 characters and numbers only; decimal places as dot (comma is automatically converted to dot).	
Input field 3: Free text, max. 8 characters	
Saturation limits instead of 3.8 ... 20.5 mA, example: 3.8 ... 22.0 mA	<b>Y30</b>
Drop-down list 1: 3.9, 4	
Drop-down list 2: 20.8, 22	
Fault current instead of 3.6 mA [22.5 mA, 22.8 mA]	<b>Y31</b>
Drop-down list: 3.75; 21.75; 22.5; 22.6	
Damping in seconds instead of 2 s (0.0 ... 100.0 s)	<b>Y32</b>
Input field: max. 4 characters and numbers only; decimal places as dot (comma is automatically converted to dot); min. value = 0; max. value = 100.	
ID number of special version	<b>Y99</b>
Input field: max. 4 characters and only natural numbers from 0 ... 9999

# Pressure Measurement

Pressure transmitters

for applications with advanced requirements (Advanced)

SITRANS P320/P420

for absolute pressure (differential pressure series)

1

## SITRANS P320 / SITRANS P420 for absolute pressure (differential pressure series)

Conformity error at limit point setting, including hysteresis and repeatability

Measuring span ratio  $r$  (spread, Turn-Down)

• Linear characteristic (all measuring cells)

-  $r \leq 10$

-  $10 < r \leq 30$

$r$  = maximum measuring span/set measuring span or nominal measuring range

$\leq 0.1\%$

$\leq 0.2\%$

Influence of ambient temperature (in % per 28 °C (50 °F))

• 250 mbar a/25 kPa a/3.6 psi a

$\leq (0.15 \cdot r + 0.1)\%$

• 1300 mbar a/130 kPa a/18.8 psi a

$\leq (0.08 \cdot r + 0.16)\%$

5 bar a/500 kPa a/72.5 psi a

30 bar a/3000 kPa a/435 psi a

100 bar a/10 MPa a/1450 psi a

Long-term stability at  $\pm 30$  °C ( $\pm 54$  °F)

In 5 years  $\leq (0.25 \cdot r)\%$

Step response time  $T_{63}$  (without electrical damping)

• 250 mbar a/25 kPa a/3.6 psi a

Approx. 0.195 s

• 1300 mbar a/130 kPa a/18.8 psi a

Approx. 0.145 s

5 bar a/500 kPa a/72.5 psi a

30 bar a/3000 kPa a/435 psi a

100 bar a/10 MPa a/1450 psi a

Effect of mounting position (in pressure per change of angle)

$\leq 0.7$  mbar/0.07 kPa/0.010 psi per 10° incline (zero offset is possible with position error compensation)

Effect of auxiliary power (in % per voltage change)

0.005% per 1 V

### Operating conditions

Temperature of medium

• Measuring cell with silicone oil filling

- Measuring cell 30 bar (435 psi)

-40 ... +100 °C (-40 ... +212 °F)

- Measuring cell 100 bar (1450 psi)

-20 ... +100 °C (-4 ... +212 °F)

• Measuring cell with inert oil

-20 ... +100 °C (-4 ... +212 °F)

• In conjunction with dust explosion protection

-40 ... +85 °C (-4 ... +185 °F)

Ambient conditions

• Ambient temperature/enclosure

Observe the temperature class in areas subject to explosion hazard.

- Measuring cell with silicone oil filling

-40 ... +85 °C (-40 ... +185 °F)

- Measuring cell with inert oil

-40 ... +85 °C (-40 ... +185 °F)

- Display

-20 ... +80 °C (-4 ... +176 °F)

• Storage temperature

-50 ... +85 °C (-58 ... +185 °F); with FDA-compliant oil: -20 ... +85 °C (-4 ... +185 °F)

• Climatic class in accordance with IEC 60721-3-4

4K4H

• Degree of protection

- According to IEC 60529

IP66, IP68

- According to NEMA 250

Type 4X

• Electromagnetic compatibility

- Emitted interference and interference immunity

According to IEC 61326 and NAMUR NE 21

### Design

Weight

Approx. 3.9 kg (8.5 lb) with aluminum enclosure

Approx. 5.8 kg (12.7 lb) with stainless steel enclosure

Material

• Wetted parts materials

- Seal diaphragm

Stainless steel, mat. no. 1.4404/316L, Alloy C276, mat. no. 2.4819, Monel, mat. no. 2.4360, tantalum or gold

- Process flanges and sealing plugs

Stainless steel, mat. no. 1.4408 to PN 160, mat. no. 1.4571/316Ti for PN 420, Alloy C22, 2.4602 or Monel, mat. no. 2.4360

- O-ring

FPM (Viton) or optionally: PTFE, FEP, FEPM and NBR

• Non-wetted parts materials

- Electronics enclosure

• Low-copper die-cast aluminum GD-AISI 12 or stainless steel precision casting, mat. no. 1.4409/ CF-3M

• Standard: Powder coating with polyurethane

Option: 2 coats: Coat 1: epoxy-based; coat 2: Polyurethane

• Stainless steel type plate (1.4404/316L)

Stainless steel ISO 3506-1 A4-70

Steel, electrogalvanized steel, or stainless steel

- Pressure flange screws

- Mounting bracket

Process connection

¼-18 NPT female thread and flat connection with 7/16-20 UNF fastening screw thread in accordance with EN 61518 or M10 fastening screw thread in accordance with DIN 19213 (M12 for PN 420 (MWP 6092 psi))

Electrical connection

Screw terminals

Cable entry via the following screwed glands:

• M20 x 1.5

• ½-14 NPT

• Device plug Han 7D/Han 8D<sup>1)</sup>

• Device plug M12

	0.3 ... 30 bar	420 bar	630 bar
	0.03 ... 3 MPa	42 MPa	63 MPa
	4.35 ... 435 psi	6092 psi	9137 psi
Measuring limits			
• Low measuring limit			
- Measuring cell with silicone oil filling		-100% of the maximum measuring span (-33% for measuring cell 30 bar/3 MPa/435 psi PN 420) or 30 mbar a /3 kPa a /0.44 psi a	
- Measuring cell with inert liquid			
		For temperature of medium -20 °C < $\vartheta$ ≤ +60 °C (-4 °F < $\vartheta$ ≤ +140 °F)	-100% of maximum measuring range or 30 mbar a /3 kPa a /0.44 psi a
		For temperature of medium 60 °C < $\vartheta$ ≤ +100 °C (max. 85 °C for measuring cell 30 bar with PN 420) (140 °F < $\vartheta$ ≤ +212 °F (max. 185 °F for measuring cell 435 psi))	-100% of maximum measuring range or 30 mbar a /3 kPa a /0.44 psi a
			30 mbar a + 20 mbar a · ( $\vartheta$ - 60 °C)/°C 3 kPa a + 2 kPa a · ( $\vartheta$ - 60 °C)/°C 0.44 psi a + 0.29 psi a · ( $\vartheta$ - 140 °F)/°F
- Measuring cell with FDA-compliant oil		For temperature of medium -10 °C < $\vartheta$ ≤ +100 °C (-14 °F < $\vartheta$ ≤ +212 °F)	-100% of maximum measuring range or 100 mbar a /10 kPa a /14.5 psi a
• Upper measuring limit		100% of the max. measuring span (for oxygen measurement max. 100 bar/10 MPa/ 1450 psi and 60 °C (140 °F) ambient temperature/temperature of medium)	
• Lower range value		Between the measuring limits (infinitely adjustable)	

**SITRANS P320 / SITRANS P420 for differential pressure and flow****Output**

Output signal

- Low saturation limit (infinitely adjustable)
- High saturation limit (infinitely adjustable)
- Ripple (without HART communication)

Adjustable damping

- Current transmitter
- Failure signal

Load

- Without HART communication
- With HART communication

Characteristic curve

Physical bus

Polarity-independent

**HART**

## for differential pressure and flow

1

### SITRANS P320 / SITRANS P420 for differential pressure and flow

Influence of ambient temperature (in % per 28 °C (50 °F))

- 20 mbar/2 kPa/0.29 psi	$\leq (0.15 \cdot r + 0.1)\%$
- 60 mbar/6 kPa/0.87 psi	$\leq (0.075 \cdot r + 0.1)\%$
- 250 mbar/25 kPa/3.63 psi	$\leq (0.025 \cdot r + 0.125)\%$ (SITRANS P320)
600 mbar/60 kPa/8.7 psi	
1600 mbar/160 kPa/23.21 psi	
5 bar/500 kPa/72.5 psi	
30 bar/3 MPa/435 psi	
- 250 mbar/25 kPa/3.63 psi	$\leq (0.025 \cdot r + 0.0625)\%$ (SITRANS P420)
5 bar/500 kPa/72.5 psi	
- 600 mbar/60 kPa/8.7 psi	$\leq (0.0125 \cdot r + 0.0625)\%$ (SITRANS P420)
1600 mbar/160 kPa/23.21 psi	
30 bar/3 MPa/435 psi	

Effect of static pressure

• on the lower range value	Zero-point correction is possible with position error compensation
- 20 mbar/2 kPa/0.29 psi	$\leq (0.3 \cdot r)\%$ per 70 bar (SITRANS P320)
	$\leq (0.2 \cdot r)\%$ per 70 bar (SITRANS P420)
- 60 mbar/6 kPa/0.87 psi	$\leq (0.1 \cdot r)\%$ per 70 bar
250 mbar/25 kPa/3.63 psi	
600 mbar/60 kPa/8.7 psi	
1600 mbar/160 kPa/23.21 psi	
30 bar/3 MPa/435 psi	
- 5 bar/500 kPa/72.5 psi	$\leq (0.15 \cdot r)\%$ per 70 bar
• on the measuring span	
- 20 mbar/2 kPa/0.29 psi	$\leq 0.2\%$ per 70 bar
- 60 mbar/6 kPa/0.87 psi	$\leq 0.1\%$ per 70 bar
250 mbar/25 kPa/3.63 psi	
600 mbar/60 kPa/8.7 psi	
1600 mbar/160 kPa/23.21 psi	
5 bar/500 kPa/72.5 psi	
30 bar/3 MPa/435 psi	

Long-term stability at  $\pm 30$  °C ( $\pm 54$  °F)

• 20 mbar/2 kPa/0.29 psi	Static pressure max. 70 bar/7 MPa/1015 psi
• 60 mbar/6 kPa/0.87 psi	$\leq (0.2 \cdot r)\%$ per year
• 250 mbar/25 kPa/3.63 psi	In 5 years $\leq (0.25 \cdot r)\%$
600 mbar/60 kPa/8.7 psi	In 5 years $\leq (0.125 \cdot r)\%$
1600 mbar/160 kPa/23.21 psi	In 10 years $\leq (0.15 \cdot r)\%$
5 bar/500 kPa/72.5 psi	
• 30 bar/3 MPa/435 psi	In 5 years $\leq (0.25 \cdot r)\%$
	In 10 years $\leq (0.35 \cdot r)\%$

Step response time  $T_{63}$  (without electrical damping for pressure rating PN 1600)

• 20 mbar/2 kPa/0.29 psi	Approx. 0.160 s
• 60 mbar/6 kPa/0.87 psi	Approx. 0.150 s
• 250 mbar/25 kPa/3.63 psi	Approx. 0.135 s
600 mbar/60 kPa/8.7 psi	
1600 mbar/160 kPa/23.21 psi	
5 bar/500 kPa/72.5 psi	
30 bar/3 MPa/435 psi	

Effect of mounting position (in pressure per change of angle)

$\leq 0.7$  mbar/0.07 kPa/0.028 inH<sub>2</sub>O per 10° incline (zero point correction is possible with position error compensation)

Effect of auxiliary power (in % per voltage change)

0.005% per 1 V

**SITRANS P320 / SITRANS P420 for differential pressure and flow****Operating conditions**

Temperature of medium

- Measuring cell with silicone oil filling
  - Measuring cell 30 bar (435 psi) -40 ... +100 °C (-40 ... +212 °F)
  - Measuring cell 30 bar (435 psi) -20 ... +100 °C (-4 ... +212 °F)
- Measuring cell with inert oil -20 ... +100 °C (-4 ... +212 °F)
- Measuring cell with FDA-compliant oil -10 ... +100 °C (14 ... +212 °F)
- In conjunction with dust explosion protection -40 ... +85 °C (-4 ... +185 °F)

Ambient conditions

- Ambient temperature/enclosure
  - Measuring cell with silicone oil filling Observe the temperature class in areas subject to explosion hazard.
  - Measuring cell with inert oil -40 ... +85 °C (-40 ... +185 °F)
  - Measuring cell with FDA-compliant oil -40 ... +85 °C (-40 ... +185 °F)
  - Display -10 ... +85 °C (14 ... +185 °F)

- Storage temperature -50 ... +85 °C (-58 ... +185 °F) (with FDA-compliant oil: -20 ... +85 °C (-4 ... +185 °F))
- Climatic class in accordance with IEC 60721-3-4 4K4H
- Degree of protection
  - According to IEC 60529 IP66, IP68
  - According to NEMA 250 Type 4X
- Electromagnetic compatibility
  - Emitted interference and interference immunity According to IEC 61326 and NAMUR NE 21

**Design**

Weight

Approx. 3.9 kg (8.5 lb) with aluminum enclosure  
 Approx. 5.8 kg (12.7 lb) with stainless steel enclosure

Material

- Wetted parts materials
  - Seal diaphragm Stainless steel, mat. no. 1.4404/316L, Alloy C276, mat. no. 2.4819, Monel, mat. no. 2.4360, tantalum or gold
  - Process flanges and sealing plugs Stainless steel, mat. no. 1.4408 to PN 160, mat. no. 1.4571/316Ti for PN 420, Alloy C22, 2.4602 or Monel, mat. no. 2.4360
  - O-ring FPM (Viton) or optionally: PTFE, FEP, FEPM and NBR
- Non-wetted parts materials
  - Electronics enclosure
    - Low-copper die-cast aluminum GD-ALSi 12 or stainless steel precision casting, mat. no. 1.4409/ CF-3M
    - Standard: Powder coating with polyurethane
    - Option: 2 coats: Coat 1: epoxy-based; coat 2: Polyurethane
  - Pressure flange screws
    - Stainless steel type plate (1.4404/316L)
  - Mounting bracket Stainless steel ISO 3506-1 A4-70

Process connection

¼"-18 NPT female thread and flat connection with 7/16"-20 UNF fastening screw thread in accordance with EN 61518 or M10 fastening screw thread in accordance with DIN 19213 (M12 for PN 420 (MWP 6092 psi))

Electrical connection

Screw terminals  
 Cable entry via the following screwed glands:
 

- M20 x 1.5
- ½"-14 NPT
- Device plug Han 7D/Han 8D<sup>1)</sup>
- Device plug M12

**Displays and controls**

Keys

4 keys for operation directly on the device

Display

- With or without integrated display (optional)
- Cover with inspection window (optional)

**Auxiliary power  $U_H$** 

Terminal voltage on pressure transmitter

10.5 ... 45 V DC  
 10.5 ... 30 V DC in intrinsically safe mode

Ripple

 $U_{SS} \leq 0.2 \text{ V}$  (47 ... 125 Hz)

Noise

 $U_{\text{eff}} \leq 1.2 \text{ mV}$  (0.5 ... 10 kHz)

Auxiliary power

-

Separate supply voltage

-

For gases of fluid group 1 and liquids of fluid group 1; complies with requirements of article 4, paragraph 3 (sound engineering practice)

#### For flow only

For gases of fluid group 1 and liquids of fluid group 1; fulfills the basic safety requirements as per article 3, paragraph 1 (appendix 1); classified as category III, module H conformity evaluation by TÜV Nord

No.: 1903094 (option E83)

SITRANS P320/P420

## for level

1

### SITRANS P320 / SITRANS P420 for level

#### Design

##### Weight

- According to EN (pressure transmitter with mounting flange, without tube)
- According to ASME (pressure transmitter with mounting flange, without tube)

##### Material

- Wetted parts materials

- High-pressure side

Seal diaphragm of mounting flange

Stainless steel, mat. no. 1.4404/316L, Monel 400, mat. no. 2.4360, Alloy B2, mat. no. 2.4617, Alloy C276, mat. no. 2.4819, Alloy C22, mat. no. 2.4602, tantalum, PTFE, PFA, ECTFE

Sealing surface

Smooth according to EN 1092-1, form B1 or ASME B16.5 RF 125 ... 250 AA for stainless steel 316L, EN 2092-1 form B2 or ASME B16.5 RFSF for the remaining materials

- Sealing material in the process flanges

For standard applications

Viton

For underpressure applications on the mounting flange

Copper

- Low-pressure side

Seal diaphragm

Stainless steel, mat. no. 1.4404/316L

Process flanges

Stainless steel, mat. no. 1.4408/316

Process flanges screw

Stainless steel ISO 3506-1 A4-70

O-ring

FPM (Viton)

- Non-wetted parts materials

- Electronics enclosure

- Low-copper die-cast aluminum GD-AISI 12 or stainless steel precision casting, mat. no. 1.4409/ CF-3M
- Standard: Powder coating with polyurethane
- Option: 2 coats: Coat 1: epoxy-based; coat 2: Polyurethane
- Stainless steel type plate (1.4404/316L)

##### Pressure flange screws

Stainless steel ISO 3506-1 A4-70

##### Measuring cell filling

Silicone oil

- Mounting flange fill fluid

Silicone oil or other material

##### Process connection

- High-pressure side
- Low-pressure side

Flange according to EN and ASME

1/4-18 NPT female thread and flat connection with M10 fastening screw thread in accordance with DIN 19213 (M12 for PN 420 (MWP 6092 psi)) or 7/16-20 UNF in accordance with EN 61518

##### Electrical connection

Screw terminals

Cable entry via the following screwed glands:

- M20 x 1.5
- 1/2-14 NPT
- Device plug Han 7D/Han 8D<sup>1)</sup>
- Device plug M12

#### Displays and controls

##### Keys

4 keys for operation directly on the device

##### Display

- With or without integrated display (optional)
- Cover with inspection window (optional)

#### Auxiliary power $U_H$

##### Terminal voltage on pressure transmitter

10.5 ... 45 V DC  
10.5 ... 30 V DC in intrinsically safe mode

##### Ripple

$U_{SS} \leq 0.2 \text{ V}$  (47 ... 125 Hz)

##### Noise

$U_{eff} \leq 1.2 \text{ mV}$  (0.5 ... 10 kHz)

##### Auxiliary power

–

##### Separate supply voltage

–

Functional safety (IEC 61508) - SIL2/3	<b>C20</b>		

<i>Options</i>	Order code
Append "-Z" to Article No., add order code and plain text or entry from drop-down list.	
<b>Special approvals</b>	
Oxygen application (with inert liquid, max. 100 bar (1 450 psi) at 60° C (140 °F))	<b>E80</b>
Dual seal	<b>E81</b>
WRC / WRAS (drinking water); only with pressure cap O-rings made of EPDM	<b>E83</b>
NSF61 (drinking water)	<b>E84</b>
ACS (drinking water)	<b>E85</b>
<b>Device settings</b>	
Measuring span Lower range value (max. 5 characters), upper range value (max. 5 characters), unit [mbar, bar, kPa, MPa, psi, ...], example: -0.5 ... 10.5 psi  Input field 1 and input field 2: max. 5 characters and numbers only; decimal places as dot (comma is automatically converted to dot).  Drop-down list: Pa, MPa, kPa, hPa, bar, mbar, psi, g/cm <sup>2</sup> , kg/cm <sup>2</sup> , kgf/cm <sup>2</sup> , inH <sub>2</sub> O, inH <sub>2</sub> O (4°C), ftH <sub>2</sub> O, mmH <sub>2</sub> O, mmH <sub>2</sub> O (4°C), mH <sub>2</sub> O (4°C), mmHg, inHg, atm, torr	<b>Y01</b>
TAG (on stainless steel plate and device parameters, max. 32 characters)  Input field: Free text, max. 32 characters	<b>Y15</b>
Measuring point description (on stainless steel plate and device parameters, max. 32 characters)  Input field: Free text, max. 32 characters	<b>Y16</b>
TAG short (device parameters, max. 8 characters)  Input field: Free text, max. 8 characters	<b>Y17</b>
Local display [Pressure, Percent], reference [None, Absolute, Relative], example: Pressure gauge  Drop-down list: Percent, pressure unit, pressure unit abs., pressure unit gauge	<b>Y21</b>
Local display Scaling with standard units [m <sup>3</sup> /s, l/s, m, inch, ...], example 1 ... 5 m  Input field 1 and input field 2: max. 5 characters and numbers only; decimal places as dot (comma is automatically converted to dot).  Drop-down list: m, cm, mm, in, ft, m <sup>3</sup> , l, hl, in <sup>3</sup> , ft <sup>3</sup> , yd <sup>3</sup> , gal, gal (UK), bu, bbl, bbl (US), SCF, Nm <sup>3</sup> , NI.	<b>Y22</b>
Local display Scaling with user-specific units (max. 12 characters), example 1 ... 5 m  Input field 1 and input field 2: max. 5 characters and numbers only; decimal places as dot (comma is automatically converted to dot).  Input field 3: Free text, max. 8 characters	<b>Y23</b>
Saturation limits instead of 3.8 ... 20.5 mA, example: 3.8 ... 22.0 mA  Drop-down list 1: 3.9, 4  Drop-down list 2: 20.8, 22	<b>Y30</b>
Fault current instead of 3.6 mA [22.5 mA, 22.8 mA]  Drop-down list: 3.75; 21.75; 22.5; 22.6	<b>Y31</b>
Damping in seconds instead of 2 s (0.0 ... 100.0 s)  Input field: max. 4 characters and numbers only; decimal places as dot (comma is automatically converted to dot); min. value = 0; max. value = 100.	<b>Y32</b>
ID number of special version  Input field: max. 4 characters and only natural numbers from 0 ... 9999	<b>Y99</b>

## Pressure Measurement

Pressure transmitters  
for applications with advanced requirements (Advanced)  
SITRANS P DS III

### Technical description

1

#### Overview

SITRANS P DS III pressure transmitters are digital pressure transmitters featuring extensive user-friendliness and high accuracy. The parameterization is performed using control keys or via HART, PROFIBUS-PA or FOUNDATION Fieldbus interface.

Extensive functionality enables the pressure transmitter to be precisely adapted to the plant's requirements. Operation is very simple in spite of the numerous setting options.

Transmitters with type of protection "Intrinsic safety" and "Explosion-proof" may be installed within potentially explosive atmospheres (zone 1) or in zone 0. The transmitters are provided with an EC type examination certificate and comply with the corresponding harmonized European standards (ATEX).

The transmitters can be equipped with various designs of remote seals for special applications such as the measurement of highly viscous substances.

Various versions of the DS III pressure transmitters are available for measuring:

- Gauge pressure
- Absolute pressure
- Differential pressure
- Level
- Volume level
- Mass level
- Volume flow
- Mass flow

#### Benefits

- High quality and service life
- High reliability even under extreme chemical and mechanical loads
- For aggressive and non-aggressive gases, vapors and liquids
- Extensive diagnosis and simulation functions
- Separate replacement of measuring cell and electronics without recalibration
- Minimum conformity error
- Good long-term stability
- Wetted parts made of high-grade materials (e.g. stainless steel, Hastelloy, gold, Monel, tantalum)

- Infinitely adjustable measuring spans from 0.01 bar to 700 bar (0.15 psi to 10153 psi) for DS III with HART interface
- Nominal measuring range from 1 bar to 700 bar (14.5 psi to 10153 psi) for DS III with PROFIBUS PA and FOUNDATION Fieldbus interface
- High measuring accuracy
- Parameterization over control keys and HART or PROFIBUS PA, or FOUNDATION Fieldbus interface.

#### Application

The pressure transmitters of the DS III series, can be used in industrial areas with extreme chemical and mechanical loads. Electromagnetic compatibility in the range 10 kHz to 1 GHz makes the DS III pressure transmitters suitable for locations with high electromagnetic emissions.

Pressure transmitters with type of protection "Intrinsic safety" and "Explosion-proof" may be installed within potentially explosive atmospheres (zone 1) or in zone 0. The pressure transmitters are provided with an EC type examination certificate and comply with the corresponding harmonized European standards (ATEX).

Pressure transmitters with the type of protection "Intrinsic safety" for use in zone 0 may be operated with power supply units of category "ia" and "ib".

The transmitters can be equipped with various designs of remote seals for special applications such as the measurement of highly viscous substances.

The pressure transmitter can be programmed locally using the 3 control buttons or externally via HART or PROFIBUS PA or FOUNDATION Fieldbus interface.

**Pressure transmitter for gauge pressure**

Measured variable: Gauge pressure of aggressive and non-aggressive gases, vapors and liquids.

Measuring span (infinitely adjustable)

for DS III with HART: 0.01 bar to 700 bar (0.15 psi to 10153 psi)

Nominal measuring range

for DS III with PROFIBUS PA and FOUNDATION Fieldbus:  
1 bar to 700 bar (14.5 psi to 10153 psi)

**Pressure transmitters for absolute pressure**

Measured variable: Absolute pressure of aggressive and non-aggressive gases, vapors and liquids.

Measuring span (infinitely adjustable)

for DS III with HART: 8.3 mbar a ... 100 bar a (0.12 ... 1450 psi a)

Nominal measuring range

for DS III with PROFIBUS PA and FOUNDATION Fieldbus:  
250 mbar a ... 100 bar a (3.6 ... 1450 psi a)

There are two series:

- Gauge pressure series
- Differential pressure series

**Pressure transmitters for differential pressure and flow**

Measured variables:

- Differential pressure
- Small positive or negative pressure
- Flow  $q \sim \sqrt{\Delta p}$  (together with a primary differential pressure device (see Chapter "Flow Meters"))

Measuring span (infinitely adjustable)

for DS III with HART: 1 mbar ... 30 bar (0.0145 ... 435 psi)

Nominal measuring range

for DS III with PROFIBUS PA and FOUNDATION Fieldbus:  
20 mbar ... 30 bar (0.29 ... 435 psi)

**Pressure transmitters for level**

Measured variable: Level of aggressive and non-aggressive liquids in open and closed vessels.

Measuring span (infinitely adjustable)

for DS III with HART: 25 mbar ... 5 bar (0.363 ... 72.5 psi)

Nominal measuring range

for DS III with PROFIBUS PA and FOUNDATION Fieldbus:  
250 mbar ... 5 bar (3.63 ... 72.5 psi)

Nominal diameter of the mounting flange

- DN 80 or DN 100
- 3 inch or 4 inch

In the case of level measurements in open containers, the low-pressure connection of the measuring cell remains open (measurement "compared to atmospheric").

In the case of measurements in closed containers, the lower-pressure connection has to be connected to the container in order to compensate the static pressure.

The wetted parts are made from a variety of materials, depending on the degree of corrosion resistance required.

**Design**

Front view

The transmitter consists of various components depending on the order. The possible versions are listed in the ordering information. The components described below are the same for all transmitters.

The rating plate (7, Figure "Front view") with the Article No. is located on the side of the enclosure. The specified number together with the ordering information provide details on the optional design details and on the possible measuring range (physical properties of built-in sensor element).

The approval label is located on the opposite side.

The enclosure is made of die-cast aluminium or stainless steel precision casting. A round cover (6) is screwed on at the front and rear of the enclosure. The front cover can be fitted with a viewing pane so that the measured values can be read directly on the display. The inlet (8) for the electrical connection is located either on the left or right side. The unused opening on the opposite side is sealed by a blanking plug. The protective earth connection is located on the rear of the enclosure.

The electrical connections for the power supply and screen are accessible by unscrewing the rear cover. The bottom part of the enclosure contains the measuring cell with process connection (5). The measuring cell is prevented from rotating by a locking screw (4). As the result of this modular design, the measuring cell and the electronics can be replaced separately from each other. The set parameter data are retained.

At the top of the enclosure is a plastic cover (1), which hides the input keys.

**Example for an attached measuring point label**

### Function

#### Operation of electronics with HART communication

Function diagram of electronics

The bridge output voltage created by the sensor (1, Figure "Function diagram of the electronics") is amplified by the measuring amplifier (2) and digitized in the analog-to-digital converter (3). The digital information is evaluated in a microcontroller, its linearity and temperature response corrected, and converted in a digital-to-analog converter (5) into an output current of 4 to 20 mA.

The diode circuit (10) protects against incorrect polarity.

The data specific to the measuring cell, the electronics data, and the parameter data are stored in the two non-volatile memories (6). The one memory is coupled to the measuring cell, the other to the electronics. As the result of this modular design, the electronics and the measuring cell can be replaced separately from each other.

Using the 3 input keys (8) you can parameterize the pressure transmitter directly at the measuring point. The input buttons can also be used to control the view of the results, the error messages and the operating modes on the display (9).

The HART modem (7) permits parameterization using a protocol according to the HART specification.

The pressure transmitters with measuring spans  $\leq 63$  bar measure the input pressure compared to atmosphere, transmitters with measuring spans  $\geq 160$  bar compared to vacuum.

#### Operation of electronics with PROFIBUS PA communication

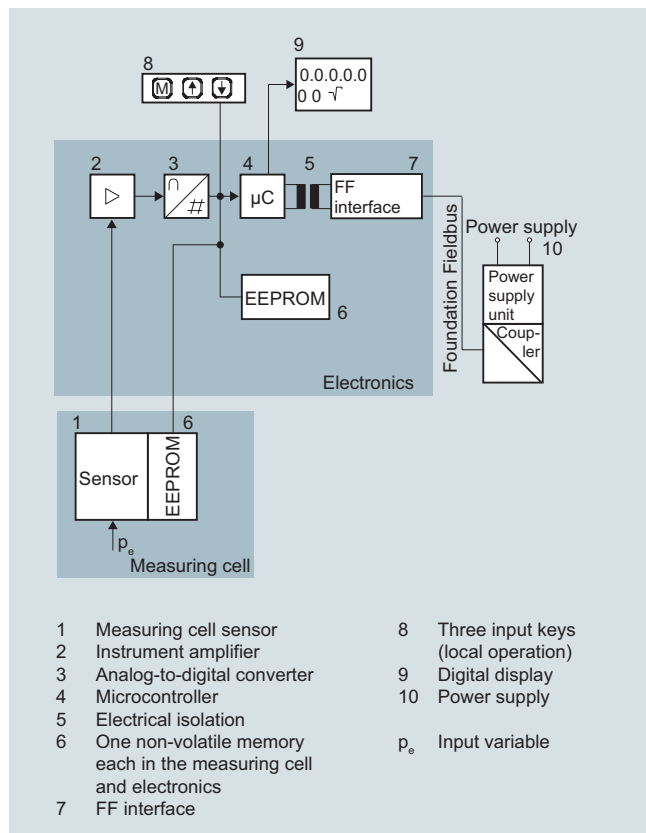

Function diagram of electronics

The bridge output voltage created by the sensor (1, Figure "Function diagram of the electronics") is amplified by the measuring amplifier (2) and digitized in the analog-to-digital converter (3). The digital information is evaluated in the microcontroller, its linearity and temperature response corrected, and provided on the PROFIBUS PA through an electrically isolated PA interface (7).

The data specific to the measuring cell, the electronics data, and the parameter data are stored in the two non-volatile memories (6). The one memory is coupled to the measuring cell, the other to the electronics. As the result of this modular design, the electronics and the measuring cell can be replaced separately from each other.

Using the three input buttons (8) you can parameterize the pressure transmitter directly at the measuring point. The input buttons can also be used to control the view of the results, the error messages and the operating modes on the display (9).

The results with status values and diagnostic values are transferred by cyclic data transmission on the PROFIBUS PA. Parameterization data and error messages are transferred by acyclic data transmission. Special software such as SIMATIC PDM is required for this.

**Operation of electronics with FOUNDATION Fieldbus communication**

## Function diagram of electronics

The bridge output voltage created by the sensor (1, Figure "Function diagram of electronics") is amplified by the measuring amplifier (2) and digitized in the analog-to-digital converter (3). The digital information is evaluated in the microcontroller, its linearity and temperature response corrected, and provided on the FOUNDATION Fieldbus through an electrically isolated FOUNDATION Fieldbus interface (7).

The data specific to the measuring cell, the electronics data, and the parameter data are stored in the two non-volatile memories (6). The one memory is coupled to the measuring cell, the other to the electronics. As the result of this modular design, the electronics and the measuring cell can be replaced separately from each other.

Using the three input buttons (8) you can parameterize the pressure transmitter directly at the measuring point. The input buttons can also be used to control the view of the results, the error messages and the operating modes on the display (9).

The results with status values and diagnostic values are transferred by cyclic data transmission on the FOUNDATION Fieldbus. Parameterization data and error messages are transferred by acyclic data transmission. Special software such as National Instruments Configurator is required for this.

**Mode of operation of the measuring cells**

## Measuring cell for gauge pressure

## Measuring cell for gauge pressure, function diagram

The pressure  $p_e$  is applied through the process connection (2, Figure "Measuring cell for gauge pressure, function diagram") to the measuring cell (1). This pressure is subsequently transmitted further through the seal diaphragm (3) and the filling liquid (4) to the silicon pressure sensor (5) whose measuring diaphragm is then flexed. This changes the resistance of the four piezo-resistors fitted in the diaphragm in a bridge circuit. This change in resistance results in a bridge output voltage proportional to the absolute pressure.

## Measuring cell for gauge pressure with front-flush diaphragm

## Measuring cell for gauge pressure, with front-flush diaphragm for paper industry, function diagram

The pressure  $p_e$  is applied through the process connection (2, Figure "Measuring cell for gauge pressure, with front-flush diaphragm for paper industry, function diagram") to the measuring cell (1). This pressure is subsequently transmitted further through the seal diaphragm (3) and the filling liquid (4) to the silicon pressure sensor (5) whose measuring diaphragm is then flexed. This changes the resistance of the four piezo-resistors fitted in the diaphragm in a bridge circuit. This change in resistance results in a bridge output voltage proportional to the absolute pressure.

SITRANS P DS III

### Technical description

1

#### Measuring cell for absolute pressure from gauge pressure series

Measuring cell for absolute pressure from the pressure series, function diagram

The absolute pressure  $p_e$  is transmitted through the seal diaphragm (3, Figure "Measuring cell for absolute pressure from pressure series, gauge pressure, function diagram") and the filling liquid (4) to the silicon absolute pressure sensor (5) whose measuring diaphragm is then flexed. This changes the resistance of the four piezo-resistors fitted in the diaphragm in a bridge circuit. This change in resistance results in a bridge output voltage proportional to the absolute pressure.

#### Measuring cell for absolute pressure from differential pressure series

Measuring cell for absolute pressure from differential pressure series, function diagram

The input pressure  $p_e$  is transmitted through the seal diaphragm (6, Figure "Measuring cell for absolute pressure from differential pressure series, function diagram") and the filling liquid (8) to the silicon pressure sensor (3).

The difference in pressure between the input pressure  $p_e$  and the reference vacuum (1) on the low-pressure side of the measuring cell flexes the measuring diaphragm. This changes the resistance of the four piezo-resistors fitted in the diaphragm in a bridge circuit. This change in resistance results in a bridge output voltage proportional to the absolute pressure.

An overload diaphragm is installed to provide protection from overloads. If the measuring limits are exceeded, the overload diaphragm (2) is flexed until the seal diaphragm rests on the body of the measuring cell (7), thus protecting the silicon pressure sensor from overloads.

#### Measuring cell for differential pressure and flow

Measuring cell for differential pressure and flow, function diagram

The differential pressure is transmitted through the seal diaphragms (1, Figure "Measuring cell for differential pressure and flow, function diagram") and the filling liquid (7) to the silicon pressure sensor (4).

The measuring diaphragm is flexed by the applied differential pressure. This changes the resistance of the four piezo-resistors fitted in the diaphragm in a bridge circuit. This change in resistance results in a bridge output voltage proportional to the differential pressure.

An overload diaphragm is installed to provide protection from overloads. If the measuring limits are exceeded, the overload diaphragm (3) is flexed until the seal diaphragm rests on the body of the measuring cell (6), thus protecting the silicon pressure sensor from overloads.

#### Measuring cell for level

Measuring cell for level, function diagram

The input pressure (hydrostatic pressure) acts hydraulically on the measuring cell through the seal diaphragm on the mounting flange (2, Figure "Measuring cell for level, function diagram"). This differential pressure is subsequently transmitted further through the measuring cell (3) and the filling liquid (9) to the silicon pressure sensor (6) whose measuring diaphragm is then flexed.

This changes the resistance of the four piezo-resistors fitted in the diaphragm in a bridge circuit.

This change in resistance results in a bridge output voltage proportional to the differential pressure.

An overload diaphragm is installed to provide protection from overloads. If the measuring limits are exceeded, the overload diaphragm (5) is flexed until the seal diaphragm rests on the body of the measuring cell (4), thus protecting the silicon pressure sensor from overloads.

### Parameterization DS III

Depending on the version, there are a range of options for parameterizing the pressure transmitter and for setting or scanning the parameters.

#### Parameterization using the input buttons (local operation)

With the input buttons you can easily set the most important parameters without any additional equipment.

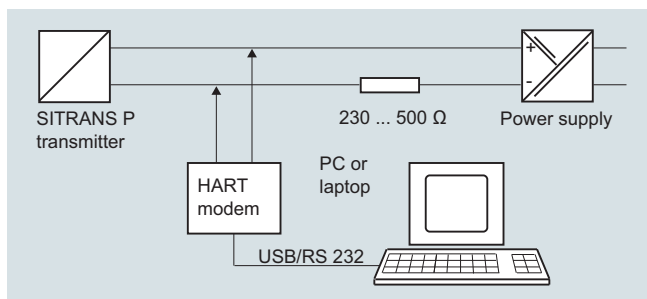

#### Parameterization using HART

Parameterization using HART is performed with a HART Communicator or a PC.

Communication between a HART Communicator and a pressure transmitter

When parameterizing with the HART Communicator, the connection is made directly to the 2-wire cable.

HART communication between a PC communicator and a pressure transmitter

When parameterizing with a PC, the connection is made through a HART modem.

The signals needed for communication in conformity with the HART 5.x or 6.x protocols are superimposed on the output current using the Frequency Shift Keying (FSK) method.

#### Adjustable parameters, DS III with HART

Parameters	Input keys (DS III HART)	HART communication
Lower range value	x	x
Upper range value	x	x
Electrical damping	x	x
Lower range value without application of a pressure ("Blind setting")	x	x
Upper range value without application of a pressure ("Blind setting")	x	x
Zero adjustment	x	x
Current transmitter	x	x
Fault current	x	x
Disabling of buttons, write protection	x	x <sup>1)</sup>
Type of dimension and actual dimension	x	x
Characteristic (linear / square-rooted)	x <sup>2)</sup>	x <sup>2)</sup>
Input of characteristic		x
Freely-programmable LCD		x
Diagnostic functions		x

<sup>1)</sup> Cancel apart from write protection

<sup>2)</sup> Only differential pressure

#### Diagnostic functions for DS III with HART

- Zero correction display
- Event counter
- Limit transmitter
- Saturation alarm
- Slave pointer
- Simulation functions
- Maintenance timer

#### Available physical units of display for DS III with HART

Table style: Technical specifications 2

Physical variable	Physical dimensions
Pressure (setting can also be made in the factory)	Pa, MPa, kPa, bar, mbar, torr, atm, psi, g/cm <sup>2</sup> , kg/cm <sup>2</sup> , inH <sub>2</sub> O, inH <sub>2</sub> O (4 °C), mmH <sub>2</sub> O, ftH <sub>2</sub> O (20 °C), inHg, mmHg
Level (height data)	m, cm, mm, ft, in
Volume	m <sup>3</sup> , dm <sup>3</sup> , hl, yd <sup>3</sup> , ft <sup>3</sup> , in <sup>3</sup> , US gallon, Imp. gallon, bushel, barrel, barrel liquid
Mass	g, kg, t, lb, Ston, Lton, oz
volume flow	m <sup>3</sup> /d, m <sup>3</sup> /h, m <sup>3</sup> /s, l/min, l/s, ft <sup>3</sup> /d, ft <sup>3</sup> /min, ft <sup>3</sup> /s, US gallon/min, US gallon/s
Mass flow	t/d, t/h, t/min, kg/d, kg/h, kg/min, kg/s, g/d, g/h, g/min, g/s, lb/d, lb/h, lb/min, lb/s, Lton/d, Lton/h, STon/d, STon/h, STon/min
Temperature	K, °C, °F, °R
Miscellaneous	%, mA

#### Parameterization through PROFIBUS PA interface

Fully digital communication through PROFIBUS PA, profile 3.0, is particularly user-friendly. Through the PROFIBUS the DS III with PROFIBUS PA is connected to a process control system, e. g. SIMATIC PSC 7. Communication is possible even in a potentially explosive environment.

For parameterization through PROFIBUS you need suitable software, e.g. SIMATIC PDM (Process Device Manager).

#### Parameterization through FOUNDATION Fieldbus interface

Fully digital communication through FOUNDATION Fieldbus is particularly user-friendly. Through the FOUNDATION Fieldbus the DS III with FOUNDATION Fieldbus is connected to a process control system. Communication is possible even in a potentially explosive environment.

For parameterization through the FOUNDATION Fieldbus you need suitable software, e.g. National Instruments Configurator.

#### Adjustable parameters for DS III with PROFIBUS PA and FOUNDATION Fieldbus

Parameters	Input keys	PROFIBUS PA and FOUNDATION Fieldbus interface
Electrical damping	x	x
Zero adjustment (correction of position)	x	x
Buttons and/or function disabling	x	x
Source of measured-value display	x	x
Physical dimension of display	x	x
Position of decimal point	x	x
Bus address	x	x
Adjustment of characteristic	x	x
Input of characteristic		x
Freely-programmable LCD		x
Diagnostics functions		x

Volume	m <sup>3</sup> , dm <sup>3</sup> , hl, yd <sup>3</sup> , ft <sup>3</sup> , in <sup>3</sup> , US gallon, Imp. gallon, bushel, barrel, barrel liquid
volume flow	m <sup>3</sup> /s, m <sup>3</sup> /min, m <sup>3</sup> /h, m <sup>3</sup> /d, l/s, l/min, l/h, l/d, Ml/d, ft <sup>3</sup> /s, ft <sup>3</sup> /min, ft <sup>3</sup> /h, ft <sup>3</sup> /d, US gallon/s, US gallon/min, US gallon/h, US gallon/d, bbl/s, bbl/min, bbl/h, bbl/d
Mass flow	g/s, g/min, g/h, g/d, kg/s, kg/min, kg/h, kg/d, t/s, t/min, t/h, t/d, lb/s, lb/min, lb/h, lb/d, STon/s, STon/min, STon/h, STon/d, LTon/s, LTon/min, LTon/h, LTon/d
Total mass flow	t, kg, g, lb, oz, LTon, STon
Temperature	K, °C, °F, °R
Miscellaneous	%

## Technical specifications

## SITRANS P, DS III series for gauge pressure

## Input

Measured variable

Gauge pressure

Measuring span (fully adjustable) or nominal measuring range, max. operating pressure (in accordance with 2014/68/EU Pressure Equipment Directive) and max. test pressure (pursuant to DIN 16086)

(for oxygen measurement, max. 100 bar/10 MPa/1450 psi and 60 °C (140 °F) ambient temperature/temperature of medium)

**HART****PROFIBUS PA/  
FOUNDATION  
Fieldbus**

Lower measuring limit

(for 250mbar/25 kPa/3.6 psi measuring cells, the lower measuring limit is 750 mbar a/75 kPa a/10.8 psi a. The measuring cell is vacuum-resistant up to 30 mbar a/3 kPa a/0.44 psi a.)

- Measuring cell with silicone oil filling
- Measuring cell with inert filling liquid

30 mbar a/3 kPa a/0.44 psi a

30 mbar a/3 kPa a/0.44 psi a

Upper measuring limit

100% of max. measuring span (max. 100 bar/10 MPa/1450 psi for oxygen measurement) ambient temperature/temperature of medium 60 °C (140 °F)

## Output

**HART****PROFIBUS PA/FOUNDATION Fieldbus**

Output signal

4 ... 20 mA

Digital PROFIBUS PA and FOUNDATION Fieldbus signal

- Lower limit (infinitely adjustable)
- Upper limit (infinitely adjustable)

3.55 mA, factory preset to 3.84 mA

-

23 mA, factory preset to 20.5 mA or optionally set to 22.0 mA

-

Load

- Without HART

$$R_B \leq (U_H - 10.5 \text{ V}) / 0.023 \text{ A in } \Omega$$

$$U_H: \text{ Power supply in V}$$

-

- With HART

$$R_B = 230 \dots 500 \Omega \text{ (SIMATIC PDM) bzw.}$$

$$R_B = 230 \dots 1100 \Omega \text{ (HART-Communicator)}$$

-

Physical bus

-

IEC 61158-2

Protection against polarity reversal

Protected against short-circuit and polarity reversal.  
Each connection against the other with max. supply voltage.

Electrical damping (step width 0.1 s)

Set to 2 s (0 ... 100 s)

## SITRANS P, DS III series for gauge pressure

### Measuring accuracy

Reference conditions

Acc. to IEC 60770-1

- Increasing characteristic
- Lower range value 0 bar/kPa/psi
- Stainless steel seal diaphragm
- Silicone oil filling
- Room temperature 25 °C (77 °F)

Measuring span ratio  $r$  (spread, Turn-Down)

$r = \text{max. measuring span/set measuring span or nominal measuring range}$

Error in measurement at limit setting incl. hysteresis and reproducibility

- Linear characteristic

- 250 mbar/25 kPa/3.6 psi

$r \leq 1.25 :$   $\leq 0.065 \%$   
 $1.25 < r \leq 30 :$   $\leq (0.008 \cdot r + 0.055) \%$

- 1 bar/100 kPa/14.5 psi  
 4 bar/400 kPa/58 psi  
 16 bar/1.6 MPa/232 psi  
 63 bar/6.3 MPa/914 psi  
 160 bar/16 MPa/2321 psi

$r \leq 5 :$   $\leq 0.065 \%$   
 $5 < r \leq 100 :$   $\leq (0.004 \cdot r + 0.045) \%$

- 400 bar/40 MPa/5802 psi  
 700 bar/70 MPa/10152 psi

$r \leq 3 :$   $\leq 0.075 \%$   
 $3 < r \leq 10 :$   $\leq (0.0029 \cdot r + 0.071) \%$   
 $10 < r \leq 100 :$   $\leq (0.005 \cdot r + 0.05) \%$

Influence of ambient temperature  
 (in percent per 28 °C (50 °F))

- 250 mbar/25 kPa/3.6 psi

$\leq (0.16 \cdot r + 0.1) \%$

- 1 bar/100 kPa/14.5 psi

$\leq (0.05 \cdot r + 0.1) \%$

- 4 bar/400 kPa/58 psi  
 16 bar/1.6 MPa/232 psi  
 63 bar/6.3 MPa/914 psi  
 160 bar/16 MPa/2321 psi  
 400 bar/40 MPa/5802 psi

$\leq (0.025 \cdot r + 0.125) \%$

- 700 bar/70 MPa/10152 psi

$\leq (0.08 \cdot r + 0.16) \%$

Long-term stability (temperature change  $\pm 30$  °C ( $\pm 54$  °F))

- 250 mbar/25 kPa/3.6 psi

$\leq (0.25 \cdot r) \%$  per year

- 1 bar/100 kPa/14.5 psi  
 4 bar/400 kPa/58 psi

$\leq (0.25 \cdot r) \%$  in 5 years

- 16 bar/1.6 MPa/232 psi  
 63 bar/6.3 MPa/914 psi  
 160 bar/16 MPa/2321 psi  
 400 bar/40 MPa/5802 psi

$\leq (0.125 \cdot r) \%$  in 5 years

- 700 bar/70 MPa/10152 psi

$\leq (0.25 \cdot r) \%$  in 5 years

Effect of mounting position

$\leq 0.05$  mbar/0.005 kPa/0.000725 psi per 10° inclination  
 (zero point correction is possible with position error compensation)

Effect of auxiliary power supply  
 (in percent per change in voltage)

0.005 % per 1 V

Measuring value resolution for PROFIBUS PA and FOUNDATION Fieldbus

$3 \cdot 10^{-5}$  of nominal measuring range

**SITRANS P, DS III series for gauge pressure****Operating conditions**

Degree of protection	IP66 (optional IP66/IP68) Type 4X
• according to EN 60529	
• according to NEMA 250	
Temperature of medium	
• Measuring cell with silicone oil filling	-40 ... +100 °C (-40 ... +212 °F)
• Measuring cell with inert filling liquid	
- 1 bar/100 kPa/14.5 psi	-40 ... +85 °C (-40 ... +185 °F)
4 bar/400 kPa/58 psi	
16 bar/1.6 MPa/232 psi	
63 bar/6.3 MPa/914 psi	
- 160 bar/16 MPa/2321 psi	-20 ... +100 °C (-4 ... +212 °F)
400 bar/40 MPa/5802 psi	
700 bar/70 MPa/10152 psi	
• Measuring cell with Neobee fill fluid (FDA-compliant)	-10 ... +100 °C (+14 ... +212 °F)
• In conjunction with dust explosion protection	-20 ... +60 °C (-4 ... +140 °F)
Ambient conditions	
• Ambient temperature (silicone oil and inert oil)	
- Transmitter	-40 ... +85 °C (-40 ... +185 °F)
- Display readable	-30 ... +85 °C (-22 ... +185 °F)
• Ambient temperature (Neobee fill fluid)	
- Transmitter	-10 ... +85 °C (+14 ... +185 °F)
• Storage temperature	-50 ... +85 °C (-58 ... +185 °F)
• Climatic class	
- Condensation	Relative humidity 0 ... 100 %/Condensation permissible, suitable for use in the tropics
• Electromagnetic Compatibility	
- Emitted interference and interference immunity	Acc. to IEC 61326 and NAMUR NE 21

**Design**

Weight (without options)	Die-cast aluminum: ≈ 2.0 kg (≈ 4.4 lb) Stainless steel precision casting: ≈ 4.6 kg (≈ 10.1 lb)
Enclosure material	Low-copper die-cast aluminum, GD-AISI 12 or stainless steel precision casting, mat. no. 1.4408
Wetted parts materials	
• Connection shank	Stainless steel, mat. no. 1.4404/316L or Hastelloy C4, mat. no. 2.4602
• Oval flange	Stainless steel, mat. no. 1.4404/316L
• Seal diaphragm	Stainless steel, mat. no. 1.4404/316L or Hastelloy C276, mat. no. 2.4819
Measuring cell filling	Silicone oil or inert filling liquid (maximum value with oxygen measurement pressure 100 bar (1450 psi) at 60 °C (140 °F))
Process connection	Connection shank G $\frac{1}{2}$ B to DIN EN 837-1, female thread $\frac{1}{2}$ -14 NPT or oval flange (PN 160 (MAWP 2320 psi)) to DIN 19213 with mounting thread M10 or $\frac{7}{16}$ -20 UNF to IEC 61518/DIN EN 61518
Material of mounting bracket	
• Steel	Sheet-steel, Mat. No. 1.0330, chrome-plated
• Stainless steel 304	Sheet stainless steel, mat. no. 1.4301 (SS 304)
• Stainless steel 316L	Sheet stainless steel, mat. no. 1.4404 (SS 316L)

**Power supply  $U_H$** 

	<b>HART</b>	<b>PROFIBUS PA/FOUNDATION Fieldbus</b>
Terminal voltage on transmitter	10.5 ... 45 V DC 10.5 ... 30 V DC in intrinsically-safe mode	-
Power supply	-	Supplied through bus
Separate supply voltage	-	Not necessary
Bus voltage		
• Not Ex	-	9 ... 32 V
• With intrinsically-safe operation	-	9 ... 24 V
Current consumption		
• Basic current (max.)	-	12.5 mA
• Start-up current $\leq$ basic current	-	Yes
• Max. current in event of fault	-	15.5 mA
Fault disconnection electronics (FDE) available	-	Yes

SITRANS P DS III

## for gauge pressure

1

SITRANS P, DS III series for gauge pressure	HART	PROFIBUS PA/ FOUNDATION Fieldbus
<b>Certificates and approvals</b>		
Classification according to PED 2014/68/EU	For gases of fluid group 1 and liquids of fluid group 1; complies with requirements of article 4, paragraph 3 (sound engineering practice)	
Explosion protection		
• Intrinsic safety "i"	PTB 13 ATEX 2007 X	
- Marking	Ex II 1/2 G Ex ia/ib IIC T4/T5/T6 Ga/Gb	
- Permissible ambient temperature	-40 ... +85 °C (-40 ... +185 °F) temperature class T4; -40 ... +70 °C (-40 ... +158 °F) temperature class T5; -40 ... +60 °C (-40 ... +140 °F) temperature class T6	
- Connection	To certified intrinsically-safe circuits with peak values: $U_i = 30 \text{ V}$ , $I_i = 100 \text{ mA}$ , $P_i = 750 \text{ mW}$ ; $R_i = 300 \Omega$	FISCO supply unit: $U_o = 17.5 \text{ V}$ , $I_o = 380 \text{ mA}$ , $P_o = 5.32 \text{ W}$ Linear barrier: $U_o = 24 \text{ V}$ , $I_o = 174 \text{ mA}$ , $P_o = 1 \text{ W}$
- Effective internal inductance/capacitance	$L_i = 0.4 \text{ mH}$ , $C_i = 6 \text{ nF}$	$L_i = 7 \mu\text{H}$ , $C_i = 1.1 \text{ nF}$
• Explosion-proof "d"	PTB 99 ATEX 1160	
- Marking	Ex II 1/2 G Ex d IIC T4/T6 Gb	
- Permissible ambient temperature	-40 ... +85 °C (-40 ... +185 °F) temperature class T4; -40 ... +60 °C (-40 ... +140 °F) temperature class T6	
- Connection	To circuits with values: $U_H = 10.5 \dots 45 \text{ V DC}$	To circuits with values: $U_H = 9 \dots 32 \text{ V DC}$
• Dust explosion protection for zone 20	PTB 01 ATEX 2055	
- Marking	Ex II 1 D Ex ta IIIC T120°C Da Ex II 1/2 D Ex ta/tb IIIC T120°C Da/Db	
- Permissible ambient temperature	-40 ... +85 °C (-40 ... +185 °F)	
- Max. surface temperature	120 °C (248 °F)	
- Connection	To certified intrinsically-safe circuits with peak values: $U_i = 30 \text{ V}$ , $I_i = 100 \text{ mA}$ , $P_i = 750 \text{ mW}$ , $R_i = 300 \Omega$	FISCO supply unit: $U_o = 17.5 \text{ V}$ , $I_o = 380 \text{ mA}$ , $P_o = 5.32 \text{ W}$ Linear barrier: $U_o = 24 \text{ V}$ , $I_o = 250 \text{ mA}$ , $P_o = 1 \text{ W}$
- Effective internal inductance/capacitance	$L_i = 0.4 \text{ mH}$ , $C_i = 6 \text{ nF}$	$L_i = 7 \mu\text{H}$ , $C_i = 1.1 \text{ nF}$
• Dust explosion protection for zone 21/22	PTB 01 ATEX 2055	
- Marking	Ex II 2 D Ex tb IIIC T120°C Db	
- Connection	To circuits with values: $U_H = 10.5 \dots 45 \text{ V DC}$ ; $P_{\max} = 1.2 \text{ W}$	To circuits with values: $U_H = 9 \dots 32 \text{ V DC}$ ; $P_{\max} = 1 \text{ W}$
• Type of protection "n" (zone 2)	PTB 13 ATEX 2007 X	
- Marking	Ex II 2/3 G Ex nA IIC T4/T5/T6 Gb/Gc Ex II 2/3 G Ex ic IIC T4/T5/T6 Gb/Gc	
- Connection (Ex nA)	$U_m = 45 \text{ V}$	$U_m = 32 \text{ V}$
- Connections (Ex ic)	To circuits with values: $U_i = 45 \text{ V}$	FISCO supply unit ic: $U_o = 17.5 \text{ V}$ , $I_o = 570 \text{ mA}$ Linear barrier: $U_o = 32 \text{ V}$ , $I_o = 132 \text{ mA}$ , $P_o = 1 \text{ W}$
- Effective internal inductance/capacitance	$L_i = 0.4 \text{ mH}$ , $C_i = 6 \text{ nF}$	$L_i = 7 \mu\text{H}$ , $C_i = 1.1 \text{ nF}$
• Explosion protection acc. to FM	Certificate of Compliance 3008490	
- Identification (XP/DIP) or (IS); (NI)	CL I, DIV 1, GP ABCD T4...T6; CL II, DIV 1, GP EFG; CL III; CL I, ZN 0/1 AEx ia IIC T4...T6; CL I, DIV 2, GP ABCD T4...T6; CL II, DIV 2, GP FG; CL III	
• Explosion protection to CSA	Certificate of Compliance 1153651	
- Identification (XP/DIP) or (IS)	CL I, DIV 1, GP ABCD T4...T6; CL II, DIV 1, GP EFG; CL III; Ex ia IIC T4...T6; CL I, DIV 2, GP ABCD T4...T6; CL II, DIV 2, GP FG; CL III	

HART communication		FOUNDATION Fieldbus communication	
HART	230 ... 1100 Ω	Function blocks	3 function blocks analog input, 1 function block PID
Protocol	HART Version 5.x	• Analog input	Yes, linearly rising or falling characteristic
Software for computer	SIMATIC PDM	- Adaptation to customer-specific process variables	0 ... 100 s
<b>PROFIBUS PA communication</b>		- Electrical damping, adjustable	Output/input (can be locked within the device with a bridge)
Simultaneous communication with master class 2 (max.)	4	- Simulation function	parameterizable (last good value, substitute value, incorrect value)
The address can be set using	Configuration tool or local operation (standard setting address 126)	- Failure mode	Yes, one upper and lower warning limit and one alarm limit respectively
Cyclic data usage		- Limit monitoring	Yes
• Output byte	5 (one measured value) or 10 (two measured values)	- Square-rooted characteristic for flow measurement	Standard FOUNDATION Fieldbus function block
• Input byte	0, 1, or 2 (register operating mode and reset function for metering)	• PID	1 resource block
Internal preprocessing		• Physical block	1 transducer block Pressure with calibration, 1 transducer block LCD
Device profile	PROFIBUS PA Profile for Process Control Devices Version 3.0, class B	Transducer blocks	
Function blocks	2	• Pressure transducer block	
• Analog input		- Can be calibrated by applying two pressures	Yes
- Adaptation to customer-specific process variables	Yes, linearly rising or falling characteristic	- Monitoring of sensor limits	Yes
- Electrical damping, adjustable	0 ... 100 s	- Simulation function: Measured pressure value, sensor temperature and electronics temperature	Constant value or over parameterizable ramp function
- Simulation function	Input /Output		
- Failure mode	parameterizable (last good value, substitute value, incorrect value)		
- Limit monitoring	Yes, one upper and lower warning limit and one alarm limit respectively		
• Register (totalizer)	Can be reset, preset, optional direction of counting, simulation function of register output		
- Failure mode	parameterizable (summation with last good value, continuous summation, summation with incorrect value)		
- Limit monitoring	One upper and lower warning limit and one alarm limit respectively		
• Physical block	1		
Transducer blocks	2		
• Pressure transducer block			
- Can be calibrated by applying two pressures	Yes		
- Monitoring of sensor limits	Yes		
- Specification of a container characteristic with	Max. 30 nodes		
- Square-rooted characteristic for flow measurement	Yes		
- Gradual volume suppression and implementation point of square-root extraction	Parameterizable		
- Simulation function for measured pressure value and sensor temperature	Constant value or over parameterizable ramp function

• Chinese version, English label inscription, setting of pressure unit: kPa	3		
All versions include DVD with compact operating instructions in various EU languages.			

A quick-start guide is included in the scope of delivery of the device.

- 1) For oxygen application, add Order code E10.
- 2) Available for measuring ranges 1 ... 63 bar.
- 3) When also ordering the quality test certificate (factory calibration) according to IEC 60770-2 for transmitters with mounted diaphragm seals: Order this certificate only together with the remote seals. The measuring accuracy of the total combination is certified here.
- 4) If the inspection certificate 3.1 is ordered for the transmitter with mounted diaphragm seals this certificate must also be ordered with the respective remote seals.
- 5) The diaphragm seal is to be specified with a separate order number and must be included with the transmitter order number, for example 7MF403-...Y... and 7MF4900-1...-B
- 6) The standard measuring cell filling of configurations with remote seals (Y) is silicone oil.
- 7) M10 fastening thread:  
Max. measuring span 160 bar (2320 psi) 7/16-20 UNF and M12 fastening thread: Max. measuring span 400 bar (5802 psi)
- 8) Without cable gland, with blanking plug.
- 9) With enclosed cable gland Ex ia and blanking plug.
- 10) Configurations with device plugs Han and M12 are only available in Ex ic.
- 11) Only in connection with IP66.
- 12) Explosion protection acc. to FM/CSA: suitable for installations according to NEC 500/505.
- 13) M12 delivered without cable socket.
- 14) Only in connection with Ex approval A, B, E or F.

• Korean Register of Shipping (KR)	S17	✓	✓	✓
1) Device plug Han IP65				
2) When also ordering the quality test certificate (factory calibration) according to IEC 60770-2 for transmitters with mounted diaphragm seals: Order this certificate only together with the remote seals. The measuring accuracy of the total combination is certified here.				
3) If the inspection certificate 3.1 is ordered for the transmitter with mounted diaphragm seals this certificate must also be ordered with the respective remote seals.				
4) Profisafe transmitters can only be operated with the S7 F Systems V6.1 configuration software in combination with S7-400H				
5) Option does not contain gas explosion protection; only dust explosion protection: Use in or at Zone 1D/2D.				
6) Cannot be ordered with remote seal.				
7) When the additional ex option is selected, the ATEX marking on the device is omitted. Only the Ex option selected via the Z option is marked.				

Selection and Ordering data	Order code			
<b>Additional data</b> Please add "-Z" to Article No. and specify Order code(s) and plain text.		HART	PA	FF
<b>Measuring range to be set</b> Specify in plain text (max. 5 characters): Y01: ... up to ... mbar, bar, kPa, MPa, psi	Y01	✓	✓ <sup>1)</sup>	
<b>Stainless steel tag plate and entry in device variable (measuring point description)</b> Max. 16 characters, specify in plain text: Y15: .....	Y15 <sup>2)</sup>	✓	✓	✓
<b>Measuring point text (entry in device variable)</b> Max. 27 characters, specify in plain text: Y16: .....	Y16	✓	✓	✓
<b>Entry of HART address (TAG)</b> Max. 8 characters, specify in plain text: Y17: .....	Y17	✓		
<b>Setting of pressure indication in pressure units</b> Specify in plain text (standard setting: bar): Y21: mbar, bar, kPa, MPa, psi, ... Note: The following pressure units can be selected: bar, mbar, mm H <sub>2</sub> O <sup>+</sup> , inH <sub>2</sub> O <sup>+</sup> , ftH <sub>2</sub> O <sup>+</sup> , mmHG, inHG, psi, Pa, kPa, MPa, g/cm <sup>2</sup> , kg/cm <sup>2</sup> , Torr, ATM or % ) ref. temperature 20 °C	Y21	✓	✓	✓
<b>Setting of pressure indication in non-pressure units<sup>3)</sup></b> Specify in plain text: Y22: .... up to .... l/min, m <sup>3</sup> /h, m, USgpm, ... (specification of measuring range in pressure units "Y01" is essential, unit with max. 5 characters)	Y22 + Y01	✓		
<b>Preset bus address</b> possible between 1 and 126 Specify in plain text: Y25: .....	Y25		✓	✓
<b>Damping adjustment in seconds (0 ... 100 s)</b> Factory mounting of valve manifolds, see accessories. Only Y01, Y15, Y16, Y17, Y21, Y22, Y25 and D05 can be factory preset ✓ = available	Y30	✓	✓	✓

**Ordering example**

Item line: 7MF4033-1EA00-1AA7-Z  
 B line: A01 + Y01 + Y21  
 C line: Y01: 10 ... 20 bar (145 ... 290 psi)  
 C line: Y21: bar (psi)

- 1) Measuring accuracies for PROFIBUS PA transmitters with Option Y01 are calculated in the same way as for HART devices.
- 2) If you do not wish to have any text engraved for Y15, then do not make any further text entries as "Y15:".
- 3) Preset values can only be changed over SIMATIC PDM.

SITRANS P DS III

for gauge/absolute pressure, with front-flush diaphragm

1

## SITRANS P DS III series for gauge and absolute pressure, with front-flush diaphragm

### Measuring accuracy

Reference conditions

(All error data refer always refer to the set span)

Measuring span ratio  $r$  (spread, Turn-Down)

Error in measurement at limit setting incl. hysteresis and reproducibility

• Linear characteristic

-  $r \leq 5$

-  $5 < r \leq 100$

-  $r \leq 10$

-  $10 < r \leq 30$

Influence of ambient temperature (in percent per 28 °C (50 °F))  $\leq (0.08 \cdot r + 0.16) \%$

Effect of ambient temperature (in pressure per temperature change)

• Temperature difference between medium temperature and ambient temperature

3 mbar/0.3 kPa/0.04 psi per 10 K

Long-term stability (temperature change  $\pm 30$  °C ( $\pm 54$  °F))  $\leq (0.25 \cdot r) \%$  in 5 years

Effect of mounting position (in pressure per change in angle) 0.4 mbar/0.04 kPa/0.006 per 10° inclination (zero point correction is possible with position error compensation)

Effect of auxiliary power supply (in percent per change in voltage)

0.005 % per 1 V

Measuring value resolution for PROFIBUS PA and FOUNDATION Fieldbus

$3 \cdot 10^{-5}$  of nominal measuring range

Acc. to IEC 60770-1

- Increasing characteristic
- Lower range value 0 bar/kPa/psi
- Stainless steel seal diaphragm
- Silicone oil filling
- Room temperature 25 °C (77 °F)

$r = \max.$  measuring span/set measuring span or nominal measuring range

### Gauge pressure, front-flush

### Absolute pressure, front-flush

$\leq 0.075 \%$

-

$\leq (0.005 \cdot r + 0.05) \%$

-

-

$\leq 0.2 \%$

-

$\leq 0.4 \%$

$\leq (0.08 \cdot r + 0.16) \%$

$\leq (0.16 \cdot r + 0.24) \%$

### Operating conditions

#### Installation conditions

Ambient temperature

Observe the temperature class in areas subject to explosion hazard.

• Measuring cell with silicone oil

-40 ... +85 °C (-40 ... +185 °F)

• Measuring cell with Neobee oil (with front-flush diaphragm)

-10 ... +85 °C (14 ... +185 °F)

• Measuring cell with inert liquid

-40 ... +85 °C (-40 ... +185 °F)

• Transmitter

-40 ... +85 °C (-40 ... +185 °F)

• Display readable

-30 ... +85 °C (-22 ... +185 °F)

• Storage temperature

-50 ... +85 °C (-58 ... +185 °F)  
(in the case of Neobee: -20 ... +85 °C (-4 ... +185 °F))  
(for high temperature oil: -10 ... +85 °C (14 ... 185 °F))

Climatic class

• Condensation

Relative humidity 0 ... 100 %  
Condensation permissible, suitable for use in the tropics

Degree of protection

• according to EN 60529

IP66 (optional IP66/IP68)

• according to NEMA 250

Type 4X

Electromagnetic Compatibility

• Emitted interference and interference immunity

Acc. to IEC 61326 and NAMUR NE 21

#### Medium conditions

The max. medium temperature of the front-flush process connections is to be taken into account in accordance with the relevant connection standards (e. g. DIN 32676, DIN 11851 etc.).

Temperature of medium

• Measuring cell with silicone oil

-40 ... +100 °C (-40 ... +212 °F)

• Measuring cell with silicone oil (with front-flush diaphragm)

-40 ... +150 °C (-40 ... +302 °F)

• Measuring cell with Neobee oil (with front-flush diaphragm)

-10 ... +150 °C (14 ... 302 °F)

• Measuring cell with silicone oil, with temperature decoupler (only for gauge pressure version with front-flush diaphragm)

-40 ... +200 °C (-40 ... +392 °F)

• Measuring cell with Neobee oil, with temp. decoupler (only for gauge pressure version with flush-mounted diaphragm)

-10 ... +200 °C (14 ... 392 °F)

• Measuring cell with inert filling liquid

-20 ... +100 °C (-4 ... +212 °F)

• Measuring cell with high-temperature oil (only for gauge pressure version with front-flush diaphragm)

-10 ... +250 °C (14 ... 482 °F)

### SITRANS P DS III series for gauge and absolute pressure, with front-flush diaphragm

#### Certificates and approvals

Classification according to PED 2014/68/EU	For gases of fluid group 1 and liquids of fluid group 1; complies with requirements of article 4, paragraph 3 (sound engineering practice)	
Explosion protection		
• Intrinsic safety "i"	PTB 13 ATEX 2007 X	
- Marking	Ex II 1/2 G Ex ia/ib IIC T4/T5/T6 Ga/Gb	
- Permissible ambient temperature	-40 ... +85 °C (-40 ... +185 °F) temperature class T4; -40 ... +70 °C (-40 ... +158 °F) temperature class T5; -40 ... +60 °C (-40 ... +140 °F) temperature class T6	
- Connection	To certified intrinsically-safe circuits with peak values: $U_i = 30 \text{ V}$ , $I_i = 100 \text{ mA}$ , $P_i = 750 \text{ mW}$ ; $R_i = 300 \Omega$	FISCO supply unit: $U_o = 17.5 \text{ V}$ , $I_o = 380 \text{ mA}$ , $P_o = 5.32 \text{ W}$ Linear barrier: $U_o = 24 \text{ V}$ , $I_o = 250 \text{ mA}$ , $P_o = 1.2 \text{ W}$
- Effective internal inductance/capacitance	$L_i = 0.4 \text{ mH}$ , $C_i = 6 \text{ nF}$	$L_i = 7 \mu\text{H}$ , $C_i = 1.1 \text{ nF}$
• Explosion-proof "d"	PTB 99 ATEX 1160	
- Marking	Ex II 1/2 G Ex d IIC T4/T6 Gb	
- Permissible ambient temperature	-40 ... +85 °C (-40 ... +185 °F) temperature class T4; -40 ... +60 °C (-40 ... +140 °F) temperature class T6	
- Connection	To circuits with values: $U_H = 10.5 \dots 45 \text{ V DC}$	To circuits with values: $U_H = 9 \dots 32 \text{ V DC}$
• Dust explosion protection for zone 20	PTB 01 ATEX 2055	
- Marking	Ex II 1 D Ex ta IIIC T120°C Da Ex II 1/2 D Ex ta/tb IIIC T120°C Da/Db	
- Permissible ambient temperature	-40 ... +85 °C (-40 ... +185 °F)	
- Max. surface temperature	120 °C (248 °F)	
- Connection	To certified intrinsically-safe circuits with peak values: $U_i = 30 \text{ V}$ , $I_i = 100 \text{ mA}$ , $P_i = 750 \text{ mW}$ , $R_i = 300 \Omega$	FISCO supply unit: $U_o = 17.5 \text{ V}$ , $I_o = 380 \text{ mA}$ , $P_o = 5.32 \text{ W}$ Linear barrier: $U_o = 24 \text{ V}$ , $I_o = 250 \text{ mA}$ , $P_o = 1 \text{ W}$
- Effective internal inductance/capacitance	$L_i = 0.4 \text{ mH}$ , $C_i = 6 \text{ nF}$	$L_i = 7 \mu\text{H}$ , $C_i = 1.1 \text{ nF}$
• Dust explosion protection for zone 21/22	Ex II 2 D Ex tb IIIC T120°C Db	
- Marking	Ex II 2 D IP65 T 120 °C	
- Connection	To circuits with values: $U_H = 10.5 \dots 45 \text{ V DC}$ ; $P_{\max} = 1.2 \text{ W}$	To circuits with values: $U_H = 9 \dots 32 \text{ V DC}$ ; $P_{\max} = 1 \text{ W}$
• Type of protection "n" (zone 2)	PTB 13 ATEX 2007 X	
- Marking	Ex II 2/3 G Ex nA IIC T4/T5/T6 Gb/Gc Ex II 2/3 G Ex ic IIC T4/T5/T6 Gb/Gc	
- Connection (Ex nA)	$U_m = 45 \text{ V}$	$U_m = 32 \text{ V}$
- Connections (Ex ic)	To circuits with values: $U_i = 45 \text{ V}$	FISCO supply unit ic: $U_o = 17.5 \text{ V}$ , $I_o = 570 \text{ mA}$ Linear barrier: $U_o = 32 \text{ V}$ , $I_o = 132 \text{ mA}$ , $P_o = 1 \text{ W}$
- Effective internal inductance/capacitance	$L_i = 0.4 \text{ mH}$ , $C_i = 6 \text{ nF}$	$L_i = 7 \mu\text{H}$ , $C_i = 1.1 \text{ nF}$
• Explosion protection acc. to FM	Certificate of Compliance 3008490	
- Identification (XP/DIP) or (IS); (NI)	CL I, DIV 1, GP ABCD T4...T6; CL II, DIV 1, GP EFG; CL III; CL I, ZN 0/1 AEx ia IIC T4...T6; CL I, DIV 2, GP ABCD T4...T6; CL II, DIV 2, GP FG; CL III	
• Explosion protection to CSA	Certificate of Compliance 1153651	
- Identification (XP/DIP) or (IS)	CL I, DIV 1, GP ABCD T4...T6; CL II, DIV 1, GP EFG; CL III; Ex ia IIC T4...T6; CL I, DIV 2, GP ABCD T4...T6; CL II, DIV 2, GP FG; CL III	

#### Hygiene version

In the case of SITRANS P DSIII with 7MF413x front-flush diaphragm, selected connections comply with the requirements of EHEDG.

# Pressure Measurement

## Pressure transmitters for applications with advanced requirements (Advanced) SITRANS P DS III

for gauge/absolute pressure, with front-flush diaphragm

1

HART communication		FOUNDATION Fieldbus communication	
HART	230 ... 1100 Ω	Function blocks	3 function blocks analog input, 1 function block PID
Protocol	HART Version 5.x	• Analog input	Yes, linearly rising or falling characteristic
Software for computer	SIMATIC PDM	- Adaptation to customer-specific process variables	0 ... 100 s
<b>PROFIBUS PA communication</b>		- Electrical damping, adjustable	Output/input (can be locked within the device with a bridge)
Simultaneous communication with master class 2 (max.)	4	- Simulation function	parameterizable (last good value, substitute value, incorrect value)
The address can be set using	Configuration tool or local operation (standard setting address 126)	- Failure mode	Yes, one upper and lower warning limit and one alarm limit respectively
Cyclic data usage		- Limit monitoring	Yes
• Output byte	5 (one measured value) or 10 (two measured values)	- Square-rooted characteristic for flow measurement	Standard FOUNDATION Fieldbus function block
• Input byte	0, 1, or 2 (register operating mode and reset function for metering)	• PID	1 resource block
Internal preprocessing		• Physical block	1 transducer block Pressure with calibration, 1 transducer block LCD
Device profile	PROFIBUS PA Profile for Process Control Devices Version 3.0, class B	Transducer blocks	
Function blocks	2	• Pressure transducer block	
• Analog input		- Can be calibrated by applying two pressures	Yes
- Adaptation to customer-specific process variables	Yes, linearly rising or falling characteristic	- Monitoring of sensor limits	Yes
- Electrical damping, adjustable	0 ... 100 s	- Simulation function: Measured pressure value, sensor temperature and electronics temperature	Constant value or over parameterizable ramp function
- Simulation function	Input /Output		
- Failure mode	parameterizable (last good value, substitute value, incorrect value)		
- Limit monitoring	Yes, one upper and lower warning limit and one alarm limit respectively		
• Register (totalizer)	Can be reset, preset, optional direction of counting, simulation function of register output		
- Failure mode	parameterizable (summation with last good value, continuous summation, summation with incorrect value)		
- Limit monitoring	One upper and lower warning limit and one alarm limit respectively		
• Physical block	1		
Transducer blocks	2		
• Pressure transducer block			
- Can be calibrated by applying two pressures	Yes		
- Monitoring of sensor limits	Yes		
- Specification of a container characteristic with	Max. 30 nodes		
- Square-rooted characteristic for flow measurement	Yes		
- Gradual volume suppression and implementation point of square-root extraction	Parameterizable		
- Simulation function for measured pressure value and sensor temperature	Constant value or over parameterizable ramp function

1) Device plug Han IP65

2) Profisafe transmitters can only be operated with the S7 F Systems V6.1 configuration software in combination with S7-400H.

3) Cannot be ordered with remote seal.

4) When the additional ex option is selected, the ATEX marking on the device is omitted. Only the Ex option selected via the Z option is marked.

5) Special seal in Viton included in the scope of delivery.  
FKM; temperature range -20 ... +200 °C (-4 ... +392 °C)

6) Cannot be combined with Order code P00. Can only be ordered with silicone oil measuring cell filling.

7) The weldable socket can be ordered under accessories.

8) 3A and EHEDG compliant. The maximum permissible temperatures of the medium depend on the respective cell fillings (see medium conditions).

Selection and Ordering data	Order code		
<i>Additional data</i>	HART	PA	FF
Please add "-Z" to Article No. and specify Order code(s) and plain text.			
<b>Measuring range to be set</b> Specify in plain text (max. 5 characters): Y01: ... up to ... mbar, bar, kPa, MPa, psi	Y01	✓	✓ <sup>1)</sup>
<b>Stainless steel tag plate and entry in device variable (measuring point description)</b> Max. 16 characters, specify in plain text: Y15: .....	Y15	✓	✓
<b>Measuring point text (entry in device variable)</b> Max. 27 characters, specify in plain text: Y16: .....	Y16	✓	✓
<b>Entry of HART address (TAG)</b> Max. 8 characters, specify in plain text: Y17: .....	Y17	✓	
<b>Setting of pressure indicator in pressure units</b> Specify in plain text (standard setting: bar): Y21: mbar, bar, kPa, MPa, psi, ... Note: The following pressure units can be selected: bar, mbar, mm H <sub>2</sub> O <sup>1)</sup> , inH <sub>2</sub> O <sup>1)</sup> , ftH <sub>2</sub> O <sup>1)</sup> , mmHG, inHG, psi, Pa, kPa, MPa, g/cm <sup>2</sup> , kg/cm <sup>2</sup> , Torr, ATM or % <sup>1)</sup> ref. temperature 20 °C	Y21	✓	✓
<b>Setting of pressure indication in non-pressure units<sup>2)</sup></b> Specify in plain text: Y22: ..... up to ..... l/min, m <sup>3</sup> /h, m, USgpm, ... (specification of measuring range in pressure units "Y01" is essential, unit with max. 5 characters)	Y22 + Y01	✓	
<b>Preset bus address</b> possible between 1 and 126 Specify in plain text: Y25: .....	Y25		✓
<b>Damping adjustment in seconds (0 ... 100 s)</b>	Y30	✓	✓

Only Y01, Y15, Y16, Y17, Y21, Y22, Y25 and D05 can be factory preset

✓ = available

### ordering example

Item line: 7MF4133-1DB20-1AB7-Z  
B line: A22 + Y01 + Y21  
C line: Y01: 1 ... 10 bar (14.5 ... 145 psi)  
C line: Y21: bar (psi)

<sup>1)</sup> Measuring accuracies for PROFIBUS PA transmitters with Option Y01 are calculated in the same way as for HART devices.

<sup>2)</sup> Preset values can only be changed over SIMATIC PDM.

## Dimensional drawings

SITRANS P pressure transmitters, DS III series for gauge pressure, with front-flush diaphragm, dimensions in mm (inch)

The diagram shows a SITRANS P DS III with an example of a flange. In this drawing the height is subdivided into  $H_1$  and  $H_2$ .

$H_1$  = Height of the SITRANS P300 up to a defined cross-section

$H_2$  = Height of the flange up to this defined cross-section

Only the height  $H_2$  is indicated in the dimensions of the flanges.

SITRANS P DS III

for absolute pressure (from gauge pressure series)

1

## SITRANS P DS III series for absolute pressure (from the gauge pressure series)

### Design

Weight (without options)	≈ 1.5 kg (≈ 3.3 lb)
Enclosure material	Low-copper die-cast aluminum, GD-AlSi 12 or stainless steel precision casting, mat. no. 1.4408
Wetted parts materials	
• Connection shank	Stainless steel, mat. no. 1.4404/316L or Hastelloy C4, mat. no. 2.4602
• Oval flange	Stainless steel, mat. no. 1.4404/316L
• Seal diaphragm	Stainless steel, mat. no. 1.4404/316L or Hastelloy C276, mat. no. 2.4819
Measuring cell filling	Silicone oil or inert filling liquid (maximum value with oxygen measurement pressure 100 bar (1450 psi) at 60 °C (140 °F))
Process connection	Connection shank G $\frac{1}{2}$ B to EN 837-1, female thread $\frac{1}{2}$ -14 NPT or oval flange (PN 160 (MAWP 2320 psi a)) to DIN 19213 with mounting thread M10 or $\frac{7}{16}$ -20 UNF to IEC 61518/DIN EN 61518
Material of mounting bracket	
• Steel	Sheet-steel, Mat. No. 1.0330, chrome-plated
• Stainless steel 304	Sheet stainless steel, mat. no. 1.4301 (SS 304)
• Stainless steel 316L	Sheet stainless steel, mat. no. 1.4404 (SS 316L)

### Power supply $U_H$

	HART	PROFIBUS PA/FOUNDATION Fieldbus
Terminal voltage on transmitter	10.5 ... 45 V DC 10.5 ... 30 V DC in intrinsically-safe mode	-
Power supply		Supplied through bus
Separate supply voltage	-	No
Bus voltage		
• Not Ex	-	9 ... 32 V
• With intrinsically-safe operation	-	9 ... 24 V
Current consumption		
• Basic current (max.)	-	12.5 mA
• Start-up current $\leq$ basic current	-	Yes
• Max. current in event of fault	-	15.5 mA
Fault disconnection electronics (FDE) available	-	Yes

SITRANS P DS III series for absolute pressure (from the gauge pressure series)		
Certificates and approvals	HART	PROFIBUS PA/ FOUNDATION Fieldbus
Classification according to PED 2014/68/EU	For gases of fluid group 1 and liquids of fluid group 1; complies with requirements of article 4, paragraph 3 (sound engineering practice)	
Explosion protection		
• Intrinsic safety "i"		
- Marking	PTB 13 ATEX 2007 X	
- Permissible ambient temperature	Ex II 1/2 G Ex ia/ib IIC T4/T5/T6 Ga/Gb	
- Connection	-40 ... +85 °C (-40 ... +185 °F) temperature class T4; -40 ... +70 °C (-40 ... +158 °F) temperature class T5; -40 ... +60 °C (-40 ... +140 °F) temperature class T6	
- Effective internal inductance/capacitance	To certified intrinsically-safe circuits with peak values: $U_i = 30 \text{ V}$ , $I_i = 100 \text{ mA}$ , $P_i = 750 \text{ mW}$ ; $R_i = 300 \Omega$	FISCO supply unit: $U_o = 17.5 \text{ V}$ , $I_o = 380 \text{ mA}$ , $P_o = 5.32 \text{ W}$ Linear barrier: $U_o = 24 \text{ V}$ , $I_o = 250 \text{ mA}$ , $P_o = 1.2 \text{ W}$
• Explosion-proof "d"		
- Marking	PTB 99 ATEX 1160	
- Permissible ambient temperature	Ex II 1/2 G Ex d IIC T4/T6 Gb	
- Connection	-40 ... +85 °C (-40 ... +185 °F) temperature class T4; -40 ... +60 °C (-40 ... +140 °F) temperature class T6	
• Dust explosion protection for zone 20		
- Marking	To circuits with values: $U_H = 10.5 \dots 45 \text{ V DC}$	
- Permissible ambient temperature	PTB 01 ATEX 2055	
- Max. surface temperature	Ex II 1 D Ex ta IIIC T120°C Da Ex II 1/2 D Ex ta/tb IIIC T120°C Da/Db	
- Connection	-40 ... +85 °C (-40 ... +185 °F)	
- Effective internal inductance/capacitance	To certified intrinsically-safe circuits with peak values: $U_i = 30 \text{ V}$ , $I_i = 100 \text{ mA}$ , $P_i = 750 \text{ mW}$ , $R_i = 300 \Omega$	FISCO supply unit: $U_o = 17.5 \text{ V}$ , $I_o = 380 \text{ mA}$ , $P_o = 5.32 \text{ W}$ Linear barrier: $U_o = 24 \text{ V}$ , $I_o = 250 \text{ mA}$ , $P_o = 1.2 \text{ W}$
• Dust explosion protection for zone 21/22		
- Marking	PTB 01 ATEX 2055	
- Connection	Ex II 2 D Ex tb IIIC T120°C Db	
• Type of protection "n" (zone 2)		
- Marking	To circuits with values: $U_H = 10.5 \dots 45 \text{ V DC}$ ; $P_{\max} = 1.2 \text{ W}$	
- Connection (Ex nA)	PTB 13 ATEX 2007 X	
- Connection (Ex ic)	Ex II 2/3 G Ex nA IIC T4/T5/T6 Gb/Gc Ex II 2/3 G Ex ic IIC T4/T5/T6 Gb/Gc	
- Effective internal inductance/capacitance	$U_m = 45 \text{ V}$	$U_m = 32 \text{ V}$
• Explosion protection acc. to FM	To circuits with values: $U_i = 45 \text{ V}$	
- Identification (XP/DIP) or (IS); (NI)	FISCO supply unit ic: $U_o = 17.5 \text{ V}$ , $I_o = 570 \text{ mA}$ Linear barrier: $U_o = 32 \text{ V}$ , $I_o = 132 \text{ mA}$ , $P_o = 1 \text{ W}$	
• Explosion protection to CSA	$L_i = 0.4 \text{ mH}$ , $C_i = 6 \text{ nF}$	
- Identification (XP/DIP) or (IS)	Certificate of Compliance 3008490	
	CL I, DIV 1, GP ABCD T4...T6; CL II, DIV 1, GP EFG; CL III; CL I, ZN 0/1 AEx ia IIC T4...T6; CL I, DIV 2, GP ABCD T4...T6; CL II, DIV 2, GP FG; CL III

# Pressure Measurement

Pressure transmitters  
for applications with advanced requirements (Advanced)  
SITRANS P DS III

for absolute pressure (from gauge pressure series)

1

HART communication		FOUNDATION Fieldbus communication	
HART	230 ... 1100 Ω	Function blocks	3 function blocks analog input, 1 function block PID
Protocol	HART Version 5.x	• Analog input	Yes, linearly rising or falling characteristic
Software for computer	SIMATIC PDM	- Adaptation to customer-specific process variables	0 ... 100 s
<b>PROFIBUS PA communication</b>		- Electrical damping, adjustable	Output/input (can be locked within the device with a bridge)
Simultaneous communication with master class 2 (max.)	4	- Simulation function	parameterizable (last good value, substitute value, incorrect value)
The address can be set using	Configuration tool or local operation (standard setting address 126)	- Failure mode	Yes, one upper and lower warning limit and one alarm limit respectively
Cyclic data usage		- Limit monitoring	Yes
• Output byte	5 (one measured value) or 10 (two measured values)	- Square-rooted characteristic for flow measurement	Standard FOUNDATION Fieldbus function block
• Input byte	0, 1, or 2 (register operating mode and reset function for metering)	• PID	1 resource block
Internal preprocessing		• Physical block	1 transducer block Pressure with calibration, 1 transducer block LCD
Device profile	PROFIBUS PA Profile for Process Control Devices Version 3.0, class B	Transducer blocks	
Function blocks	2	• Pressure transducer block	
• Analog input		- Can be calibrated by applying two pressures	Yes
- Adaptation to customer-specific process variables	Yes, linearly rising or falling characteristic	- Monitoring of sensor limits	Yes
- Electrical damping, adjustable	0 to 100 s	- Simulation function: Measured pressure value, sensor temperature and electronics temperature	Constant value or over parameterizable ramp function
- Simulation function	Input /Output		
- Failure mode	parameterizable (last good value, substitute value, incorrect value)		
- Limit monitoring	Yes, one upper and lower warning limit and one alarm limit respectively		
• Register (totalizer)	Can be reset, preset, optional direction of counting, simulation function of register output		
- Failure mode	parameterizable (summation with last good value, continuous summation, summation with incorrect value)		
- Limit monitoring	One upper and lower warning limit and one alarm limit respectively		
• Physical block	1		
Transducer blocks	2		
• Pressure transducer block			
- Can be calibrated by applying two pressures	Yes		
- Monitoring of sensor limits	Yes		
- Specification of a container characteristic with	Max. 30 nodes		
- Square-rooted characteristic for flow measurement	Yes		
- Gradual volume suppression and implementation point of square-root extraction	Parameterizable		
- Simulation function for measured pressure value and sensor temperature	Constant value or over parameterizable ramp function

1) Device plug Han IP65

2) When also ordering the quality test certificate (factory calibration) according to IEC 60770-2 for transmitters with mounted diaphragm seals: Order this certificate only together with the remote seals. The measuring accuracy of the total combination is certified here.

3) If the inspection certificate 3.1 is ordered for the transmitter with mounted diaphragm seals this certificate must also be ordered with the respective remote seals.

4) Profisafe transmitters can only be operated with the S7 F Systems V6.1 configuration software in combination with S7-400H.

5) Option does not contain gas explosion protection; only dust explosion protection: Use in or at Zone 1D/2D.

6) Cannot be ordered with remote seal.

7) When the additional ex option is selected, the ATEX marking on the device is omitted. Only the Ex option selected via the Z option is marked.

<b>Damping adjustment in seconds (0 ... 100 s)</b>	Y30	✓	✓

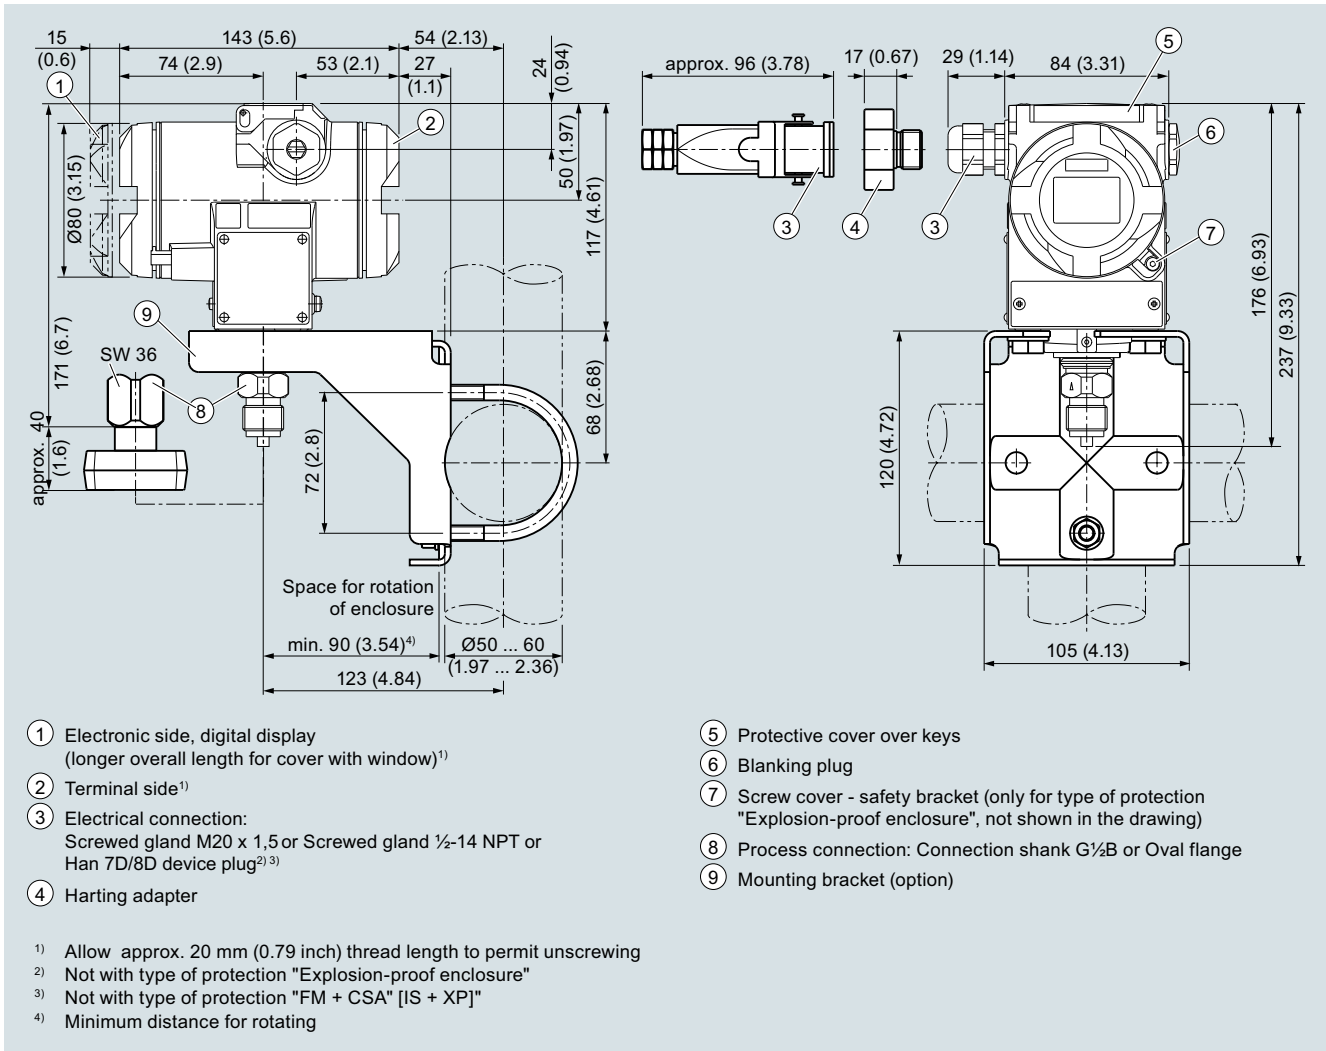

Factory mounting of valve manifolds, see accessories.

Only Y01, Y15, Y16, Y17, Y21, Y22, Y25 and D05 can be factory preset

✓ = available

- 1) Measuring accuracies for PROFIBUS PA transmitters with Option Y01 are calculated in the same way as for HART devices.
- 2) Only absolute pressure units selectable. Negative pressure values not permitted.
- 3) Preset values can only be changed over SIMATIC PDM.

2320 psi a

Lower measuring limit

- Measuring cell with silicone oil filling
- Measuring cell with inert filling liquid

0 mbar a/0 kPa a/0 psi a

- for temperature of medium  $-20\text{ °C} < \vartheta \leq +60\text{ °C}$   
( $-4\text{ °F} < \vartheta \leq +140\text{ °F}$ )

30 mbar a/3 kPa a/0.44 psi a

- for temperature of medium  
 $60\text{ °C} < \vartheta \leq +100\text{ °C}$  (max.  $85\text{ °C}$  for measuring cell 30 bar)  
( $140\text{ °F} < \vartheta \leq +212\text{ °F}$  (max.  $185\text{ °F}$  for measuring cell  
435 psi))

$30\text{ mbar a} + 20\text{ mbar a} \cdot (\vartheta - 60\text{ °C})/\text{°C}$   
 $3\text{ kPa a} + 2\text{ kPa a} \cdot (\vartheta - 60\text{ °C})/\text{°C}$   
 $0.44\text{ psi a} + 0.29\text{ psi a} \cdot (\vartheta - 140\text{ °F})/\text{°F}$

Upper measuring limit

100 % of max. measuring span  
(for oxygen measurement max. 100 bar/10 MPa/1450 psi and  $60\text{ °C}$  ( $140\text{ °F}$ )  
ambient temperature/temperature of medium)

Lower range value

Between the measuring limits (fully adjustable)

#### Output

#### HART

#### PROFIBUS PA/ FOUNDATION Fieldbus

Output signal

4 ... 20 mA

Digital PROFIBUS PA and  
FOUNDATION Fieldbus signal

- Lower limit (infinitely adjustable)
- Upper limit (infinitely adjustable)

3.55 mA, factory preset to 3.84 mA

-

23 mA, factory preset to 20.5 mA or optionally set to 22.0 mA

-

Load

- Without HART

$R_B \leq (U_H - 10.5\text{ V})/0.023\text{ A}$  in  $\Omega$ ,  
 $U_H$ : Power supply in V

-

- With HART

$R_B = 230 \dots 500\ \Omega$  (SIMATIC PDM) or  
 $R_B = 230 \dots 1100\ \Omega$  (HART Communicator)

-

Physical bus

-

IEC 61158-2

Protection against polarity reversal

Protected against short-circuit and polarity reversal.  
Each connection against the other with max. supply voltage.

Electrical damping (step width 0.1 s)

Set to 2 s (0 ... 100 s)

# Pressure Measurement

Pressure transmitters

for applications with advanced requirements (Advanced)

SITRANS P DS III

for absolute pressure (from differential pressure series)

1

## SITRANS P, DS III for absolute pressure (from the differential pressure series)

### Design

Weight (without options)	≈ 4.5 kg (≈ 9.9 (lb))
Enclosure material	Low-copper die-cast aluminum, GD-AlSi12 or stainless steel precision casting, mat. no. 1.4408
Wetted parts materials	
• Seal diaphragm	Stainless steel, mat. no. 1.4404/316L or Hastelloy C276, mat. no. 2.4819, Monel, mat. no. 2.4360, tantalum or gold
• Process flanges and sealing screw	Stainless steel, mat. no. 1.4408, Hastelloy C4, mat. no. 2.4602 or Monel, mat. no. 2.4360
• O-Ring	FPM (Viton) or optionally: PTFE, FEP, FEPM and NBR
Measuring cell filling	Silicone oil or inert filling liquid (maximum value with oxygen measurement pressure 100 bar (1450 psi) at 60 °C (140 °F))
Process connection	1/4-18 NPT and flange connection with mounting thread M10 to DIN 19213 or 7/16-20 UNF to IEC 61518/DIN EN 61518
Material of mounting bracket	
• Steel	Sheet-steel, Mat. No. 1.0330, chrome-plated
• Stainless steel 304	Sheet stainless steel, mat. no. 1.4301 (SS 304)
• Stainless steel 316L	Sheet stainless steel, mat. no. 1.4404 (SS 316L)

### Power supply $U_H$

	HART	PROFIBUS PA/FOUNDATION Fieldbus
Terminal voltage on transmitter	10.5 ... 45 V DC 10.5 ... 30 V DC in intrinsically-safe mode	-
Power supply		Supplied through bus
Separate supply voltage	-	No
Bus voltage		
• Not Ex	-	9 ... 32 V
• With intrinsically-safe operation	-	9 ... 24 V
Current consumption		
• Basic current (max.)	-	12.5 mA
• Start-up current ≤ basic current	-	Yes
• Max. current in event of fault	-	15.5 mA
Fault disconnection electronics (FDE) available	-	Yes

SITRANS P, DS III for absolute pressure (from the differential pressure series)		
Certificates and approvals	HART	PROFIBUS PA/ FOUNDATION Field-bus
Classification according to PED 2014/68/EU	For gases of fluid group 1 and liquids of fluid group 1; complies with requirements of article 4, paragraph 3 (sound engineering practice)	
Explosion protection	PTB 13 ATEX 2007 X	
• Intrinsic safety "i"	Ex II 1/2 G Ex ia/ib IIC T4/T5/T6 Ga/Gb	
- Marking	-40 ... +85 °C (-40 ... +185 °F) temperature class T4; -40 ... +70 °C (-40 ... +158 °F) temperature class T5; -40 ... +60 °C (-40 ... +140 °F) temperature class T6	
- Permissible ambient temperature		
- Connection	To certified intrinsically-safe circuits with peak values: $U_i = 30 \text{ V}$ , $I_i = 100 \text{ mA}$ , $P_i = 750 \text{ mW}$ ; $R_i = 300 \Omega$	FISCO supply unit: $U_o = 17.5 \text{ V}$ , $I_o = 380 \text{ mA}$ , $P_o = 5.32 \text{ W}$ Linear barrier: $U_o = 24 \text{ V}$ , $I_o = 250 \text{ mA}$ , $P_o = 1.2 \text{ W}$
- Effective internal inductance/capacitance	$L_i = 0.4 \text{ mH}$ , $C_i = 6 \text{ nF}$	$L_i = 7 \mu\text{H}$ , $C_i = 1.1 \text{ nF}$
• Explosion-proof "d"	PTB 99 ATEX 1160	
- Marking	Ex II 1/2 G Ex d IIC T4/T6 Gb	
- Permissible ambient temperature	-40 ... +85 °C (-40 ... +185 °F) temperature class T4; -40 ... +60 °C (-40 ... +140 °F) temperature class T6	
- Connection	To circuits with values: $U_H = 10.5 \dots 45 \text{ V DC}$	To circuits with values: $U_H = 9 \dots 32 \text{ V DC}$
• Dust explosion protection for zone 20	PTB 01 ATEX 2055	
- Marking	Ex II 1 D Ex ta IIIC T120°C Da Ex II 1/2 D Ex ta/tb IIIC T120°C Da/Db	
- Permissible ambient temperature	-40 ... +85 °C (-40 ... +185 °F)	
- Max. surface temperature	120 °C (248 °F)	
- Connection	To certified intrinsically-safe circuits with peak values: $U_i = 30 \text{ V}$ , $I_i = 100 \text{ mA}$ , $P_i = 750 \text{ mW}$ , $R_i = 300 \Omega$	FISCO supply unit: $U_o = 17.5 \text{ V}$ , $I_o = 380 \text{ mA}$ , $P_o = 5.32 \text{ W}$ Linear barrier: $U_o = 24 \text{ V}$ , $I_o = 250 \text{ mA}$ , $P_o = 1.2 \text{ W}$
- Effective internal inductance/capacitance	$L_i = 0.4 \text{ mH}$ , $C_i = 6 \text{ nF}$	$L_i = 7 \mu\text{H}$ , $C_i = 1.1 \text{ nF}$
• Dust explosion protection for zone 21/22	PTB 01 ATEX 2055

# Pressure Measurement

Pressure transmitters  
for applications with advanced requirements (Advanced)  
SITRANS P DS III

for absolute pressure (from differential pressure series)

1

HART communication		FOUNDATION Fieldbus communication	
HART	230 ... 1100 Ω	Function blocks	3 function blocks analog input, 1 function block PID
Protocol	HART Version 5.x	• Analog input	Yes, linearly rising or falling characteristic
Software for computer	SIMATIC PDM	- Adaptation to customer-specific process variables	0 to 100 s
<b>PROFIBUS PA communication</b>		- Electrical damping, adjustable	Output/input (can be locked within the device with a bridge)
Simultaneous communication with master class 2 (max.)	4	- Simulation function	parameterizable (last good value, substitute value, incorrect value)
The address can be set using	Configuration tool or local operation (standard setting address 126)	- Failure mode	Yes, one upper and lower warning limit and one alarm limit respectively
Cyclic data usage		- Limit monitoring	Yes
• Output byte	5 (one measured value) or 10 (two measured values)	- Square-rooted characteristic for flow measurement	
• Input byte	0, 1, or 2 (register operating mode and reset function for metering)	• PID	Standard FOUNDATION Fieldbus function block
Internal preprocessing		• Physical block	1 resource block
Device profile	PROFIBUS PA Profile for Process Control Devices Version 3.0, class B	Transducer blocks	1 transducer block Pressure with calibration, 1 transducer block LCD
Function blocks	2	• Pressure transducer block	
• Analog input		- Can be calibrated by applying two pressures	Yes
- Adaptation to customer-specific process variables	Yes, linearly rising or falling characteristic	- Monitoring of sensor limits	Yes
- Electrical damping, adjustable	0 ... 100 s	- Simulation function: Measured pressure value, sensor temperature and electronics temperature	Constant value or over parameterizable ramp function
- Simulation function	Input /Output		
- Failure mode	parameterizable (last good value, substitute value, incorrect value)		
- Limit monitoring	Yes, one upper and lower warning limit and one alarm limit respectively		
• Register (totalizer)	Can be reset, preset, optional direction of counting, simulation function of register output		
- Failure mode	parameterizable (summation with last good value, continuous summation, summation with incorrect value)		
- Limit monitoring	One upper and lower warning limit and one alarm limit respectively		
• Physical block	1		
Transducer blocks	2		
• Pressure transducer block			
- Can be calibrated by applying two pressures	Yes		
- Monitoring of sensor limits	Yes		
- Specification of a container characteristic with	Max. 30 nodes		
- Square-rooted characteristic for flow measurement	Yes		
- Gradual volume suppression and implementation point of square-root extraction	Parameterizable		
- Simulation function for measured pressure value and sensor temperature	Constant value or over parameterizable ramp function

1) Device plug Han IP65

2) When also ordering the quality test certificate (factory calibration) according to IEC 60770-2 for transmitters with mounted diaphragm seals: Order this certificate only together with the remote seals. The measuring accuracy of the total combination is certified here.

3) If the inspection certificate 3.1.1 is ordered for the transmitter with mounted diaphragm seals this certificate must also be ordered with the respective remote seals.

4) Profisafe transmitters can only be operated with the S7 F Systems V6.1 configuration software in combination with S7-400H

5) Option does not contain gas explosion protection; only dust explosion protection: Use in or at Zone 1D/2D.

6) Cannot be ordered with remote seal.

7) When the additional ex option is selected, the ATEX marking on the device is omitted. Only the Ex option selected via the Z option is marked.

8) Not suitable for connection of remote seals.

9) Blanking plug is standard configuration. Order option A40 if a vent valve is required instead of a blanking plug.

<b>Setting of pressure indication in non-pressure units<sup>3)</sup></b> Specify in plain text: Y22: ..... up to ..... l/min, m <sup>3</sup> /h, m, USgpm, ... (specification of measuring range in pressure units "Y01" is essential, unit with max. 5 characters)	Y22 + Y01	✓		
<b>Preset bus address</b> possible between 1 and 126 Specify in plain text: Y25: .....	Y25		✓	✓
<b>Damping adjustment in seconds (0 ... 100 s)</b>	Y30	✓	✓	✓

Factory mounting of valve manifolds, see accessories.

Only Y01, Y15, Y16, Y17, Y21, Y22, Y25 and D05 can be factory preset

✓ = available

- 1) Measuring accuracies for PROFIBUS PA transmitters with Option Y01 are calculated in the same way as for HART devices.
- 2) Only absolute pressure units selectable. Negative pressure values not permitted.
- 3) Preset values can only be changed over SIMATIC PDM.

SITRANS P DS III

for differential pressure and flow

1

## SITRANS P, DS III for differential pressure and flow

### Operating conditions

Degree of protection

- according to EN 60529
- according to NEMA 250

IP66 (optional IP66/IP68)

Type 4X

Temperature of medium

- Measuring cell with silicone oil filling
- Measuring cell with inert filling liquid
- Measuring cell with Neobee fill fluid (FDA-compliant)
- In conjunction with dust explosion protection

-40 ... +100 °C (-40 ... +212 °F) -20 ... +100 °C (-4 ... +212 °F)  
with 30 bar measuring cell

-20 ... +100 °C (-4 ... +212 °F)

-10 ... +100 °C (+14 ... +212 °F)

-20 ... +60 °C (-4 ... +140 °F)

Ambient conditions

- Ambient temperature (silicone oil and inert oil)
  - Transmitter

-40 ... +85 °C (-40 ... +185 °F)

-20 ... +85 °C (-4 ... +185 °F) with 30 bar measuring cell

- Display readable

-30 ... +85 °C (-22 ... +185 °F)

- Ambient temperature (Neobee fill fluid)
  - Transmitter

-10 ... +85 °C (+14 ... +185 °F)

- Storage temperature

-50 ... +85 °C (-58 ... +185 °F)

- Climatic class

- Condensation

Relative humidity 0 ... 100 %

Condensation permissible, suitable for use in the tropics

- Electromagnetic Compatibility

- Emitted interference and interference immunity

Acc. to IEC 61326 and NAMUR NE 21

### Design

Weight (without options)

Die-cast aluminum: ≈ 4.5 kg (≈ 9.9 lb)  
Stainless steel precision casting: ≈ 7.1 kg (≈ 15.6 lb)

Enclosure material

Low-copper die-cast aluminum, GD-AISI12 or stainless steel precision casting, mat. no. 1.4408

Wetted parts materials

- Seal diaphragm
- Process flanges and sealing screw
- O-Ring

Stainless steel, mat. no. 1.4404/316L or Hastelloy C276, mat. no. 2.4819, Monel, mat. no. 2.4360, tantalum or gold

Stainless steel, mat. no. 1.4408, Hastelloy C4, mat. no. 2.4602 or Monel, mat. no. 2.4360

FPM (Viton) or optionally: PTFE, FEP, FEPM and NBR

Measuring cell filling

Silicone oil or inert filling liquid (maximum value with oxygen measurement pressure 100 bar (1450 psi) at 60 °C (140 °F))

Process connection

Female thread 1/4-18 NPT and flange connection with mounting thread M10 to DIN 19213 or 7/16-20 UNF to IEC 61518/DIN EN 61518

Material of mounting bracket

- Steel
- Stainless steel 304
- Stainless steel 316L

Sheet-steel, Mat. No. 1.0330, chrome-plated

Sheet stainless steel, mat. no. 1.4301 (SS 304)

Sheet stainless steel, mat. no. 1.4404 (SS 316L)

### Power supply $U_H$

Terminal voltage on transmitter

#### HART

10.5 ... 45 V DC  
10.5 ... 30 V DC in intrinsically-safe mode

#### PROFIBUS PA/ FOUNDATION Fieldbus

-

Supplied through bus

Power supply

Separate supply voltage

-

No

Bus voltage

- Not Ex
- With intrinsically-safe operation

-

9 ... 32 V

-

9 ... 24 V

Current consumption

- Basic current (max.)
- Start-up current ≤ basic current
- Max. current in event of fault

-

12.5 mA

-

Yes

-

15.5 mA

Fault disconnection electronics (FDE) available

-

Yes

**SITRANS P, DS III for differential pressure and flow****Certificates and approvals**

Classification according to PED 2014/68/EU

## Explosion protection

## • Intrinsic safety "i"

- Marking
- Permissible ambient temperature

## - Connection

## - Effective internal inductance/capacitance

## • Explosion-proof "d"

- Marking
- Permissible ambient temperature

## - Connection

## • Dust explosion protection for zone 20

- Marking
- Permissible ambient temperature

## - Max. surface temperature

## - Connection

## - Effective internal inductance/capacitance

## • Dust explosion protection for zone 21/22

- Marking
- Connection

## • Type of protection "n" (zone 2)

## - Marking

## - Connection (Ex nA)

## - Connection (Ex ic)

## - Effective internal inductance/capacitance

## • Explosion protection acc. to FM

- Identification (XP/DIP) or (IS); (NI)

## • Explosion protection to CSA

- Identification (XP/DIP) or (IS)

**HART**

- PN 32/160 (MAWP 464/2320 psi) for gases of fluid group 1 and liquids of fluid group 1; complies with requirements of article 4, paragraph 3 (sound engineering practice)
- PN 420 (MAWP 6092) for gases of fluid group 1 and liquids of fluid group 1; complies with basic safety requirements of Article 4, paragraph 1 (appendix 1); assigned to category III, conformity evaluation module H by the TÜV Nord.

# Pressure Measurement

Pressure transmitters  
for applications with advanced requirements (Advanced)  
SITRANS P DS III

## for differential pressure and flow

1

HART communication		FOUNDATION Fieldbus communication	
HART	230 ... 1100 Ω	Function blocks	3 function blocks analog input, 1 function block PID
Protocol	HART Version 5.x	• Analog input	Yes, linearly rising or falling characteristic
Software for PC	SIMATIC PDM	- Adaptation to customer-specific process variables	0 ... 100 s
<b>PROFIBUS PA communication</b>		- Electrical damping, adjustable	Output/input (can be locked within the device with a bridge)
Simultaneous communication with master class 2 (max.)	4	- Simulation function	parameterizable (last good value, substitute value, incorrect value)
The address can be set using	Configuration tool or local operation (standard setting address 126)	- Failure mode	Yes, one upper and lower warning limit and one alarm limit respectively
Cyclic data usage		- Limit monitoring	Yes
• Output byte	5 (one measured value) or 10 (two measured values)	- Square-rooted characteristic for flow measurement	Standard FOUNDATION Fieldbus function block
• Input byte	0, 1, or 2 (register operating mode and reset function for metering)	• PID	1 resource block
Internal preprocessing		• Physical block	1 transducer block Pressure with calibration, 1 transducer block LCD
Device profile	PROFIBUS PA Profile for Process Control Devices Version 3.0, class B	Transducer blocks	
Function blocks	2	• Pressure transducer block	
• Analog input		- Can be calibrated by applying two pressures	Yes
- Adaptation to customer-specific process variables	Yes, linearly rising or falling characteristic	- Monitoring of sensor limits	Yes
- Electrical damping, adjustable	0 ... 100 s	- Simulation function: Measured pressure value, sensor temperature and electronics temperature	Constant value or over parameterizable ramp function
- Simulation function	Input /Output		
- Failure mode	parameterizable (last good value, substitute value, incorrect value)		
- Limit monitoring	Yes, one upper and lower warning limit and one alarm limit respectively		
• Register (totalizer)	Can be reset, preset, optional direction of counting, simulation function of register output		
- Failure mode	parameterizable (summation with last good value, continuous summation, summation with incorrect value)		
- Limit monitoring	One upper and lower warning limit and one alarm limit respectively		
• Physical block	1		
Transducer blocks	2		
• Pressure transducer block			
- Can be calibrated by applying two pressures	Yes		
- Monitoring of sensor limits	Yes		
- Specification of a container characteristic with	Max. 30 nodes		
- Square-rooted characteristic for flow measurement	Yes		
- Gradual volume suppression and implementation point of square-root extraction	Parameterizable		
- Simulation function for measured pressure value and sensor temperature	Constant value or over parameterizable ramp function

Factory mounting of valve manifolds, see accessories.

✓ = available

- Device plug Han IP65
- When the manufacture's certificate (calibration certificate) has to be ordered for transmitters with diaphragm seals according to IEC 60770-2, it is recommended only to order this certificate exclusively with the diaphragm seals. The measuring accuracy of the total combination is certified here.
- If the inspection certificate 3.1 is ordered for the transmitter with mounted diaphragm seals this certificate must also be ordered with the respective remote seals.
- Profisafe transmitters can only be operated with the S7 F Systems V6.1 configuration software in combination with S7-400H
- Option does not contain gas explosion protection; only dust explosion protection: Use in or at Zone 1D/2D.
- Cannot be ordered with remote seal.
- When the additional ex option is selected, the ATEX marking on the device is omitted. Only the Ex option selected via the Z option is marked.
- Not suitable for connection of remote seal.
- Blanking plug is standard configuration. Order option A40 if a vent valve is required instead of a blanking plug.

Selection and Ordering data	Order code	HART	PA	FF
<b>Additional data</b> Please add "-Z" to Article No. and specify Order code(s) and plain text.				
<b>Measuring range to be set</b> Specify in plain text: • in the case of linear characteristic curve (max. 5 characters): Y01: ... up to ... mbar, bar, kPa, MPa, psi • in the case of square rooted characteristic (max. 5 characters): Y02: ... up to ... mbar, bar, kPa, MPa, psi	Y01 Y02	✓ ✓	✓ <sup>1)</sup> ✓	
<b>Stainless steel tag plate and entry in device variable (measuring point description)</b> Max. 16 characters, specify in plain text: Y15: .....	Y15	✓	✓	✓
<b>Measuring point text (entry in device variable)</b> Max. 27 char., specify in plain text: Y16: .....	Y16	✓	✓	✓
<b>Entry of HART address (TAG)</b> Max. 8 char., specify in plain text: Y17: .....	Y17	✓		
<b>Setting of pressure indicator in pressure units</b> Specify in plain text (standard setting: bar): Y21: mbar, bar, kPa, MPa, psi, ... Note: The following pressure units can be selected: bar, mbar, mm H <sub>2</sub> O <sup>*</sup> , inH <sub>2</sub> O <sup>*</sup> , ftH <sub>2</sub> O <sup>*</sup> , mmHG, inHG, psi, Pa, kPa, MPa, g/cm <sup>2</sup> , kg/cm <sup>2</sup> , Torr, ATM or % *) ref. temperature 20 °C	Y21	✓	✓	✓
<b>Setting of pressure indicator in non-pressure units<sup>2)</sup></b> Specify in plain text: Y22: ..... up to ..... l/min, m <sup>3</sup> /h, m, USgpm, ... (specification of measuring range in pressure units "Y01" or "Y02" is essential, unit with max. 5 characters)	Y22 <sup>3)</sup> + Y01 or Y02	✓		
<b>Preset bus address</b> possible between 1 and 126 Specify in plain text: Y25: .....	Y25		✓	✓
<b>Damping adjustment in seconds (0 ... 100 s)</b>	Y30	✓	✓	✓

Factory mounting of valve manifolds, see accessories.

Only Y01, Y15, Y16, Y17, Y21, Y22, Y25 and D05 can be factory preset

✓ = available

- Measuring accuracies for PROFIBUS PA transmitters with Option Y01 are calculated in the same way as for HART devices.
- Preset values can only be changed over SIMATIC PDM.
- Not in conjunction with over-filling safety device for flammable and non-flammable liquids (Order code "E08")

1) Device plug Han IP65

2) Profisafe transmitters can only be operated with the S7 F Systems V6.1 configuration software in combination with S7-400H

3) Tested according to IEC 61010. Only for media of the group of fluids 2 in accordance with PED permissible. Not for use with dangerous media suitable.

4) Option does not contain gas explosion protection; only dust explosion protection: Use in or at Zone 1D/2D.

5) Cannot be ordered with remote seal.

6) When the additional ex option is selected, the ATEX marking on the device is omitted. Only the Ex option selected via the Z option is marked.

7) Blanking plug is standard configuration. Order option A40 if a vent valve is required instead of a blanking plug.

### Measuring accuracy

Reference conditions

Acc. to IEC 60770-1

- Increasing characteristic
- Lower range value 0 bar/kPa/psi
- Stainless steel seal diaphragm
- Silicone oil filling
- Room temperature 25 °C (77 °F)

Measuring span ratio  $r$  (spread, Turn-Down)

$r = \text{max. measuring span/set measuring span or nominal measuring range}$

Error in measurement at limit setting incl. hysteresis and reproducibility

- Linear characteristic

- 250 mbar/25 kPa/3.6 psi

$r \leq 5$  :  $\leq 0.125\%$   
 $5 < r \leq 10$  :  $\leq (0.007 \cdot r + 0.09)\%$

- 600 mbar/60 kPa/8.7 psi

$r \leq 5$  :  $\leq 0.125\%$   
 $5 < r \leq 25$  :  $\leq (0.007 \cdot r + 0.09)\%$

- 1600 mbar/160 kPa/23.21 psi  
 5 bar/500 kPa/72.5 psi

$r \leq 5$  :  $\leq 0.125\%$   
 $5 < r \leq 30$  :  $\leq (0.007 \cdot r + 0.09)\%$

Influence of ambient temperature  
(in percent per 28 °C (50 °F))

- 250 mbar/25 kPa/3.6 psi

$\leq (0.4 \cdot r + 0.16)\%$

- 600 mbar/60 kPa/8.7 psi

$\leq (0.24 \cdot r + 0.16)\%$

- 1600 mbar/160 kPa/23.21 psi  
 5 bar/500 kPa/72.5 psi

$\leq (0.2 \cdot r + 0.16)\%$

Influence of static pressure

- on the lower range value

- 250 mbar/25 kPa/3.6 psi

$\leq (0.3 \cdot r)\%$  per nominal pressure

- 600 mbar/60 kPa/8.7 psi

$\leq (0.15 \cdot r)\%$  per nominal pressure

- 1600 mbar/160 kPa/23.21 psi  
 5 bar/500 kPa/72.5 psi

$\leq (0.1 \cdot r)\%$  per nominal pressure

- on the measuring span

$\leq (0.1 \cdot r)\%$  per nominal pressure

Long-term stability

(temperature change  $\pm 30$  °C ( $\pm 54$  °F))

$\leq (0.25 \cdot r)\%$  in 5 years  
 static pressure max. 70 bar/7 MPa/1015 psi

Effect of mounting position

Depending on filling liquid of mounting flange

Effect of auxiliary power supply  
(in percent per change in voltage)

0.005 % per 1 V

Measuring value resolution for PROFIBUS PA and FOUNDATION Fieldbus

$3 \cdot 10^{-5}$  of nominal measuring range

### Operating conditions

<b>HART communication</b>		<b>FOUNDATION Fieldbus communication</b>	
HART	230 ... 1100 Ω	Function blocks	3 function blocks analog input, 1 function block PID
Protocol	HART Version 5.x	• Analog input	Yes, linearly rising or falling characteristic
Software for computer	SIMATIC PDM	- Adaptation to customer-specific process variables	0 ... 100 s
<b>PROFIBUS PA communication</b>		- Electrical damping, adjustable	Output/input (can be locked within the device with a bridge)
Simultaneous communication with master class 2 (max.)	4	- Simulation function	parameterizable (last good value, substitute value, incorrect value)
The address can be set using	Configuration tool or local operation (standard setting address 126)	- Failure mode	Yes, one upper and lower warning limit and one alarm limit respectively
Cyclic data usage		- Limit monitoring	Yes
• Output byte	5 (one measured value) or 10 (two measured values)	- Square-rooted characteristic for flow measurement	Yes
• Input byte	0, 1, or 2 (register operating mode and reset function for metering)	• PID	Standard FOUNDATION Fieldbus function block
Internal preprocessing		• Physical block	1 resource block
Device profile	PROFIBUS PA Profile for Process Control Devices Version 3.0, class B	Transducer blocks	1 transducer block Pressure with calibration, 1 transducer block LCD
Function blocks	2	• Pressure transducer block	
• Analog input		- Can be calibrated by applying two pressures	Yes
- Adaptation to customer-specific process variables	Yes, linearly rising or falling characteristic	- Monitoring of sensor limits	Yes
- Electrical damping, adjustable	0 ... 100 s	- Simulation function: Measured pressure value, sensor temperature and electronics temperature	Constant value or over parameterizable ramp function
- Simulation function	Input/Output	<b>Mounting flange</b>	
- Failure mode	parameterizable (last good value, substitute value, incorrect value)	Nominal diameter	Nominal pressure
- Limit monitoring	Yes, one upper and lower warning limit and one alarm limit respectively	• Acc. to EN 1092-1	
• Register (totalizer)	Can be reset, preset, optional direction of counting, simulation function of register output	- DN 80	PN 40
- Failure mode	parameterizable (summation with last good value, continuous summation, summation with incorrect value)	- DN100	PN16, PN40
- Limit monitoring	One upper and lower warning limit and one alarm limit respectively	• To ASME B16.5	
• Physical block	1	- 3 inch	class 150, class 300
Transducer blocks	2	- 4 inch	class 150, class 300
• Pressure transducer block			
- Can be calibrated by applying two pressures	Yes		
- Monitoring of sensor limits	Yes		
- Specification of a container characteristic with	Max. 30 nodes		
- Square-rooted characteristic for flow measurement	Yes		
- Gradual volume suppression and implementation point of square-root extraction	Parameterizable		
- Simulation function for measured pressure value and sensor temperature	Constant value or over parameterizable ramp function

## Ordering information

1st order item: Pressure transmitter 7MF4633-...

2nd order item: Mounting flange 7MF4912-3...

### ordering example

Item line 1: 7MF4633-1EY20-1AA1-Z

B line: Y01

C line: Y01: 80 to 143 mbar (1.16 to 2.1 psi)

Item line 2: 7MF4912-3GE01

Power supply units see Chap. 7 "Supplementary Components".

Included in delivery of the device:

- Quick-start guide
- Sealing plug(s) or sealing screw(s) for the process flanges(s)

- 1) Not in conjunction with Electrical connection "device plug Han 7D".
- 2) Without cable gland, with blanking plug.
- 3) With enclosed cable gland Ex ia and blanking plug.
- 4) Configurations with device plugs Han and M12 are only available in Ex ic.
- 5) Only in connection with IP66.
- 6) Explosion protection acc. to FM/CSA: suitable for installations according to NEC 500/505.
- 7) Only in connection with Ex approval A, B or E.
- 8) M12 delivered without cable socket
- 9) Only in connection with Ex approval A, B, E or F.

Only Y01, Y15, Y16, Y17, Y21, Y22, Y25 and D05 can be factory preset  
✓ = available

- 1) Device plug Han IP65
- 2) Profisafe transmitters can only be operated with the S7 F Systems V6.1 configuration software in combination with S7-400H
- 3) Option does not contain gas explosion protection; only dust explosion protection: Use in or at Zone 1D/2D.
- 4) When the additional ex option is selected, the ATEX marking on the device is omitted. Only the Ex option selected via the Z option is marked.
- 5) Blanking plug is standard configuration. Order option A40 if a vent valve is required instead of a blanking plug.

- 1) Measuring accuracies for PROFIBUS PA transmitters with Option Y01 are calculated in the same way as for HART devices.
- 2) Preset values can only be changed over SIMATIC PDM.
- 3) Not in conjunction with over-filling safety device for flammable and non-flammable liquids (Order code "E08")

## Dimensional drawings

SITRANS P DS III with HART pressure transmitters for level, including mounting flange, dimensions in mm (inch)

- 1) Electrical connection:  
Screwed gland M20 x 1,5 or Screwed gland ½-14 NPT or Han 7D/8D device plug<sup>2) 3)</sup>
- 2) Protective cover over keys
- 3) Blanking plug
- 4) Screw cover - safety bracket (only for type of protection "Explosion-proof enclosure", not shown in the drawing)
- 5) Terminal side<sup>1)</sup>
- 6) Electronic side, digital display (longer overall length for cover with window)<sup>1)</sup>
- 7) Sealing screw with valve (option)
- 8) Harting adapter
- 9) Process connection of low pressure side ¼-18 NPT (IEC 61518)

<sup>1)</sup> Allow approx. 20 mm (0.79 inch) thread length to permit unscrewing

<sup>2)</sup> Not with type of protection "Explosion-proof enclosure"

<sup>3)</sup> Not with type of protection "FM + CSA" [IS + XP]"

<sup>4)</sup> For Pg 13,5 with adapter approx. 45 mm (1.77 inch)

<sup>5)</sup> 117 (4.61) with Order Code R15, 167 (6.57) with Order Code R20

<sup>6)</sup> 150 (5.91) with Order Code R15, 200 (7.87) with Order Code R20

<sup>7)</sup> 161 (6.34) with Order Code R15, 211 (8.31) with Order Code R20

SITRANS P DS III with HART pressure transmitters for level, including mounting flange, one sided-mounting, sealing surface below (order code H20), dimensions in mm (inch)

Mounting bracket for SITRANS P DS III, SITRANS P410 gauge and absolute pressure-transmitters, dimensions in mm  
mounting bracket material: Sheet-steel Mat. No. 1.0330, chrome-plated, or stainless steel Mat. No. 1.4301 (304)

Mounting bracket for SITRANS P DS III and SITRANS P410 differential pressure transmitter, dimensions in mm  
mounting bracket material: Sheet-steel Mat. No. 1.0330, chrome-plated, or stainless steel Mat. No. 1.4301 (304)

## Factory-mounting of valve manifolds on transmitters

1

## Overview

SITRANS P transmitters

- DS III for relative and absolute pressure (both designs) and
- DS III for differential pressure

can be delivered factory-fitted with the following valve manifolds:

- 7MF9011-4EA and 7MF9011-4FA valve manifolds for gauge pressure and absolute pressure transmitters
- 7MF9411-5BA and 7MF9411-5CA valve manifolds for absolute pressure and differential pressure transmitters

## Design

The 7MF9011-4EA valve manifolds are sealed with PTFE gaskets between the transmitter and the valve manifold as standard. Soft iron, stainless steel and copper gaskets are also available for sealing purposes if preferred.

The 7MF9011-4FA valve manifolds are sealed with PTFE sealing tape between the transmitter and the valve manifold.

The 7MF9411-5BA and 7MF9411-5CA valve manifolds are sealed with PTFE gaskets between the transmitter and the valve manifold.

The complete unit is checked for leaks under pressure after assembly (air pressure 6 bar (87 psi)) and certified with a factory certificate according to EN 10204 - 2.2.

All valve manifolds should preferably be secured with the corresponding mounting brackets. The transmitters are mounted on the valve manifold and not on the unit itself.

If you order a mounting bracket when choosing the option "Factory mounting of valve manifolds", you will receive a mounting bracket for the valve manifold instead of a bracket for mounting the transmitter.

If you order an inspection certificate 3.1 according to EN 10204 after choosing the option "Factory mounting of valve manifolds", a separate certificate is provided for the transmitter and for the valve manifold.

## Overview

SITRANS P410 pressure transmitters are digital pressure transmitters with a high level of operating convenience. Technically, they are based on the SITRANS P DS III but offer an increased measuring accuracy of 0.04%. This means the SITRANS P 410 is perfectly suited for measuring tasks with increased accuracy requirements. The parameterization is performed using input buttons or via HART or via PROFIBUS PA or FOUNDATION Fieldbus interface.

The comprehensive functionality makes for precise adjustment of the pressure transmitter to the requirements of the plant. Operation is very simple, despite the variety of setting options.

Pressure transmitters with type of protection "Intrinsic safety" and "Explosion-proof" may be installed in hazardous areas (zone 1) or in zone 0. The transmitters are provided with an EC type examination certificate and comply with the respective harmonized European standards (ATEX).

The transmitters can be equipped with various designs of remote seals for special applications such as the measurement of highly viscous substances.

SITRANS P410 pressure transmitters are available in various versions for measuring:

- Gauge pressure
- Differential pressure
- Volume flow
- Mass flow

## Benefits

- High quality and service life
- For aggressive and non-aggressive gases, vapors and liquids
- Extensive diagnostics and simulation functions
- Minimal conformity error
- Good long-term stability
- Wetted parts made of high-grade materials (e.g., stainless steel, Hastelloy)
- Infinitely adjustable measuring spans from 0.01 bar to 160 bar (0.15 psi to 2321 psi) for P410 with HART interface
- Nominal measuring ranges from 1 bar to 160 bar (14.5 psi to 2321 psi) for P410 with PROFIBUS PA and FOUNDATION Fieldbus interface
- High measuring accuracy
- Parameterization over input buttons and HART, PROFIBUS PA or FOUNDATION Fieldbus interface.

## Application

SITRANS P410 pressure transmitters can be used in industrial areas with extreme chemical and mechanical loads. Electromagnetic compatibility in the range 10 kHz to 1 GHz makes the P410 suitable for locations with high electromagnetic emissions.

Pressure transmitters with type of protection "Flameproof enclosure" may be installed in hazardous areas (zone 1) or in zone 0. The pressure transmitters are provided with an EC type examination certificate and comply with the corresponding harmonized European standards (ATEX).

Pressure transmitters with the type of protection "Intrinsic safety" for use in zone 0 may be operated with power supply units of category "ia" and "ib".

The transmitters can be equipped with various designs of remote seals for special applications such as the measurement of highly viscous substances.

The pressure transmitter can be operated locally over 3 input buttons or programmed externally over HART or over PROFIBUS PA or FOUNDATION Fieldbus interface.

### **Pressure transmitter for gauge pressure**

Measured variable: Gauge pressure of aggressive and non-aggressive gases, vapors and liquids.

#### Measuring span (infinitely adjustable)

for P410 with HART: 0.01 bar to 160 bar (0.15 psi to 2321 psi)

#### Nominal measuring range

for P410 with PROFIBUS PA and FOUNDATION Fieldbus:  
1 bar to 160 bar (14.5 psi to 2321 psi)

### **Pressure transmitters for differential pressure and flow**

Measured variables:

- Differential pressure
- Small positive or negative pressure
- Flow  $q \sim \sqrt{\Delta p}$  (together with a primary differential pressure device (see Chapter "Flow Meters"))

#### Measuring span (infinitely adjustable)

for P410 with HART: 1 mbar ... 30 bar (0.0145 ... 435 psi)

#### Nominal measuring range

for P410 with PROFIBUS PA and FOUNDATION Fieldbus:  
20 mbar ... 30 bar (0.29 ... 435 psi)

## Pressure Measurement

Pressure transmitters  
for applications with advanced requirements (Advanced)  
SITRANS P410

### Technical description

1

#### Design

Front view

The transmitter consists of various components depending on the order. The possible versions are listed in the ordering information. The components described below are the same for all transmitters.

The rating plate (7, Figure "Front view") with the Article No. is located on the side of the enclosure. The specified number together with the ordering information provide details on the optional design details and on the possible measuring range (physical properties of built-in sensor element).

The approval label is located on the opposite side.

The enclosure is made of die-cast aluminium or stainless steel precision casting. A round cover (6) is screwed on at the front and rear of the enclosure. The front cover can be fitted with a viewing pane so that the measured values can be read directly on the display. The inlet (8) for the electrical connection is located either on the left or right side. The unused opening on the opposite side is sealed by a blanking plug. The protective earth connection is located on the rear of the enclosure.

The electrical connections for the power supply and screen are accessible by unscrewing the rear cover. The bottom part of the enclosure contains the measuring cell with process connection (5). The measuring cell is prevented from rotating by a locking screw (4). As the result of this modular design, the measuring cell and the electronics can be replaced separately from each other. The set parameter data are retained.

At the top of the enclosure is a plastic cover (1), which hides the input keys.

#### Example for an attached measuring point label

## Function

## Operation of electronics with HART communication

Function diagram of electronics

The bridge output voltage created by the sensor (1, Figure "Function diagram of the electronics") is amplified by the measuring amplifier (2) and digitized in the analog-to-digital converter (3). The digital information is evaluated in a microcontroller, its linearity and temperature response corrected, and converted in a digital-to-analog converter (5) into an output current of 4 to 20 mA.

The diode circuit (10) protects against incorrect polarity.

The data specific to the measuring cell, the electronics data, and the parameter data are stored in the two non-volatile memories (6). The one memory is coupled to the measuring cell, the other to the electronics. As the result of this modular design, the electronics and the measuring cell can be replaced separately from each other.

Using the 3 input keys (8) you can parameterize the pressure transmitter directly at the measuring point. The input buttons can also be used to control the view of the results, the error messages and the operating modes on the display (9).

The HART modem (7) permits parameterization using a protocol according to the HART specification.

The pressure transmitters with measuring spans  $\leq 63$  bar measure the input pressure compared to atmosphere, transmitters with measuring spans  $\geq 160$  bar compared to vacuum.

## Operation of electronics with PROFIBUS PA communication

Function diagram of electronics

The bridge output voltage created by the sensor (1, Figure "Function diagram of the electronics") is amplified by the measuring amplifier (2) and digitized in the analog-to-digital converter (3). The digital information is evaluated in the microcontroller, its linearity and temperature response corrected, and provided on the PROFIBUS PA through an electrically isolated PA interface (7).

The data specific to the measuring cell, the electronics data, and the parameter data are stored in the two non-volatile memories (6). The one memory is coupled to the measuring cell, the other to the electronics. As the result of this modular design, the electronics and the measuring cell can be replaced separately from each other.

Using the three input buttons (8) you can parameterize the pressure transmitter directly at the measuring point. The input buttons can also be used to control the view of the results, the error messages and the operating modes on the display (9).

The results with status values and diagnostic values are transferred by cyclic data transmission on the PROFIBUS PA. Parameterization data and error messages are transferred by acyclic data transmission. Special software such as SIMATIC PDM is required for this.

## Pressure Measurement

Pressure transmitters  
for applications with advanced requirements (Advanced)  
SITRANS P410

### Technical description

#### Operation of electronics with FOUNDATION Fieldbus communication

Function diagram of electronics

The bridge output voltage created by the sensor (1, Figure "Function diagram of electronics") is amplified by the measuring amplifier (2) and digitized in the analog-to-digital converter (3). The digital information is evaluated in the microcontroller, its linearity and temperature response corrected, and provided on the FOUNDATION Fieldbus through an electrically isolated FOUNDATION Fieldbus interface (7).

The data specific to the measuring cell, the electronics data, and the parameter data are stored in the two non-volatile memories (6). The one memory is coupled to the measuring cell, the other to the electronics. As the result of this modular design, the electronics and the measuring cell can be replaced separately from each other.

Using the three input buttons (8) you can parameterize the pressure transmitter directly at the measuring point. The input buttons can also be used to control the view of the results, the error messages and the operating modes on the display (9).

The results with status values and diagnostic values are transferred by cyclic data transmission on the FOUNDATION Fieldbus. Parameterization data and error messages are transferred by acyclic data transmission. Special software such as National Instruments Configurator is required for this.

#### Mode of operation of the measuring cells

##### Measuring cell for gauge pressure

Measuring cell for gauge pressure, function diagram

The pressure  $p_e$  is applied through the process connection (2, Figure "Measuring cell for gauge pressure, function diagram") to the measuring cell (1). This pressure is subsequently transmitted further through the seal diaphragm (3) and the filling liquid (4) to the silicon pressure sensor (5) whose measuring diaphragm is then flexed. This changes the resistance of the four piezo-resistors fitted in the diaphragm in a bridge circuit. This change in resistance results in a bridge output voltage proportional to the differential pressure.

##### Measuring cell for differential pressure and flow

Measuring cell for differential pressure and flow, function diagram

The differential pressure is transmitted through the seal diaphragms (1, Figure "Measuring cell for differential pressure and flow, function diagram") and the filling liquid (7) to the silicon pressure sensor (4).

The measuring diaphragm is flexed by the applied differential pressure. This changes the resistance of the four piezo-resistors fitted in the diaphragm in a bridge circuit. This change in resistance results in a bridge output voltage proportional to the differential pressure.

An overload diaphragm is installed to provide protection from overloads. If the measuring limits are exceeded, the overload diaphragm (3) is flexed until the seal diaphragm rests on the body of the measuring cell (6), thus protecting the silicon pressure sensor from overloads.

**Parameterization SITRANS P410**

Depending on the version, there are a range of options for parameterizing the pressure transmitter and for setting or scanning the parameters.

Parameterization using the input buttons (local operation)

With the input buttons you can easily set the most important parameters without any additional equipment.

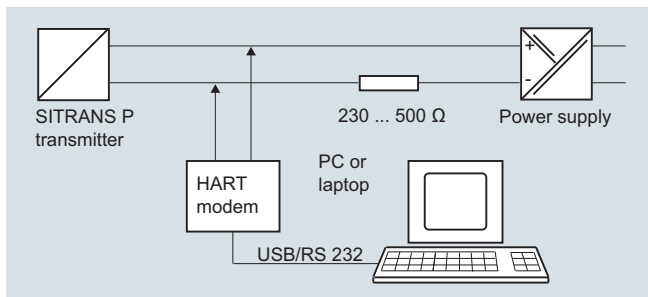

Parameterization using HART

Parameterization using HART is performed with a HART Communicator or a PC.

Communication between a HART Communicator and a pressure transmitter

When parameterizing with the HART Communicator, the connection is made directly to the 2-wire cable.

HART communication between a PC communicator and a pressure transmitter

When parameterizing with a PC, the connection is made through a HART modem.

The signals needed for communication in conformity with the HART 5.x or 6.x protocols are superimposed on the output current using the Frequency Shift Keying (FSK) method.

Adjustable parameters, SITRANS P410 with HART

Parameters	Input keys (DS III HART)	HART communication
Lower range value	x	x
Upper range value	x	x
Electrical damping	x	x
Lower range value without application of a pressure ("Blind setting")	x	x
Upper range value without application of a pressure ("Blind setting")	x	x
Zero adjustment	x	x
current transmitter	x	x
Fault current	x	x
Disabling of buttons, write protection	x	x <sup>1)</sup>
Type of dimension and actual dimension	x	x
Characteristic (linear / square-rooted)	x <sup>2)</sup>	x <sup>2)</sup>
Input of characteristic		x
Freely-programmable LCD		x
Diagnostic functions		x

1) Cancel apart from write protection  
2) Only differential pressure

Diagnostic functions for SITRANS P410 with HART

- Zero correction display
- Event counter
- Limit transmitter
- Saturation alarm
- Slave pointer
- Simulation functions
- Maintenance timer

Parameterization through PROFIBUS PA interface

Fully digital communication through PROFIBUS PA, profile 3.0, is particularly user-friendly. Through the PROFIBUS the DS III with PROFIBUS PA is connected to a process control system, e. g. SIMATIC PSC 7. Communication is possible even in a potentially explosive environment.

For parameterization through PROFIBUS you need suitable software, e.g. SIMATIC PDM (Process Device Manager).

Parameterization through FOUNDATION Fieldbus interface

Fully digital communication through FOUNDATION Fieldbus is particularly user-friendly. Through the FOUNDATION Fieldbus the DS III with FOUNDATION Fieldbus is connected to a process control system. Communication is possible even in a potentially explosive environment.

For parameterization through the FOUNDATION Fieldbus you need suitable software, e.g. National Instruments Configurator.

Adjustable parameters for SITRANS P410 with PROFIBUS PA and FOUNDATION Fieldbus

Parameters	Input keys	PROFIBUS PA and FOUNDATION Fieldbus interface
Electrical damping	x	x
Zero adjustment (correction of position)	x	x
Buttons and/or function disabling	x	x
Source of measured-value display	x	x
Physical dimension of display	x	x
Position of decimal point	x	x
Bus address	x	x
Adjustment of characteristic	x	x
Input of characteristic		x
Freely-programmable LCD		x
Diagnostics functions		x

### Technical description

Diagnostic functions for SITRANS P410 with PROFIBUS PA and FOUNDATION Fieldbus

- Event counter
- Slave pointer
- Maintenance timer
- Simulation functions
- Display of zero correction
- Limit transmitter
- Saturation alarm

Physical dimensions available for the display

Physical variable	Physical dimensions
Pressure (setting can also be made in the factory)	MPa, kPa, Pa, bar, mbar, torr, atm, psi, g/cm <sup>2</sup> , kg/cm <sup>2</sup> , mmH <sub>2</sub> O, mmH <sub>2</sub> O (4 °C), inH <sub>2</sub> O, inH <sub>2</sub> O (4 °C), ftH <sub>2</sub> O (20 °C), mmHg, inHg
Level (height data)	m, cm, mm, ft, in, yd
Volume	m <sup>3</sup> , dm <sup>3</sup> , hl, yd <sup>3</sup> , ft <sup>3</sup> , in <sup>3</sup> , US gallon, Imp. gallon, bushel, barrel, barrel liquid
volume flow	m <sup>3</sup> /s, m <sup>3</sup> /min, m <sup>3</sup> /h, m <sup>3</sup> /d, l/s, l/min, l/h, l/d, Ml/d, ft <sup>3</sup> /s, ft <sup>3</sup> /min, ft <sup>3</sup> /h, ft <sup>3</sup> /d, US gallon/s, US gallon/min, US gallon/h, US gallon/d, bbl/s, bbl/min, bbl/h, bbl/d
Mass flow	g/s, g/min, g/h, g/d, kg/s, kg/min, kg/h, kg/d, t/s, t/min, t/h, t/d, lb/s, lb/min, lb/h, lb/d, STon/s, STon/min, STon/h, STon/d, LTon/s, LTon/min, LTon/h, LTon/d
Total mass flow	t, kg, g, lb, oz, LTon, STon
Temperature	K, °C, °F, °R
Miscellaneous	%

Upper measuring limit

100 % of max. measuring span

## Output

## HART

## PROFIBUS PA/FOUNDATION Fieldbus

Output signal

4 ... 20 mA

Digital PROFIBUS PA and FOUNDATION Fieldbus signal

- Lower limit (infinitely adjustable)

3.55 mA, factory preset to 3.84 mA

-

- Upper limit (infinitely adjustable)

23 mA, factory preset to 20.5 mA or optionally set to 22.0 mA

-

Load

- Without HART

$$R_B \leq (U_H - 10.5 \text{ V}) / 0.023 \text{ A in } \Omega$$

$$U_H: \text{ Power supply in V}$$

-

- With HART

$$R_B = 230 \dots 500 \Omega \text{ (SIMATIC PDM) or}$$

$$R_B = 230 \dots 1100 \Omega \text{ (HART Communicator)}$$

-

Physical bus

-

IEC 61158-2

Protection against polarity reversal

Protected against short-circuit and polarity reversal. Each connection against the other with max. supply voltage.

Electrical damping (step width 0.1 s)

Set to 2 s (0 ... 100 s)

## SITRANS P410 for gauge pressure

### Measuring accuracy

Reference conditions

Acc. to IEC 60770-1

- Increasing characteristic
- Lower range value 0 bar/kPa/psi
- Stainless steel seal diaphragm
- Silicone oil filling
- Room temperature 25 °C (77 °F)

Measuring span ratio  $r$  (spread, Turn-Down)

$r = \text{max. measuring span/set measuring span or nominal measuring range}$

Error in measurement at limit setting incl. hysteresis and reproducibility

- Linear characteristic

- 1 bar/100 kPa/14.5 psi
- 4 bar/400 kPa/58 psi
- 16 bar/1.6 MPa/232 psi
- 63 bar/6.3 MPa/914 psi
- 160 bar/16 MPa/2321 psi

$r \leq 5$  :  $\leq 0.04$  %  
 $5 < r \leq 100$  :  $\leq (0.004 \cdot r + 0.045)$  %

Influence of ambient temperature  
(in percent per 28 °C (50 °F))

- 1 bar/100 kPa/14.5 psi
- 4 bar/400 kPa/58 psi
- 16 bar/1.6 MPa/232 psi
- 63 bar/6.3 MPa/914 psi
- 160 bar/16 MPa/2321 psi

$\leq (0.05 \cdot r + 0.1)$  %  
 $\leq (0.025 \cdot r + 0.125)$  %

Long-term stability (temperature change  $\pm 30$  °C ( $\pm 54$  °F))

- 1 bar/100 kPa/14.5 psi
- 4 bar/400 kPa/58 psi
- 16 bar/1.6 MPa/232 psi
- 63 bar/6.3 MPa/914 psi
- 160 bar/16 MPa/2321 psi

$\leq (0.25 \cdot r)$  % in 5 years  
 $\leq (0.125 \cdot r)$  % in 5 years

Effect of mounting position

$\leq 0.05$  mbar/0.005 kPa/0.000725 psi per 10° inclination  
(zero point correction is possible with position error compensation)

Effect of auxiliary power supply  
(in percent per change in voltage)

0.005 % per 1 V

Measuring value resolution for PROFIBUS PA and FOUNDATION Fieldbus

$3 \cdot 10^{-5}$  of nominal measuring range

#### Certificates and approvals

Classification according to PED 2014/68/EU	For gases of fluid group 1 and liquids of fluid group 1; complies with requirements of article 4, paragraph 3 (sound engineering practice)	
Explosion protection		
• Intrinsic safety "i"	PTB 13 ATEX 2007 X	
- Marking	Ex II 1/2 G Ex ia/ib IIC T4/T5/T6 Ga/Gb	
- Permissible ambient temperature	-40 ... +85 °C (-40 ... +185 °F) temperature class T4; -40 ... +70 °C (-40 ... +158 °F) temperature class T5; -40 ... +60 °C (-40 ... +140 °F) temperature class T6	
- Connection	To certified intrinsically-safe circuits with peak values: $U_i = 30 \text{ V}$ , $I_i = 100 \text{ mA}$ , $P_i = 750 \text{ mW}$ ; $R_i = 300 \Omega$	FISCO supply unit: $U_o = 17.5 \text{ V}$ , $I_o = 380 \text{ mA}$ , $P_o = 5.32 \text{ W}$ Linear barrier: $U_o = 24 \text{ V}$ , $I_o = 174 \text{ mA}$ , $P_o = 1 \text{ W}$
- Effective internal inductance/capacitance	$L_i = 0.4 \text{ mH}$ , $C_i = 6 \text{ nF}$	$L_i = 7 \mu\text{H}$ , $C_i = 1.1 \text{ nF}$
• Explosion-proof "d"	PTB 99 ATEX 1160	
- Marking	Ex II 1/2 G Ex d IIC T4/T6 Ga/Gb	
- Permissible ambient temperature	-40 ... +85 °C (-40 ... +185 °F) temperature class T4; -40 ... +60 °C (-40 ... +140 °F) temperature class T6	
- Connection	To circuits with values: $U_H = 10.5 \dots 45 \text{ V DC}$	To circuits with values: $U_H = 9 \dots 32 \text{ V DC}$
• Dust explosion protection for zone 20 (pending)	PTB 01 ATEX 2055	
- Marking	Ex II 1 D Ex ta IIIC T120°C Da Ex II 1/2 D Ex ta/tb IIIC T120°C Da/Db	
- Permissible ambient temperature	-40 ... +85 °C (-40 ... +185 °F)	
- Max. surface temperature	120 °C (248 °F)	
- Connection	To certified intrinsically-safe circuits with peak values: $U_i = 30 \text{ V}$ , $I_i = 100 \text{ mA}$ , $P_i = 750 \text{ mW}$ , $R_i = 300 \Omega$	FISCO supply unit: $U_o = 17.5 \text{ V}$ , $I_o = 380 \text{ mA}$ , $P_o = 5.32 \text{ W}$ Linear barrier: $U_o = 24 \text{ V}$ , $I_o = 250 \text{ mA}$ , $P_o = 1 \text{ W}$
- Effective internal inductance/capacitance	$L_i = 0.4 \text{ mH}$ , $C_i = 6 \text{ nF}$	$L_i = 7 \mu\text{H}$ , $C_i = 1.1 \text{ nF}$
• Dust explosion protection for zone 21/22 (pending)	PTB 01 ATEX 2055	
- Marking	Ex II 2 D Ex tb IIIC T120°C Db	
- Connection	To circuits with values: $U_H = 10.5 \dots 45 \text{ V DC}$ ; $P_{\max} = 1.2 \text{ W}$	To circuits with values: $U_H = 9 \dots 32 \text{ V DC}$ ; $P_{\max} = 1 \text{ W}$
• Type of protection "n" (zone 2)	PTB 13 ATEX 2007 X	
- Marking	Ex II 2/3 G Ex nA IIC T4/T5/T6 Gb/Gc Ex II 2/3 G Ex ic IIC T4/T5/T6 Gb/Gc	
- Connection (Ex nA)	$U_m = 45 \text{ V}$	$U_m = 32 \text{ V}$
- Connections (Ex ic)	To circuits with values: $U_i = 45 \text{ V}$	FISCO supply unit ic: $U_o = 17.5 \text{ V}$ , $I_o = 570 \text{ mA}$ Linear barrier: $U_o = 32 \text{ V}$ , $I_o = 132 \text{ mA}$ , $P_o = 1 \text{ W}$
- Effective internal inductance/capacitance	$L_i = 0.4 \text{ mH}$ , $C_i = 6 \text{ nF}$	$L_i = 7 \mu\text{H}$ , $C_i = 1.1 \text{ nF}$
• Explosion protection acc. to FM (pending)	Certificate of Compliance 3008490	
- Identification (XP/DIP) or (IS); (NI)	CL I, DIV 1, GP ABCD T4...T6; CL II, DIV 1, GP EFG; CL III; CL I, ZN 0/1 AEx ia IIC T4...T6; CL I, DIV 2, GP ABCD T4...T6; CL II, DIV 2, GP FG; CL III	
• Explosion protection to CSA (pending)	Certificate of Compliance 1153651	
- Identification (XP/DIP) or (IS)	CL I, DIV 1, GP ABCD T4...T6; CL II, DIV 1, GP EFG; CL III; Ex ia IIC T4...T6; CL I, DIV 2, GP ABCD T4...T6; CL II, DIV 2, GP FG; CL III	

HART communication		FOUNDATION Fieldbus communication	
HART	230 ... 1100 Ω	Function blocks	3 function blocks analog input, 1 function block PID
Protocol	HART Version 5.x	• Analog input	Yes, linearly rising or falling characteristic
Software for computer	SIMATIC PDM	- Adaptation to customer-specific process variables	0 ... 100 s
<b>PROFIBUS PA communication</b>		- Electrical damping, adjustable	Output/input (can be locked within the device with a bridge)
Simultaneous communication with master class 2 (max.)	4	- Simulation function	parameterizable (last good value, substitute value, incorrect value)
The address can be set using	Configuration tool or local operation (standard setting address 126)	- Failure mode	Yes, one upper and lower warning limit and one alarm limit respectively
Cyclic data usage		- Limit monitoring	Yes
• Output byte	5 (one measured value) or 10 (two measured values)	- Square-rooted characteristic for flow measurement	Yes
• Input byte	0, 1, or 2 (register operating mode and reset function for metering)	• PID	Standard FOUNDATION Fieldbus function block
Internal preprocessing		• Physical block	1 resource block
Device profile	PROFIBUS PA Profile for Process Control Devices Version 3.0, class B	Transducer blocks	1 transducer block Pressure with calibration, 1 transducer block LCD
Function blocks	2	• Pressure transducer block	
• Analog input		- Can be calibrated by applying two pressures	Yes
- Adaptation to customer-specific process variables	Yes, linearly rising or falling characteristic	- Monitoring of sensor limits	Yes
- Electrical damping, adjustable	0 ... 100 s	- Simulation function: Measured pressure value, sensor temperature and electronics temperature	Constant value or over parameterizable ramp function
- Simulation function	Input /Output		
- Failure mode	parameterizable (last good value, substitute value, incorrect value)		
- Limit monitoring	Yes, one upper and lower warning limit and one alarm limit respectively		
• Register (totalizer)	Can be reset, preset, optional direction of counting, simulation function of register output		
- Failure mode	parameterizable (summation with last good value, continuous summation, summation with incorrect value)		
- Limit monitoring	One upper and lower warning limit and one alarm limit respectively		
• Physical block	1		
Transducer blocks	2		
• Pressure transducer block			
- Can be calibrated by applying two pressures	Yes		
- Monitoring of sensor limits	Yes		
- Specification of a container characteristic with	Max. 30 nodes		
- Square-rooted characteristic for flow measurement	Yes		
- Gradual volume suppression and implementation point of square-root extraction	Parameterizable		
- Simulation function for measured pressure value and sensor temperature	Constant value or over parameterizable ramp function

Selection and Ordering data	Article No.	Order code
<b>Pressure transmitter for gauge pressure, SITRANS P410 with HART</b>	<b>7MF4033-</b>  <b>-</b>  <b>-Z C41</b>	
<b>Display</b>		
• Without display		0
• Without visible display (display concealed, setting: mA)		1
• With visible display (setting: mA)		6
• with customer-specific display (setting as specified, Order code "Y21" or "Y22" required)		7

Power supply units see Chap. 7 "Supplementary Components".

A quick-start guide is included in the scope of delivery of the device.

- 1) When the manufacture's certificate (calibration certificate) has to be ordered for transmitters with diaphragm seals according to IEC 60770-2, it is recommended only to order this certificate exclusively with the diaphragm seals. The measuring accuracy of the total combination is certified here.
- 2) If the inspection certificate 3.1 is ordered for the transmitter with mounted diaphragm seals this certificate must also be ordered with the respective remote seals.
- 3) The diaphragm seal is to be specified with a separate order number and must be included with the transmitter order number, for example 7MF403-...Y.-... and 7MF4900-1...-B
- 4) The standard measuring cell filling of configurations with remote seals (Y) is silicone oil.
- 5) Not in conjunction with Electrical connection "device plug Han 7D".
- 6) Without cable gland, with blanking plug
- 7) With enclosed cable gland Ex ia and blanking plug
- 8) Configurations with device plugs Han and M12 are only available in Ex ic.
- 9) Only in connection with IP66.
- 10) Explosion protection acc. to FM/CSA: suitable for installations according to NEC 500/505.
- 11) Only in connection with Ex approval A, B or E.
- 12) M12 delivered without cable socket

• With visible display (setting: bar)		6
• with customer-specific display (setting as specified, Order code "Y21" required)		7

A quick-start guide is included in the scope of delivery of the device.

- 1) When the manufacture's certificate (calibration certificate) has to be ordered for transmitters with diaphragm seals according to IEC 60770-2, it is recommended only to order this certificate exclusively with the diaphragm seals. The measuring accuracy of the total combination is certified here.
- 2) If the inspection certificate 3.1 is ordered for the transmitter with mounted diaphragm seals this certificate must also be ordered with the respective remote seals.
- 3) The diaphragm seal is to be specified with a separate order number and must be included with the transmitter order number, for example 7MF403-...Y... and 7MF4900-1...-B
- 4) The standard measuring cell filling of configurations with remote seals (Y) is silicone oil.
- 5) M10 fastening thread: Max. measuring span 160 bar (2320 psi)  
7/16-20 UNF and M12 fastening thread: Max. measuring span 400 bar (5802 psi)
- 6) Without cable gland, with blanking plug.
- 7) With enclosed cable gland Ex ia and blanking plug.
- 8) Configurations with device plugs Han and M12 are only available in Ex ic.
- 9) Only in connection with IP66.
- 10) Explosion protection acc. to FM/CSA: suitable for installations according to NEC 500/505.
- 11) M12 delivered without cable socket.
- 12) Only in connection with Ex approval A, B, E or F.

Factor valve block mounting for SITRANS P410 is possible. Depending on the available P410 variants, please see the configuration options for SITRANS P DS III (page 1/253).

1) Device plug Han IP65

2) When the manufacture's certificate (calibration certificate) has to be ordered for transmitters with diaphragm seals according to IEC 60770-2, it is recommended only to order this certificate exclusively with the diaphragm seals. The measuring accuracy of the total combination is certified here.

3) If the inspection certificate 3.1 is ordered for the transmitter with mounted diaphragm seals this certificate must also be ordered with the respective remote seals.

4) Option does not contain gas explosion protection; only dust explosion protection: Use in or at Zone 1D/2D.

5) Cannot be ordered with remote seal.

6) When the additional ex option is selected, the ATEX marking on the device is omitted. Only the Ex option selected via the Z option is marked.

Selection and Ordering data	Order code			
		HART	PA	FF
<b>Additional data</b> Please add "-Z" to Article No. and specify Order code(s) and plain text.				
<b>Measuring range to be set</b> Specify in plain text (max. 5 characters): Y01: ... up to ... mbar, bar, kPa, MPa, psi	Y01	✓	✓ <sup>1)</sup>	
<b>Stainless steel tag plate and entry in device variable (measuring point description)</b> Max. 16 characters, specify in plain text: Y15: .....	Y15	✓	✓	✓
<b>Measuring point text (entry in device variable)</b> Max. 27 characters, specify in plain text: Y16: .....	Y16	✓	✓	✓
<b>Entry of HART address (TAG)</b> Max. 8 characters, specify in plain text: Y17: .....	Y17	✓		
<b>Setting of pressure indication in pressure units</b> Specify in plain text (standard setting: bar): Y21: mbar, bar, kPa, MPa, psi, ... Note: The following pressure units can be selected: bar, mbar, mm H <sub>2</sub> O <sup>*</sup> , inH <sub>2</sub> O <sup>*</sup> , ftH <sub>2</sub> O <sup>*</sup> , mmHG, inHG, psi, Pa, kPa, MPa, g/cm <sup>2</sup> , kg/cm <sup>2</sup> , Torr, ATM or % *) ref. temperature 20 °C	Y21	✓	✓	✓
<b>Setting of pressure indication in non-pressure units<sup>2)</sup></b> Specify in plain text: Y22: ..... up to ..... l/min, m <sup>3</sup> /h, m, USgpm, ... (specification of measuring range in pressure units "Y01" is essential, unit with max. 5 characters)	Y22 + Y01	✓		

✓ = available

**Ordering example**

Item line: 7MF4033-1EA00-1AA7-Z C41  
 B line: A01 + Y01 + Y21  
 C line: Y01: 10 ... 20 bar (145 ... 290 psi)  
 C line: Y21: bar (psi)

1) Measuring accuracies for PROFIBUS PA transmitters with Option Y01 are calculated in the same way as for HART devices.

2) Preset values can only be changed over SIMATIC PDM.

## Pressure transmitters for applications with advanced requirements (Advanced) SITRANS P410

for differential pressure and flow

1

<b>HART communication</b>		<b>FOUNDATION Fieldbus communication</b>	
HART	230 ... 1100 Ω	Function blocks	3 function blocks analog input, 1 function block PID
Protocol	HART Version 5.x	• Analog input	Yes, linearly rising or falling characteristic
Software for PC	SIMATIC PDM	- Adaptation to customer-specific process variables	0 ... 100 s
<b>PROFIBUS PA communication</b>		- Electrical damping, adjustable	Output/input (can be locked within the device with a bridge)
Simultaneous communication with master class 2 (max.)	4	- Simulation function	parameterizable (last good value, substitute value, incorrect value)
The address can be set using	Configuration tool or local operation (standard setting address 126)	- Failure mode	Yes, one upper and lower warning limit and one alarm limit respectively
Cyclic data usage		- Limit monitoring	Yes
• Output byte	5 (one measured value) or 10 (two measured values)	- Square-rooted characteristic for flow measurement	Standard FOUNDATION Fieldbus function block
• Input byte	0, 1, or 2 (register operating mode and reset function for metering)	• PID	1 resource block
Internal preprocessing		• Physical block	1 transducer block Pressure with calibration, 1 transducer block LCD
Device profile	PROFIBUS PA Profile for Process Control Devices Version 3.0, class B	Transducer blocks	
Function blocks	2	• Pressure transducer block	
• Analog input		- Can be calibrated by applying two pressures	Yes
- Adaptation to customer-specific process variables	Yes, linearly rising or falling characteristic	- Monitoring of sensor limits	Yes
- Electrical damping, adjustable	0 ... 100 s	- Simulation function: Measured pressure value, sensor temperature and electronics temperature	Constant value or over parameterizable ramp function
- Simulation function	Input /Output		
- Failure mode	parameterizable (last good value, substitute value, incorrect value)		
- Limit monitoring	Yes, one upper and lower warning limit and one alarm limit respectively		
• Register (totalizer)	Can be reset, preset, optional direction of counting, simulation function of register output		
- Failure mode	parameterizable (summation with last good value, continuous summation, summation with incorrect value)		
- Limit monitoring	One upper and lower warning limit and one alarm limit respectively		
• Physical block	1		
Transducer blocks	2		
• Pressure transducer block			
- Can be calibrated by applying two pressures	Yes		
- Monitoring of sensor limits	Yes		
- Specification of a container characteristic with	Max. 30 nodes		
- Square-rooted characteristic for flow measurement	Yes		
- Gradual volume suppression and implementation point of square-root extraction	Parameterizable		
- Simulation function for measured pressure value and sensor temperature	Constant value or over parameterizable ramp function

### Measuring cell filling

Silicone oil

### Measuring cell cleaning

normal

### Measuring span (min. ... max.)

2.5 ... 250 mbar	(1.004 ... 100.4 inH <sub>2</sub> O)
6 ... 600 mbar	(2.409 ... 240.9 inH <sub>2</sub> O)
16 ... 1600 mbar	(6.424 ... 642.4 inH <sub>2</sub> O)
50 ... 5000 mbar	(20.08 ... 2008 inH <sub>2</sub> O)
0.3 ... 30 bar	(4.35 ... 435 psi)

### Wetted parts materials

(stainless steel process flanges)

Seal diaphragm      Parts of measuring cell

Stainless steel      Stainless steel

Hastelloy      Stainless steel

Hastelloy      Hastelloy

Version for diaphragm seal<sup>1) 2) 3) 4)</sup>

### Process connection

Female thread 1/4-18 NPT with flange connection

- Sealing screw opposite process connection
  - Mounting thread 7/16-20 UNF to IEC 61518/DIN EN 61518
  - Mounting thread M10 to DIN 19213 (only for replacement requirement)
- Vent on side of process flange<sup>5)</sup>
  - Mounting thread 7/16-20 UNF to IEC 61518/DIN EN 61518
  - Mounting thread M10 to DIN 19213 (only for replacement requirement)

### Non-wetted parts materials

process flange screws      Electronics enclosure

Stainless steel      Die-cast aluminum

Stainless steel      Stainless steel precision casting<sup>6)</sup>

### Version

- Standard version, German plate inscription, setting for pressure unit: bar
  - International version, English plate inscription, setting for pressure unit: bar
  - Chinese version, English plate inscription, setting for pressure unit: Pascal
- All versions include DVD with compact operating instructions in various EU languages.

### Explosion protection

- None
- With ATEX, Type of protection:
  - "Intrinsic safety (Ex ia)"
  - "Explosion-proof (Ex d)"<sup>7)</sup>
  - "Intrinsic safety and flameproof enclosure" (Ex ia + Ex d)<sup>8)</sup>
  - "Ex nA/ic (Zone 2)"<sup>9)</sup>
  - "Intrinsic safety, explosion-proof enclosure and dust explosion protection (Ex ia+ Ex d + Zone 1D/2D)"<sup>8)10)</sup>
- FM + CSA intrinsic safe (is) (pending)<sup>11)</sup>
- FM + CSA (is + ep) + Ex ia + Ex d (ATEX) + Zone 1D/2D<sup>8)10)11)</sup>
- With FM + CSA, Type of protection:
  - "Intrinsic Safe and Explosion Proof (is + xp)"<sup>7)11)</sup>

#### SITRANS P410

for differential pressure and flow

1

Selection and Ordering data	Article No.	Order Code
<b>SITRANS P410 with HART pressure transmitters for differential pressure and flow, PN 160 (MAWP 2320 psi)</b>	<b>7MF4433-</b>  <b>-Z C41</b>	
<b>Electrical connection/cable entry</b>		<b>B</b>
• Screwed gland M20 x 1.5		<b>C</b>
• Screwed gland ½-14 NPT		<b>D</b>
• Device plug Han 7D (plastic enclosure) incl. mating connector <sup>12)13)</sup>		<b>F</b>
• Device plugs M12 (stainless steel) <sup>14)15)</sup>		
<b>Display</b>		<b>0</b>
• Without display		<b>1</b>
• Without visible display (display concealed, setting: mA)		<b>6</b>
• With visible display (setting: mA)		<b>7</b>
• with customer-specific display (setting as specified, Order code "Y21" or "Y22" required)		

Power supply units see Chap. 7 "Supplementary Components".

Included in delivery of the device:

- Quick-start guide
- Sealing plug(s) or sealing screw(s) for the process flanges(s)

- When the manufacturer's certificate (calibration certificate) has to be ordered for transmitters with diaphragm seals according to IEC 60770-2, it is recommended only to order this certificate exclusively with the diaphragm seals. The measuring accuracy of the total combination is certified here.
- If the inspection certificate 3.1 is ordered for the transmitter with mounted diaphragm seals this certificate must also be ordered with the respective remote seals.
- The diaphragm seal is to be specified with a separate order number and must be included with the transmitter order number, for example 7MF443-.-Y.-.-... and 7MF4900-1...-B
- The standard measuring cell filling for configurations with remote seals (Y) is silicone oil.
- Not suitable for connection of remote seal. Position of the top vent valve in the process flange (see dimensional drawing).
- Not in conjunction with Electrical connection "device plug Han 7D".
- Without cable gland, with blanking plug
- With enclosed cable gland Ex ia and blanking plug
- Configurations with device plugs Han and M12 are only available in Ex ic.
- Only in connection with IP66.
- Explosion protection acc. to FM/CSA: suitable for installations according to NEC 500/505.
- Only in connection with Ex approval A, B or E.
- Permissible only for crimp-contact of conductor cross-section 1 mm<sup>2</sup>
- Only in connection with Ex approval A, B, E or F.
- M12 delivered without cable socket.

Power supply units see Chap. 7 "Supplementary Components".

Scope of delivery: Pressure transmitter as ordered (Instruction Manual is extra ordering item)

- 1) When the manufacturer's certificate (calibration certificate) has to be ordered for transmitters with diaphragm seals according to IEC 60770-2, it is recommended only to order this certificate exclusively with the diaphragm seals. The measuring accuracy of the total combination is certified here.
- 2) If the inspection certificate 3.1 is ordered for the transmitter with mounted diaphragm seals this certificate must also be ordered with the respective remote seals.
- 3) The diaphragm seal is to be specified with a separate order number and must be included with the transmitter order number, for example 7MF453-...Y.-... and 7MF4900-1...-B
- 4) The standard measuring cell filling for configurations with remote seals (Y) is silicone oil.
- 5) Not in conjunction with Electrical connection "device plug Han 7D".
- 6) Without cable gland, with blanking plug
- 7) With enclosed cable gland Ex ia and blanking plug
- 8) Configurations with device plugs Han and M12 are only available in Ex ic.
- 9) Only in connection with IP66.
- 10) Explosion protection acc. to FM/CSA: suitable for installations according to NEC 500/505.
- 11) Only in connection with Ex approval A, B or E.
- 12) Permissible only for crimp-contact of conductor cross-section 1 mm<sup>2</sup>
- 13) Only in connection with Ex approval A, B, E or F.
- 14) M12 delivered without cable socket.

## Overview

SITRANS P500 pressure transmitters are digital pressure transmitters featuring extensive user-friendliness and which fulfil the most stringent demands of accuracy, long-term stability, speed and lots more.

Extensive functionality allows you to set the pressure transmitter specifically to your own requirements. Despite their many settings options, local set-up is easy. A multi-lingual menu with clear text instructions guides you through the process. There are also help texts available.

The innovative EDD with integrated QuickStart assistance is also quick and easy to configure by computer using the HART protocol.

Extensive diagnostic functions, e.g. min/max pointer for pressure and temperature, or limit value indicator, make sure you always have the process under control. You can also display additional process values such as temperature or static pressure. The simultaneous display of mass, resulting from a volume, is also easy.

The SITRANS P500 pressure transmitters can be configured to measure:

- Differential pressure
- Level
- Volume
- Mass
- Volume flow
- Mass flow

## Benefits

- High measuring accuracy
- Very fast response time
- Extremely good long-term stability
- High reliability even under extreme chemical and mechanical loads
- For aggressive and non-aggressive gases, vapors and liquids
- Extensive diagnosis and simulation functions which can be used both on site as well as via HART.
- Optional separate replacement of measuring cell and electronics without recalibration.
- Extremely low conformity error values

- Infinitely adjustable measuring spans of 1 mbar to 32 bar (0.0145 to 465 psi; 0.4 to 12860 inH<sub>2</sub>O)
- Extremely good total performance and conformity error values with no loss of performance up to a turndown of 10 guaranteed.
- Additional integrated sensor for static pressure
- Parameterization via on-site control keys or HART
- Short process flanges enable space-saving installation.

## Application

The SITRANS P500 pressure transmitters can be used in industrial areas with extreme chemical and mechanical loads. Electromagnetic compatibility in the range 10 kHz to 1 GHz makes them suitable for locations with high electromagnetic emissions.

Pressure transmitters with ratings "Intrinsic safety" and "Explosion-proof" may be installed within potentially explosive atmospheres (zone 1) or in zone 0. The pressure transmitter comes with a CE-declaration of conformity and fulfils the corresponding unified European directives (ATEX).

Pressure transmitters with the type of protection "Intrinsic safety" for use in zone 0 may be operated with power supply units of category "ia" and "ib".

With newly designed measuring cell, it is possible to work with temperature of mediums of -40 to 125 °C (-40 to +257 °F) without having to use a remote seal.

The transmitters can be equipped with various designs of remote seals for special applications such as the measurement of highly viscous fluids.

The pressure transmitter can be fully parameterized locally via the three operating keys and externally via HART.

## Pressure Measurement

Pressure transmitters

for applications with highest requirements (Premium)

SITRANS P500

### Technical description

#### Pressure transmitters for differential pressure and flow

- Measured variables:
  - Differential pressure
  - Small positive or negative pressure
  - Flow  $q \sim \sqrt{\Delta p}$  (together with a primary element (see Chapter "Flow Meters"))
- Measuring span (freely adjustable)  
for SITRANS P500: 1 mbar to 32 bar (0.0145 to 465 psi; 0.4 to 12860 inH<sub>2</sub>O)

#### Pressure transmitters for level

- Measured variable: Level of aggressive and non-aggressive liquids in open and closed vessels.
- Measuring span (freely adjustable)  
for SITRANS P500: 1.25 to 6250 mbar (0.5 to 2509 inH<sub>2</sub>O)

- Nominal diameter of the mounting flange
  - DN 50 / PN 40
  - DN 80 / PN 40
  - DN 100/ PN 16, PN 40
  - 2 inch/class 150, class 300
  - 3 inch/class 150, class 300
  - 4 inch/ class 150, class 300
  - customized special version

In the case of level measurements in open vessels, the low-pressure connection of the measuring cell remains open (measurement "compared to atmospheric").

In the case of measurements in closed vessels, the lower-pressure connection has to be connected to the vessel in order to compensate the static pressure.

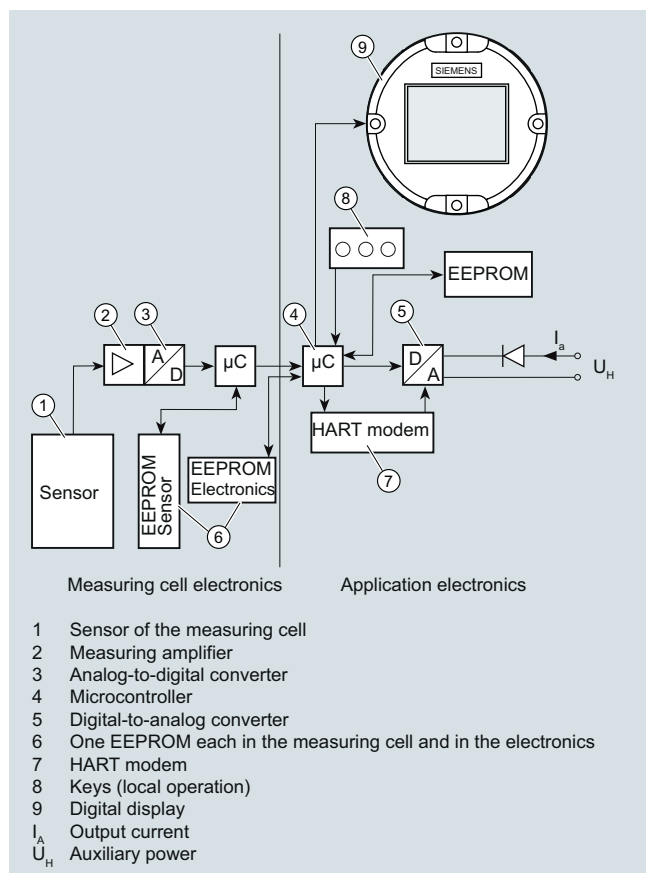

The wetted parts are made from a variety of materials, depending on the degree of corrosion resistance required.

### Design

View of transmitter

- The electronics enclosure is made of coated die-cast aluminum.
- The enclosure has round screwed covers front and back.
- Depending on the design the front cover is fitted with an inspection window. You can read off the measured value directly from the optional display through the window.
- The inlet to the terminal compartment is located either on the left or right side. The unused opening in each case is sealed by a blanking plug.
- The PE/ground terminal is on the back of the enclosure.
- Access to the terminal compartment for auxiliary power and shielding by unscrewing the cover.
- Beneath the electronic enclosure is the measuring cell with its process flanges at which the process connections are available. The modular design of the pressure transmitter lets you replace the measuring cell, electronics and connection board as required.
- On the top of the enclosure you can see the screwed cover of the three local pushbuttons of the transmitter.

**Function****Operation of electronics with HART communication**

## Function diagram of electronics

- The input pressure is converted into an electrical signal by the sensor.
- This signal is amplified by the measuring amplifier and digitalized in an analog-to-digital converter.
- The digital signal is analyzed in a microcontroller and corrected according to linearity and thermal characteristics.
- In a digital-to-analog converter it is then converted into the output current of 4 to 20 mA. When connected to supply lines, a diode circuit provides reverse polarity protection.
- The measuring cell-specific data, the electronic data and the parameterization data is held in two EEPROMs. One EEPROM is incorporated into the measuring cell electronics, the other is incorporated into the application electronics.

**Operation**

- The three local pushbuttons enable you both to navigate and carry out configuration and to visually track messages and process values, provided a display is available.
- If you have a device without a display, you can carry out zero adjustment using the three local pushbuttons. It is possible to retrofit a display at any time.
- You can also carry out settings by computer via a HART modem.

**Mode of operation of the measuring cells**Measuring cell for differential pressure and flow

## Measuring cell for differential pressure and flow, function diagram

- The differential pressure is transmitted via the seal diaphragm and the filling liquid to the silicon pressure sensor.
- If the measuring limits are exceeded, the overload diaphragm flexes until the seal diaphragm touches the body of the measuring cell. This protects the sensor module from overload.
- The differential pressure causes the measuring diaphragm of the silicon pressure sensor to flex.
- The displacement changes the resistance value of the 4 piezo resistors in the measuring diaphragm in a bridge circuit.
- The change in the resistance causes a bridge output voltage proportional to the input pressure.

SITRANS P500

### Technical description

#### Measuring cell for level

Measuring cell for level, function diagram

- The input pressure (hydrostatic pressure) acts hydraulically on the measuring cell via the seal diaphragm on the mounting flange.
- The differential pressure applied to the measuring cell is transmitted via the seal diaphragm and the filling liquid to the silicon pressure sensor.
- If the measuring limits are exceeded, the overload diaphragm flexes until the seal diaphragm touches the body of the measuring cell. This protects the sensor module from overload.
- The differential pressure causes the measuring diaphragm of the silicon pressure sensor to flex.
- The displacement changes the resistance value of the 4 piezo resistors in the measuring diaphragm in a bridge circuit.
- The change in the resistance causes a differential pressure proportional to the input pressure.

#### Configuration of SITRANS P500 HART

Depending on the version, there are a range of options for configuring the pressure transmitter and for setting or reading the parameters.

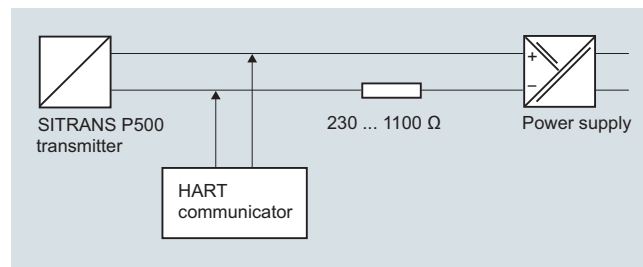

##### Configuration using the pushbuttons (local operation)

You can configure the transmitter in situ using the three keys provided a display is available. If you have no display, you can only carry out zero adjustment.

It is possible to retrofit a display. See accessories.

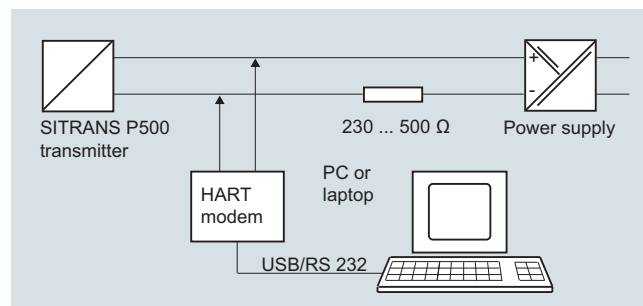

#### Configuration using HART

Parameterization using HART is carried out using a HART Communicator or a PC in conjunction with a HART modem.

Communication between a HART Communicator and a pressure transmitter

When parameterizing with the HART Communicator, the connection is made directly to the 2-wire cable.

HART communication between a PC communicator and a pressure transmitter

For configuring via PC a HART modem is used which connects the transmitter to the PC.

The signals needed for communication in conformity with the HART 6.0 protocols are superimposed on the output current using the Frequency Shift Keying (FSK) method.

The necessary device files are available for download on the Internet.

#### SITRANS P500 configuration options

The transmission offers you full configuring options both via HART as well as in situ provided the optional display is available.

For simple parameterizing we also offer the easy to understand QuickStart function with guided commissioning.

#### SITRANS P500 diagnostic functions

- Maintenance timer
- Min/Max pointer (both resetable and non-resetable)
  - Pressure (incl. time and temperature stamp)
  - Static pressure (incl. time and temperature stamp)
  - Sensor temperature (incl. time stamp)
  - Electronic temperature (incl. time stamp)
- Limit monitor block
- Diagnostic warning
- Diagnostic alarm
- Simulation functions
- Display of trends and histograms
- Operating hours meter

Physical dimensions available for the SITRANS P500 HART display

Physical variable	Physical dimensions
Pressure (setting can also be made in the factory)	Pa, MPa, kPa, bar, mbar, torr, atm, psi, g/cm <sup>2</sup> , kg/cm <sup>2</sup> , mmH <sub>2</sub> O (4 °C), inH <sub>2</sub> O (4 °C), inH <sub>2</sub> O (20 °C), mmH <sub>2</sub> O, mmH <sub>2</sub> O (4 °C), ftH <sub>2</sub> O (20 °C), inHg, mmHg, hPA
Level	m, cm, mm, ft, in

1

## Certificates and approvals

Classification according to PED  
2014/68/EU

- PN 160 (MAWP 2320 psi) For gases of fluid group 1 and liquids of fluid group 1; complies with requirements of article 4, paragraph 3 (sound engineering practice)

Explosion protection

Explosion protection for Europe (to ATEX)

- Intrinsic safety "i"
  - Marking PTB 09 ATEX 2004 X
  - Permissible ambient temperature Ex II 1/2 G Ex ia/ib IIC T4
  - Connection -40 ... +85 °C (-40 ... +185 °F)
  - Effective internal inductance: To certified intrinsically-safe circuits with peak values:  
 $U_i = 30 \text{ V}$ ,  $I_i = 100 \text{ mA}$ ,  $P_i = 750 \text{ mW}$ ;  $R_i = 300 \Omega$
  - Effective inner capacitance:  $L_i = 400 \mu\text{H}$
- Explosion-proof "d"
  - Marking BVS 09 ATEX E 027
  - Permissible ambient temperature Ex II 1/2 G Ex db ia IIC T4/T6 Ga/Gb
  - Connection -40 ... +85 °C (-40 ... +185 °F)
  - Effective internal inductance: -40 ... +60 °C (-40 ... +140 °F)
  - Effective inner capacitance: temperature class T6
- Dust explosion protection for zone 20
  - Marking To circuits with values:  
 $U_m = \text{DC } 10.5 \dots 45 \text{ V}$
  - Permissible ambient temperature BVS 09 ATEX E 027
  - Max. surface temperature Ex II 1 D Ex ta ia IIIC T120°C Da
  - Connection -40 ... +85 °C (-40 ... +185 °F)
  - Effective internal inductance: 120 °C (248 °F)
  - Effective inner capacitance: To certified intrinsically-safe circuits with peak values:  
 $U_i = 30 \text{ V}$ ,  $I_i = 100 \text{ mA}$ ,  $P_i = 750 \text{ mW}$ ,  $R_i = 300 \Omega$
- Dust explosion protection for zone 21/22
  - Marking Ex II 2D Ex tb ia IIIC T120°C Db
  - Connection To circuits with values:  
 $U_m = 10.5 \dots 45 \text{ V DC}$ ;  $P_{\text{max}} = 1.2 \text{ W}$
- Type of protection "n" (zone 2)
  - Marking PTB 09 ATEX 2004 X
  - "nA" connection Ex II 3 G Ex nA II T4/T6
  - "nL, ic" connection Ex II 2/3 G Ex ib/nL IIC T4/T6
  - Effective internal inductance: Ex II 2/3 G Ex ib/ic IIC T4/T6
  - Effective inner capacitance:  $U_m = 45 \text{ V DC}$
  - "nL, ic" connection  $U_i = 45 \text{ V}$
  - Effective internal inductance:  $L_i = 400 \mu\text{H}$
  - Effective inner capacitance:  $C_i = 6 \text{ nF}$

Explosion protection for USA (to FM)

Certificate of Compliance

- Identification (XP/DIP) or (IS)

- Permissible Ambient Temperature

- Entity parameters

- Marking (NI/NO)

- Permissible Ambient Temperature

- (NI/S) parameters

Explosion protection for Canada (to cCSAUS)

Certificate of Compliance

- Marking (XP/DIP)

- Permissible ambient temperature

- Entity parameters

- Marking (ia/ib)

- Permissible ambient temperature

- Entity parameters

- Marking (NI/n)

- Permissible ambient temperature

- NI/nA parameters

- nL parameters

Selection and Ordering data	Order code
<b>Additional data</b>	
Please add <b>"-Z"</b> to Article No. and specify Order code(s) and plain text.	
<b>Measuring range to be set</b>	
Specify in plain text:	
• In the case of linear characteristic curve (max. 5 characters): Y01: ... up to ... mbar, bar, kPa, MPa, psi	<b>Y01</b>
• In the case of square rooted characteristic (max. 5 characters): Y02: ... up to ... mbar, bar, kPa, MPa, psi	<b>Y02</b>
<b>Measuring point number and measuring point identifier (only standard ASCII character set)</b>	
Specify in plain text:	
Measuring point number (TAG No.), max. 16 characters Y15: .....	<b>Y15</b>
Measuring point text (max. 27 char.) Y16: .....	<b>Y16</b>
Entry of HART address (TAG), max. 32 characters Y17: .....	<b>Y17</b>
<b>Setting of pressure indication in pressure units</b>	
<b>Y21</b>	
Specify in plain text (standard setting: mbar) Y21: bar, kPa, MPa, psi, ...	
Note: The following pressure units are selectable: bar, mbar, mm H <sub>2</sub> O*, in H <sub>2</sub> O*), ftH <sub>2</sub> O*), mmHG, inHG, psi, Pa, kPa, MPa, g/cm <sup>2</sup> , kg/cm <sup>2</sup> , Torr, ATM, % or mA	
*) Reference temperature 20 °C	
<b>Setting of pressure indication in non-pressure units<sup>1)</sup></b>	
<b>Y22 + Y01 or Y02</b>	
Specify in plain text: Y22: ... up to ... l/min, m <sup>3</sup> /h, m, USgpm, ... (specification of measuring range in pressure units "Y01" is essential, unit with max. 5 characters)	
<b>Customer-specific settings</b>	
<b>Y30</b>	
Damping setting (range: 0 ... 100 s) (Standard setting: 2 s)	

<sup>1)</sup> Preset values can only be changed over SIMATIC PDM.

**Dimensional drawings**

- ① Connection side<sup>1)</sup>
- ② Process connection: 1/4-18 NPT (IEC 61518)
- ③ Electronics side, local display<sup>1)</sup>
- ④ Cover over buttons
- ⑤ Electrical connection:
  - M20 x 1,5 or 1/2-14 NPT screw gland
  - Han 7D/Han 8D<sup>2)</sup> or M12<sup>3)</sup> device plug
- ⑥ Mounting bracket (optional)
- ⑦ Electrical connection:
  - Han 7D/Han 8D device plug<sup>2)</sup><sup>3)</sup>
- ⑧ Process connection, with valve (optional) or screwed joint (optional)
- ⑨ Screw lid - safety bracket
- ⑩ Screw-type blank cap

<sup>1)</sup> In addition, allow approx. 20 mm (0.79 inch) for the thread length

<sup>2)</sup> Not with "flameproof enclosure" type of protection

<sup>3)</sup> Not with type of protection "FM + CSA" [is + XP]"

## Technical specifications

Input		Long-term stability		
Measured variable	Level		$\leq (0.05 \cdot r) \% \text{ per 5 years}$ $\leq (0.08 \cdot r) \% \text{ per 10 years}$	
Measuring span (infinitely adjustable)	Measuring span (min. ... max.)	Maximum operating pressure	Influence of ambient temperature per 28 °C (50 °F) <sup>1)</sup>	
	1.25 ... 250 mbar (0.5 ... 100 inH <sub>2</sub> O)			See "Mounting flange"
	6.25 ... 1250 mbar (2.5 ... 500 inH <sub>2</sub> O)			
	31.25 ... 6250 mbar (12.54 ... 2509 inH <sub>2</sub> O)			
Lower range limit				
• Measuring cell with silicone oil filling	-100 % of max. measuring span or 500 mbar a (7.25 psi a) vacuum resistance			
	Also available as vacuum-resistant remote seal: 30 mbar a (0.44 psi a)			
Upper range limit	100% of max. measuring span			
Lower range value	Between measuring limits (freely adjustable)			
Output		Operating conditions		
Output current signal	4 ... 20 mA	Mounting position	Defined by flange	
• Lower current limit (freely adjustable)	3.55 mA, factory setting 3.8 mA	Ambient conditions		
• Upper current limit (freely adjustable)	23 mA, factory setting 20.5 mA	• Ambient temperature (Note: Observe the temperature class in areas subject to explosion hazard.)		
• Ripple (without HART communication)	$I_{pp} \leq 0.4$ of max. output current	- total device	-40 ... +85 °C (-40 ... +185 °F)	
• adjustable damping	0... 100 s in steps of 0.1 s, factory setting 2 s	- Readable display	-20 ... +85 °C (-4 ... +185 °F)	
		- Storage temperature	-50 ... +90 °C (-58 ... +194 °F)	
• current transmitter	3.55 ... 23 mA	Climatic class		
• Failure signal	Adjustable within limits:	• Condensation	Relative humidity 0 ... 100 % (condensation permissible)	
	• Lower: 3.55 ... 3.7 mA (factory setting 3.6 mA)	Degree of protection to IEC 60529	IP66/IP68 and NEMA 4X (with corresponding cable gland)	
	• Upper: 21.0 ... 23 mA (factory setting 22.8 mA)	Electromagnetic Compatibility		
Load		• Emitted interference and interference immunity	Acc. to IEC 61326 and NAMUR NE 21	
• Without HART communication	$R_B \leq (U_H - 10.5 \text{ V})/0.023 \text{ A}$ in $\Omega$ , $U_H$ : Power supply in V	Permissible pressures	According to 2014/68/EU pressure equipment directive	
• With HART communication		Medium temperature of high-pressure side		
- HART Communicator	$R_B = 230 \dots 1100 \Omega$	• Measuring cell with silicone oil filling		
- HART modem	$R_B = 230 \dots 500 \Omega$	- $p_{abs} \geq 1 \text{ bar}$	-40 ... +175 <sup>3)</sup> °C (-40 ... +347 <sup>3)</sup> °F)	
Characteristic curve	Linearly rising or linearly falling and user-specific	- $p_{abs} < 1 \text{ bar}$	-40 ... +80 °C (-40 ... +176 °F)	
Measuring accuracy		Design		
Reference conditions (in accordance with IEC 60770-1)		Weight		
All error information always refers to the set measuring span.	• Rising characteristic curve	• To EN (pressure transmitter with mounting flange, without tube)	approx. 9.8 ... 11.8 kg (21.6 ... 26.0 lb)	
Error in measurement at limit setting incl. hysteresis and reproducibility	• Lower range value 0 bar	• To ASME (pressure transmitter with mounting flange, without tube)	approx. 9.8 ... 16.8 kg (21.6 ... 37.0 lb)	
r: measuring span ratio (r = max. measuring span / set measuring span)	• Stainless steel seal diaphragm			
	• Measuring cell with silicone oil filling			
	• Room temperature (25 °C (77 °F))			
Linear characteristic	$r \leq 10$			
• 250 mbar (100 inH <sub>2</sub> O)	$\leq 0.03 \%$			
• 1250 mbar (502 inH <sub>2</sub> O)				
• 6250 mbar (2509 inH <sub>2</sub> O)	$r \geq 10$			
	$\leq (0.003 \cdot r) \%$			

Material of wetted parts at the high-pressure side		<b>Auxiliary power supply</b>	
• Seal diaphragm of mounting flange	Stainless steel 1.4404/316L, Hastelloy C276, mat. no. 2.4819, Monel 400, mat. no. 2.4360, Tantal, PFA auf Edelstahl 1.4404/316L, PTFE auf Edelstahl 1.4404/316L	Terminal voltage on transmitter	<ul style="list-style-type: none"> <li>• DC 10.6 ... 44 V</li> <li>• With intrinsically-safe operation DC 10.6 ... 30 V</li> </ul>
• Sealing surface	Smooth to EN 1092-1, Form B1 and/or ASME B16.5 RF 125 ... 250 AA for stainless steel 316L, EN 1092-1 Form B2 and/or ASME B16.5 RFSF in the case of other materials	<b>Certificates and approvals</b>	
• Sealing material in the process connection		Classification according to PED 2014/68/EU	
- O-Ring	<ul style="list-style-type: none"> <li>• Standard: Viton (FKM (FPM))</li> <li>• Optional: NBR, PTFE (virginal), PTFE (glas fiber-reinforced), FFPM (Kalrez), Graphite</li> </ul>	• PN 160 (MAWP 2320 psi)	For gases of fluid group 1 and liquids of fluid group 1; complies with requirements of article 4, paragraph 3 (sound engineering practice)
- For vacuum application of mounting flange	Copper	Explosion protection	
Material of wetted parts at the low-pressure side		<u>Explosion protection for Europe (to ATEX)</u>	
• Seal diaphragm	Stainless steel, mat. no. 1.4404/316L, Hastelloy C276, Monel 400	• Intrinsic safety "i"	PTB 09 ATEX 2004 X
• Process connection and sealing screw	• Stainless steel, mat. no. 1.4404/316L	- Marking	Ex II 1/2 G Ex ia/ib IIC T4
• Sealing material in the process connection		- Permissible ambient temperature	-40 ... +85 °C (-40 ... +185 °F)
- O-Ring	<ul style="list-style-type: none"> <li>• Standard: Viton (FKM (FPM))</li> <li>• Optional: NBR, PTFE (virginal), PTFE (glas fiber-reinforced), FFPM (Kalrez), Graphite</li> </ul>	- Connection	To certified intrinsically-safe circuits with peak values: $U_i = 30 \text{ V}$ , $I_i = 100 \text{ mA}$ , $P_i = 750 \text{ mW}$ , $R_i = 300 \Omega$
Material of parts not in contact with media		- Effective internal inductance:	$L_i = 400 \mu\text{H}$
Die-cast aluminum enclosure	<ul style="list-style-type: none"> <li>• Low copper die-cast aluminum AC-AISI12 (Fe) or AC-AISI 10 Mg (Fe) to DIN EN 1706</li> <li>• Lacquer on polyurethane base, optional epoxy-based primer</li> <li>• Stainless steel serial plate</li> </ul>	- Effective inner capacitance:	$C_i = 6 \text{ nF}$
Stainless steel precision cast enclosure	Stainless steel, mat. no. 1.4404/316L	• Explosion-proof "d"	BVS 09 ATEX E 027
Process connection screws	Stainless steel	- Marking	Ex II 1/2 G Ex db ia IIC T4/T6 Ga/Gb
Measuring cell filling	Silicone oil	- Permissible ambient temperature	-40 ... +85 °C (-40 ... +185 °F) -40 ... +60 °C (-40 ... +140 °F) temperature class T6
• Liquid mounting flange	Silicone oil or other material	- Connection	To circuits with values: $U_m = \text{DC } 10.5 \dots 45 \text{ V}$
Process connection		• Dust explosion protection for zone 20	BVS 09 ATEX E 027
• High-pressure side	Flange to EN and ASME	- Marking	Ex II 1 D Ex ta ia IIC T120°C Da
• Low-pressure side	¼-18 NPT female thread and flange connection with M10 to DIN 19213 or 7/16-20 UNF mounting thread to IEC 61518/DIN EN 61518	- Permissible ambient temperature	-40 ... +85 °C (-40 ... +185 °F)
Electrical connection	<ul style="list-style-type: none"> <li>• Screw terminals</li> <li>• Cable entry via the following screwed glands: <ul style="list-style-type: none"> <li>- M20 x 1.5</li> <li>- ½-14 NPT</li> <li>- Device plug Han 7D/Han 8D</li> <li>- Device plug M12</li> </ul> </li> </ul>	- Max. surface temperature	120 °C (248 °F)
Displays and controls		- Connection	To certified intrinsically-safe circuits with peak values: $U_i = 30 \text{ V}$ , $I_i = 100 \text{ mA}$ , $P_i = 750 \text{ mW}$ , $R_i = 300 \Omega$
Push buttons	3; for operation directly on the device	- Effective internal inductance:	$L_i = 400 \mu\text{H}$
Display	<ul style="list-style-type: none"> <li>• With or without integrated display</li> <li>• Cover with or without window</li> </ul>	- Effective inner capacitance:	$C_i = 6 \text{ nF}$
		• Dust explosion protection for zone 21/22	BVS 09 ATEX E 027
		- Marking	Ex II 2 D Ex tb ia IIIC T120°C Db
		- Connection	To circuits with values: $U_H = 10.5 \dots 45 \text{ V DC}$ ; $P_{\text{max}} = 1.2 \text{ W}$
		• Type of protection "n" (zone 2)	PTB 09 ATEX 2004 X
		- Marking	Ex II 3 G Ex nA II T4/T6 Ex II 2/3 G Ex ib/nL IIC T4/T6 Ex II 2/3 G Ex ib/ic IIC T4/T6
		- "nA" connection	$U_m = 45 \text{ V DC}$
		- "nL, ic" connection	$U_i = 45 \text{ V}$
		- Effective internal inductance	$L_i = 400 \mu\text{H}$
		- Effective inner capacitance	$C_i = 6 \text{ nF}$

- Connection	To circuits with values: $U_m = \text{DC } 10.5 \dots 45 \text{ V}$
• Dust explosion protection for zone 21/22	GYJ111112
- Marking	DIP A21 TA,T120 °C IP68 D21
- Connection	To circuits with values: $U_m = \text{DC } 10.5 \dots 45 \text{ V}$
• Type of protection "n" (zone 2)	GYJ111111X
- Marking	Ex nL IIB/IIC T4/T6 Ex nA II T4/T6
- Connection	$U_i = 45 \text{ V DC}$
- Effective internal inductance	$L_i = 400 \text{ mH}$
- Effective inner capacitance	$C_i = 6 \text{ nF}$

- 1) Only relevant for the pressure transmitter. The temperature error of the remote seal must be calculated separately.
- 2) If the Type "D" measuring cell is used, the error should be increased by a factor of 5. This error can be reduced to 0 by a means of a zero adjustment.
- 3) This value may be increased if the process connection is sufficiently insulated.

### HART communication

Load with connection of	
• HART Communicator	$R_B = 230 \dots 1100 \text{ Ω}$
• HART modem	$R_B = 230 \dots 500 \text{ Ω}$
Cable	2 wire shielded: ≤ 3.0 km (1.86 miles), multiwire shielded: ≤ 1.5 km (0.93 miles)
Protocol	HART Version 6.0
PC/laptop requirements	IBM compatible, RAM > 32 MByte, hard disk > 70 MByte, depending on modem type: RS 232-interface or USB connection, VGA graphics
Software for computer	SIMATIC PDM 6.0

## Pressure Measurement

Pressure transmitters  
for applications with highest requirements (Premium)  
SITRANS P500

### Accessories/Spare parts

1

### Dimensional drawings

Mounting bracket for SITRANS P pressure transmitter, P500 series, measurements in mm (inch)  
Mounting bracket material: Sheet-steel Mat. No. 1.0330, chrome-plated, or stainless steel Mat. No. 1.4301 (304)

**Overview**

The SITRANS P500 transmitter can be delivered factory-fitted with the following valve manifolds:

- Valve manifolds 7MF9411-5BA: Three valve manifold for differential pressure transmitter
- Valve manifolds 7MF9411-5CA: Three valve manifold for differential pressure transmitter

**Design**

The 7MF9411-5BA and 7MF9411-5CA valve manifolds are sealed with PTFE gaskets between the transmitter and the valve manifold.

Once installed, the complete unit is checked under pressure for leaks (compressed air 6 bar (24.11 inH<sub>2</sub>O)) and is certified leak-proof with a factory certificate to EN 10204 - 2.2.

All valve manifolds should preferably be secured with the corresponding mounting brackets. The transmitters are mounted on the valve manifold and not on the unit itself.

If you order a mounting bracket when choosing the option "Factory mounting of valve manifolds", you will receive a mounting bracket for the valve manifold instead of a bracket for mounting the transmitter.

If you order an inspection certificate 3.1 to EN 10204 after choosing the option "Factory mounting of valve manifolds", a separate certificate is provided for the transmitter and for the valve manifold.

## Pressure Measurement

### Remote seals for pressure transmitters SITRANS P320/P420

#### Technical description

1

#### Overview

In many cases the pressure transmitter and the medium have to be physically separated. It is then necessary to use a remote seal.

The remote seals can be used with the SITRANS P320/420 pressure transmitter series:

- Pressure
- Absolute pressure
- Differential pressure and flow

#### Note

When configuring your remote seal, be sure to read the information about transmission response, temperature error and response time to be found in the sections "Function" and "Technical data". Only then will the remote seal work to optimum effect.

#### Benefits

- No direct contact between the pressure transmitter and the medium
- Individual configuration of the pressure transmitter for perfect adaptation to the operating conditions
- Available in many versions
- Specially designed for difficult operating conditions
- Quick-release versions available for the food industry

#### Application

Remote seal systems should be used if a separation between the medium and the measuring instrument is essential or appropriate.

Examples of such cases:

- The temperature of the medium is outside the limits specified for the pressure transmitter.
- The medium is corrosive and requires diaphragm materials which are not available for the pressure transmitter.
- The medium is highly viscous or contains solids which would block the measuring chambers of the pressure transmitter.
- The medium may freeze in the measuring chambers or pulse line.
- The medium is heterogeneous or fibrous.
- The medium tends towards polymerization or crystallization.
- The process requires quick-release remote seals, as necessary e.g. in the food industry for fast cleaning.
- The process requires cleaning of the measuring point, e.g. in a batch process.

#### Design

A remote seal system consists of the following components.

- Pressure transmitter
- One or two remote seals
- Filling liquid
- Connection between pressure transmitter and remote seal (direct mounting or by means of capillary)

The space for the medium is sealed off with a flat embedded elastic diaphragm. Between the diaphragm and the pressure transmitter is the filling liquid.

In many cases, a capillary must be connected between the remote seal and the pressure transmitter in order, for example, to reduce the temperature effects on the pressure transmitter when the measured medium is hot.

However, the capillary influences the activation time and the temperature response of the overall remote seal system. When capillaries are used to connect a remote seal to a pressure transmitter for differential pressure, two capillaries of equal length must always be used.

Optionally, the remote seal with diaphragm extension (tube) can be ordered.

The remote seals in sandwich design are secured with a blank flange.

#### Designs

##### Diaphragm seal

With diaphragm seals, the pressure is measured by means of a flat diaphragm which rests in a bed.

The following types of diaphragm seals exist:

Diaphragm seal of sandwich design without (left) and with a projecting diaphragm (tube)

- Sandwich design
- Sandwich design with projecting diaphragm (tube) to DIN or ASME which are secured using a dummy flange.

Diaphragm seal of flange design without (left) and with a projecting diaphragm (tube)

- Flange design
- Flange design with projecting diaphragm (tube) to DIN or ASME, secured using holes in the flange.

Quick-release diaphragm seal

- Quick-release remote seals, e.g. to DIN 11851, SMS standard, IDF standard, APV RJF standard, clamp connection, etc.
- Miniature diaphragm seal with male thread for screwing into tapped holes
- Remote seals with customer-specific process connections

Miniature diaphragm seal with diaphragm flush with front

- Miniature diaphragm seals

The quick-release remote seals are used above all in the food industry. Their design means that the medium cannot accumulate in dead volumes. The quick-release clamp present on the remote seal means that quick dismantling is possible for cleaning.

#### Inline seal

Inline seal with quick-release design (left) and for flange mounting

With inline seals, the pressure is first measured using a cylindrical diaphragm positioned in a pipe, and then transmitted to the pressure transmitter by means of the filling liquid.

The inline seal is a special design for flowing media. It consists of a cylindrical pipe in which a cylindrical diaphragm is embedded. Since it is completely integrated in the process pipe, no turbulences, dead volumes or other obstructions to the flow occur. Furthermore, the inline seal can be cleaned by a pig.

The following types of inline seals exist:

- Quick-release inline seals, e.g. to DIN 11851, SMS standard, IDF standard, APV/RJF standard, clamp connection etc. The quick-release facility attached to the remote seal enables the seal to be removed quickly for cleaning purposes.
- Inline seals for flanging to EN or ASME.
- Inline seals with customer-specific process connections.

#### **Note:**

The pressure data on the transmitter and the remote seal must be observed with regard to pressure/temperature behavior.

#### **Function**

The measured pressure is transferred from the diaphragm to the filling liquid and passes through the capillary to the measuring chamber of the pressure transmitter. The interior of the diaphragm seal and of the capillary, as well as the measuring chamber of the transmitter, are filled gas-free by the filling liquid.

#### **Transmission response**

The transmission response of a remote seal is characterized by the following variables:

- Temperature error
- Adjustment time

#### Temperature error

Temperature errors are caused by the change of volume of the filling liquid due to temperature variations. To select the right remote seal you must calculate the temperature error.

Below you will find an overview of the factors which influence the size of the temperature error, as well as information on how to calculate the temperature error.

The temperature error is dependent on the following variables:

- Rigidity of the diaphragm used
- Filling liquid used
- Influence of the filling liquid underneath the process flanges or in the connection shank of the pressure transmitter
- Internal diameter of the capillary: The bigger the internal diameter, the bigger the temperature error
- Length of the capillary: The longer the capillary, the bigger the temperature error

#### Diaphragm rigidity

The rigidity of the diaphragm is of decisive importance. The bigger the diameter of the diaphragm, the softer the diaphragm and the more sensitively it reacts to temperature-induced changes in volume of the filling liquid.

The result is that small measuring ranges are only possible with large diaphragm diameters.

Other factors apart from diaphragm rigidity which also play a role:

- Diaphragm thickness
- Diaphragm material
- Coatings if present

#### Filling liquid

Every filling liquid reacts to temperature variations with a change of volume. Temperature errors can be minimized by selecting a suitable filling liquid, but the filling liquid must also be appropriate for the temperature limits and operating pressure. Furthermore, the filling liquid must also be physiologically harmless.

Since the filling liquid is present under the diaphragm, in the capillary and under the process flange of the pressure transmitter (or in the connection shank), the temperature error must be calculated separately for each combination.

#### **Note:**

A vacuum-resistant remote seal is recommended for continuous low-pressure operation at 500 mbar or below, including during commissioning (see ordering data).

An example of a temperature error calculation can be found in the section "Technical Specifications".

## Pressure Measurement

### Remote seals for pressure transmitters SITRANS P320/P420

1

#### Technical description

##### Response time

The response time is dependent on the following factors:

- Internal diameter of the capillary: The bigger the internal diameter, the shorter the response time
- Viscosity of the filling liquid: The greater the viscosity, the longer the response time
- Length of the capillary: The longer the capillary, the longer the response time
- Pressure in the pressure measuring system: The higher the pressure, the shorter the response time

##### Recommendations

The following should be observed to obtain an optimum combination of transmitter and remote seal:

- Choose the biggest possible diameter for the remote seal. The effective diameter of the seal diaphragm is then bigger and the temperature error smaller.
- Choose the shortest possible capillary. The response time is then shorter and the temperature error smaller
- Choose the filling liquid with the least viscosity and the smallest coefficient of expansion. Make sure, however, that the filling liquid meets the process requirements with regard to pressure, vacuum and temperature. And ensure that the filling liquid and the medium are compatible with one another.
- Note the following points for use in the vacuum range:
  - The pressure transmitter must always be positioned below the lowest spigot.
  - The operating range of some filling liquids is very limited with regard to the permissible temperature of the medium.
  - A vacuum-proof seal is necessary for continuous operation in the low-pressure range.
- Recommendations for the minimum measuring span can be found in the section "Technical data".

##### **Note**

The remote seals listed here are a selection of the most common designs. On account of the large variety of process connections, certain remote seals which are not listed here may be available nevertheless.

Other versions can be:

- Other process connections, standards
- Aseptic or sterile connections
- Other dimensions
- Other nominal pressures
- Special diaphragm materials, including coatings
- Other sealing faces
- Other filling liquids
- Other capillary lengths
- Sheathing of capillaries with protective hose
- Calibration at higher/lower temperatures etc.

**Please contact your local Siemens office for further information.**

##### **Negative pressure service**

Liquids, such as silicone oils, inert or those suitable for food, are used in remote seal systems for transmission of the process pressure to the pressure transmitter.

In each liquid, particles have the tendency to leave the liquid compound with increasing temperature (transition from liquid to gaseous aggregate state). This means the vapor pressure increases with increasing temperature and is dependent on the substance or mixture being present.

The higher the temperature and the lower the associated process pressure in the liquid, the more difficult it gets to guarantee the desired transmission properties of the fill fluid and therefore the measuring arrangement.

Plus the sealing elements at the transmitter must be designed so that a diffusion of molecules from the atmosphere into the remote seal system is prevented due to the constantly occurring negative pressure.

In addition to the influencing variables process pressure and process temperature, the vapor pressure curve of the fill fluid at the remote seal end and the stiffness of the remote seal membrane impact the functionality of the remote seal in the negative pressure range.

This means you have to pay special attention to the physical properties of fill fluids with applications in the negative pressure range.

There are three stages for the negative pressure resistance:

- **Standard design** of the remote seal without additional protective measures, suitable for the overpressure range and low negative pressure range. This design is identified with (1) in the diagrams below in section 3.
- **Negative pressure service** with suitable seals and treated fill fluid, identified with (2) in the diagrams below in section 3. Here you select the order codes D81 or D83, depending on the mounting type.
- **Extended negative pressure service** with more extended treatment of the fill fluid and the remote seals, identified in the diagrams below. Here you select the order codes D85 or D88, depending on the mounting type.

There are two more areas in the diagrams. The area (4) identifies an area that has to be clarified with Technical Support prior to placing the order. The area (5) describes the area in which the remote seal fill fluid is permanently destroyed and the entire remote seal is therefore without function.

#### Technical specifications of the remote seal filling liquids

Filling liquid	Number in the Article No.	Density at 20°C [kg/dm <sup>3</sup> ]	Viscosity at 20°C [mm <sup>2</sup> /s]	Suitable for negative pressure service	Suitable for extended negative pressure service
Silicone oil M5	1	0.914	4	x	-
Silicone oil M50	2	0.966	50	x	x
High-temperature oil	3	1.070	57	x	x
Halocarbon oil	4	1.968	14	x	-
Food oil (FDA-listed)	7	0.920	10	x	x

The suitable negative pressure service is specified with the pressure/temperature curves of the respective liquids described below.

**Note:** For reasons of operational safety, the transmitter must not exceed the height of the remote seal - with differential pressure applications, the height of the bottom remote seal - for measurements in the negative pressure range. The associated installation types B, C1, C2 or H are described at the end of this section under the topic "Measuring arrangements".

#### Selection of the required negative pressure service

The procedure for determining the required negative pressure service is described below using the silicone oil M5 as fill fluid. The minimum existing process pressure of a fictitious process is 200 mbar<sub>abs</sub> (2.9 psi) (at a maximum process temperature of 150 °C (302 °F)). This intersection is identified by an "✱" in the diagram below. This means the negative pressure service D81 or D83 (depending on the application) is sufficient in this example.

The suitable negative pressure resistance is determined this way for all other fill fluids.

#### Note:

Note the response times according to the table on page 1/336.

- ① Operating range of the standard remote seal design without special measures.
- ② Operating range for which the **negative pressure service D81 or D83** is required.  
Note: An extended negative pressure service is **not** possible for this fill fluid.
- ④ Please contact Technical Support for applications in this area.  
Detailed information regarding application, process and ambient data are necessary.
- ⑤ Area in which you have to expect the destruction of the fill fluid.  
A function of the remote seal is not specified here.

Permissible operating range:  
Max. temperature limit: 160 °C  
Min. temperature limit: -90 °C

## Pressure Measurement

Remote seals for pressure transmitters  
SITRANS P320/P420

### Technical description

- ① Operating range of the standard remote seal design without special measures.
- ② Operating range for which the **negative pressure service D81 or D83** is required.
- ③ Operating range for which the **extended negative pressure service D85 or D88** is required
- ④ Please contact Technical Support for applications in this area.  
Detailed information regarding application, process and ambient data are necessary.
- ⑤ Area in which you have to expect the destruction of the fill fluid.  
A function of the remote seal is not specified here.

Permissible operating range:  
Max. temperature limit: 300 °C  
Min. temperature limit: -40 °C

Negative pressure applications with silicone oil M50

- ① Operating range of the standard remote seal design without special measures.
- ② Operating range for which the **negative pressure service D81 or D83** is required.
- ③ Operating range for which the **extended negative pressure service D85 or D88** is required
- ④ Please contact Technical Support for applications in this area.  
Detailed information regarding application, process and ambient data are necessary.
- ⑤ Area in which you have to expect the destruction of the fill fluid.  
A function of the remote seal is not specified here.

Permissible operating range:  
Max. temperature limit: 400 °C  
Min. temperature limit: -10 °C

Negative pressure applications with high-temperature oil

## Pressure Measurement

Remote seals for pressure transmitters  
SITRANS P320/P420

### Technical description

- ① Operating range of the standard remote seal design without special measures.
- ② Operating range for which the **negative pressure service D81 or D83** is required.  
Note: An extended negative pressure service is **not** possible for this fill fluid.
- ④ Please contact Technical Support for applications in this area.  
Detailed information regarding application, process and ambient data are necessary.
- ⑤ Area in which you have to expect the destruction of the fill fluid.  
A function of the remote seal is not specified here.

Permissible operating range:  
Max. temperature limit: 175 °C  
Min. temperature limit: -30 °C

Oxygen application for operating temperature between 60 and 175 °C  
and also for operating pressure > 50 bar not permissible.

Negative pressure applications with halocarbon oil (inert filling liquid)

A BAM approval for process temperatures up to 60 °C (140 °F) and system pressures up to 50 bar (725 psi) is available for the oxygen application.

- ① Operating range of the standard remote seal design without special measures.
  - ② Operating range for which the **negative pressure service D81 or D83** is required.
  - ③ Operating range for which the **extended negative pressure service D85 or D88** is required
  - ④ Please contact Technical Support for applications in this area.  
Detailed information regarding application, process and ambient data are necessary.
  - ⑤ Area in which you have to expect the destruction of the fill fluid.  
A function of the remote seal is not specified here.
- Permissible operating range:  
 Max. temperature limit: 230 °C  
 Min. temperature limit: -15 °C

Negative pressure applications with food oil (FDA listed)

## Pressure Measurement

Remote seals for pressure transmitters  
SITRANS P320/P420

### Technical description

#### Temperature error inline seals

Temperature errors of inline seals when connected to pressure transmitters for gauge pressure and absolute pressure, and with single-sided connection to pressure transmitters for differential pressure

Nominal diameter/ design	Temperature error of remote seal $f_{RS}$		Temperature error of capillary $f_{Cap}$		Temperature error of process flange/connection spigot $f_{PF}$		Recommended min. measuring spans (guidance values, observe temperature error)	
	mbar/10 K	(psi/10 K)	mbar/10 K	(psi/10 K)	mbar/10 K	(psi/10 K)	mbar	(psi)
DN 25 (1 inch)	6.0	(0.0870)	8.5	(0.123)	8.5	(0.123)	1000	(14.5)
DN 40 (1½ inch)	4.5	(0.065)	4.5	(0.065)	4.5	(0.065)	250	(3.63)
DN 50 (2 inch)	4.0	(0.058)	3.0	(0.044)	3.0	(0.044)	100	(1.45)
DN 80 (3 inch)	9.5	(0.138)	5.0	(0.073)	5.0	(0.073)	100	(1.45)
DN 100 (4 inch)	8.0	(0.012)	3.0	(0.044)	3.0	(0.044)	100	(1.45)

Temperature errors of inline seals with double-sided connection to pressure transmitters for differential pressure

Nominal diameter/ design	Temperature error of remote seal $f_{RS}$		Temperature error of capillary $f_{Cap}$		Temperature error of process flange/connection spigot $f_{PF}$		Recommended min. measuring spans (guidance values, observe temperature error)	
	mbar/10 K	(psi/10 K)	mbar/10 K	(psi/10 K)	mbar/10 K	(psi/10 K)	mbar	(psi)
DN 25 (1 inch)	2.3	(0.033)	1.8	(0.026)	1.8	(0.026)	1000	(14.5)
DN 40 (1½ inch)	0.8	(0.012)	0.3	(0.004)	0.3	(0.004)	250	(3.63)
DN 50 (2 inch)	0.3	(0.004)	0.1	(0.002)	0.1	(0.002)	100	(1.45)
DN 80 (3 inch)	3.0	(0.044)	0.5	(0.007)	0.5	(0.007)	100	(1.45)
DN 100 (4 inch)	1.0	(0.015)	0.1	(0.002)	0.1	(0.002)	100	(1.45)

#### Remarks:

- Values apply for the filling liquids silicone oil M5, silicone oil M50, high-temperature oil, halocarbon oil and food oil (FDA listed).
- Half the values apply to glycerin/water mixture as the filling liquid.
- Values apply to stainless steel as the diaphragm material.
- Diaphragm thickness 0.05 mm (0.002 inch) for DN 25/DN 40/DN 50 and 0.1 mm (0.004 inch) for DN 80/DN 100

### Calculation of the temperature error

The following equation is used to calculate the temperature error:

$$dp = (\vartheta_{RS} - \vartheta_{Cal}) \cdot f_{RS} + (\vartheta_{Cap} - \vartheta_{Cal}) \cdot l_{Cap} \cdot f_{Cap} + (\vartheta_{TR} - \vartheta_{Cal}) \cdot f_{PF}$$

dp	Additional temperature error (mbar)
$\vartheta_{RS}$	Temperature on remote seal diaphragm (generally corresponds to temperature of medium)
$\vartheta_{Cal}$	Calibration (reference) temperature (20 °C (68 °F))
$f_{RS}$	Temperature error of remote seal
$\vartheta_{Cap}$	Ambient temperature on the capillaries
$l_{Cap}$	Capillary length
$f_{Cap}$	Temperature error of capillaries
$\vartheta_{TR}$	Ambient temperature on pressure transmitter
$f_{PF}$	Temperature error of the oil filling in the process flanges of the pressure transmitter

### Example of temperature error calculation

#### Existing conditions:

SITRANS P pressure transmitter for differential pressure, 250 mbar, set to 0 ... 100 mbar, with DN 100 remote seal diaphragms without tube, diaphragm made of stainless steel, mat. No. 1.4404/316L	$f_{RS} = 0.05 \text{ mbar}/10 \text{ K}$ (0.039 inH <sub>2</sub> O/10 K)
Capillary length	$l_{Cap} = 6 \text{ m}$ (19.7 ft)
Capillaries fitted on both sides	$f_{Cap} = 0.07 \text{ mbar}/(10 \text{ K} \cdot m_{Cap})$ (0.028 inH <sub>2</sub> O/(10 K · m <sub>Cap</sub> ))
Filling liquid silicone oil M5	$f_{PF} = 0.07 \text{ mbar}/10 \text{ K}$ (0.028 inH <sub>2</sub> O/10 K)
Process temperature	$\vartheta_{RS} = 100 \text{ °C}$ (212 °F)
Temperature on the capillaries	$\vartheta_{Cap} = 50 \text{ °C}$ (122 °F)
Temperature on pressure transmitter	$\vartheta_{TR} = 50 \text{ °C}$ (122 °F)
Calibration temperature	$\vartheta_{Cal} = 20 \text{ °C}$ (68 °F)

#### Required:

Additional temperature error of remote seals: dp

#### Calculation:

##### in mbar

$$dp = (100 \text{ °C} - 20 \text{ °C}) \cdot 0.05 \text{ mbar}/10 \text{ K} + (50 \text{ °C} - 20 \text{ °C}) \cdot 6 \text{ m} \cdot 0.07 \text{ mbar}/(10 \text{ K} \cdot \text{m}) + (50 \text{ °C} - 20 \text{ °C}) \cdot 0.07 \text{ mbar}/10 \text{ K}$$

$$dp = 0.4 \text{ mbar} + 1.26 \text{ mbar} + 0.21 \text{ mbar}$$

##### in inH<sub>2</sub>O

$$dp = (212 \text{ °F} - 68 \text{ °F}) \cdot 0.039 \text{ inH}_2\text{O}/10 \text{ K} + (112 \text{ °F} - 68 \text{ °F}) \cdot 19.7 \text{ ft} \cdot 0.028 \text{ inH}_2\text{O}/(10 \text{ K} \cdot 3.28 \text{ ft}) + (112 \text{ °F} - 68 \text{ °F}) \cdot (0.028 \text{ inH}_2\text{O}/10 \text{ K})$$

$$dp = 0.16 \text{ inH}_2\text{O} + 0.51 \text{ inH}_2\text{O} + 0.08 \text{ inH}_2\text{O}$$

#### Result:

$$dp = 1.87 \text{ mbar} (0.75 \text{ inH}_2\text{O})$$

(corresponds to 2.27% of set measuring span)

#### Note

The determined temperature error only applies to the error resulting from connection of the remote seal.

The transmission response of the respective transmitter is not included in this consideration.

It must be calculated separately, and the resulting error added to the error determined above from connection of the remote seal.

### Dependence of temperature error on diaphragm material

The temperature errors listed in the previous table are based on the use of stainless steel as the diaphragm material. If other diaphragm materials are used, the temperature errors change as follows:

Diaphragm material	Change in temperature error of remote seal
	Increase in values by
Stainless steel, Duplex, ...	See previous tables
Hastelloy C4, mat. No. 2.4602	50 %
Hastelloy C276, mat. No. 2.4819	50 %
Monel 400, mat. No. 2.4360	60 %
Tantalum	50 %
Titanium	50 %
PTFE coating on stainless steel diaphragm	80 %
ECTFE coating or PFA coating on stainless steel diaphragm	100 %
Gold coating on stainless steel diaphragm	40 %
Inconel	50 %
Incoloy	50 %

### Maximum temperature of medium

Note:

When taking into account the maximum medium temperature, the application limits of the fill fluids and gaskets used as well as the pressure/temperature limits of the respective process connections must also be taken into consideration.

The following maximum temperatures of the medium apply depending on the material of the wetted parts.

Material	Max. temperature of medium	Min./max. pressure
Stainless steel, 316L	400 °C (752 °F)	No restriction
PTFE coating	200 °C (392 °F)	< 0 bar (0 psi); gauge pressure
	260 °C (500 °F)	0 bar (0 psi) ... 25 bar (363 psi); gauge pressure
	150 °C (302 °F)	25 bar (363 psi) ... 40 bar (580 psi); gauge pressure
	50 °C (302 °F)	40 bar (580 psi) ... 60 bar (870 psi); gauge pressure
ECTFE coating	150 °C (302 °F)	For pressures < 1 bar (14.5 psi) on request
PFA coating	200 °C (392 °F)	< 0 bar (0 psi); gauge pressure
	260 °C (500 °F)	25 bar (363 psi)/40 bar (580 psi); gauge pressure
	150 °C (302 °F)	40 bar (580 psi)/60 bar (870 psi); gauge pressure
	50 °C (302 °F)	For pressures < 1 bar (14.5 psi) on request
Hastelloy C4, mat. No. 2.4602	400 °C (752 °F)	No restriction
Hastelloy C276, mat. No. 2.4819	400 °C (752 °F)	No restriction
Hastelloy C22, mat. No. 2.4602	400 °C (752 °F)	No restriction
Monel 400, mat. No. 2.4360	400 °C (752 °F)	No restriction
Tantalum	300 °C (572 °F)	No restriction
Duplex, mat. No. 1.4462	250 °C (482 °F)	No restriction
Titanium	150 °C (302 °F)	No restriction
Inconel	400 °C (752 °F)	No restriction
Incoloy	400 °C (752 °F)	No restriction
Gold coating	400 °C (752 °F)	No restriction

## Pressure Measurement

Remote seals for pressure transmitters  
SITRANS P320/P420

### Technical description

#### Maximum capillary length for diaphragm seals (guidance values)

Nom. diam.		Max. length of capillary			
		Diaphragm seal		inline seal	
		m	(ft)	m	(ft)
DN 25	(1 inch)	2.5	(8.2)	2.5	(8.2)
DN 32	(1¼ inch)	2.5	(8.2)	2.5	(8.2)
DN 40	(1½ inch)	4	(13.1)	6	(19.7)
DN 50	(2 inch)	6	(19.7)	10	(32.8)
DN 65	(2½ inch)	8	(26.2)	10	(32.8)
DN 80	(3 inch)	15	(49.1)	10	(32.8)
DN 100	(4 inch)	15	(49.1)	10	(32.8)
DN 125	(5 inch)	15	(49.1)	-	-

#### Response times

The values listed in the following table are the response times (in seconds per meter of capillary) for a change in pressure which corresponds to the set measuring span.

The listed values must be multiplied by the respective length of the capillary, or with transmitters for differential pressure and flow by the total length of both capillaries.

The response times are independent of the set measuring span within the range of the respective transmitter. The response times are of insignificant importance for measuring spans above 10 bar (145 psi). The response times of the pressure transmitters are not considered in the table.

Filling liquid	Density		Temperature on capillary		Response time in s/m (s/ft) with max. measuring span of pressure transmitter					
	kg/dm <sup>3</sup>	(lb/in <sup>3</sup> )	°C	(°F)	250 mbar	(101 inH <sub>2</sub> O)	600 mbar	(241 inH <sub>2</sub> O)	1600 mbar	(643 inH <sub>2</sub> O)

Permissible data of filling liquids for pressure and temperature see diagrams on page 1/327 ff.

### More information

#### Specification of process conditions for selection and ordering data

##### Ambient temperature range

As standard, the remote seal systems are optimized for an ambient temperature range of -10 to +50 °C (14 to +122 °F). Therefore, in the ordering options, the **order code "D66" is** preset.

If the range of the ambient temperature deviates from this, you have the possibility to choose other ambient temperature ranges:

- With the **order code D67**, a range from -40 to +50 °C (-40 to +122 °F)
- With the **order code D68**, a range from -10 to +85 °C (14 to +185 °F)

In the case of a **special version**, which you can select with the **order option Y99** in the device settings, it is possible to enter the ambient temperature as a numerical value.

##### Process temperature

The standard optimization for the process temperature depends on the filling liquid used:

Filling liquid	Code	Optimized temperature range as standard
Silicone M50	B	-10 ... +200 °C (14 ... +392 °F)
High-temperature oil	C	-10 ... +300 °C (14 ... +572 °F)
Silicone oil M5	A	-40 ... +140 °C (-40 ... +284 °F)
Food-grade oil (FDA grade)	E	-10 ... +140 °C (14 ... +284 °F)
Halocarbon oil	D	-20 ... +60 °C (-4 ... +140 °F)

- **If the process temperatures** deviate from the temperature ranges mentioned in the table above, we ask you to send the process temperature with the **order code Y50** along with the order.
- If the remote seal has a small diameter (< DN 50/2") or a long capillary (> 4 m), we also ask you to provide the process data with the **following order code** when ordering.

These entries are transmitted and ensure the correct functioning of the remote seal systems.

##### Ambient temperature range

- -10 ... +50 °C (14 ... +122 °F) preset
- -40 ... +50 °C (-40 ... +122 °F)
- -10 ... +85 °C (14 ... +185 °F)

Process temperature min. ... °C/(°F)/max. ... °C/(°F)

Sealing material in the process flanges

- For pressure transmitters, absolute pressure transmitters and low-pressure applications
- For other applications

Copper

Viton

Maximum pressure

See above and the technical data of the pressure transmitters

Tube length

Without tube as standard (tube available on request)

Capillary

- Length

Max. 10 m (32.8 ft), longer lengths on request

- Internal diameter

max. 2 mm (0.079 inch)

- Minimum bending radius

150 mm (5.9 inch)

Filling liquid

Silicone oil M5

Silicone oil M50

High-temperature oil

Halocarbon oil (for measuring O<sub>2</sub>)

Food grade oil (FDA listed)

Permissible ambient temperature

Dependent on the pressure transmitter and the filling liquid of the remote seal

More information can be found in the technical data of the pressure transmitters and in the section "Technical data of filling liquid" in the Technical description to the remote seals

Weight

Approx. 4 kg (8.82 lb)

##### Certificate and approvals

Classification according to pressure equipment directive (DGRL 2014/68/EU)

For gases of fluid group 1 and liquids of fluid group 1; complies with requirements of article 4, paragraph 3 (sound engineering practice)

#### Materials

- Main body
- Wetted parts

Stainless steel  
mat. no. 1.4404/316L  
Stainless steel  
mat. no. 1.4404/316L

- Without coating
- PTFE coating
- ECTFE coating (for vacuum on request)
- PFA coating

Monel 400, mat. No. 2.4360  
Hastelloy C276, mat. No. 2.4819  
Hastelloy C4, mat. No. 2.4602  
Hastelloy C22, W.-Nr. 2.4602  
Tantalum  
Titanium, W.-Nr. 3.7035  
Nickel 201

Duplex 2205, mat. no. 1.4462  
Stainless steel 316L, gold plated, thickness approx. 25 µm

Stainless steel, mat. No. 1.4571/316Ti

Spiral protective tube made of stainless steel, mat. no. 1.4404/316L

- Capillary

- Sheath

Sealing material in the process flanges

- For pressure transmitters, absolute pressure transmitters and low-pressure applications
- For other applications

Copper

Viton

Maximum pressure

See above and the technical data of the pressure transmitter

Tube length

Without tube as standard (tube available on request)

Capillary

- Length

Max. 10 m (32.8 ft), longer lengths on request

- Internal diameter

2 mm (0.079 inch)

- Minimum bending radius

150 mm (5.9 inch)

Filling liquid

(for remote seals of sandwich and flange design)

Silicone oil M5

Silicone oil M50

High-temperature oil

Halocarbon oil (for measuring O<sub>2</sub>)

Food oil (FDA listed)

Permissible ambient temperature

Dependent on the pressure transmitter and the filling liquid of the remote seal

More information can be found in the technical data of the pressure transmitters and in the section "Technical data of filling liquid" in the Technical description to the remote seals

Weight

Approx. 4 kg (8.82 lb)

#### Certificate and approvals

Classification according to pressure equipment directive (DGRL 2014/68/EU)

For gases of fluid group 1 and liquids of fluid group 1; complies with requirements of article 4, paragraph 3 (sound engineering practice)

#### Selection and Ordering data

Order code

#### Further designs

Add "-Z" to Article No. and specify Order code.

#### Factory certificates

- Quality inspection certificate (Five-step factory calibration) to IEC 60770-2 **C11**
- Inspection certificate to EN 10204-3.1 - material of body and wetted parts **C12**
- Manufacturer's declaration acc. to NACE (MR 0103-2012 and MR 0175-2009) (only together with seal diaphragm made of Hastelloy and stainless steel) **C13**
- Inspection certificate (EN 10204-3.1) - PMI test of pressure containing and wetted parts **C15**
- Certificate of FDA-approved fill oil (to EN10204-2.2) **C17**
- Factory certificate functional safety (SIL2/3), devices suitable for use according to IEC 61508 and IEC 61511 (includes SIL conformity declaration) **C20**

#### Accessories

- Spark arrestor (for gauge and absolute pressure transmitters) **D61**
- Spark arrestor (for differential pressure and flow transmitters) **D62**
- Low-temperature version (for Silicon Oil M50 only) **D67**

#### Negative pressure services

- Negative pressure service (for gauge and absolute pressure transmitters) (only for 7MF0810) **D81**
- Negative pressure service (for differential pressure transmitters) **D83**
- Extended negative pressure service (for gauge and absolute pressure transmitters) (only for 7MF0810) **D85**
- Extended negative pressure service (for differential pressure transmitters) **D88**

#### General product approvals without explosion proof approvals

- Oil-and grease-free cleaned version (for O<sub>2</sub>-appl. including certificate EN10204-2.2 (only with fill fluid Halocarbon oil max. temperature 60 °C and max. pressure 50 bar) **E80**
- Oil-and grease-free cleaned version (not for O<sub>2</sub>-appl. including certificate EN10204-2.2 (only with fill fluid Halocarbon oil) **E87**

#### Sealing surface

- Sealing surface smooth, form B2/EN1092-1 resp. RFSF/ANSI B16.5 (wetted parts 316L only) **M50**
- Sealing surface groove to EN1092-1, form D (instead of sealing surface B1, wetted parts 316L only) **M54**
- Sealing surface RJF (groove) to ASME B16.5 (instead of sealing surface RF 125...250AA, wetted parts 316L only) **M64**
- Sealing surface with tongue to EN1092-1, form C (wetted parts 316L only)
  - DN 25 **M70**
  - DN 40 **M71**
  - DN 50 **M72**
  - DN 80 **M73**
  - DN 100 **M74**
  - DN 125 **M75**
- Sealing surface with spigot to EN1092-1, form E (wetted parts 316L only)
  - DN 25 **M76**
  - DN 40 **M77**
  - DN 50 **M78**
  - DN 80 **M79**
  - DN 100 **M80**
  - DN 125 **M81**

#### Materials

- Main body
- Wetted parts

Stainless steel, 1.4404/316L

Stainless steel, 1.4404/316L

- Without coating
- PTFE coating
- ECTFE coating (for vacuum on request)
- PFA coating

Monel 400, mat. No. 2.4360

Hastelloy C276, mat. No. 2.4819

Hastelloy C4, mat. No. 2.4602

Hastelloy C22, mat. No. 2.4602

Tantalum

Titanium, mat. No. 3.7035

Nickel 201

Duplex 2205, mat. no. 1.4462

Stainless steel 316L, gold plated, thickness approx. 25 µm

Stainless steel, 1.4404/316L

Copper

- Capillary

- Sealing material at the transmitter connection

Maximum pressure

See above and the technical data of the transmitter

Tube length

- Without tube
- 50 mm (1.97 inch)
- 100 mm (3.94 inch)
- 150 mm (5.91 inch)
- 200 mm (7.87 inch)

Capillary

- Length

Max. 10 m (32.8 ft), longer lengths on request

- Internal diameter

2 mm (0.079 inch)

- Minimum bending radius

150 mm (5.9 inch)

Filling liquid

- Silicone oil M5
- Silicone oil M50
- High-temperature oil
- Halocarbon oil (for measuring O<sub>2</sub>)
- Food oil (FDA listed)

Max. recommended temperature of medium

170 °C (338 °F)

Permissible ambient temperature

Dependent on the pressure transmitter and the filling liquid of the remote seal.

More information can be found in the technical data of the pressure transmitters and in the section "Technical data of filling liquid" in the Technical description to the remote seals.

Weight

Approx. 4 kg (8.82 lb)

#### Certificate and approvals

Classification according to pressure equipment directive (DGRL 2014/68/EU)

For gases of fluid group 1 and liquids of fluid group 1; complies with requirements of article 4, paragraph 3 (sound engineering practice)

## Pressure Measurement

Remote seals for pressure transmitters  
SITRANS P320/P420

### Diaphragm seals of flange design mounted directly and with capillary

1

#### Overview

Diaphragm seal of flange design for pressure transmitters for differential pressure, fixed connection and with flexible capillary

#### Technical specifications

##### Diaphragm seals of screwed design for pressure transmitters for differential pressure, fixed connection and with flexible capillary

Nominal diameter	Nominal pressure
Connecting standard EN 1092-1	
• DN 40	PN 10/16/25/40/63/100/160
• DN 50	PN 10/16/25/40/63/100
• DN 80	PN 10/16/25/40/100
• DN 100	PN 10/16/25/40
• DN 125	PN 16/40
Connecting standard ASME B16.5	
• 1½ inch	Class 150/300/400/600/900/1500
• 2 inch	Class 150/300/400/600/900/1500
• 3 inch	Class 150/300/600/1500
• 4 inch	Class 150/300/400/1500
• 5 inch	Class 150/300/400
Connecting standard J.I.S.	
• DN 50	10K
• DN 80	20K
• DN 100	40K
Sealing surface	
• For stainless steel, mat. No. 1.4404/316L	To EN 1092-1, form B1 or ASME B16.5 RF 125 ... 250 AA
• For the other materials	To EN 1092-1, form B2 or ASME B16.5 RFSF

#### Materials

- Main body
- Wetted parts

Stainless steel, 1.4404/316L  
Stainless steel, 1.4404/316L

- Without coating
- PTFE coating
- ECTFE coating (for vacuum on request)
- PFA coating

Monel 400, mat. No. 2.4360  
Hastelloy C276, mat. No. 2.4819  
Hastelloy C4, mat. No. 2.4602  
Hastelloy C22, W.-Nr. 2.4602  
Tantalum  
Titanium, W.-Nr. 3.7035  
Nickel 201  
Duplex 2205, mat. no. 1.4462  
Stainless steel 316L, gold plated, thickness approx. 25 µm  
Stainless steel, mat. No. 1.4571/316Ti  
Spiral protective tube made of stainless steel, mat. No. 1.4404/316L

- Capillary

- Sheath

#### Sealing material in the process flanges

- For pressure transmitters, absolute pressure transmitters and low-pressure applications
- For other applications

Copper

#### Maximum pressure

Viton

See above and the technical data of the pressure transmitter

#### Tube length

Without tube  
50 mm (1.97 inch)  
100 mm (3.94 inch)  
150 mm (5.91 inch)  
200 mm (7.87 inch)

#### Capillary

- Length

Max. 10 m (32.8 ft), longer lengths on request

- Internal diameter
- Minimum bending radius

2 mm (0.079 inch)  
150 mm (5.9 inch)

#### Filling liquid

Silicone oil M5  
Silicone oil M50  
High-temperature oil  
Halocarbon oil (for measuring O<sub>2</sub>)  
Food oil (FDA listed)  
170 °C (338 °F)

#### Max. recommended temperature of medium

#### Permissible ambient temperature

Dependent on the pressure transmitter and the filling liquid of the remote seal

More information can be found in the technical data of the pressure transmitters and in the section "Technical data of filling liquid" in the Technical description to the remote seals

#### Weight

Approx. 4 kg (8.82 lb)

#### Certificate and approvals

Classification according to pressure equipment directive (DGRL 2014/68/EU)

For gases of fluid group 1 and liquids of fluid group 1; complies with requirements of article 4, paragraph 3 (sound engineering practice)

SITRANS P320/P420

### Quick-release diaphragm seals

1

#### Overview

Quick-release diaphragm seals, to DIN 11851 with slotted union nut

Quick-release diaphragm seals, with clamp connection

Quick-release diaphragm seals are available for the following SITRANS P pressure transmitter series:

- For pressure: P300, DS III with HART, DS III with PROFIBUS PA and DS III with FOUNDATION Fieldbus
- For differential pressure and flow: P500, DS III with HART, DS III with PROFIBUS PA and DS III with FOUNDATION Fieldbus
- The quick-release remote seals are common designs in the food industry. Their design means that the medium cannot accumulate in dead volumes. The quick-release clamp present on the remote seal means that quick dismantling is possible for cleaning.

#### Technical specifications

- Capillary

Stainless steel 316L

Stainless steel 316L

Stainless steel, mat. No. 1.4571/316Ti

- Sheath

Spiral protective tube made of stainless steel, mat. No. 1.4301/316

#### Maximum pressure

See above and the technical data of the pressure transmitter

#### Tube length

Without tube

#### Capillary

- Length

Max. 10 m (32.8 ft), longer lengths on request

- Internal diameter

2 mm (0.079 inch)

- Minimum bending radius

150 mm (5.9 inch)

- Sheath

Spiral protective tube made of stainless steel, mat. No. 1.4404/316L

#### Filling liquid

Food oil (FDA listed)

#### Permissible ambient temperature

Dependent on the pressure transmitter and the filling liquid of the remote seal

More information can be found in the technical data of the pressure transmitters and in the section "Technical data of filling liquid" in the Technical description to the remote seals

#### Weight

Approx. 4 kg (8.82 lb)

#### Certificates and approvals

Classification according to pressure equipment directive (DGRL 2014/68/EU)

For gases of fluid group 1 and liquids of fluid group 1; complies with requirements of article 4, paragraph 3 (sound engineering practice)

EHEDG

Complies with EHEDG recommendations

### Overview

Miniature diaphragm seals

The miniature diaphragm seals are available for the SITRANS P320/420 pressure transmitter series.

Suitable for high pressures, contaminated, fibrous and viscous media in the chemical, paper, food and drink industries.

### Design

- Flush-mounted diaphragm
- No dead spaces
- Fixed threaded stems

### Dimensional drawings

Miniature diaphragm seal, dimensions in mm (inch)

### Overview

Inline seals for flange-mounting

The inline seal is completely integrated in the process line. It is particularly suitable for flowing and highly viscous media.

The inline seal consists of a cylindrical jacket into which a thin-walled pipe is welded. It is clamped directly between two flanges in the pipeline.

### Design

- Inline seals for flange-mounting (flange design) to EN/ASME for SITRANS P pressure transmitters
  - For pressure: P300, DS III with HART, DS III with PROFIBUS PA and DS III with FOUNDATION Fieldbus
  - For differential pressure and flow: DS III with HART, DS III with PROFIBUS PA, DS III with FOUNDATION Fieldbus and P500
- Sealing surface to EN 1092-1 or ASME B16.5
- Connection to the transmitter directly or by means of a flexible capillary (max. 10 m long)
- See Technical data for details of materials used for the wetted parts
- Material used for the capillary, the guard sleeve, the seal's main body and the measuring cell: Stainless steel, mat.-No. 1.4571
- Filling liquid: Silicone oil, high-temperature oil, halocarbon oil, food oil (FDA listed) or glycerin/water (not suitable for uses in low-pressure range)

### Function

The measured pressure is transferred from the diaphragm to the filling liquid and passes either directly or through the capillary to the measuring chamber of the pressure transmitter. The interior of the diaphragm seal and of the capillary, as well as the measuring chamber of the pressure transmitter, are filled gas-free by the filling liquid.

#### Note:

When operating in the low-pressure range, also during commissioning, it is recommended to use a vacuum-proof remote seal (see Selection and Ordering data).

### Technical specifications

#### Inline seals for flange-mounting

Nominal diameter	Nominal pressure

## Overview

Quick-release inline seals, to DIN 11851 with threaded socket

Quick-release inline seals, with clamp connection

Quick-release inline seals for pressure are available for the following SITRANS P pressure transmitter series:

- P300
- DS III with HART
- DS III with PROFIBUS PA
- DS III with FOUNDATION Fieldbus

## Application

The quick-release inline seal is a special design for flowing and high-viscosity media. Because it is completely integrated in the process line, there are no turbulences, dead spaces or other obstacles in the flow direction. The medium flows almost unhindered through the inline seal and causes self-cleaning of the sample chamber. The inline seal is also piggable.

## Design

The quick-release clamp is available in two versions:

- DIN 11851 with threaded socket
- Clamp connection

The inline seal is connected to the pressure transmitter either directly or by way of a capillary.

## Function

The measured pressure is transferred from the diaphragm, mounted on the inner circumference of the inline seal, to the filling liquid and then passes through the capillary to the measuring chamber of the pressure transmitter. The interior of the inline seal and of the capillary, as well as the measuring chamber of the pressure transmitter, are filled gas-free by the filling liquid.

### Note:

When operating in the low-pressure range, also during commissioning, it is recommended to use a vacuum-proof pressure transmitter (see Selection and Ordering data).

## Technical specifications

## Pressure Measurement

Remote seals for pressure transmitters  
SITRANS P320/P420

### Flushing rings for diaphragm seals

1

#### Overview

Flushing ring

Flushing rings are required for flange-mounted and sandwich-type remote seals (Article No. 7MF0800 ... 7MF0814) if the danger exists that the process conditions and the geometry of the connection could cause the medium to form deposits or blockages.

The flushing ring is clamped between the process flange and the remote seal.

Deposits can be flushed away from the diaphragm through the holes in the side, or the pressure volume can be vented. Different nominal diameters and forms permit adaptation to the respective process flange.

#### Process connection

For flanges to EN and ASME:  
DN 50, 80, 100, 125; PN 16 ... 100 or  
DN 2 inch, 3 inch, 4 inch, 5 inch; Class 150 ... 600

#### Standard design

Material: CrNi-Stahl, mat. No. 1.4404/316L  
Sealing faces and flushing holes: See Selection and Ordering data

### Overview

This section shows examples of typical measuring setups for using SITRANS P pressure transmitters with and without remote seals.

Equations for calculating lower range value and upper range value are provided for each example.

Questionnaires are included to help you select the right combination of remote seal and pressure transmitter.

### Installation

Remote seals of sandwich design are fitted between the connection flange of the measuring point and a dummy flange. Remote seals of flange design are fitted directly on the connection flange of the measuring point. The respective pressure rating of the dummy flange or the flanged remote seal must be observed.

The pressure transmitter should be installed below the connection flange (and below the lower connection flange in the case of differential pressure transmitters). This arrangement must be used in the low-pressure range.

When measuring at pressures above atmospheric, the pressure transmitter can also be installed above the connection flange.

The capillaries between the remote seal and the pressure transmitter should be as short as possible to obtain a good transmission response.

### Offset of measuring range

If there is a difference in height between the two connection flanges when measuring with two remote seals, an additional differential pressure will result from the oil filling of the remote seal capillaries. This results in a measuring range offset which has to be taken into account when you set the pressure transmitter.

An offset in the measuring range also occurs when combining a remote seal with a transmitter if the remote seal is not installed at the same height as the transmitter.

### Pressure transmitter output

If the level, separation layer or density increase in closed vessels, the differential pressure and hence the output signal of the pressure transmitter also increase.

For an inverted relationship between the differential pressure and the output signal, the lower range value and upper range value of the SITRANS P must be interchanged.

With open vessels, a rising pressure is usually assigned to an increasing level, separation layer or density.

### Influence of ambient temperature

Temperature differences between the individual capillaries and between the individual remote seals should be avoided.

Temperature variations in the area of the measuring setup cause a change in volume of the filling liquid and hence measuring errors.

### Notes

- For the separation layer measurement, the separation layer has to be positioned between the two spigots. Also you must make sure that the level in the container is always above the top spigot.
- When measuring density, make sure that the level of the medium remains constant. The level should be above the top spigot.

### Possible combinations of pressure transmitters and remote seals

Type of installation	Pressure transmitters	Remote seals
A/B	7MF030-... 7MF031-... 7MF040-... 7MF041-...	7MF0800-... 7MF0810-...

Remote seals for pressure transmitters  
SITRANS P320/P420

### Measuring setups with remote seals

#### Dimensional drawings

##### Types of installation for pressure and level measurements (open vessels)

**Installation type A**

Pressure transmitter above the measuring point

**Installation type B**

Pressure transmitter below the measuring point

$H_1 \leq 7 \text{ m (23 ft)}$ , with halocarbon oil as filling liquid only  $H_1 \leq 4 \text{ m (13.1 ft)}$

**Installation type A**

Lower range value:  $p_{MA} = \rho_{FL} \cdot g \cdot H_U - \rho_{OIL} \cdot g \cdot H_1$

Upper range value:  $p_{ME} = \rho_{FL} \cdot g \cdot H_O - \rho_{OIL} \cdot g \cdot H_1$

**Installation type B**

Lower range value:  $p_{MA} = \rho_{FL} \cdot g \cdot H_U + \rho_{OIL} \cdot g \cdot H_1$

Upper range value:  $p_{ME} = \rho_{FL} \cdot g \cdot H_O + \rho_{OIL} \cdot g \cdot H_1$

**Legend**

$p_{MA}$	Lower range value to be set
$p_{ME}$	Upper range value to be set
$\rho_{FL}$	Density of medium in vessel
$\rho_{OIL}$	Density of filling oil in the capillary to the remote seal
$g$	Local acceleration due to gravity
$H_U$	Lower range value
$H_O$	Upper range value
$H_1$	Distance between vessel flange and pressure trans.

##### Types of installation for absolute level measurements (closed vessels)

**Installation type C<sub>1</sub>**

**Installation type C<sub>2</sub>**

Pressure transmitter for absolute pressure always below the measuring point:  $H_1 \geq 200 \text{ mm (7.9 inch)}$

**Installation type C<sub>1</sub> and C<sub>2</sub>**

Lower range value:  $p_{MA} = p_{START} + \rho_{OIL} \cdot g \cdot H_1$

Upper range value:  $p_{ME} = p_{END} + \rho_{OIL} \cdot g \cdot H_1$

**Legend**

$p_{MA}$	Lower range value to be set
$p_{ME}$	Upper range value to be set
$p_{START}$	Lower range value
$p_{END}$	Upper range value
$\rho_{OIL}$	Density of filling oil in the capillary to the remote seal
$g$	Local acceleration due to gravity
$H_1$	Distance between vessel flange and pressure trans.

##### Type of installation for differential pressure and flow measurements

**Installation type D Filter monitoring**

**Installation type D**

Lower range value:  $p_{MA} = p_{START} - \rho_{OIL} \cdot g \cdot H_V$

Upper range value:  $p_{ME} = p_{END} - \rho_{OIL} \cdot g \cdot H_V$

**Legend**

$p_{MA}$	Lower range value to be set
$p_{ME}$	Upper range value to be set
$p_{START}$	Lower range value
$p_{END}$	Upper range value
$\rho_{OIL}$	Density of filling oil in the capillary to the remote seal
$g$	Local acceleration due to gravity
$H_V$	Distance between the measuring points (spigots)

**Types of installation for level measurements (closed vessels)**

Installation type E

**Installation type E**

Lower range value:  $p_{MA} = \rho_{FL} \cdot g \cdot H_U - \rho_{Oil} \cdot g \cdot H_V$

Upper range value:  $p_{ME} = \rho_{FL} \cdot g \cdot H_O - \rho_{Oil} \cdot g \cdot H_V$

**Legend**

- $p_{MA}$  Lower range value to be set
- $p_{ME}$  Upper range value to be set
- $\rho_{FL}$  Density of medium in vessel
- $\rho_{Oil}$  Density of filling oil in the capillary to the remote seal
- $g$  Local acceleration due to gravity
- $H_U$  Lower range value
- $H_O$  Upper range value
- $H_V$  Distance between the measuring points (spigots)

**Installation type G**

Pressure transmitter for differential pressure above the upper measuring point, no vacuum

$H_2 \leq 7$  m (23 ft), with halocarbon oil as filling liquid only  $H_1 \leq 4$  m (13.1 ft)

**Installation type H**

below the lower measuring point

Installation type for vacuum applications

**Installation type J**

between the measuring points, no vacuum

$H_2 \leq 7$  m (23 ft), with halocarbon oil as filling liquid only  $H_2 \leq 4$  m (13.1 ft)

**Installation type G, H and J**

Lower range value:  
 $p_{MA} = \rho_{FL} \cdot g \cdot H_U - \rho_{Oil} \cdot g \cdot H_V$

Upper range value:  
 $p_{ME} = \rho_{FL} \cdot g \cdot H_O - \rho_{Oil} \cdot g \cdot H_V$

**Legend**

- $p_{MA}$  Lower range value to be set
- $p_{ME}$  Upper range value to be set
- $\rho_{FL}$  Density of medium in vessel
- $\rho_{Oil}$  Density of filling oil in the capillary to the remote seal
- $g$  Local acceleration due to gravity
- $H_U$  Lower range value
- $H_O$  Upper range value
- $H_V$  Distance between the measuring points (spigots)

## Pressure Measurement

Remote seals for pressure transmitters  
SITRANS P320/P420

### Measuring setups without remote seals

#### Overview

##### Notes

- For the separation layer measurement, the separation layer has to be positioned between the two spigots.

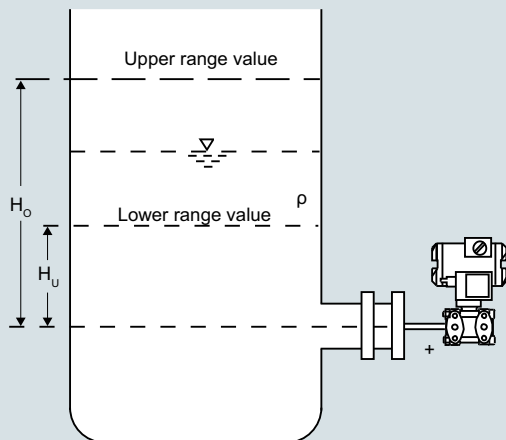

Also you must make sure that the level in the container is always above the top spigot.

- When measuring density, make sure that the level of the medium remains constant. The level should be above the top spigot

- $\rho$  Density of medium in vessel
- $\rho'$  Density of liquid in the negative pressure line (corresponding to the temperature existing there)
- $g$  Local acceleration due to gravity
- $H_U$  Lower range value
- $H_O$  Upper range value
- $H_V$  Distance between the measuring points (spigots)

## Pressure Measurement

Remote seals for pressure transmitters  
SITRANS P320/P420

1

### Measuring setups without remote seals

#### Level measurement, Version 3

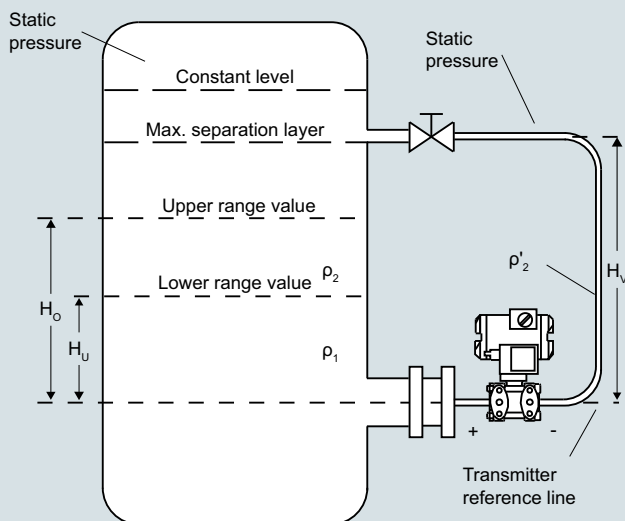

$$\text{Lower range value: } \Delta p_{MA} = \underbrace{P_{Stat} + \rho \cdot g \cdot H_U}_{\text{Transmitter 1}} - \underbrace{P_{Stat}}_{\text{Transmitter 2}}$$

$$\text{Upper range value: } \Delta p_{ME} = \underbrace{P_{Stat} + \rho \cdot g \cdot H_O}_{\text{Transmitter 1}} - \underbrace{P_{Stat}}_{\text{Transmitter 2}}$$

#### Legend

$\Delta p_{MA}$	Lower range value to be set
$\Delta p_{ME}$	Upper range value to be set
$\rho$	Density of medium in vessel
$g$	Local acceleration due to gravity
$H_U$	Lower range value
$H_O$	Upper range value
$H_V$	Distance between the measuring points (spigots)

The pressure measuring range ( $\triangleq$  level) will be calculated by subtraction of measuring range of transmitter 1 minus measuring range of transmitter 2 in the process control system.

#### Separation layer measurement

$$\text{Lower range value: } \Delta p_{MA} = g \cdot (H_U \cdot \rho_1 + (H_O - H_U) \cdot \rho_2 - H_V \cdot \rho'_2)$$

$$\text{Upper range value: } \Delta p_{ME} = g \cdot (H_O \cdot \rho_1 - H_V \cdot \rho'_2)$$

#### Legend

$\Delta p_{MA}$	Lower range value to be set
$\Delta p_{ME}$	Upper range value to be set
$\rho_1$	Density of heavier liquid with separation layer in vessel
$\rho_2$	Density of lighter liquid with separation layer
$\rho'_2$	Density of liquid in the negative pressure line (corresponding to the temperature existing there)
$g$	Local acceleration due to gravity
$H_U$	Lower range value
$H_O$	Upper range value
$H_V$	Distance between the measuring points (spigots)

## Overview

In many cases the pressure transmitter and the medium have to be physically separated. It is then necessary to use a remote seal.

The remote seals can be used with the following SITRANS P pressure transmitter series:

- Gauge pressure
  - P300 with HART, PROFIBUS PA, FOUNDATION Fieldbus
  - DS III with HART, PROFIBUS PA, FOUNDATION Fieldbus
  - P410 with HART, PROFIBUS PA, FOUNDATION Fieldbus
- Absolute pressure
  - P300, DS III with HART
  - DS III with PROFIBUS PA
  - DS III with FOUNDATION Fieldbus
- Differential pressure and flow
  - DS III with HART, PROFIBUS PA, FOUNDATION Fieldbus
  - P410 with HART, PROFIBUS PA, FOUNDATION Fieldbus
  - P500 with HART

## Note

When configuring your remote seal, be sure to read the information about transmission response, temperature error and response time to be found in the sections "Function" and "Technical data". Only then will the remote seal work to optimum effect.

## Benefits

- No direct contact between the pressure transmitter and the medium
- Individual configuration of the pressure transmitter for perfect adaptation to the operating conditions
- Available in many versions
- Specially designed for difficult operating conditions
- Quick-release versions available for the food industry

## Application

Remote seal systems should be used if a separation between the medium and the measuring instrument is essential or appropriate.

Examples of such cases:

- The temperature of the medium is outside the limits specified for the pressure transmitter.
- The medium is corrosive and requires diaphragm materials which are not available for the pressure transmitter.
- The medium is highly viscous or contains solids which would block the measuring chambers of the pressure transmitter.
- The medium may freeze in the measuring chambers or pulse line.
- The medium is heterogeneous or fibrous.
- The medium tends towards polymerization or crystallization.
- The process requires quick-release remote seals, as necessary e.g. in the food industry for fast cleaning.
- The process requires cleaning of the measuring point, e.g. in a batch process.

## Design

A remote seal system consists of the following components.

- Pressure transmitter
- One or two remote seals
- Filling liquid
- Connection between pressure transmitter and remote seal (direct mounting or by means of capillary)

The space for the medium is sealed off with a flat embedded elastic diaphragm. Between the diaphragm and the pressure transmitter is the filling liquid.

In many cases, a capillary must be connected between the remote seal and the pressure transmitter in order, for example, to reduce the temperature effects on the pressure transmitter when the measured medium is hot.

However, the capillary influences the activation time and the temperature response of the overall remote seal system. When capillaries are used to connect a remote seal to a pressure transmitter for differential pressure, two capillaries of equal length must always be used.

Optionally, the remote seal with diaphragm extension (tube) can be ordered.

The remote seals in sandwich design are secured with a blank flange.

## Designs

### Diaphragm seal

With diaphragm seals, the pressure is measured by means of a flat diaphragm which rests in a bed.

The following types of diaphragm seals exist:

Diaphragm seal of sandwich design without (left) and with a projecting diaphragm (tube)

- Sandwich design
- Sandwich design with projecting diaphragm (tube) to DIN or ASME which are secured using a dummy flange.

Diaphragm seal of flange design without (left) and with a projecting diaphragm (tube)

- Flange design
- Flange design with projecting diaphragm (tube) to DIN or ASME, secured using holes in the flange.

Quick-release diaphragm seal

## Pressure Measurement

Remote seals for pressure transmitters  
SITRANS P300, P DS III, P410, P500

1

### Technical description

- Quick-release remote seals, e.g. to DIN 11851, SMS standard, IDF standard, APV RJF standard, clamp connection, etc.
- Miniature diaphragm seal with male thread for screwing into tapped holes
- Remote seals with customer-specific process connections

Miniature diaphragm seal with diaphragm flush with front

- Miniature diaphragm seals

The quick-release remote seals are used above all in the food industry. Their design means that the medium cannot accumulate in dead volumes. The quick-release clamp present on the remote seal means that quick dismounting is possible for cleaning.

#### Inline seal

Inline seal with quick-release design (left) and for flange mounting

With inline seals, the pressure is first measured using a cylindrical diaphragm positioned in a pipe, and then transmitted to the pressure transmitter by means of the filling liquid.

The inline seal is a special design for flowing media. It consists of a cylindrical pipe in which a cylindrical diaphragm is embedded. Since it is completely integrated in the process pipe, no turbulences, dead volumes or other obstructions to the flow occur. Furthermore, the inline seal can be cleaned by a pig.

The following types of inline seals exist:

- Quick-release inline seals, e.g. to DIN 11851, SMS standard, IDF standard, APV/RJF standard, clamp connection etc. The quick-release facility attached to the remote seal enables the seal to be removed quickly for cleaning purposes.
- Inline seals for flanging to EN or ASME.
- Inline seals with customer-specific process connections.

#### **Note:**

The pressure data on the transmitter and the remote seal must be observed with regard to pressure/temperature behavior.

### Function

The measured pressure is transferred from the diaphragm to the filling liquid and passes through the capillary to the measuring chamber of the pressure transmitter. The interior of the diaphragm seal and of the capillary, as well as the measuring chamber of the transmitter, are filled gas-free by the filling liquid.

#### **Transmission response**

The transmission response of a remote seal is characterized by the following variables:

- Temperature error
- Adjustment time

#### Temperature error

Temperature errors are caused by the change of volume of the filling liquid due to temperature variations. To select the right remote seal you must calculate the temperature error.

Below you will find an overview of the factors which influence the size of the temperature error, as well as information on how to calculate the temperature error.

The temperature error is dependent on the following variables:

- Rigidity of the diaphragm used
- Filling liquid used
- Influence of the filling liquid underneath the process flanges or in the connection shank of the pressure transmitter
- Internal diameter of the capillary: The bigger the internal diameter, the bigger the temperature error
- Length of the capillary: The longer the capillary, the bigger the temperature error

#### Diaphragm rigidity

The rigidity of the diaphragm is of decisive importance. The bigger the diameter of the diaphragm, the softer the diaphragm and the more sensitively it reacts to temperature-induced changes in volume of the filling liquid.

The result is that small measuring ranges are only possible with large diaphragm diameters.

Other factors apart from diaphragm rigidity which also play a role:

- Diaphragm thickness
- Diaphragm material
- Coatings if present

#### Filling liquid

Every filling liquid reacts to temperature variations with a change of volume. Temperature errors can be minimized by selecting a suitable filling liquid, but the filling liquid must also be appropriate for the temperature limits and operating pressure. Furthermore, the filling liquid must also be physiologically harmless.

Since the filling liquid is present under the diaphragm, in the capillary and under the process flange of the pressure transmitter (or in the connection shank), the temperature error must be calculated separately for each combination.

#### **Note:**

A vacuum-resistant remote seal is recommended for continuous low-pressure operation at 500 mbar or below, including during commissioning (see ordering data).

An example of a temperature error calculation can be found in the section "Technical Specifications".

### Response time

The response time is dependent on the following factors:

- Internal diameter of the capillary: The bigger the internal diameter, the shorter the response time
- Viscosity of the filling liquid: The greater the viscosity, the longer the response time
- Length of the capillary: The longer the capillary, the longer the response time
- Pressure in the pressure measuring system: The higher the pressure, the shorter the response time

### Recommendations

The following should be observed to obtain an optimum combination of transmitter and remote seal:

- Choose the biggest possible diameter for the remote seal. The effective diameter of the seal diaphragm is then bigger and the temperature error smaller.
- Choose the shortest possible capillary. The response time is then shorter and the temperature error smaller
- Choose the filling liquid with the least viscosity and the smallest coefficient of expansion. Make sure, however, that the filling liquid meets the process requirements with regard to pressure, vacuum and temperature. And ensure that the filling liquid and the medium are compatible with one another.
- Note the following points for use in the vacuum range:
  - The pressure transmitter must always be positioned below the lowest spigot.
  - The operating range of some filling liquids is very limited with regard to the permissible temperature of the medium.
  - A vacuum-proof seal is necessary for continuous operation in the low-pressure range.
- Recommendations for the minimum measuring span can be found in the section "Technical data".

### **Note**

The remote seals listed here are a selection of the most common designs. On account of the large variety of process connections, certain remote seals which are not listed here may be available nevertheless.

Other versions can be:

- Other process connections, standards
- Aseptic or sterile connections
- Other dimensions
- Other nominal pressures
- Special diaphragm materials, including coatings
- Other sealing faces
- Other filling liquids
- Other capillary lengths
- Sheathing of capillaries with protective hose
- Calibration at higher/lower temperatures etc.

**Please contact your local Siemens office for further information.**

### **Negative pressure service**

Liquids, such as silicone oils, inert or those suitable for food, are used in remote seal systems for transmission of the process pressure to the pressure transmitter.

In each liquid, particles have the tendency to leave the liquid compound with increasing temperature (transition from liquid to gaseous aggregate state). This means the vapor pressure increases with increasing temperature and is dependent on the substance or mixture being present.

The higher the temperature and the lower the associated process pressure in the liquid, the more difficult it gets to guarantee the desired transmission properties of the fill fluid and therefore the measuring arrangement.

Plus the sealing elements at the transmitter must be designed so that a diffusion of molecules from the atmosphere into the remote seal system is prevented due to the constantly occurring negative pressure.

In addition to the influencing variables process pressure and process temperature, the vapor pressure curve of the fill fluid at the remote seal end and the stiffness of the remote seal membrane impact the functionality of the remote seal in the negative pressure range.

This means you have to pay special attention to the physical properties of fill fluids with applications in the negative pressure range.

There are three stages for the negative pressure resistance:

- **Standard design** of the remote seal without additional protective measures, suitable for the overpressure range and low negative pressure range. This design is identified with (1) in the diagrams below in section 3.
- **Negative pressure service** with suitable seals and treated fill fluid, identified with (2) in the diagrams below in section 3. Here you select the order codes V01, V03 or V04, depending on the mounting type.
- **Extended negative pressure service** with more extended treatment of the fill fluid and the remote seals, identified in the diagrams below. Here you select the order codes V51, V53 or V54, depending on the mounting type.

There are two more areas in the diagrams. The area (4) identifies an area that has to be clarified with Technical Support prior to placing the order. The area (5) describes the area in which the remote seal fill fluid is permanently destroyed and the entire remote seal is therefore without function.

## Pressure Measurement

Remote seals for pressure transmitters  
SITRANS P300, P DS III, P410, P500

### Technical description

Technical specifications of the remote seal filling liquids

Filling liquid	Number in the Article No.	Density at 20°C [kg/dm <sup>3</sup> ]	Viscosity at 20°C [mm <sup>2</sup> /s]	Suitable for negative pressure service	Suitable for extended negative pressure service
Silicone oil M5	1	0,914	4	x	-
Silicone oil M50	2	0,966	50	x	x
High-temperature oil	3	1,070	57	x	x
Halocarbon oil	4	1,968	14	x	-
Food oil (FDA-listed)	7	0,920	10	x	x

The suitable negative pressure service is specified with the pressure/temperature curves of the respective liquids described below.

**Note:** For reasons of operational safety, the transmitter must not exceed the height of the remote seal - with differential pressure applications, the height of the bottom remote seal - for measurements in the negative pressure range. The associated installation types B, C1, C2 or H are described at the end of this section under the topic "Measuring arrangements".

#### Selection of the required negative pressure service

The procedure for determining the required negative pressure service is described below using the silicone oil M5 as fill fluid. The minimum existing process pressure of a fictitious process is 200 mbar<sub>abs</sub> (2.9 psi) (at a maximum process temperature of 150 °C (302 °F)). This intersection is identified by an "✱" in the diagram below. This means the negative pressure service V01, V03 or V04 (depending on the application) is sufficient in this example.

The suitable negative pressure resistance is determined this way for all other fill fluids.

#### Note:

Note the response times according to the table on page 1/413.

- ① Operating range of the standard remote seal design without special measures.
- ② Operating range for which the **negative pressure service V01, V03 or V04** is required.  
Note: An extended negative pressure service is **not** possible for this fill fluid.
- ④ Please contact Technical Support for applications in this area.  
Detailed information regarding application, process and ambient data are necessary.
- ⑤ Area in which you have to expect the destruction of the fill fluid.  
A function of the remote seal is not specified here.

Permissible operating range:  
Max. temperature limit: 160 °C  
Min. temperature limit: -90 °C

- ① Operating range of the standard remote seal design without special measures.
- ② Operating range for which the **negative pressure service V01, V03 or V04** is required.
- ③ Operating range for which the **extended negative pressure service V51, V53 or V54** is required

#### Remarks:

- Values apply for the filling liquids silicone oil M5, silicone oil M50, high-temperature oil, halocarbon oil and food oil (FDA listed).
- Half the values apply to glycerin/water mixture as the filling liquid.
- Values apply to stainless steel as the diaphragm material.
- Diaphragm thickness 0.05 mm (0.002 inch) for DN 25/DN 40/DN 50 and 0.1 mm (0.004 inch) for DN 80/DN 100

## Pressure Measurement

Remote seals for pressure transmitters  
SITRANS P300, P DS III, P410, P500

### Technical description

#### Calculation of the temperature error

The following equation is used to calculate the temperature error:

$$dp = (\vartheta_{RS} - \vartheta_{Cal}) \cdot f_{RS} + (\vartheta_{Cap} - \vartheta_{Cal}) \cdot l_{Cap} \cdot f_{Cap} + (\vartheta_{TR} - \vartheta_{Cal}) \cdot f_{PF}$$

dp	Additional temperature error (mbar)
$\vartheta_{RS}$	Temperature on remote seal diaphragm (generally corresponds to temperature of medium)
$\vartheta_{Cal}$	Calibration (reference) temperature (20 °C (68 °F))
$f_{RS}$	Temperature error of remote seal
$\vartheta_{Cap}$	Ambient temperature on the capillaries
$l_{Cap}$	Capillary length
$f_{Cap}$	Temperature error of capillaries
$\vartheta_{TR}$	Ambient temperature on pressure transmitter
$f_{PF}$	Temperature error of the oil filling in the process flanges of the pressure transmitter

#### Example of temperature error calculation

##### Existing conditions:

SITRANS P pressure transmitter for differential pressure, 250 mbar, set to 0 ... 100 mbar, with DN 100 remote seal diaphragms without tube, diaphragm made of stainless steel, mat. No. 1.4404/316L	$f_{RS} = 0.05 \text{ mbar}/10 \text{ K}$ (0.039 inH <sub>2</sub> O/10 K)
Capillary length	$l_{Cap} = 6 \text{ m}$ (19.7 ft)
Capillaries fitted on both sides	$f_{Cap} = 0.07 \text{ mbar}/(10 \text{ K} \cdot m_{Cap})$ (0.028 inH <sub>2</sub> O/(10 K · m <sub>Cap</sub> ))
Filling liquid silicone oil M5	$f_{PF} = 0.07 \text{ mbar}/10 \text{ K}$ (0.028 inH <sub>2</sub> O/10 K)
Process temperature	$\vartheta_{RS} = 100 \text{ °C}$ (212 °F)
Temperature on the capillaries	$\vartheta_{Cap} = 50 \text{ °C}$ (122 °F)
Temperature on pressure transmitter	$\vartheta_{TR} = 50 \text{ °C}$ (122 °F)
Calibration temperature	$\vartheta_{Cal} = 20 \text{ °C}$ (68 °F)

##### Required:

Additional temperature error of remote seals: dp

##### Calculation:

###### in mbar

$$dp = (100 \text{ °C} - 20 \text{ °C}) \cdot 0.05 \text{ mbar}/10 \text{ K} + (50 \text{ °C} - 20 \text{ °C}) \cdot 6 \text{ m} \cdot 0.07 \text{ mbar}/(10 \text{ K} \cdot \text{m}) + (50 \text{ °C} - 20 \text{ °C}) \cdot 0.07 \text{ mbar}/10 \text{ K}$$

$$dp = 0.4 \text{ mbar} + 1.26 \text{ mbar} + 0.21 \text{ mbar}$$

###### in inH<sub>2</sub>O

$$dp = (212 \text{ °F} - 68 \text{ °F}) \cdot 0.039 \text{ inH}_2\text{O}/10 \text{ K} + (112 \text{ °F} - 68 \text{ °F}) \cdot 19.7 \text{ ft} \cdot 0.028 \text{ inH}_2\text{O}/(10 \text{ K} \cdot 3.28 \text{ ft}) + (112 \text{ °F} - 68 \text{ °F}) \cdot (0.028 \text{ inH}_2\text{O}/10 \text{ K})$$

$$dp = 0.16 \text{ inH}_2\text{O} + 0.51 \text{ inH}_2\text{O} + 0.08 \text{ inH}_2\text{O}$$

##### Result:

$$dp = 1.87 \text{ mbar (0.75 inH}_2\text{O)}$$

(corresponds to 2.27% of set measuring span)

##### Note

The determined temperature error only applies to the error resulting from connection of the remote seal.

The transmission response of the respective transmitter is not included in this consideration.

It must be calculated separately, and the resulting error added to the error determined above from connection of the remote seal.

#### Dependence of temperature error on diaphragm material

The temperature errors listed in the previous table are based on the use of stainless steel as the diaphragm material. If other diaphragm materials are used, the temperature errors change as follows:

Diaphragm material	Change in temperature error of remote seal
	Increase in values by
Stainless steel, Duplex, ...	See previous tables
Hastelloy C4, mat. No. 2.4602	50 %
Hastelloy C276, mat. No. 2.4819	50 %
Monel 400, mat. No. 2.4360	60 %
Tantalum	50 %
Titanium	50 %
PTFE coating on stainless steel diaphragm	80 %
ECTFE coating or PFA coating on stainless steel diaphragm	100 %
Gold coating on stainless steel diaphragm	40 %
Inconel	50 %
Incoloy	50 %

#### Maximum temperature of medium

##### Note

When taking into account the maximum medium temperature, the application limits of the fill fluids and gaskets used as well as the pressure/temperature limits of the respective process connections must also be taken into consideration. The following maximum temperatures of the medium apply depending on the material of the wetted parts.

Material	Max. medium temperature	Min./max. Pressure
Stainless steel, mat. no. 1.4404/31L	400 °C (752 °F)	No restrictions
PTFE coating	200 °C (392 °F) 260 °C (500 °F)	< 0 bar (0 psi); gauge pressure 0 bar (0 psi) ... 25 bar (363 psi); gauge pressure
	150 °C (302 °F)	25 bar (363 psi) ... 40 bar (580 psi); gauge pressure
	50 °C (302 °F)	40 bar (580 psi) ... 60 bar (870 psi); gauge pressure
ECTFE coating	150 °C (302 °F)	For pressures < 1 bar (14.5 psi) on request
PFA coating	200 °C (392 °F) 260 °C (500 °F)	< 0 bar (0 psi); gauge pressure 25 bar (363 psi)/40 bar (580 psi); gauge pressure
	150 °C (302 °F)	40 bar (580 psi)/60 bar (870 psi); gauge pressure
	50 °C (302 °F)	For pressures < 1 bar (14.5 psi) on request
Hastelloy C4, mat. no. 2.4610	400 °C (752 °F)	No restrictions
Hastelloy C276, mat. no. 2.4819	400 °C (752 °F)	No restrictions
Hastelloy C22, mat. no. 2.4602	400 °C (752 °F)	No restrictions
Monel 400, mat. no. 2.4360	400 °C (752 °F)	No restrictions
Tantalum	300 °C (572 °F)	No restrictions
Duplex, mat. no. 1.4462	250 °C (482 °F)	No restrictions
Titanium	150 °C (302 °F)	No restrictions
Inconel	400 °C (752 °F)	No restrictions
Incoloy	400 °C (752 °F)	No restrictions
Gold coating	400 °C (752 °F)	No restrictions

### Maximum capillary length for diaphragm seals (guidance values)

Nom. diam.		Max. length of capillary			
		Diaphragm seal		Inline seal	
		m	(ft)	m	(ft)
DN 25	(1 inch)	2.5	(8.2)	2.5	(8.2)
DN 32	(1¼ inch)	2.5	(8.2)	2.5	(8.2)
DN 40	(1½ inch)	4	(13.1)	6	(19.7)
DN 50	(2 inch)	6	(19.7)	10	(32.8)
DN 65	(2½ inch)	8	(26.2)	10	(32.8)
DN 80	(3 inch)	15	(49.1)	10	(32.8)
DN 100	(4 inch)	15	(49.1)	10	(32.8)
DN 125	(5 inch)	15	(49.1)	-	-

### Response times

The values listed in the following table are the response times (in seconds per meter of capillary) for a change in pressure which corresponds to the set measuring span.

The listed values must be multiplied by the respective length of the capillary, or with transmitters for differential pressure and flow by the total length of both capillaries.

The response times are independent of the set measuring span within the range of the respective transmitter. The response times are of insignificant importance for measuring spans above 10 bar (145 psi). The response times of the pressure transmitters are not considered in the table.

Filling liquid	Density		Temperature on capillary		Response time in s/m (s/ft) with max. measuring span of pressure transmitter					
	kg/dm <sup>3</sup>	(lb/in <sup>3</sup> )	°C	(°F)	250 mbar	(101 inH <sub>2</sub> O)	600 mbar	(241 inH <sub>2</sub> O)	1600 mbar	(643 inH <sub>2</sub> O)
Silicone oil M5	0.914	(0.033)	+60	(140)	0.06	(0.018)	0.02	(0.006)	0.01	(0.003)

			-20	(-4)	20	(6.100)	8.5	(2.593)	3.25	(0.991)

Permissible data of filling liquids for pressure and temperature see diagrams on page 1/404 ff.

## Pressure Measurement

Remote seals for pressure transmitters  
SITRANS P300, P DS III, P410, P500

### Diaphragm seals of sandwich design with flexible capillary

1

#### Overview

Diaphragm seals of sandwich design

#### Technical specifications

##### Diaphragm seals of sandwich design

Nominal diameter	Nominal pressure
• DN 50	PN 16 ... PN 400
• DN 80	PN 16 ... PN 400
• DN 100	PN 16 ... PN 400
• DN 125	PN 16 ... PN 400
• 2 inch	Class 150 ... class 2500
• 3 inch	Class 150 ... class 2500
• 4 inch	Class 150 ... class 2500
• 5 inch	Class 150 ... class 2500
Sealing surface	
• For stainless steel, mat. No. 1.4404/316L	To EN 1092-1, form B1 or ASME B16.5 RF 125 ... 250 AA
• For the other materials	To EN 1092-1, form B2 or ASME B16.5 RFSF
Materials	
• Main body	Stainless steel mat. no. 1.4404/316L
• Wetted parts	Stainless steel mat. no. 1.4404/316L
	<ul style="list-style-type: none"> <li>• Without coating</li> <li>• PTFE coating</li> <li>• ECTFE coating (for vacuum on request)</li> <li>• PFA coating</li> </ul>
	Monel 400, mat. No. 2.4360
	Hastelloy C276, mat. No. 2.4819
	Hastelloy C4, mat. No. 2.4602
	Hastelloy C22, mat. no. 2.4602
	Tantalum
	Titanium, mat. no. 3.7035
	Nickel 201
	Duplex 2205, mat. no. 1.4462
	Stainless steel 316L, gold plated, thickness approx. 25 µm
• Capillary	Stainless steel, mat. No. 1.4571/316Ti
• Sheath	Spiral protective tube made of stainless steel, mat. No. 1.4404/316L

Sealing material in the process flanges

- For pressure transmitters, absolute pressure transmitters and low-pressure applications
- For other applications

Copper

Viton

Maximum pressure

See above and the technical data of the pressure transmitters

Tube length

Without tube as standard (tube available on request)

Capillary

- Length

Max. 10 m (32.8 ft), longer lengths on request

- Internal diameter

max. 2 mm (0.079 inch)

- Minimum bending radius

150 mm (5.9 inch)

Filling liquid

Silicone oil M5

Silicone oil M50

High-temperature oil

Halocarbon oil (for measuring O<sub>2</sub>)

Food oil (FDA listed)

Permissible ambient temperature

Dependent on the pressure transmitter and the filling liquid of the remote seal

More information can be found in the technical data of the pressure transmitters and in the section "Technical data of filling liquid" in the Technical description to the remote seals

Weight

Approx. 4 kg (8.82 lb)

##### Certificate and approvals

Classification according to pressure equipment directive (DGRL 2014/68/EU)

For gases of fluid group 1 and liquids of fluid group 1; complies with requirements of article 4, paragraph 3 (sound engineering practice)

### Diaphragm seals of sandwich design with flexible capillary

#### Selection and Ordering data

Article No. Ord.code

#### Diaphragm seal

Sandwich-type design, with flexible capillary connected to a SITRANS P transmitter (order separately):

**for pressure** 7MF2033-...; 7MF403-... and 7MF423-... together with Order code "V01" (Negative pressure service) and 7MF802-...<sup>1)</sup>; Scope of delivery (1 off)

7MF4900 -

**for absolute pressure** 7MF433-...; Scope of delivery (1 off)

7MF4901 -

**for differential pressure and flow** 7MF243-...; 7MF443-... and 7MF54-...; scope of delivery 2 off

7MF4903 -

#### Filling liquid

- Silicone oil M5
- Silicone oil M50
- High-temperature oil
- Halocarbon oil (for measuring O<sub>2</sub>)<sup>5)</sup>
- Food oil (FDA listed)

1) With 7MF802-... and the measuring cells Q, S, T and U also order negative pressure service version.

2) Only possible up to max. PN 100.

3) For vacuum on request

4) Only for use in non-hazardous atmospheres.

5) Oil- and grease- free cleaning to DIN 25410, level 2 and packaging included in the scope of delivery. Refer to "Further designs" C10 and E10.

6) Max. capillary length, see section "Technical description".

#### Selection and Ordering data

Order code

#### Further designs

Please add "-Z" to Article No. and specify Order code.

#### Customer-specific tubus length

Y44

Select range, enter desired length in plain text (No entry = standard length)

#### Spark arrester

With spark arrester for mounting on zone 0 (including documentation)

• Pressure and absolute pressure

A01

• for differential pressure transmitters

A02

#### Remote seal nameplate

B20

Attached out of stainless steel, contains Article No. and order number of the remote seal supplier

#### Oil- and grease-free cleaned version

C10

Oil- and grease-free cleaned and packed version, not for oxygen application, only in conjunction with halocarbon oil fill fluid, certified by certificate acc. to EN 10204-2.2

#### Quality Inspection Certificate (5-point characteristic curve test) according to IEC 60770-2

C11

#### Inspection certificate

C12

to EN 10204, section 3.1

#### 2.2 Certificate of FDA approval of fill oil

C17

Only in conjunction with "Food-grade oil" fill liquid (FDA listed)"

#### Functional safety certificate ("SIL 2") to IEC 61508

C20

(Only in conjunction with the Order code "C20" in the case of SITRANS P DSIII transmitter)

#### Functional safety certificate ("SIL 2/3") to IEC 61508

C23

(Only in conjunction with the Order code "C23" in the case of SITRANS P DSIII transmitter)

#### Certification acc. to NACE MR-0175

D07

Includes inspection certificate 3.1 according to EN 10204 (only for wetted parts made of stainless steel 1.4404/316L and Hastelloy C276)

#### Certification acc. to NACE MR-0103

D08

Includes inspection certificate 3.1 according to EN 10204 (only for wetted parts made of stainless steel 1.4404/316L and Hastelloy C276)

#### Oil- and grease-free cleaned version

E10

Oil- and grease-free cleaned and packed version, only for oxygen application, only inert fill fluid may be used. Max. temperature: 60 °C (140 °F), max. pressure 50 bar (725 psi), only in connection with halocarbon oil, certified by certificate acc. to EN 10204-2.2

#### Epoxy painting

E15

(not possible with vacuum-proof design and not for 7MF4901-...)

Color: transparent, coverage: front and rear of the remote seal, capillary(ies) or connecting tube, process connection of the transmitter. With transmitters 7MF40.. and 7MF42.. only possible with process connection G $\frac{1}{2}$ B according to EN 837-1

#### One-sided mounting on differential pressure transmitters

H10

(only for 7MF4900-...)

on high-pressure side

H11

on low-pressure side

### Diaphragm seals of flange design mounted directly on transmitter

#### Overview

Diaphragm seals of flange design, directly fitted on a pressure transmitter for pressure

#### Technical specifications

##### Diaphragm seals (flange design) for pressure and absolute pressure, directly fitted on a transmitter

Nominal diameter	Nominal pressure
• DN 50	PN 10/16/25/40, PN 100
• DN 80	PN 10/16/25/40, PN 100
• DN 100	PN 10/16, PN 25/40
• 2 inch	Class 150, class 300, class 400/600, class 900/1500
• 3 inch	Class 150, class 300, class 600
• 4 inch	Class 150, class 300, class 400
Sealing surface	
• For stainless steel, mat. No. 1.4404/316L	To EN 1092-1, form B1 or ASME B16.5 RF 125 ... 250 AA
• For the other materials	Smooth to EN 1092-1, form B2 or ASME B16.5 RFSF
Materials	
• Main body	Stainless steel mat. no. 1.4404/316L
• Wetted parts	Stainless steel mat. no. 1.4404/316L
	• Without coating
	• PTFE coating
	• ECTFE coating (for vacuum on request)
	• PFA coating
	Monel 400, mat. No. 2.4360
	Hastelloy C276, mat. No. 2.4819
	Hastelloy C4, mat. No. 2.4602
	Hastelloy C22, mat. No. 2.4602
	Tantalum
	Titanium, mat. No. 3.7035
	Nickel 201
	Duplex 2205, mat. no. 1.4462
	Stainless steel 316L, gold plated, thickness approx. 25 µm
• Capillary	Stainless steel, mat. No. 1.4404/316L
• Sealing material at the transmitter connection	Copper

Maximum pressure	See above and the technical data of the transmitter
Tube length	<ul style="list-style-type: none"> <li>• Without tube</li> <li>• 50 mm (1.97 inch)</li> <li>• 100 mm (3.94 inch)</li> <li>• 150 mm (5.91 inch)</li> <li>• 200 mm (7.87 inch)</li> </ul>
Capillary	
• Length	Max. 10 m (32.8 ft), longer lengths on request
• Internal diameter	2 mm (0.079 inch)
• Minimum bending radius	150 mm (5.9 inch)
Filling liquid	<ul style="list-style-type: none"> <li>• Silicone oil M5</li> <li>• Silicone oil M50</li> <li>• High-temperature oil</li> <li>• Halocarbon oil (for measuring O<sub>2</sub>)</li> <li>• Food oil (FDA listed)</li> </ul>
Max. recommended temperature of medium	170 °C (338 °F)
Permissible ambient temperature	Dependent on the pressure transmitter and the filling liquid of the remote seal.  More information can be found in the technical data of the pressure transmitters and in the section "Technical data of filling liquid" in the Technical description to the remote seals.
Weight	Approx. 4 kg (8.82 lb)

##### Certificate and approvals

Classification according to pressure equipment directive (DGRL 2014/68/EU)	For gases of fluid group 1 and liquids of fluid group 1; complies with requirements of article 4, paragraph 3 (sound engineering practice)
--	--

#### Selection and Ordering data

##### Further designs

Please add "-Z" to Article No. and specify Order code.

##### Customer-specific tubus length

Select range, enter desired length in plain text (No entry = standard length)

##### Spark arrester

With spark arrester for mounting on zone 0 (including documentation) for transmitters for gauge pressure and absolute pressure

##### Remote seal nameplate

Attached out of stainless steel, contains MLFB and order number of the remote seal

##### Oil- and grease-free cleaned version

Oil- and grease-free cleaned and packed version, not for oxygen application, only in conjunction with halocarbon oil fill fluid, certified by certificate acc. to EN 10204-2.2

##### Quality Inspection Certificate (5-point characteristic curve test) according to IEC 60770-2

Inspection certificate to EN 10204, section 3.1

##### 2.2 Certificate of FDA approval of fill oil

Only in conjunction with "Food-grade oil" fill liquid (FDA listed)

##### Functional safety certificate ("SIL 2") to IEC 61508

(Only in conjunction with the Order code "C20" in the case of SITRANS P DSIII transmitter)

##### Functional safety certificate ("SIL 2/3") to IEC 61508

(Only in conjunction with the Order code "C23" in the case of SITRANS P DSIII transmitter)

##### Certification acc. to NACE MR-0175

Includes inspection certificate 3.1 according to EN 10204 (only for wetted parts made of stainless steel 1.4404/316L and Hastelloy C276)

##### Certification acc. to NACE MR-0103

Includes inspection certificate 3.1 according to EN 10204 (only for wetted parts made of stainless steel 1.4404/316L and Hastelloy C276)

##### Oil- and grease-free cleaned version

Oil- and grease-free cleaned and packed version, only for oxygen application, only inert fill fluid may be used. Max. temperature: 60 °C (140 °F), max. pressure 50 bar (725 psi), only in connection with halocarbon oil, certified by certificate acc. to EN 10204-2.2

##### Epoxy painting

Not possible with negative pressure service

Color: transparent, coverage: front and rear of the remote seal, capillary(ies) or connecting tube, process connection of the transmitter. With transmitters 7MF40.. and 7MF42.., only possible with process connection G½B according to EN 837-1.

<sup>2)</sup> 89 mm = 3½ inch with tube length L = 0

## Pressure Measurement

Remote seals for pressure transmitters  
SITRANS P300, P DS III, P410, P500

### Diaphragm seal, screwed design, mounted directly or/and with capillary

1

#### Overview

Diaphragm seal, screwed gland design with inside diaphragm for gauge, absolute and differential pressure for direct mounting

Process connection: open measurement flange

#### Technical specifications

##### Diaphragm seal, screwed gland with inside diaphragm

Process connection	Nominal pressure
• Male thread G $\frac{1}{2}$ B to EN 837-1	PN 100, PN 250
• External thread $\frac{1}{2}$ -14" NPT-M	PN 100, PN 250
• open measurement flange	
- DN 25	PN 10 ... PN 40
- 1 inch	Class 150, class 300
Sealing surface for open measurement flange	
• For stainless steel, mat. no. 1.4404/316L	To EN 1092-1, form B1 or ASME B16.5 RF 125 ... 250 AA
Materials	
• Lower section (in the case of process connection thread)	Stainless steel, Mat. no. 1.4404/316L
• Diaphragm	Stainless steel, Mat. no. 1.4404/316L
	• No coating
	• With PTFE coating
	Monel 400, mat. no. 2.4360
	Hastelloy C276, mat. no. 2.4819
	Hastelloy C4, mat. no. 2.4602
	Tantal
	Stainless steel 316L, gold plated, thickness approx. 25 $\mu$ m
• Top section (process connection in the case of an open measurement flange)	Stainless steel, mat. no. 1.4404/316L
• Capillary	Stainless steel, mat. no. 1.4404/316L
• Sealing material on the process connection	Viton or copper (in the case of vacuum-free version)
• Sealing material between top and bottom section	Viton (FKM) (standard) Teflon (PTFE) metal spring ring (silver-coated)

Capillary	
• Length	Max. 10 m (32.8 ft)
• Internal diameter	2 mm (0.079 inch)
• Minimum bending radius	150 mm (5.9 inch)
• Sheath	Stainless steel protective tube, mat. No. 1.4301/304
Filling liquid	<ul style="list-style-type: none"> <li>• Silicone oil M5</li> <li>• Silicone oil M50</li> <li>• High-temperature oil</li> <li>• Halocarbon oil (for measuring O<sub>2</sub>)</li> <li>• Food oil (FDA listed)</li> </ul>
Max. recommended temperature of medium	170 °C (338 °F)
Permissible ambient temperature	Dependent on the pressure transmitter and the filling liquid of the remote seal
	More information can be found in the technical specifications of the pressure transmitters and in the section "Technical data of filling liquid" in the introduction to the remote seals
Weight	Approx. 1.5 kg (3.3 lb)

##### Certificates and approvals

Classification according to pressure equipment directive (PED 2014/68/EU)	For gases of fluid group 1 and liquids of fluid group 1; complies with requirements of article 4, paragraph 3 (sound engineering practice)
---	--

## Pressure Measurement

Remote seals for pressure transmitters  
SITRANS P300, P DS III, P410, P500

### Quick-release diaphragm seals

1

#### Overview

Quick-release diaphragm seals, to DIN 11851 with slotted union nut

Quick-release diaphragm seals, with clamp connection

Quick-release diaphragm seals are available for the following SITRANS P pressure transmitter series:

- For pressure: P300, DS III with HART, DS III with PROFIBUS PA and DS III with FOUNDATION Fieldbus
- For differential pressure and flow: P500, DS III with HART, DS III with PROFIBUS PA and DS III with FOUNDATION Fieldbus
- The quick-release remote seals are common designs in the food industry. Their design means that the medium cannot accumulate in dead volumes. The quick-release clamp present on the remote seal means that quick dismounting is possible for cleaning.

#### Technical specifications

##### Quick-release diaphragm seal

Connection, nominal diameter	Nominal pressure
<u>For pressure</u>	
• To DIN 11851 with slotted union nut	
- DN 25	PN 40
- DN 32	PN 40
- DN 40	PN 40
- DN 50	PN 25
- DN 65	PN 25
- DN 80	PN 25
• To DIN 11851 with threaded socket	
- DN 25	PN 40
- DN 32	PN 40
- DN 40	PN 40
- DN 50	PN 25
- DN 65	PN 25
- DN 80	PN 25

• Clamp connection	
- 1½ inch	PN 16
- 2 inch	PN 16
- 2½ inch	PN 16
- 3 inch	PN 10
<u>For differential pressure and flow</u>	
• To DIN 11851 with slotted union nut	
- DN 50	PN 25
- DN 65	PN 25
- DN 80	PN 25
• To DIN 11851 with threaded socket	
- DN 50	PN 25
- DN 65	PN 25
- DN 80	PN 25
• Clamp connection	
- 2 inch	PN 16
- 2½ inch	PN 16
- 3 inch	PN 10
Sealing surface	
• For stainless steel, mat. No. 1.4404/316L	To EN 1092-1, form B1 or ASME B 16.5RF 125 ... 250 AA
• For the other materials	To EN 1092-1, form B2 or ASME B16.5 RFSF
Materials	
• Main body	Stainless steel 316L
• Wetted parts	Stainless steel 316L
• Capillary	Stainless steel, mat. No. 1.4571/316Ti
• Sheath	Spiral protective tube made of stainless steel, mat. no.1.4404/316L
Maximum pressure	See above and the technical data of the pressure transmitter
Tube length	Without tube
Capillary	
• Length	Max. 10 m (32.8 ft), longer lengths on request
• Internal diameter	2 mm (0.079 inch)
• Minimum bending radius	150 mm (5.9 inch)
• Sheath	Spiral protective tube made of stainless steel, mat. No. 1.4301/316
Filling liquid	Food oil (FDA listed)
Permissible ambient temperature	Dependent on the pressure transmitter and the filling liquid of the remote seal
	More information can be found in the technical data of the pressure transmitters and in the section "Technical data of filling liquid" in the Technical description to the remote seals
Weight	Approx. 4 kg (8.82 lb)
<b>Certificates and approvals</b>	
Classification according to pressure equipment directive (DGRL 2014/68/EU)	For gases of fluid group 1 and liquids of fluid group 1; complies with requirements of article 4, paragraph 3 (sound engineering practice)
EHEDG	Complies with EHEDG recommendations

## Pressure Measurement

Remote seals for pressure transmitters  
SITRANS P300, P DS III, P410, P500

### Miniature diaphragm seals

#### Overview

Miniature diaphragm seals

The miniature diaphragm seals are available for the following SITRANS P pressure transmitter series for pressure:

- P300, DS III with HART, DS III with PROFIBUS PA and DS III with FOUNDATION Fieldbus

Suitable for high pressures, contaminated, fibrous and viscous media in the chemical, paper, food and drink industries.

#### Design

- Flush-mounted diaphragm
- No dead spaces
- Fixed threaded stems

#### Dimensional drawings

Miniature diaphragm seal, dimensions in mm (inch)

d<sub>M</sub>: Effective diaphragm diameter

#### Technical specifications

##### Miniature diaphragm seals

Measuring span when

- G1B and 1"-NPT > 6 bar (> 87 psi)
- G1½B and 1½"-NPT > 2 bar (> 29 psi)
- G2B and 2"-NPT > 600 mbar (> 8.7 psi)

Filling liquid

Silicone oil M5 or food oil (FDA listed)

Material

- Main body

Stainl. steel mat No. 1.4404/ 316L or Hastelloy C276, mat No. 2.4819

- Diaphragm

Stainl. steel mat No. 1.4404 / 316L or Hastelloy C276, mat. No. 2.4819

Maximum pressure

100% of nominal pressure of pressure transmitter, up to maximum of PN 400 (5802 psi) (depending on the seal used)

Temperature of use

Same as pressure transmitter

Temperature range of medium

Same as pressure transmitter

Max. recommended temperature of medium

150 °C (302 °F)

Weight

- G1B and 1"-NPT
- G1½B and 1½"-NPT
- G2B and 2"-NPT

Approx. 0.3 kg (approx. 0.66 lb)

Approx. 0.5 kg (approx. 1.10 lb)

Approx. 0.8 kg (approx. 1.76 lb)

##### Certificate and approvals

Classification according to pressure equipment directive (DGRL 2014/68/EU)

For gases of fluid group 1 and liquids of fluid group 1; complies with requirements of article 4, paragraph 3 (sound engineering practice)

## Pressure Measurement

Remote seals for pressure transmitters  
SITRANS P300, P DS III, P410, P500

### Inline seals in sandwich design

1

#### Overview

Inline seals for flange-mounting

The inline seal is completely integrated in the process line. It is particularly suitable for flowing and highly viscous media.

The inline seal consists of a cylindrical jacket into which a thin-walled pipe is welded. It is clamped directly between two flanges in the pipeline.

#### Design

- Inline seals for flange-mounting (flange design) to EN/ASME for SITRANS P pressure transmitters
  - For pressure: P300, DS III with HART, DS III with PROFIBUS PA and DS III with FOUNDATION Fieldbus
  - For differential pressure and flow: DS III with HART, DS III with PROFIBUS PA, DS III with FOUNDATION Fieldbus and P500
- Sealing surface to EN 1092-1 or ASME B16.5
- Connection to the transmitter directly or by means of a flexible capillary (max. 10 m long)
- See Technical data for details of materials used for the wetted parts
- Material used for the capillary, the guard sleeve, the seal's main body and the measuring cell: Stainless steel, mat.-No. 1.4571
- Filling liquid: Silicone oil, high-temperature oil, halocarbon oil, food oil (FDA listed) or glycerin/water (not suitable for uses in low-pressure range)

#### Function

The measured pressure is transferred from the diaphragm to the filling liquid and passes either directly or through the capillary to the measuring chamber of the pressure transmitter. The interior of the diaphragm seal and of the capillary, as well as the measuring chamber of the pressure transmitter, are filled gas-free by the filling liquid.

#### Note:

When operating in the low-pressure range, also during commissioning, it is recommended to use a vacuum-proof remote seal (see Selection and Ordering data).

DN mm	PN bar	D mm	Mb mm	L mm	H mm
25	6 ... 100	63	28.5	60	78.5
40	6 ... 100	85	43	60	89.5
50	6 ... 100	95	54.5	60	92.5
80	6 ... 100	130	82.5	60	112
100	6 ... 100	150	107	60	122

#### Connection to ASME B16.5

DN (inch)	Class	D mm (inch)	Mb mm (inch)	L mm (inch)	H mm (inch)
1	150 ... 2500	63 (2.48)	28.5 (1.12)	60 (2.36)	78.5 (3.1)
1½	150 ... 2500	85 (3.35)	43 (1.69)	60 (2.36)	86 (3.4)
2	150 ... 2500	95 (3.74)	54.5 (2.15)	60 (2.36)	94.5 (3.72)
3	150 ... 2500	130 (5.12)	82.5 (3.25)	60 (2.36)	112 (4.4)
4	150 ... 2500	150 (5.9)	107 (4.21)	60 (2.36)	122 (4.8)

### Overview

Quick-release inline seals, to DIN 11851 with threaded socket

Quick-release inline seals, with clamp connection

Quick-release inline seals for pressure are available for the following SITRANS P pressure transmitter series:

- P300
- DS III with HART
- DS III with PROFIBUS PA
- DS III with FOUNDATION Fieldbus

### Application

The quick-release inline seal is a special design for flowing and high-viscosity media. Because it is completely integrated in the process line, there are no turbulences, dead spaces or other obstacles in the flow direction. The medium flows almost unhindered through the inline seal and causes self-cleaning of the sample chamber. The inline seal is also piggybackable.

### Design

The quick-release clamp is available in two versions:

- DIN 11851 with threaded socket
- Clamp connection

The inline seal is connected to the pressure transmitter either directly or by way of a capillary.

### Function

The measured pressure is transferred from the diaphragm, mounted on the inner circumference of the inline seal, to the filling liquid and then passes through the capillary to the measuring chamber of the pressure transmitter. The interior of the inline seal and of the capillary, as well as the measuring chamber of the pressure transmitter, are filled gas-free by the filling liquid.

#### Note:

When operating in the low-pressure range, also during commissioning, it is recommended to use a vacuum-proof pressure transmitter (see Selection and Ordering data).

### Technical specifications

Quick-release inline seals for gauge pressure		
Connection	Nominal diameter	Nominal pressure
• To DIN 11851 with threaded socket	DN 25	PN 40
	DN 40	PN 40
	DN 50	PN 25
	DN 65	PN 25

Quick-release inline seal, dimensions in mm (inch)

### Overview

Flushing ring

Flushing rings are required for flange-mounted and sandwich-type remote seals (Article No. 7MF4900 ... 7MF4923) if the danger exists that the process conditions and the geometry of the connection could cause the medium to form deposits or blockages.

The flushing ring is clamped between the process flange and the remote seal.

Deposits can be flushed away from the diaphragm through the holes in the side, or the pressure volume can be vented. Different nominal diameters and forms permit adaptation to the respective process flange.

#### Process connection

For flanges to EN and ASME:  
DN 50, 80, 100, 125; PN 16 ... 100 or  
DN 2 inch, 3 inch, 4 inch, 5 inch; Class 150 ... 600

#### Standard design

Material: CrNi-Stahl, mat. No. 1.4404/316L  
Sealing faces and flushing holes: See Selection and Ordering data

### Technical specifications

#### Flushing ring for remote seals of sandwich and flange design

Nominal diameter	Nominal pressure
• DN 50	PN 16 ... PN 100
• DN 80	PN 16 ... PN 100
• DN 100	PN 16 ... PN 100
• DN 125	PN 16 ... PN 100
• 2 inch	Class 150 ... class 600
• 3 inch	Class 150 ... class 600
• 4 inch	Class 150 ... class 600
• 5 inch	Class 150 ... class 600
Sealing surface	
• To EN 1092-1	Form B1

## Pressure Measurement

Remote seals for pressure transmitters  
SITRANS P300, P DS III, P410, P500

### Measuring setups

1

#### Overview

This section shows examples of typical measuring setups for using SITRANS P pressure transmitters with and without remote seals.

Equations for calculating lower range value and upper range value are provided for each example.

Questionnaires are included to help you select the right combination of remote seal and pressure transmitter.

#### Installation

Remote seals of sandwich design are fitted between the connection flange of the measuring point and a dummy flange. Remote seals of flange design are fitted directly on the connection flange of the measuring point. The respective pressure rating of the dummy flange or the flanged remote seal must be observed.

The pressure transmitter should be installed below the connection flange (and below the lower connection flange in the case of differential pressure transmitters). This arrangement must be used in the low-pressure range.

When measuring at pressures above atmospheric, the pressure transmitter can also be installed above the connection flange.

The capillaries between the remote seal and the pressure transmitter should be as short as possible to obtain a good transmission response.

#### Offset of measuring range

If there is a difference in height between the two connection flanges when measuring with two remote seals, an additional differential pressure will result from the oil filling of the remote seal capillaries. This results in a measuring range offset which has to be taken into account when you set the pressure transmitter.

An offset in the measuring range also occurs when combining a remote seal with a transmitter if the remote seal is not installed at the same height as the transmitter.

#### Pressure transmitter output

If the level, separation layer or density increase in closed vessels, the differential pressure and hence the output signal of the pressure transmitter also increase.

For an inverted relationship between the differential pressure and the output signal, the lower range value and upper range value of the SITRANS P must be interchanged.

With open vessels, a rising pressure is usually assigned to an increasing level, separation layer or density.

#### Influence of ambient temperature

Temperature differences between the individual capillaries and between the individual remote seals should be avoided.

Temperature variations in the area of the measuring setup cause a change in volume of the filling liquid and hence measuring errors.

#### Notes

- For the separation layer measurement, the separation layer has to be positioned between the two spigots. Also you must make sure that the level in the container is always above the top spigot.
- When measuring density, make sure that the level of the medium remains constant. The level should be above the top spigot.

#### Possible combinations of pressure transmitters and remote seals

Type of installation	Pressure transmitters	Remote seals

## Measuring setups with remote seals

### Types of installation for level measurements (closed vessels)

Installation type E

Installation type E

Lower range value:  $p_{MA} = \rho_{FL} \cdot g \cdot H_U - \rho_{Oil} \cdot g \cdot H_V$

Upper range value:  $p_{ME} = \rho_{FL} \cdot g \cdot H_O - \rho_{Oil} \cdot g \cdot H_V$

**Legend**

- $p_{MA}$  Lower range value to be set
- $p_{ME}$  Upper range value to be set
- $\rho_{FL}$  Density of medium in vessel
- $\rho_{Oil}$  Density of filling oil in the capillary to the remote seal
- $g$  Local acceleration due to gravity
- $H_U$  Lower range value
- $H_O$  Upper range value
- $H_V$  Distance between the measuring points (spigots)

Installation type G

Pressure transmitter for differential pressure above the upper measuring point, no vacuum

$H_2 \leq 7 \text{ m (23 ft)}$ , with halocarbon oil as filling liquid only  $H_1 \leq 4 \text{ m (13.1 ft)}$

Installation type H

below the lower measuring point

Installation type for vacuum applications

Installation type J

between the measuring points, no vacuum

$H_2 \leq 7 \text{ m (23 ft)}$ , with halocarbon oil as filling liquid only  $H_2 \leq 4 \text{ m (13.1 ft)}$

Installation type G, H and J

Lower range value:  
 $p_{MA} = \rho_{FL} \cdot g \cdot H_U - \rho_{Oil} \cdot g \cdot H_V$

Upper range value:  
 $p_{ME} = \rho_{FL} \cdot g \cdot H_O - \rho_{Oil} \cdot g \cdot H_V$

**Legend**

- $p_{MA}$  Lower range value to be set
- $p_{ME}$  Upper range value to be set
- $\rho_{FL}$  Density of medium in vessel
- $\rho_{Oil}$  Density of filling oil in the capillary to the remote seal
- $g$  Local acceleration due to gravity
- $H_U$  Lower range value
- $H_O$  Upper range value
- $H_V$  Distance between the measuring points (spigots)

## Overview

### Notes

- For the separation layer measurement, the separation layer has to be positioned between the two spigots.

Also you must make sure that the level in the container is always above the top spigot.

- When measuring density, make sure that the level of the medium remains constant. The level should be above the top spigot

### Measuring setups without remote seals

#### Measuring setups for closed containers

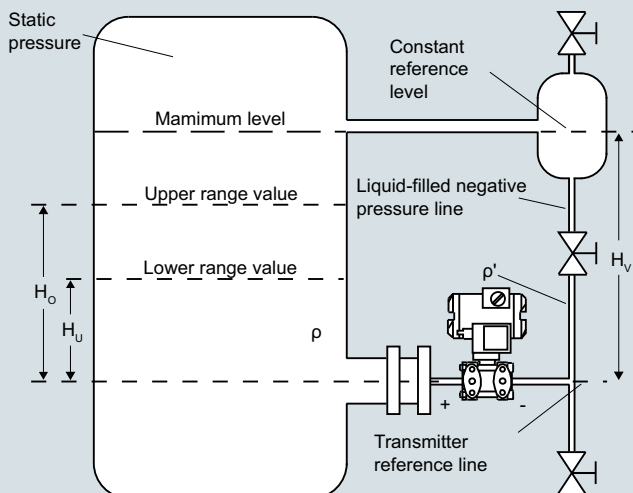

#### Level measurement, Version 1

$$\text{Lower range value: } \Delta p_{MA} = \rho \cdot g \cdot H_U$$

$$\text{Upper range value: } \Delta p_{ME} = \rho \cdot g \cdot H_O$$

#### Legend

$\Delta p_{MA}$	Lower range value to be set
$\Delta p_{ME}$	Upper range value to be set
$\rho$	Density of medium in vessel
$g$	Local acceleration due to gravity
$H_U$	Lower range value
$H_O$	Upper range value

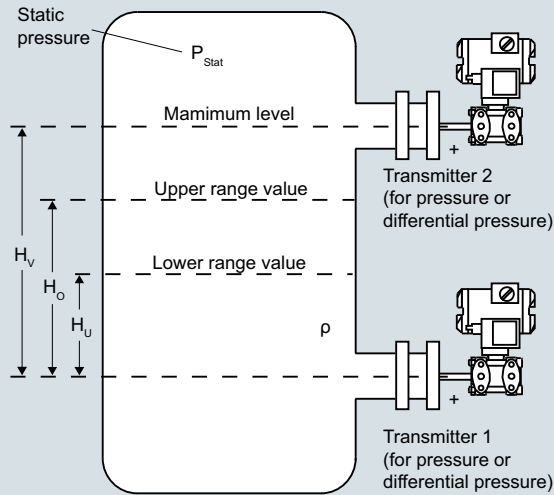

#### Level measurement, Version 2

$$\text{Lower range value: } \Delta p_{MA} = g \cdot (H_U \cdot \rho - H_V \cdot \rho')$$

$$\text{Upper range value: } \Delta p_{ME} = g \cdot (H_O \cdot \rho - H_V \cdot \rho')$$

#### Legend

$\Delta p_{MA}$	Lower range value to be set
$\Delta p_{ME}$	Upper range value to be set
$\rho$	Density of medium in vessel
$\rho'$	Density of liquid in the negative pressure line (corresponding to the temperature existing there)
$g$	Local acceleration due to gravity
$H_U$	Lower range value
$H_O$	Upper range value
$H_V$	Distance between the measuring points (spigots)

**Level measurement, Version 3**

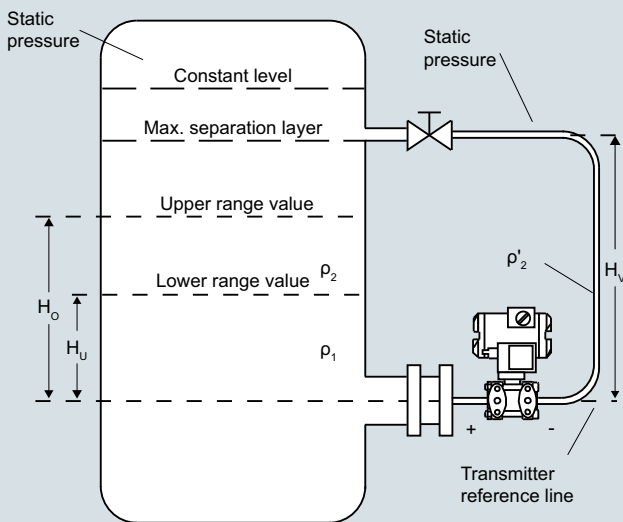

Lower range value:  $\Delta p_{MA} = \underbrace{P_{Stat} + \rho \cdot g \cdot H_U}_{\text{Transmitter 1}} - \underbrace{P_{Stat}}_{\text{Transmitter 2}}$

Upper range value:  $\Delta p_{ME} = \underbrace{P_{Stat} + \rho \cdot g \cdot H_O}_{\text{Transmitter 1}} - \underbrace{P_{Stat}}_{\text{Transmitter 2}}$

**Legend**

- $\Delta p_{MA}$  Lower range value to be set
- $\Delta p_{ME}$  Upper range value to be set
- $\rho$  Density of medium in vessel
- $g$  Local acceleration due to gravity
- $H_U$  Lower range value
- $H_O$  Upper range value
- $H_V$  Distance between the measuring points (spigots)

The pressure measuring range ( $\pm$  level) will be calculated by subtraction of measuring range of transmitter 1 minus measuring range of transmitter 2 in the process control system.

**Separation layer measurement**

Lower range value:  $\Delta p_{MA} = g \cdot (H_U \cdot \rho_1 + (H_O - H_U) \cdot \rho_2 - H_V \cdot \rho'_2)$

Upper range value:  $\Delta p_{ME} = g \cdot (H_O \cdot \rho_1 - H_V \cdot \rho'_2)$

**Legend**

- $\Delta p_{MA}$  Lower range value to be set
- $\Delta p_{ME}$  Upper range value to be set
- $\rho_1$  Density of heavier liquid with separation layer in vessel
- $\rho_2$  Density of lighter liquid with separation layer
- $\rho'_2$  Density of liquid in the negative pressure line (corresponding to the temperature existing there)
- $g$  Local acceleration due to gravity
- $H_U$  Lower range value
- $H_O$  Upper range value
- $H_V$  Distance between the measuring points (spigots)

# Pressure Measurement

## Fittings

1

### Technical description

#### Overview

All shut-off fittings can be secured onto walls, racks (72 mm grid) and vertical and horizontal pipes.

This offers the advantage when assembling a plant that the shut-off fittings can be secured first and the lines for the medium and differential pressure connected to them. It is then possible to check all connections for leaks and to blow out or flush the pipes in order to remove dirt (welding residues, shavings etc.).

The measuring instruments can be screwed onto the shut-off fittings right at the end when all piping has been completed.

If an instrument has to be removed for maintenance, the fittings and pipes remain as they are. It is only necessary to close the valves – the instrument can then be removed, and refitted following maintenance.

#### **Classification according to pressure equipment directive (PED 2014/68/EU):**

For gases of fluid group 1 and liquids of fluid group 1; compliance with requirements of article 4, paragraph 3 (sound engineering practice).

#### **Norm IEC 61518/DIN EN 61518**

The flange connection between transmitter and valve manifold was modified in the new standard IEC 61518/DIN EN 61518. The only connection thread approved for use in the process flanges of the pressure transmitter is  $7/16$ -20 UNF.

The valve manifolds for M12 screws, including the accessory sets, have therefore been deleted.

#### **Inspection certificate to EN 10204-3.**

If an inspection certificate according to EN 10204-3.1 is required for ordering valve manifolds or shut-off fittings, be aware that one certificate is sufficient for each valve type ordered. This means that you will only be charged for one certificate in the cost calculations.

#### **Minimum/maximum operating temperatures**

The maximum operating temperatures are given for each valve or valve manifold.

The minimum operating temperatures depend on the material used for the valves or valve manifold.

They are as follows:

Material	Minimum operating temperature
Brass	-10 °C (-14 °F) according to EN 12516-4
Steel	-10 °C (-14 °F) according to AD200-W10
Stainless steel	-40 °C (-40 °F)

## Overview

Transmitter for pressure with double shut-off valve 7MF9401-...

The shut-off valves for pressure gauges are used to shut off the line of the measured medium when dealing with aggressive and non-aggressive gases, vapors and liquids.

## Design

A water trap must be connected upstream of the shut-off valve in the case of temperatures of the medium above 120 °C. The shut-off valves form B have a shaft with which they can be secured on an instrument bracket. An adapter is therefore not required to secure these valves. The vent/test connection can be shut off separately with the double shut-off valves DN 5. This permits checking of the zero on the pressure gauge. In addition, the characteristic of the pressure gauge can be checked using an external pressure source. The valve packing material is PTFE.

## Overview

The 2-spindle, 3-spindle and 5-spindle valve manifolds 7MF9411-5.. are for pressure transmitters for absolute pressure or differential pressure.

The valve manifolds are used to shut off the differential pressure lines and to check the pressure transmitter zero.

The 2-spindle and the 5-spindle valve manifold enable in addition venting on the transmitter side and checking of the pressure transmitter characteristic.

## Benefits

- Max. working pressure 420 bar (6092 psi)
- Each available in version for oxygen

## Application

The spindle valve manifolds DN 5 are designed for liquids and gases.

Each is available in a version for oxygen on request.

## Design

All versions of the valve manifolds have a process connection 1/2-14 NPT. The connection for the pressure transmitter is always designed as a flange connection to IEC 61518/DIN EN 61518, form B. The 2-spindle and the 5-spindle valve manifold have in addition a vent and test connection 1/4-18 NPT.

The valves have an external spindle thread.

## Materials used

Component	Material	Mat. No.
Enclosure	X 2 CrNiMo 17 13 2	1.4404/316L
Cones	X 6 CrNiMoTi 17 12 2	1.4571/316Ti

Head parts	X 5 CrNiMo 18 10	1.4401/316
Packings	PTFE	-

## Function

Functions of all valve manifolds:

- Shutting off the differential pressure lines
- Checking the pressure transmitter zero

Additional functions of the 2-spindle and 5-spindle valve manifolds through the vent and test connection:

- Venting on the transmitter side
- Checking the pressure transmitter characteristic

## Pressure Measurement

### Fittings

### Shut-off valves for differential pressure transmitters

## Multiway cocks PN 100

### Overview

Multiway cock PN 100 (1450 psi) (7MF9004-1P.) for differential pressure transmitters

The multiway cock PN 100 (1450 psi) can be flanged to pressure transmitters for differential pressure.

### Benefits

- Version available for aggressive liquids, gases and vapors
- Robust design
- Oil-free and grease-free version possible
- One-hand operation

### Application

The PN 100 (1450 psi) multiway cock is available in versions for aggressive and non-aggressive liquids, gases and vapors.

### Design

The multiway cock can be flanged with four screws to pressure transmitters for differential pressure.

The PN 100 (1450 psi) has 2 process connections and one blow-out connection. A steel version of the multiway cock is available for non-aggressive media, and a stainless steel version for aggressive media. The enclosure is forged in one piece. The switching lever is removable.

Sealing can be improved during operation.

**Note:** An accessory set is always required for flanging of the multiway cock to a differential pressure transmitter.

### Function

- Shutting off the differential pressure lines
- Blowing out the differential pressure lines
- Testing the pressure transmitter zero

Cock positions; the symbols are printed on the cock

### Shut-off valves for differential pressure transmitters

#### 3-way and 5-way valve manifolds DN 5

1

#### Overview

The three-spindle and five-spindle valve manifolds DN 5 (7MF9410-1../-3..) are used to shut off the differential pressure lines and to check the transmitter zero.

In addition, the five-way valve manifold permits blowing out of the differential pressure lines.

#### Benefits

- Available for aggressive and non-aggressive liquids and gases
- Max. working pressure 420 bar (6092 psi), with version for oxygen max. 100 bar (1450 psi)

#### Application

The 3-way and 5-way valve manifolds are available in versions for aggressive and non-aggressive liquids and gases.

Mounting plates are available for wall mounting, for securing to mounting racks or for pipe mounting.

#### Design

The process connection of the 3-way and 5-way valve manifolds is a pipe union with ferrule.

Both valve manifolds have 2 flange connections for connecting a pressure transmitter.

In addition, the five-way valve manifold has 2 blow-out connections.

Depending on the version the valve manifold has either 3 or 5 valves, each with an internal spindle thread.

### Schematics

3-way and 5-way valve manifolds, connections

**Overview**

The 3-way valve manifold DN 8 (7MF9416-1../-2..) is for pressure transmitters for differential pressure. It is used to shut off and blow out differential pressure lines and to test the pressure transmitter zero.

In the designs with a test connection, a test device can be connected to test the pressure transmitter characteristic.

**Benefits**

- For aggressive and non-aggressive liquids and gases
- The maximum working pressure is 420 bar (6092 psi).

**Application**

The 3-way valve manifold is available in versions for aggressive and non-aggressive liquids and gases.

Mounting plates are available for wall mounting, for securing to mounting racks or for pipe mounting.

**Design**

For the process connection on the version for non-aggressive media it is possible to choose between a pipe union with ferrule and welding pins.

The version for aggressive media always has a pipe union with ferrule.

Both versions are available optionally with a test connection M20x1.5.

The valves have an internal spindle thread.

**Materials used**

Component	For non-aggressive liquids and gases		For aggressive liquids and gases

Valve seats	X 6 CrNiMoTi 17 12 2	1.4571/316Ti		
Packings	PTFE	-	PTFE	-

**Function**

The 3-way valve manifold DN 8 performs two functions as standard:

- Shutting off the differential pressure lines
- Checking the pressure transmitter zero

All versions are also available with a test connection, to which a test device for checking the pressure transmitter characteristic can be connected.

Fittings

Shut-off valves for differential pressure transmitters

### Valve manifold combination DN 5/DN 8

1

#### Overview

The valve manifold combination DN 5/DN 8 (7MF9416-6..) is for pressure transmitters for differential pressure.

The combination is used to shut off and blow out differential pressure lines and to test the pressure transmitter zero.

In the designs with a test connection, a test device can be connected to test the pressure transmitter characteristic.

#### Benefits

- Max. working pressure 420 bar (6092 psi)

#### Application

The valve manifold combination DN 5/DN 8 is designed for vapors.

#### Design

The valve manifold combination DN 5/DN 8 has a process connection with welding pins.

The connection for the pressure transmitter is designed as a flange connection, while the blow-out connection is designed as a pipe union with ferrule.

The manifold valves have an internal spindle thread, while the blow-out valves have an external spindle thread.

The optional test connections are M20x1.5.

#### Materials used

Component	Valve manifold DN 5		Blow-out valves DN 8	
	Material	Mat. No.	Material	Mat. No.
Enclosure	P250GH	1.0460	16 Mo 3	1.5415
Head parts	C 35	1.0501	21 CrMo V57	1.7709
Spindles	X 12 CrMoS 17	1.4104	X 20 Cr 13	1.4021
Cones	X 35 CrMo 17	1.4122	X 35 CrMo 17 hardened and tem- pered	1.4122
Valve seats	X 6 CrNiMoTi	1.4571/316Ti	X 20 Cr 13	1.4021
Packings	PTFE	-	Pure graphite	-
Welding pins	-	-	16 Mo 3	1.5415

#### Function

- Shutting off the differential pressure lines
- Blowing out the differential pressure lines
- Checking the pressure transmitter zero

As an option it is possible to order a version with a test connection, to which a test device for checking the transmitter characteristic can be connected.

#### Valve manifold combination DN 8

1

#### Overview

The valve manifold combination DN 8 (7MF9416-4..) is for pressure transmitters for differential pressure.

It is used to shut off and blow out the differential pressure lines and to check the pressure transmitter zero.

In the designs with a test connection, a test device can be connected to check the pressure transmitter characteristic.

#### Benefits

- Max. working pressure 420 bar (6092 psi)

#### Application

The valve manifold combination DN 8 is designed for vapors.

#### Design

The valve manifold combination DN 8 has a process connection with welding pins.

The connection for the pressure transmitter is designed as a flange connection, while the blow-out connection is designed as a pipe union with ferrule.

The manifold valves have an internal spindle thread, while the blow-out valves have an external spindle thread.

The optional test connection is M20x1.5.

The valve manifold combination DN 8 is supplied with a mounting plate.

#### Materials used

Component	Valve manifold		Blow-out valves	
	Material	Mat. No.	Material	Mat. No.

### Shut-off valves for differential pressure transmitters

#### 2-, 3- and 5-spindle valve manifolds for protective box

1

#### Overview

The 2-spindle, 3-spindle and 5-spindle valve manifolds (7MF9412-1..) are used to shut off the differential pressure lines and to check the transmitter zero point.

The 2-spindle and the 5-spindle valve manifolds also enable venting on the transmitter side and checking of the pressure transmitter characteristic.

These valve manifolds are designed for installation in protective boxes. However, using a mounting bracket, they can also be used for wall, frame or tube mounting.

SITRANS P DS III and SITRANS P500 transmitters can be operated and read from the front if these valve manifolds are used..

#### Application

The valve manifolds DN 5 are designed for liquids and vapors and for installing in protective boxes.

Each is available in a version for oxygen on request

#### Design

All versions of the spindle manifolds have a process connection 1/2-14 NPT.

The connection for the pressure transmitter is always designed as a flange connection to IEC 61518/DIN EN 61518, Form A.

The 2-spindle and the 5-spindle valve manifold have in addition a vent and test connection 1/4-18 NPT.

The valves have an external spindle thread.

#### Materials used

Components	Material	Mat. No.
Enclosure	X 2 CrNiMo 17 13 2	1.4404/316L
Cones	X 6 CrNiMoTi 17 12 2	1.4571/316Ti
Spindles	X 2 CrNiMo 18 10	1.4404/316L
Head parts	X 5 CrNiMo 18 10	1.4401/316
Packings	PTFE	-

#### Functions

Functions of all valve manifolds:

- Shutting off the differential pressure lines
- Checking the pressure transmitter zero

Additional functions of the 2-spindle and 5-spindle valve manifolds through the vent and test connection:

- Venting on the transmitter side
- Checking the pressure transmitter characteristic

## 3- and 5-spindle valve manifolds for vertical angular differential pressure lines

### Overview

These 3-spindle and 5-spindle valve manifolds 7MF9413-1.. were developed specially for vertical differential pressure lines.

The valve manifolds are used to shut off the differential pressure lines and to check the pressure transmitter zero.

The 5-spindle valve manifold permits venting on the transmitter side and checking of the pressure transmitter characteristic.

### Benefits

- For vertical differential pressure lines
- Max. operating pressure 420 bar (6092 psi)
- Transmitters of the DS series can be operated and read from the front.

### Application

The 3-spindle and 5-spindle valve manifolds for vertical differential pressure lines are for liquids and gases. The valve manifolds are flanged on the pressure transmitter.

### Design

All versions of the spindle valve manifolds have a process connection 1/2-14 NPT.

The connection for the pressure transmitter is always designed as a flange connection to IEC 61518/DIN EN 61518, form B.

The 2-spindle and the 5-spindle valve manifold have in addition a vent and test connection 1/4-18 NPT.

Materials used:

Component	Material	Mat. No.
Enclosure	X 2 CrNiMo 17 13 2	1.4404/316L
Cones	X 6 CrNiMoTi 17 12 2	1.4571/316Ti
Spindles	X 2 CrNiMo 18 10	1.4404/316L
Head parts	X 5 CrNiMo 18 10	1.4401/316
Packings	PTFE	-

### Function

Functions of all valve manifolds:

- Shutting off the differential pressure lines
- Checking the pressure transmitter zero

Additional functions of the 2-spindle and 5-spindle valve manifolds through the vent and test connection:

- Venting on the transmitter side
- Checking the pressure transmitter characteristic

## Overview

The low-pressure multiway cock 7MF9004-4CA/-4DA can be flanged to pressure transmitters for differential pressure.

## Benefits

- Robust design
- For liquids and gases
- One-hand operation

## Design

The multiway cock has 2 process connections and 2 test connections, which are available in 2 versions (with sealing screws  $G^{3/8}$  or quick-release couplings). The enclosure is made of hot-pressed brass CuZn39Pb3, CW 614N. Test connections with sealing screws or with self-sealing quick-release couplings.

**Note:** An accessory set is always required for flanging of the multiway cock to a differential pressure transmitter.

## Function

- Shutting off the differential pressure lines
- Testing the pressure transmitter zero
- Testing the pressure transmitter characteristic

#### Overview

Water traps protect pressure gauges and shut-off fittings from heating up (e.g. by steam) by the water column produced by the water trap.

The max. working temperature is 120 °C (248 °F) at 100 bar (1450 psi), 300 °C (572 °F) at 80 bar (1160 psi) or 400 °C (752 °F) at 63 bar (914 psi). If the temperature of the measured medium is higher, a sufficiently long line has to be connected up-stream of the trap to enable heat dissipation.

#### Design

The water traps are available in U shape (type B) or circular shape (type D) to DIN 16282. They have a weld-on end  $\varnothing$  20 mm  $\times$  2.6 mm on the measurement side. The connection on the device side is a clamping sleeve  $G\frac{1}{2}$  to DIN 16283.

The water traps are made of steel (P250GH) or stainless steel (X 6 CrNiMoTi 17 12 2)

Water traps are designed as standard for max. operating temperature 120 °C (248 °F) at max. operating pressure 100 bar (1450 psi) (300 °C (572 °F) at 80 bar (1160 psi), 400 °C (752 °F) at 63 bar (914 psi)). Water traps for higher operating pressures and temperatures are available on request.

### Pressure surge reducers

#### Overview

The pressure surge reducer protects the pressure gauge against damage, premature wear and tear and inaccurate/fluctuating indications.

#### Application

The pressure reducer is used when pulsations occur in the measured medium (e.g. in slow-running vapor engines, piston pumps and compressors), or if drastic fluctuations are likely to occur in the measured medium (e.g. in hydraulic presses and tensile testing machines).

#### Design

- Enclosure made of brass or stainless steel (mat. no. 1.4571)
- Adjustable nozzle
- Sleeve for connection to the measuring instrument
- Pin for connection to supply lead

#### Accessories

Factory certificate according to EN 10204-2.2

Material inspection certificate EN 10204-3.1

**7MF9000-8AB**  
**7MF9000-8AD**

1) See Figure "Permissible working pressure as a function of the permissible working temperature"

### Overview

The compensation vessels prevent the level difference which occurs with pressure changes in the pressure lines and which falsifies the measurement.

According to DIN 19211, the temperature in the compensation vessel must be assumed to be 50 K less than the steam temperature in the pipe when calculating the wall thicknesses. This is because the temperature in the compensation vessel during operation can only rise up to the saturated steam temperature.

A material inspection certificate A to EN 10204-3.1 is available for the materials from which the compensation vessels are made.

### Characteristic curves

Permissible operating pressure as a function of the permissible operating temperature

## Connection parts

### Overview

Connection parts are available in the following versions:

- Threaded flange pair G $\frac{1}{2}$  with stainless steel gasket
- Nipple G $\frac{1}{2}$  form V to DIN 19207
- Union nut G $\frac{1}{2}$  made of C 35 to DIN 16284
- Gasket B $\frac{1}{2}$  (grooved) to DIN 19207

All connection parts are also available grease-free for oxygen.

### Selection and Ordering data

Article No.

#### Threaded flange pair G $\frac{1}{2}$

- with stainless steel gasket
- grease-free for oxygen, with stainless steel gasket

Scope of delivery:

2x threaded flanges G $\frac{1}{2}$  to DIN 19207; material: P250GH (mat. No. 1.0460)

4x hexagon screws M10x45 to DIN EN 24014; Material: C35E (mat. No. 1.1181)

4x hexagon screws M10x50 to DIN EN 24032

1x gasket G $\frac{1}{2}$  (7MF9007-6BA) grooved, to DIN 19207;

Material: X 6 CrNiMoTi 17 12 2 (mat. No. 1.4571/316Ti)

Only for 7MF9007-4CA!

1x gasket G $\frac{1}{2}$  (7MF9007-6CA), grease-free for oxygen, grooved, to DIN 19207;

Material: X 6 CrNiMoTi 17 12 2 (mat. No. 1.4571/316Ti)

Only for 7MF9007-4DA!

**7MF9007-4CA****7MF9007-4DA**

#### Nipple G $\frac{1}{2}$

to DIN 19207

- Material: 16 Mo 3 (mat. No. 1.5415)

- grease-free for oxygen, Material: X 6 CrNiMoTi 17 12 2 (mat. No. 1.4571/316Ti)

**7MF9007-4KA****7MF9007-4LA**

#### Union nut G $\frac{1}{2}$

to DIN 16284

- Material: C35E (mat. No. 1.1181)

- grease-free for oxygen, Material: X 6 CrNiMoTi 17 12 2 (mat. No. 1.4571/316Ti)

**7MF9007-4MA****7MF9007-4NA**

#### Gasket G $\frac{1}{2}$

to DIN 19207, grooved

- Material: X 6 CrNiMoTi 17 12 2 (mat. No. 1.4571/316Ti)

**7MF9007-6BA**

- grease-free for oxygen, Material: X 6 CrNiMoTi 17 12 2 (mat. No. 1.4571/316Ti)

**7MF9007-6CA**

### Dimensional drawings

Threaded flange 7MF9007-4CA/-4DA, dimensions in mm

Nipple G $\frac{1}{2}$  7MF9007-4KA/-4LA, dimensions in mm

Union nut G $\frac{1}{2}$  7MF9007-4MA/-4NA, dimensions in mm

Gasket 7MF9007-6BA/-6CA, dimensions in mm

### Supplied product documentation on DVD and safety instructions

The scope of delivery of the Siemens products for process instrumentation includes a multilingual instruction sheet with **safety instructions** as well as a uniform **mini DVD – Process Instrumentation and Weighing Systems**.

This DVD contains the most important manuals and certificates for the Siemens process instrumentation and weighing technology portfolio. The delivery may also contain product-specific or order-specific printed materials. For additional information, refer to the Annex on page 10/3.

#### Overview

The temperature sensors of the SITRANS TS product family are used for measuring temperatures in industrial plants.

Siemens offers the following temperature sensors:

- SITRANS TS100
  - General use
  - Compact design with connection cable
- SITRANS TS200
  - General use
  - Compact design with plug/wire ends
- SITRANS TS300
  - Use in food, pharmaceuticals and biotechnology
  - Modular or clamp-on design
- SITRANS TS500
  - General use
  - Modular design with connection head and thermowell

#### Benefits

The modular design makes it possible to customize the temperature sensor for most applications, while still being able to use many standardized individual components.

#### Application

Depending on the specification, sensors can be combined with different connection heads, extensions (neck tube) and process connections. As a result, the sensors can be used in a large number of technical applications, e.g. in the following industries:

- Chemical industry
- Petrochemical industry
- Power engineering
- Basic material industry
- Pharmaceutical industry
- Biotechnology
- Food manufacturing

#### SITRANS TS100 and SITRANS TS200

Temperature sensors of the SITRANS TS100 series are cable thermometers with different electrical connection options (e.g. plug, soldered connection, connection cable). The SITRANS TS200 series of compact thermometers is characterized by a compact design. Both temperature sensor series are suitable for:

- Measurements of temperatures of solids, where additional thermowells are not required for replacements done during ongoing operations, e.g. bearing bracket temperature.
- Measurements which are particularly critical with regard to response times. The advantages offered by an additional thermowell are intentionally omitted.
- Measuring points which must be easy to convert or relocate.
- Surface temperature measurements: The temperature sensor is used in conjunction with a surface connection piece.
- Cost-effective transport: the mineral-insulated design of the sensors allows for economical transport even over large lengths. As of a length of 0.8 m, the sensors can be delivered rolled or bent.

#### SITRANS TS300 temperature sensors for food, pharmaceuticals and biotechnology

The temperature sensors of the SITRANS TS300 series are thermometers especially designed for measurements with high hygienic demands, such as in the food, pharmaceutical and biotechnology industries. The basic versions are:

- Thermometers in modular design with replaceable measuring insert and process connections usual in the industry
- Clamp-on thermometers for measurement of the tube surface temperature without interrupting the process

#### SITRANS TS500 temperature sensors as a module system

Due to their modular design, temperature sensors of the SITRANS TS500 series are well suited to a large number of applications.

The replaceable measuring insert makes it possible to conduct maintenance work even during ongoing operations. These devices are used particularly frequently in pipes and tanks in the following industries:

- Power stations
- Chemical industry
- Petrochemical industry
- General process engineering
- Water, waste water

## Temperature sensors

### Technical description

#### Design

##### SITRANS TS100 7MC71xx

The following figure shows the available versions of SITRANS TS100 temperature sensors.

SITRANS TS100, mineral-insulated (MIC)

Degree of protection:

- Plug-in connection type: see table
- Transition sensor/cable IP68 (2h/2.5 m [98.5 inch]) for PVC and silicone cable, otherwise IP66

Version	Degree of protection
Flying leads	IP00
LEMO coupling 1S	IP50
M12 device plugs	IP54
Thermocouple coupling	IP20

#### SITRANS TS100

The following types of process connections can be implemented:

- Compression fitting
- Spring-loaded compression fitting
- Soldering nipple
- Direct soldering/welding in

##### SITRANS TS200 7MC72xx

The following figure shows the available versions of SITRANS TS200 temperature sensors.

SITRANS TS200, dimensions in mm (inch)

The following types of process connections can be implemented:

- Compression fitting
- Spring-loaded compression fitting
- Soldering nipple
- Direct soldering/welding in

#### SITRANS TS300

##### SITRANS TS300 modular design

The resistance thermometer is intended for installation in vessels and pipes for hygienic requirements.

- Modular design consisting of thermowell, measuring insert, connection head and optional transmitter for replacement during operation.
- Hygiene version, design according to recommendations of the EHEDG
- Transmitter can be integrated (4 to 20 mA, PROFIBUS PA or FOUNDATION Fieldbus)

The following figure shows the available versions and components of SITRANS TS300 temperature sensors in modular design.

SITRANS TS, temperature sensors, TS300 modular design, dimensions in mm (inch)

## Temperature Measurement

### Temperature sensors

#### Technical description

##### SITRANS TS300 Clamp-on

The temperature is recorded via a modified, fast-response Pt100 measuring element that is positioned and insulated by a pipe collar made of temperature-resistant plastic.

The measuring insert contains a special temperature sensor made of silver that is constantly pressed onto the pipe by a spring.

A positively driven operation of the replaceable measuring insert ensures a constant fit on the pipe and thus provides for a reproducible measuring result.

#### Design

##### Measuring insert

- Special measuring insert made of stainless steel; hygienic design
  - Measuring element made of silver; thermal decoupling by plastic insert
- Measuring insert screwed into collar with spring tension. Use thermo-lubricant (see accessories) prior to mounting the device.

##### Pipe collar

- Material

Temperature-resistant, high-performance plastic with integrated insulation system in hygienic design

- Ambient temperature influence

Approx. 0.2%/10 K

The diameter of the measuring tube is required for correct device selection. For special sizes, you start by selecting the appropriate collar size and entering the desired size in plain text. Space-saving designs (clamping bracket version) are available optionally for installation in restricted spaces (e.g., tube bundles).

For correct assignment after recalibration, the collar as well as the measuring insert are marked with the serial number and tube diameter. This information can also be engraved.

The following figure illustrates the available designs and components of the SITRANS TS300 temperature sensors in clamp-on design:

SITRANS TS300 clamp-on design, device plug, field enclosure, cable gland, versions, dimensions in mm (inch)

## Temperature Measurement

### Temperature sensors

#### Technical description

##### SITRANS TS500 7MC75xx

The following figure illustrates the available designs and components for SITRANS TS500 temperature sensors:

SITRANS TS500 temperature sensors; the IP degree of protection depends on the connection head

The temperature sensors of the SITRANS TS500 series are available in three different versions:

Version	Description	Application	Process connection
1	<ul style="list-style-type: none"> <li>Tubular thermowell</li> <li>Thermowell and extension made from a pipe; closed at tip with welded-in base plug</li> </ul>	Minimal to medium process requirements	<ul style="list-style-type: none"> <li>Connection with thread or flange</li> <li>Thread is welded on, or compression fitting</li> </ul>
2	<ul style="list-style-type: none"> <li>Barstock thermowell</li> <li>Barstock thermowell, tubular extension; extension screwed into thermowell</li> </ul>	Medium to extreme process requirements	<ul style="list-style-type: none"> <li>Directly welded into pipe</li> <li>With welded-on flange</li> <li>With male thread</li> </ul>
3	<ul style="list-style-type: none"> <li>For installation in existing thermowell</li> <li>Tubular extension</li> </ul>	Process requirements depending on the thermowell design	Screwed into an existing thermowell

#### Function

A complete measuring point consists of a measuring insert which contains the sensor elements, the protective fitting and an optional measured value processor (transmitter).

##### Basic sensors

The sensor elements are:

- Resistance thermometers:  
Temperature measurement is based on the temperature dependency of the installed measuring resistor.
- Thermocouples:  
Temperature measurement is based on the Seebeck effect. A thermocouple which subjected to a temperature drop produces thermoelectric voltage that can be measured.

##### Transmitter

The optional Siemens transmitters assume the following functions:

- Optimum measurement processing
- Strengthening of weak sensor signals directly on site
- Transmit standardized signals
- Protect against electromagnetic interspersion
- Option to conduct measuring point diagnostics

## Configuration

### Components: Process connections

This catalog is limited to the standard versions. Special versions are available on request. The technical data are provided to assist the user. It is the responsibility of the ordering party to make the correct selection of suitable devices.

#### Welding in

The welding in of the thermowell provides a permanent, secure and highly resilient process connection, assuming a respective welding quality.

It is not possible to accidentally open the process connection. Additional gaskets are not required. If the pipe is not thick enough to ensure a secure welded joint, appropriate weld-in sockets are used. With weld-in sockets in suitable length, it is also possible to standardize a plant's measuring points to a large extent. Stocks of spare parts can therefore be reduced to a minimum.

Weld-in sockets

#### Thread

### Type of installation: screw-in thread

Screw-in threads of different thread types and sizes are firmly welded to the thermowell.

Screw-in thread

### Type of installation: Compression fittings

Compression fittings are available as accessories. They fit the diameter of the thermowell and provide for flexible installation. The installation length can be selected on site. When installed correctly, compression fittings are well suited for low and medium pressure.

The difference between the standard and spring-loaded version is as follows:

In the case of the spring-loaded compression fitting, the sensor is pressed against the measured object or the base of the thermowell, thus achieving particularly good heat contact.

Compression fitting

Spring-loaded compression fitting

#### Thread form:

### Cylindrical thread

Cylindrical threads do not seal in the thread but due to an additional sealing surface or seal. For example, threads with the short form "G" (as per ISO 228) feature a thread form with a defined screw gauge.

Cylindrical thread

### Tapered thread

By contrast, tapered threads, such as the American "NPT" thread, seal metalically in the thread. The relevant length information in the catalog refers to the "fully-tightened point (hand-tight)" of the thread, which cannot be defined exactly due to standard-related tolerances. However, the spring-load of the measuring insert compensates for the differences in length.

NPT thread

	Thread form	E / E <sub>1</sub>	K <sub>1</sub>	K <sub>2</sub>
Thermowells Form 2G + 3G	Cylindrical	G 1/2"	15	27
		G 3/4"	16	34
		G1	30	46
		M20 x 1.5	12	26
		M27 x 2	16	34
	M33 x 2	18	36	
	Tapered	NPT 1/2"	9	30
		NPT 3/4"	9	32.5
		NPT 1"	10	40
Extensions 7MC7500	Cylindrical	G 1/2"	12	27
		M14 x 1.5	12	23
		M18 x 1.5	12	25
	M20 x 1.5	12	25	
	Tapered	NPT 1/2"	9	33

X = extension length  
 U = installation length  
 E<sub>1</sub> = Neck tube/process connection  
 K<sub>1</sub> = Screw-in depth  
 K<sub>2</sub> = Length of the process connection

## Temperature Measurement

### Temperature sensors

#### Technical description

##### Flanges

The different properties of the flanges are as follows:

- Standard series EN 1092, ASME 16.5,...
- Nominal pressure
- Nominal diameter
- Sealing surface

This information is also stamped into the flange, along with the material code and batch number for "3.1 Material". For flange thermowells made of expensive materials, wetted parts of the thermowell and the so-called flanged wheel are designed with the required material. The flanged wheel is welded in front of the flange sealing surface in this case. Non-wetted parts are listed in 316L.

##### Industry-specific process connections

Special process connections have become popular in different industries. For example, hygiene technology: clamp-on connections, dairy connections and others.

##### Components: Thermowell

Tubular or barstock thermowells fulfill two basic functions:

- They protect the measuring insert from corrosive media
- They make it possible to replace units during ongoing operation

This catalog is limited to the standard versions. Special versions are available on request. The large number of available types can be classified as follows:

- Tubular thermowells  
Tubular thermowells are also described as "welded" or "multi-part" thermowells (not to be confused with "multi-part protective fittings"). They are suitable for low to medium process loads and can be manufactured on a cost-effective basis.  
Versions:
  - Form 2N similar to DIN 43772  
with straight tip and shortest possible extension length non-adjustable connection head
  - Form 2 as per DIN 43772  
with straight tip and extension adjustable connection head  
Form 2: without process connection  
Form 2G: Threaded connection  
Form 2F: Flange connection
  - Form 3 according to DIN 43772  
Version with tapered tip and extension  
Adjustable connection head  
For these thermowells, the thermowell tip is tapered by rotary swaging. This results in an excellent fit with the measuring insert and very good response times.  
Analogous to forms 2, versions 3G/3F are also available for form 3
- Barstock thermowells according to DIN 43772  
Where process loads are too great, or where a thermowell cannot have a welded seam, deep-hole drilled barstock thermowells are used. Thermowells of form 4 according to DIN 43772 are widely used. Forms D1-D5 of the previous standard DIN 43763 have been integrated into form 4 of DIN 43772:

Design DIN 43763 invalid	Design 4 DIN 43772 current	
	L in mm	U in mm
D1	140	65
D2	200	125
D4	200	65
D5	260	125

The following table shows the dimensions of the different thermowells.

	Tip		Process connection	
	∅ Inner mm (inch)]	∅ Outer [mm (inch)]	∅ Inner [mm (inch)]	∅ Outer [mm (inch)]
Thermowell type, design	D <sub>1</sub>	D <sub>2</sub>	D <sub>3</sub>	D <sub>4</sub>
2N/2/2G/2F, tube	7 (0.28)	9 (0.35)	7 (0.28)	9 (0.35)
2/2G/2F, tube	7 (0.28)	12 (0.47)	7 (0.28)	12 (0.47)
3/3G/3F, tube Tolerances as per DIN 43772	6 (0.24)	9 (0.35)	7 (0.28)	12 (0.47)
4/4F, barstock	7 (0.28)	12.5 (0.49)	7 (0.28)	24 (0.94)
4/4F, quick- response, bar- stock	3.5 (0.14)	9 (0.35)	3.5 (0.14)	18 (0.71)

Dimensions of thermowells

##### Barstock thermowells according to ASME B40.9

Thermowells according to ASME are distinguished by their form: Straight, reduced (staggered) or tapered along the entire installation length.

Coarse subdivisions can also be made in the type of process connection: screwed design, for welding in, with flange, or with the so-called Van Stone connection.

For the Van Stone connection, a small flange sealing surface exists directly at the barstock thermowell. This prevents any welding seams in the area touching the media. The thermowell is fixed by a collar flange that presses the sealing surface against the plant-side flange. Another advantage of this design is the optimized spare parts inventory. A thermowell fits onto multiple connecting flanges; the only difference is in the collar flanges.

##### Components: Extension (neck tube)

The extension is the section from the lower edge of the connection head to the fixed point of the process connection or thermowell. There are a variety of terms for this component, e.g. neck tube. For this reason the term extension has been selected as a standardized term for the different designs. Function is the deciding factor:

- Thermal decoupling of connection head from process temperature
- Installation of connection head over existing insulation
- Simple standardization of measuring inserts: In general, the length of the extension may be freely selected. However, when using standardized installation lengths, the option "Extension as per DIN 43772" is recommended. This ensures that measuring inserts which are quickly available can be used. In the case of special lengths, it is possible to standardize the measuring insert length through a clever combination with the respective special extension length. This allows customers to optimize their costs in purchasing and logistics.
- For American-type sensors, the extension also undertakes the spring load of the measuring insert.
- Depending on the version, the extension can also enable the adjustment of the connection head

- The form of the extension depends on the form of the thermowell:
  - Tubular thermowell  
The extension and thermowell usually consist of one continuous pipe. The process connection is welded on (= one-piece protective fitting).
  - Barstock thermowells  
Extension and the thermowell consist of two components which are screwed together. The process connection is attached to the thermowell (= multi-piece protective fitting).

Thermowell type	X [mm (inch)]	M [mm (inch)]	Divisible
2G	129 (5.08)	145 (5.71)	No
2F	64 (2.52)	80 (3.15)	No
3G	131 (5.19)	147 (5.79)	No
3F	66 (2.60)	82 (3.23)	No
4 (only L=110)	139 (5.47)	155 (6.10)	Yes
4 (others)	149 (5.87)	165 (6.50)	Yes

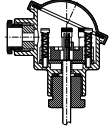

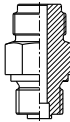

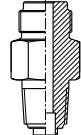

Extensions as per DIN 43772

### Versions

With regard to their function, extensions can be classified into two types:

- Adjustable/non-adjustable:  
Function of the extension to align the connection head to the desired direction
- Integrated measuring insert spring load:  
In the case of American-type sensors, the spring load of the measuring insert is integrated into the extension. Measuring insert and extension form one unit.

European type Adjustable, cylindrical	European type Adjustable, tapered	Without extension Without thread (optional sealing screw)
		
European type Non-adjustable, cylindrical	European type Non-adjustable, tapered	European type Non-adjustable, Nipple (NIP)
		
European type Adjustable Nipple-Union-Nipple (NUN)	American type Adjustable Nipple-Union-Nipple (NUN)	American type Non-adjustable, Nipple (NIP)
		

Versions; in the case of heavy stainless steel connection heads in conjunction with vibrations, a short extension length should be chosen or external support should be provided.

#### Technical description

##### Components: Connection head

##### Connection head

the connection head protects the connection department. The connection head features sufficient room for mounting a clamping base or transmitter.

Different connection heads are used depending on the application and preference. Where cable glands and thread adapters are included in the scope of the order, they will be supplied with the device.

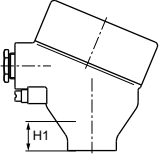

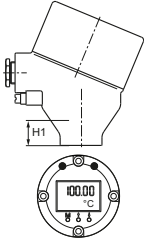

Connection head	Type Material	Label	Cable gland	Degree of protection [corrosion protection corresponding to ISO 12944-2]	Transmitter installation	Connection height H1 [mm (inch)]	Explosion protection optional
	BA0 aluminum	Flange lid	M20 x 1.5 Not Ex: Plastic Ex i/Ex n: Brass	IP65 [C2, durability H; C3, durability M]	Measuring insert	26 (1.02)	Ex i

## Temperature Measurement

### Temperature sensors

#### Technical description

##### Components: Measuring insert

###### Measuring insert

The measuring insert of the temperature sensor is built into the protective fitting (thermowell, extension and connection head). The sensor element is located in the measuring insert, where it is protected. The spring load of the Siemens measuring inserts provide good thermal contact with the tip of the thermowell, and vibration resistance is significantly increased. Only highly resistant mineral-insulated cables (so-called MIC or plastic-sheathed) are used for the electrical connection between the sensor element and connection head. The highly compacted insulation of magnesium oxide achieves excellent levels of vibration resistance. The following measuring insert designs are the most widely used on the world market:

European type

American type

###### European type

European type measuring inserts can be replaced without having to dismantle the connection head. The springs are located either on the transmitter or the terminal block. This makes it possible to achieve a 8 to 10 mm spring range. If a transmitter is not attached, a ceramic base is located at this position. Order option G01 can be used to select a version with free wire ends instead of the ceramic base for mounting of head transmitters.

###### American type

American-type measuring inserts feature a large spring range. These measuring inserts are ideal for use with NPT threads that feature high tolerances. In this configuration, the extension function is partially or fully integrated (nipple-union-nipple). Moreover, it is also possible to directly attach field devices, e.g. SITRANS TF.

##### Components: Transmitters

SITRANS TH head transmitters process weak, non-linear sensor signals and transmit a stable and temperature-linear standard signal, thereby minimizing sensor signal disruptions.

The transmitters permanently monitor the temperature sensors and transmit diagnostic data to superordinate systems.

Because of the low energy feed of the SITRANS TH head transmitters, self-heating of the temperature sensors is at a minimal level.

The electrical isolation and integrated reference junction ensure that temperature sensors with thermocouples provide reliable measurements at a low cost.

###### SITRANS TH product family

For detailed technical data on the SITRANS TH transmitters, please refer to this catalog.

- TH100 - the basic device
  - Output: 4 ... 20 mA
  - 1 x input Pt100
  - Can be configured using simple software
- TH320 - the universal device
  - Output 4 ... 20 mA or:
  - Output 4 ... 20 mA/HART
  - 1 x input resistance thermometer, thermocouples
  - Can be configured using simple software
- TH420 – Twice as safe
  - Output 4 ... 20 mA/HART
  - 2 x input resistance thermometer, thermocouples, hot backup, drift detection, etc. can be achieved as a result
  - Extended diagnostic functions
- TH400 - Fieldbus PA and FF
  - Output PROFIBUS PA or FOUNDATION Fieldbus
  - 1 x input resistance thermometer, thermocouples
  - Diagnostic functions

###### Installation types

All SITRANS-TH transmitters can be installed in type B connection heads. The following installation forms are used:

- Measuring insert installation
  - Our standard version offers the following advantages
  - Small vibrating masses and compact design
  - Measuring insert-transmitter unit can be replaced quickly

Installation of measuring insert

- Hinged cover installation
  - Standard for head type BC0 and BPO
  - Advantage: Measuring insert and transmitter can be repaired/maintained separately (recalibration).

Hinged cover installation

#### Measuring technology: Basic sensors

The diverse application spectrum for industrial temperature measuring technology requires different sensor technologies.

##### Resistance thermometer

Basic sensors made of other basic materials, with different basic values or different underlying standards, are available on request. Resistance thermometers can be classified as follows:

- **Basic design**  
The sensor element is built with thin layer technology. The resistance material is applied in the form of a thin layer on a ceramic carrier material.
- **Versions featuring increased vibration resistance**  
In addition to the basic design: Measures to improve vibration resistance.
- **Versions with expanded measuring range**  
Elements in wire-wound design. The wire winding is embedded in a ceramic body.

##### Thermocouples

Thermocouples based on other thermocouples or underlying standards are available upon request.

The most common base-metal thermocouples are:

- Type N (NiCrSi-NiSi) high degree of stability even in upper temperature range
- Type K (NiCr-Ni) more stable than type J, but drifts in upper range
- Type J (Fe-CuNi) narrow application band

#### Measuring technology: Measuring range

The measuring range describes the temperature limits within which the thermometer can be used in a way that is meaningful for measurement purposes. Depending on the loads present, the thermowell materials and the desired accuracy levels, among other things, the actual application range for the thermometer may be smaller.

Resistance thermometer [°C (°F)]	
Basic version and increased vibration resistance	-50 ... +400 (-58 ... +752)
Expanded measuring range	-196 ... +600 (-320.8 ... +1112)
Thermocouple [°C (°F)]	
Type N	-40 ... +1100 (-40 ... +2012)
Type K	-40 ... +1000 (-40 ... +1832)
Type J	-40 ... +750 (-40 ... +1382)

##### Thermocouples

The tolerance classes of the thermocouples correspond with IEC 584/EN 60584:

##### Catalog versions

Type	Basic accuracy, Class 2	Increased accuracy, Class 1

K	-40 °C ... +333 °C ±2.5 °C (-40 °F ... +631 °F ±4.5 °F) 333 °C ... 1000 °C ±0.0075x t °C] (631 °F ... 1832 °F ±0.0075x t °F]-32)]	-40 °C ... +375 °C ±1.5 °C (-40 °F ... +707 °F ±2.7 °F) 375 °C ... 1000 °C ±0.004x t °C] (707 °F ... 1832 °F ±0.004x t °F]-32)]
J	-40 °C ... +333 °C ±2.5 °C (-40 °F ... +631 °F ±4.5 °F) 333 °C ... 750 °C ±0.0075x t °C] (631 °F ... 1382 °F ±0.0075x t °F]-32)]	-40 °C ... +375 °C ±1.5 °C (-40 °F ... +707 °F ±2.7 °F) 375 °C ... 750 °C ±0.004x t °C] (707 °F ... 1382 °F ±0.004x t °F]-32)]

#### Measuring technology: Measuring accuracy

##### Resistance thermometer

The tolerance classes of the resistance thermometers correspond to IEC 751/EN 60751:

Tolerance	$\Delta t$
Basic accuracy, Class B	± (0.30 °C +0.0050 t °C]) 0.54 °F +0.0050x t °F]-32]
Increased accuracy, Class A	± (0.15 °C +0.0020 t °C]) 0.27 °F +0.0020x t °F]-32]
High degree of accuracy, Class AA (1/3 B)	± (0.10 °C +0.0017 t °C]) ± 0.18 °F +0.0017x t °F]-32]

The following tables provide an overview of the scope of these tolerances. If the specified limits are exceeded with a resistance thermometer, the values of the next lower accuracy class apply permanently:

Resistance thermometer Basic version [°C (°F)]	
Tolerance	Range
Basic accuracy, Class B	-50 ... +400 (-58 ... +752) <sup>1)</sup>
Increased accuracy, Class A	-30 ... +300 (-22 ... +572)
High degree of accuracy Class AA (1/3 B)	0 ... 150 (32 ... 302)

Resistance thermometer Increased vibration resistance [°C (°F)]	
Tolerance	Range
Basic accuracy, Class B	-50 ... +400 (-58 ... +752) <sup>1)</sup>
Increased accuracy, Class A	-30 ... +300 (-22 ... +572)
High degree of accuracy Class AA (1/3 B)	0 ... 150 (32 ... 302)

Resistance thermometer Expanded measuring range [°C (°F)]	
Tolerance	Range
Basic accuracy, Class B	-196 ... +600 (-321 ... +1112)
Increased accuracy, Class A	-100 ... +450 (-148 ... +842)
High degree of accuracy, Class AA	-50 ... +250 (-58 ... +482)

<sup>1)</sup> The requirements of IEC 60751 are being observed. In case of high requirements regarding long-term stability, Pt100 sensors "expanded measuring range" should be used for temperatures above 350 °C (662 °F).

#### SITRANS TS300 Clamp-on

##### Measuring accuracy

###### Reference conditions

- Pipe: Pipe 13 x 1.5 mm (0.51 x 0.06 inch) made of stainless steel using thermal paste
- Ambient temperature: 20 °C (68 °F)
- Medium: Water 120 °C (248 °F)
- Flow velocity: 3 m/s (9.84 ft/s)

Measuring accuracy when using thermal paste: Process-optimized for steam sterilization

(The accuracy is dependent on the geometry of the pipe, the medium and the ambient conditions.)

$T_M$  = Process temperature;  
 $T_A$  = Ambient temperature)

- Class A according to IEC 60751: -40 ... +150 °C (-40 ... 302 °F)  
( $T_A - T_M$ ) x 0.02

##### Measuring technology: Response times

Response time describes the speed of the measurement system in the case of a temperature change, and is typically indicated as T0.5 or T0.9. The values indicate the time in which a measured value has increased to 50% or 90% of the actual temperature increase.

The main variables which affect response time are as follows:

- Thermowell geometry, ideal are:
  - Very little material at the tip
  - use of conductive material
- Thermal connection of measuring insert to the thermowell: Because of design changes implemented for the measuring insert (small gap width, spring system), Siemens measuring inserts feature very good response behavior. Because of the good fit, additional contact materials are not usually required except in certain applications, e.g. attachment of a surface sensor.
- Size of temperature increase
- Medium and flow rate

#### Resistance thermometer

Typical values as per DIN EN 60751 in water at 0.4 m/s can be found in the following table.

Thermowell form	Diameter [mm (inch)]	T0.5	T0.9
Without	6 (0.24)	6	15
Straight (2)	9 (0.35)	34	90
	12 (0.47)	45	143
Tapered (3)	12 (0.47)	15	31
Barstock (4) U/C = 65	24 (0.95)	40	100
Barstock (4) U/C = 125	24 (0.95)	40	110

#### Thermocouples

Typical values as per DIN EN 60751 in water at 0.4 m/s can be found in the following table.

Thermowell form	Diameter [mm (inch)]	T0.5	T0.9
Without	6 (0.24)	2	4
Straight (2)	9 (0.35)	20	63
	12 (0.47)	19	66
Tapered (3)	12 (0.47)	7	22
Barstock (4) U/C = 65	24 (0.95)	22	73
Barstock (4) U/C = 125	24 (0.95)	20	53

### Measuring technology: Mounting depth

#### Measuring insert

Type	Temperature-sensitive length (TSL) [mm (inch)]	Non-bendable length [mm (inch)]
Basic	50 (1.97)	30 (1.82)
Increased vibration resistance	50 (1.97)	30 (1.82)
Expanded measuring range	50 (1.97)	60 (2.36)
Thermocouple	20 (0.79)	5 (0.20)

#### Immersion depth/contact with medium

The "heat transfer error" arises depending on the ambient conditions (temperature/weather/insulation) and the size of the thermowell, process connection and pipe.

To prevent such an error, the immersion depth and diameter of the thermowell are defined. The temperature-sensitive length (TSL) of the thermowell must also be taken into account. The following rule of thumb can be used:

- Water  
Immersion depth  $\geq$  TSL + 5 x  $\varnothing$  of thermowell
- Air  
Immersion depth  $\geq$  TSL + 10 ... 15 x  $\varnothing$  of thermowell
- Recommendations
  - Select largest possible submersion depth
  - Select measuring location with higher flow velocity
  - Insulate outer components of thermometer
  - Smallest possible surface for outer components
  - Insertion in tube bends
  - Direct measurement without additional thermowell if no suitable solution can be found using other measures

### Measuring technology: Connection types

For resistance thermometers, the type of sensor connection directly affects the level of accuracy:

#### 2-wire connection

The resistance of sensor lines are included in the measurement result as an error. Adjustments are recommended in this case.

Pt100 2-wire connection

#### 3-wire connection

Line resistance is not included in the measurement result. Requirements: all terminal and line resistances (corrosion) are at the same level, and terminals are at the same temperature level.

Pt100 3-wire connection

#### 4-wire connection

Line resistance is not included in the measurement result. This type of connection is the most secure and most accurate.

Pt100 4-wire connection

Siemens measuring inserts can be used to implement all types of connections for 1 x Pt100 devices. In the case of 2 x Pt100 versions, 2 and 3-wire connections are also possible. For measurement-related reasons, we always recommend a 1 x 4-wire or 2 x 3-wire connection.

## Temperature Measurement

### Temperature sensors

#### Technical description

##### Temperature influence

At connection head TS500 <sup>1)</sup>

	Without transmitter [°C (°F)]	With suitable transmitter [°C (°F)]
A heads AG0/AH0/AU0/AV0 non-SIL <sup>2)</sup>	-50 ... +100 (-58 ... +212)	-50 ... +80 (-58 ... +176)
Aluminum or stainless steel	-40 ... +100 (-40 ... +212)	-40 ... +80 (-40 ... +176)
Plastic	-40 ... +85 (-40 ... +185)	-40 ... +80 (-40 ... +176)

<sup>1)</sup> In the case of applications in hazardous areas, observe information in manual.

<sup>2)</sup> Check cable gland and transmitter (e.g. not for Han 7, M12).

##### Special climatic conditions

SITRANS TS100, TS200, TS500 and TSinsert achieve the following classes of application according to IEC 60654-1 for use in tropical climates:

- C3 for sheltered locations
- D2 for outdoor locations

##### At connection site cable/plug-in connection TS100/200

The specified measuring range applies to the hot side of the sensor. The maximum permitted temperature at the cold end depends on the cables and plugs used. <80°C (176 °F) is considered non-critical.

##### Influence of extension

The illustration below assists you in selecting the right length for the neck tube. In this case, the following applies: Connection head temperature = Ambient temperature + Overtemperature. The temperature in the connection head can thus be assessed as follows:

Extension length X, influence on temperature, dimensions in mm (inch)

Please note that guidance values may change due to local conditions. Please consider these potential changes particularly with respect to explosion protection.

Also note that the accuracy of the transmitter also depends on the temperature in the connection head.

### SITRANS TS300 Clamp-on

#### Design

Measuring insert

- Special measuring insert made of stainless steel; hygienic design
- Measuring element made of silver, thermal decoupling through plastic insert

Measuring insert screwed into collar with spring tension. Use thermo-lubricant (see accessories) prior to mounting the device.

Pipe collar

- Material

Temperature-resistant, high-performance plastic with integrated insulation system in hygienic design

- Ambient temperature influence

Approx. 0.2%/10 K

#### Process connection/thermowell

Process parameters may only allow one specific technology for the selection of process connections. You also have to observe regional, standard-based and customer-specific requirements. The range of products therefore includes a broad selection of standard connections.

In the case of redesigned or newly designed facilities, it is possible to achieve cost savings by implementing various measures:

- Use of standard lengths through clever selection of screw-in, weld-in or flange sockets
- Moveable compression fittings

The thermal stability of a material for process connection and thermowell also limits the application area of the temperature sensor. The temperature range specified on the type plate always refers to the measuring insert, not the material which comes into contact with media. Two aspects must be considered when assessing temperature stability:

- What maximum temperature may the material reach without a load?
- What is the behavior under load?

#### Pressure Equipment Directive

This device is not covered by the Pressure Equipment Directive; classification as per the Pressure Equipment Directive (PED 2014/68/EU), Directive 1/40; Section 1, Subsection 2.1.4

#### Process load

Because of the large variety of possible applications and variables, it is not possible to make general binding statements regarding the resilience of components which comes into contact with media. The load diagrams below can be used for common applications. However, where operating conditions vary significantly, please contact our technical support team.

Load on the thermowell and remedies:

The process itself	Correction options
Temperature	Material selection
Pressure	Thermowell design
Flow velocity	Installation length, thermowell form
Viscosity	Installation length, thermowell form
Vibration	Support against vibration
Corrosiveness	Material selection, coating, covering
Abrasion (e.g. carbon dust)	Sensing rod, coating

#### Thermowell calculation

Properly applied load diagrams will provide a sufficient degree of safety for the thermowell dimensioning of most applications.

However, there are cases in which operating conditions deviate too greatly from standard parameters. In this case, a customized thermowell calculation can be displayed.

Another reason for doing this calculation is the fact that flowing media can create turbulence at the tip of the thermowell under certain conditions. The thermowell will then vibrate and may even be destroyed if not configured correctly. This is the most frequent cause of thermowell failure.

#### Materials

Material descriptions/Standards comparison			Max. temperature [°C (°F)] (unloaded)	Properties	Applications	
Mat. No.:	AISI/Trade name:	EN 10028-2:	Description			
1.4404 or 1.4435	AISI 316 L	X2CrNiMo17-12-2	Austenitic stainless steel	550 (1 022)	Good acid resistance, resistant against grain boundary corrosion	Chemical industry, waste treatment, paper and cellulose industry, food industry
1.4571	AISI 316 Ti	X6CrNiMoTi1712-2	Austenitic stainless steel	600 (1 112)	Good acid resistance, resistant against grain boundary corrosion (supported by Ti portion)	Chemical industry, textile industry, paper and cellulose industry, water supply, food and pharmaceuticals
1.5415	A 204 Gr.A	16Mo3	Carbon steel, high-alloy	500 (932)	Resistant at higher temperatures, well suited for welding	Steam turbines, steam lines, water pipes
1.7335	A 182 F11	13CrMo4-5	Carbon steel, high-alloy	540 (1 004)	Resistant at higher temperatures, well suited for welding	Steam turbines, steam lines, water pipes
1.4841	SS 314	X15CrNiSi25-20	Austenitic heat-resistant stainless steel	1 150 (2 102)	Resistant at high temperatures, also resistant against low-O <sub>2</sub> gases and gases containing nitrogen.	Flue gas, petrochemical industry, chemicals industry, power plants
1.4762	446	X10CrAl24	Ferritic heat-resistant steel	1 150 (2 102)	Resistant at high temperatures, in oxidizing and reducing sulfur-containing atmosphere	Chemical industry, power plants, steel industry, waste gas treatment
2.4819	Hastelloy C 276	NiMo16Cr15W	Nickel-Chrome-Molybdenum alloy	1 100 (2 012)	Resistant at high temperatures, in oxidizing and reducing atmosphere, resistant against pitting and crevice corrosion, good corrosion resistance after welding	Chemicals industry, paper and cellulose industry, waste treatment, waste incinerators, emissions controls, shipbuilding and offshore industry
2.4360	Monel 400	NiCu30Fe	Nickel-copper alloy	500 (932)	Excellent corrosion resistance, particularly against chloride-induced cold crack corrosion	Chemical industry, offshore industry, nuclear technology, petrochemical industry
Similar to 1.0305	A 105		Carbon steel	400 (752)		Steam turbines, steam lines, water pipes
1.4410	Similar to A2507	X2CrNiMoN 22-7-4	Austenitic-ferritic super duplex steel	300 (572)	Excellent resistance especially to chloride-related gap and pitting corrosion	Chemical industry and petroleum chemistry, seawater desalination plants, paper pulp industry
1.4462	Similar to AISI 318 LN	X2CrNiMoN22-5-3	Austenitic-ferritic duplex steel	250 (482)	Resistance especially to chloride-related gap and pitting corrosion	Chloride contaminated water, acidic gas conditions, petrochemicals, marine technology

Where cost-intensive materials are used with flange thermowells, cost savings can be achieved by using a so-called flanged wheel. A thin disc of the material which comes into contact with media is applied prior to the flange (ordinary stainless steel).

Materials of sensor tube/measuring insert:

- SITRANS TSInsert, TS100, TS200
  - Resistance thermometer Cr-Ni-Mo
  - Thermocouple 2.4816/Inconel600

Siemens can offer thermowell calculations according to the two recognized procedures upon request.

- Dittrich/Klotter method
- ASME PTC-19.3-TW2016 method  
This method also takes into account turbulence formation on a mathematical level.

Both methods provide a high degree of safety with regard to thermowell configuration, however, they do not provide a guarantee against failures. A recalculation may be necessary in case of changes to the process parameters.

## Temperature Measurement

### Temperature sensors

#### Technical description

##### Vibration resistance of measuring insert, cable sensor

Similar to the thermowell, the equipment also creates inner (Karman vortices) and outer vibration inducements which act on the measuring insert. For this reason, a special assembly of measurement elements is required. Other than a few exceptions for cable and compact thermometers, Siemens only produces sensors with a mineral-insulated plastic-sheathed cable. Together with precautions taken when installing the measuring element, the Siemens basic version already exceeds EN 60751 by more than a factor of 3. Pursuant to the measurement methods of this standard, the following values are obtained (tip-tip):

- 10 g: Basic version and expanded measuring range
- 60 g: Increased vibration resistance and thermocouple

##### Bending ability of measuring insert/cable sensor

All Siemens SITRANS TSinsert measuring inserts are made with a mineral-insulated plastic-sheathed cable (MIC). The same applies to a portion of the cable and compact thermometer. In addition to the already described properties, another advantage of the plastic-sheathed cable is its bending ability. This makes it possible to install these thermometers even in difficult to access areas. Ensure that the following minimum bending radius is observed:

Ø MIC [mm] (inch)	$R_{max} = 4x \text{ Ø MIC [mm] (inch)}$
3 (0.12)	12 (0.48)
6 (0.24)	24 (0.95)

Where a smaller bending radius is required due to installation conditions, subsequent testing of the insulation resistance is recommended.

The bending ability of the mineral-insulated design allows for economical transport even of large lengths. As of a length of 0.8 m, the sensors can be delivered rolled or bent. If slight bends have arisen due to mechanical loads during transport or handling, the quality and function of the sensor are not impacted by this. The bends can easily be straightened.

#### **Electrical stability**

##### Insulation resistance

The insulation resistance between each measuring circuit and the fitting is tested at a voltage of 500 V DC at room temperature.

$$R_{iso} \geq 100 \text{ M}\Omega$$

Due to the property of the mineral-insulated cable, the insulation resistance decreases as temperature increases. Because of the special production method, it is however possible to achieve very good values even at high temperatures.

##### Wire resistance

For 2-wire connections, the wire resistance is considered in the measurement result. The following rule of thumb can be used:

- Ø Measuring insert 3 mm (0.12 inch) 5  $\Omega$ /m or 12.8 °C (55.04 °F)
- Ø Measuring insert 6 mm (0.24 in) 2.8  $\Omega$ /m or 7.1 °C (44.78 °F)

Therefore, a 3 or 4-wire connection is urgently recommended.

#### **Tests**

In addition, statutory, standards-based or operating specifications also require additional testing. The results are attested in certificates according to EN 10204:

- According to EN 10204-2.1, order conformity (C35)  
Certificate in which Siemens confirms that the delivered products correspond to the requirements of the order, without specification of test results. The testing does not have to be carried out on the delivered devices.
- According to EN 10204-3.1  
Certificate in which Siemens confirms that the delivered products meet the requirements set out in the order, with indication of the specification of test results. Testing is carried out by an organization which is independent of production. The inspection certificate 3.1 replaces 3.1.B of the previous edition.
- Material certificate for parts which come into contact with media (C12)  
This certificate confirms the properties of the material and warrants traceability up to the melting batch.
- Pressure test (C31)  
Hydrostatic pressure test on thermowell. Internal pressure for thread and weld-in, external pressure for flange forms.
- Helium leak test (C32)  
This test can be used to detect even the smallest leaks in thermowells and weld seams.
- Dye-penetration-test (C33)  
The color penetration method can detect tears and other surface defects.
- Comparative test (calibration) (Y33)  
The test object is measured in one temperature direction against a highly precise thermometer, and the measured values of test object and normal object are documented. However, calibration requires the measuring insert to be of a certain minimum length. Measuring inserts can be calibrated together with the associated transmitter. Calibration values can be stored in the transmitter in order to increase the measuring accuracy of the system.
- According to EN 10204-3.2  
This type of acceptance certificate can be prepared on request, together with an acceptance representative of the ordering party or a representative indicated by official requirements (e.g. TÜV). It confirms that the delivered products meet the requirements set out in the order; it also contains the test results.
- Welding documentation  
documentation such as WPS and PQR are available on our website.

### Approvals

#### Explosion protection

Due to the variety of requirements, all flameproof versions, as well as those complying with CSA and FM are supplied without cable glands. The Ex markings can be found in the current manual A5E03920348, section "Certificates and approvals".

# Temperature Measurement

## Temperature sensors

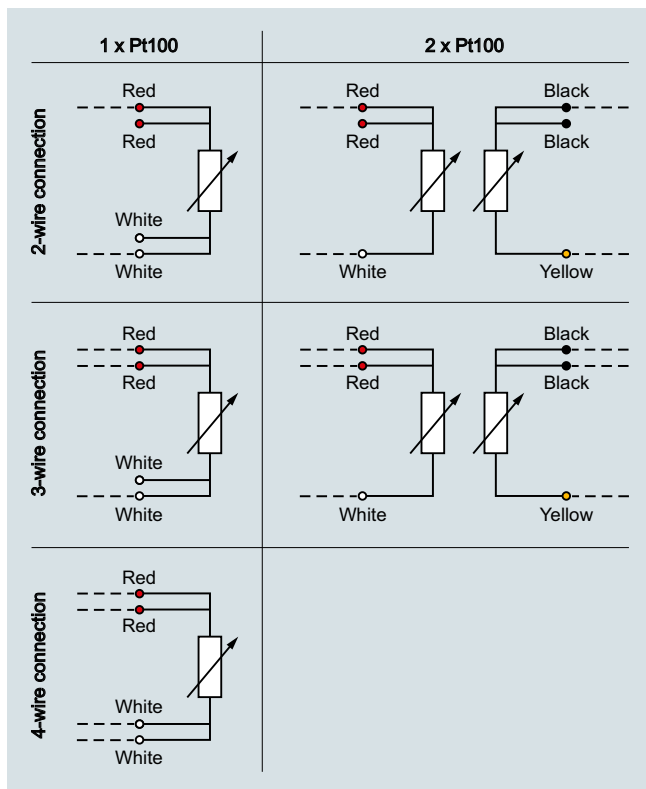

### Technical description

#### Circuit diagrams

##### Resistance thermometer connection

SITRANS TSinsert measuring inserts are, unless otherwise mentioned, designed as single Pt100 measuring inserts with a 4-wire connection. This makes it possible to implement all of the aforementioned connection types.

Double Pt100 measuring inserts (only possible with 6 mm outside diameter) are designed as 3-wire connection.

Circuit diagrams 1 x Pt100-2W to 2 x Pt100-4W

##### Thermocouple connection

Circuit diagram for thermocouple

If thermocouples are used, the use of head transmitters offers particular advantages: The reference junction is already integrated in the universal transmitter. There is no need for expensive extension or compensating cables. This also removes a number of possible error sources. The weak millivolt signal of the thermocouple is already converted into a stable and temperature-linear DC or bus signal on site. This drastically reduces the effects of electromagnetic factors on the measurement result.

If a head transmitter is not installed, the sensor supply cable consists of the appropriate extension or compensating cable. The thermo line is made from the thermocouple material of the relevant thermocouple, while the compensating cable uses a cost-effective substitute material. The electrical behavior of the compensating cable is similar to that of the thermo line within a limited temperature range of up to 200 °C.

A wide spectrum of color coding exists for thermocouples on an international level. This must be taken into account during the connecting process.

### Device plugs

In some cases, sensors are not connected directly but using device plugs. The connection is made according to the figures below.

#### Lemo 1S coupling (SITRANS TS100/TS200)

#### M12 device plug for single sensors (SITRANS TS100/TS200/TS500)

#### M12 device plug for single sensors (SITRANS TS300)

#### M12 device plug for dual sensors (SITRANS TS100)

#### Han 7D device plug (SITRANS TS500)

### Transmitter connection

If SITRANS TH transmitters are used in the connection head of the temperature sensor, connection takes place according to the following pattern:

#### SITRANS TH100/TH200/TH300

Resistance thermometer

Thermocouples

#### SITRANS TH400

#### SITRANS TS500 TH transmitter display

In addition, our transmitters also allow for a large number of other possible connections (e.g. difference, mean value, 2 sensors). More information can be obtained at:

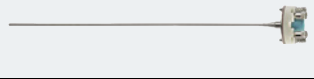

<http://www.siemens.com/temperature>

<b>Installation length</b>	Standard lengths and free configuration				
<b>Extension length</b>	Standard lengths and free configuration				
<b>Explosion protection</b>	Not Ex-relevant, but offers zone separation when wall thickness of 1 mm for anti-corrosive materials, or otherwise 3 mm is observed. Not for coated versions.				
<b>Application</b>	Pipes and vessels				
<b>Limit temperatures</b>	Material-dependent				
<b>Max. static pressure</b>	Material-dependent				
<b>Min. response time</b>	20 s ... several minutes				
<b>Degree of protection</b>	When installed correctly, IP68 is achieved between extension and thermowell

## Temperature Measurement

Temperature sensors

SITRANS TS500 - Tubular thermowells

### Type 2N, screwed design

#### Selection and Ordering data Order code

##### Certificates and approvals

EN 10204-3.1 Inspection certificate for materials coming into contact with media	<b>C12</b>
EN 10204-3.1 Inspection certificate for hydrostatic pressure test	<b>C31</b>
EN 10204-3.1 Inspection certificate for helium leak test	<b>C32</b>
EN 10204-3.1 Inspection certificate for dye-penetration-test	<b>C33</b>
EN 10204-3.1 Inspection certificate: visual, measurement and functional inspection	<b>C34</b>
EN 10204-2.1: Declaration of compliance with the order ISO 9001 grease-free (cleaned for e.g. oxygen applications)	<b>C35</b> <b>C51</b>
EN 10204-3.1 Acceptance test certificate "Positive Materials Identification" (PMI)	<b>On request</b>

##### Designation, calibration

Stainless steel TAG plate , enter lettering in plain text	<b>Y15</b>
Plant calibration per 1 point, enter temperature in plain text	<b>Y33</b>

##### Transmitter options

Transmitter, enter complete setting in plain text (Y01: +/-NNNN ... +/-NNNN C,F), marking on the device when Order code "Y15" is selected	<b>Y01</b>
Enter measuring point (max. 8 characters) in plain text	<b>Y17</b>
Transmitter, enter measuring point description (max. 16 characters) in plain text	<b>Y23</b>
Transmitter, enter measuring point text (max. 32 characters) in plain text	<b>Y24</b>
Transmitter, enter bus address in plain text	<b>Y25</b>
Transmitter, fail-safe value 3.6 mA (instead of 22.8 mA)	<b>U36</b>
SITRANS TH320/420 transmitter with SIL2/3 certificate	<b>C20</b>
Transmitter test protocol (5 points)	<b>C11</b>

##### Further options

Connection form, flying leads (for the direct transmitter assembly, delivery without screws and springs)	<b>G01</b>
M12 device plug (in combination with transmitter, Non-Ex and intrinsically safe, max. IP65/67)	<b>G12</b>
Han 7D device plug (Non Ex and intrinsically safe, without mating connector max. IP65/67)	<b>G13</b>
Connection head with 1/2" NPT thread without cable gland, for AU0 and AH0 only	<b>G20</b>
with outer earth screw for heads AG0, AH0, AU0 and AV0	<b>A02</b>
with inner earth screw for heads BC0, AG0, AH0, AU0 and AV0	<b>A03</b>

##### Option not found?

Handling number special version	<b>Y99</b>
---------------------------------	------------

1) Please select Ex i version of the optional transmitter.

2) Only with connection heads code AG0, AH0, AU0, AV0, without cable gland (please select non-Ex version of the optional transmitter).

**You find ordering examples on page 2/40.**

**Accessories, see page 2/251.**

## Temperature Measurement

Temperature sensors  
SITRANS TSthermowell

Thermowells according to DIN 43772

### Dimensional drawings

#### Thermowells according to DIN 43772 - Form 4

7MT14, welded

7MT14, flange connection

Since March 2000, DIN 43772 replaces the retracted DIN 43763: 1986-03

The name of the D sleeves is from the previous standard but still used today. The table below shows the order information for the corresponding successor products from DIN 43772.

Design	L [mm]	C [mm]	Ordering data
D1	140	65	<b>7MT1410-2*N00-0NQ2</b>
D2	200	125	<b>7MT1410-4*N00-0NQ4</b>
D4	200	65	<b>7MT1410-4*N00-0NQ2</b>
D5	260	125	<b>7MT1410-5*N00-0NQ4</b>

Material:

\* = **A**: 1.4571

\* = **B**: 1.4404

\* = **S**: 1.7335

\* = **T**: 1.5415

## Overview

The following temperature transmitters are available for installation in the connection head:

**SITRANS TH320**

Programmable 2-wire temperature transmitter as a 4 to 20 mA version or with HART communication (4 to 20 mA), galvanic isolation. 1 sensor input for resistance thermometer and thermocouples.

**SITRANS TH420**

Programmable 2-wire temperature transmitter with HART communication (4 to 20 mA), galvanic isolation. 2 sensor inputs for resistance thermometers and thermocouples; therefore expanded functions such as hot backup (redundancy) and drift detection are possible.

**SITRANS TH400**

Temperature transmitter with PROFIBUS PA or FOUNDATION Fieldbus connection, electrical isolation for resistance thermometers and thermocouple elements.

**Note:**

- SITRANS TH320/TH420/TH400 can be fitted in the high hinged cover or instead of the terminal base. Retrofitting possible only in the high hinged cover.
- If using intrinsically-safe temperature sensors any installed temperature transmitters must also be intrinsically-safe.

## Selection and Ordering data

Detailed information on the transmitters can be found at the respective products under "Compact and head transmitters".

## Temperature Measurement

### Temperature sensors

#### Thermocouples

#### Technical description

#### Design

A thermocouple comprises

- The thermocouple element (sensor) and
- The mounting and connection parts required in each case.

The thermocouple element is formed by two conductors of dissimilar metals or metal alloys which are soldered or welded together at one end, the measuring junction:

Thermocouple element

#### Function

##### Measuring principle of the thermocouple element

If the measuring junction is exposed to a temperature different from that at the free ends of the thermocouple, a voltage (the thermoelectric voltage, Seebeck effect) is produced at these free ends. The magnitude of the thermoelectric voltage depends on the difference in temperature between the measuring junction and the free ends, and on the combination of materials in the thermocouple. Since a thermocouple always measures a temperature difference, the free ends of the thermocouple must be connected to a reference junction (cold junction) and held constant at a known temperature.

##### Calibration data for thermoelectric voltages and permissible deviations

The calibration data and the permissible deviations for commonly used thermocouples are defined (see Technical Data, Table "Calibration data for thermoelectric voltages and error limits").

The thermocouples Cu-CuNi and Fe-CuNi to DIN 43710 are used for replacement purposes. Thermocouples of class 2 are supplied as standard. For more accurate measurements, thermocouples are available with half the DIN tolerance or with a test certificate. The tolerances only apply to the condition upon delivery.

During operation at high temperatures, the tolerances of the thermocouples may change due to absorption of foreign matter, oxidation or evaporation of alloy components.

##### Mode of operation

The thermocouples are extended from the connection point to a point whose temperature is as constant as possible (the cold junction) by means of extension leads.

The extension leads have the same color code as the associated thermocouple elements; the positive pole is marked in red. Correct polarity must be ensured since otherwise large errors will occur. Up to 200 °C, the same calibration data and tolerances apply to the extension leads as to the corresponding thermocouples.

The influence of temperature changes at the cold junction can be balanced by means of a compensating circuit, e.g. a compensating box. The reference temperature is 0 (32 °F) or 20 °C (68 °F).

It is also possible to keep the cold junctions at a constant temperature of 50, 60 or 70 °C (122, 140 or 158 °F) using a thermostat (for several measuring junctions).

The connections from the cold junction to the measuring or process instrument are made using copper leads. With energy-consuming instruments such as indicators or multipoint recorders, the complete measuring circuit (thermocouple, extension lead and copper lead) must be balanced in the operating condition using a resistor. SITRANS T transmitters and process recorders for connection to thermocouple elements have a built-in compensating circuit for balancing the effect of the ambient temperature on the cold junction. Lead balancing is not necessary in this case because of the high input impedance.

##### Protection fitting/Thermowells

The thermocouple can be protected against mechanical stress and chemical attack by a ceramic or metal thermowell, which may be mounted using flanges, screwed glands or by welding into the pipe or vessel. The thermocouple element terminates in the connection head.

Installation examples with specification of the recommended thermocouples and thermowell materials can be found under "Integration" in the "Installation examples" table.

Owing to the different operating conditions, no guarantee can be given for protective fittings. The manufacturer is responsible for damages and measuring errors caused by wrong installation in compliance with the General Terms of Delivery if the instruments have been installed by the manufacturer and if the specifications for the operating conditions furnished by the customer were correct and sufficiently detailed.

Thermocouple elements are very compatible since it is almost always possible to adapt them in shape and size to the particular problem. The temperature-responsive part is almost point-shaped. Thermocouple elements are therefore particularly suitable for measuring rapidly changing temperatures.

## Straight thermocouples according to EN 50446, with connection head

## Overview

The straight thermocouple together with a metal thermowell is suitable for temperatures from 0 to 1250 °C (32 to 2282 °F) and can be supplied with a built-in temperature transmitter.

## Technical specifications

Thermocouples	Ni Cr/Ni type K
• Number	1 or 2
• Leg diameter	2 ... 3 mm (0.08 ... 0.12 inch)
• Insulation of legs	Insulating beads
Thermowell	Metal
Connection head	Form A; made of cast light alloy, with one cable bushing

## Overview

SITRANS TH100 Slim is particularly suited for the production of compact thermometers with integrated transmitter.

Its cylindrical stainless steel enclosure is simply welded to the basic body of the compact thermometer.

Its compact design makes the SITRANS TH100 Slim the ideal solution for manufacturers from a wide variety of industries.

For the parameterization, the SIPROM T software is used in combination with the modem for SITRANS TH100/TH200.

## Benefits

- Transmitter in 2-wire system with M12 device plug for mounting on compact thermometer.
- Solution for easy and space-saving temperature measurements in a variety of industries.
- Programmable; as a result, the sensor connection, measuring range and much more are programmable.

## Application

The SITRANS TH100 Slim transmitter can be used in combination with Pt100 compact resistance thermometers for temperature measurement in all industries. Thanks to its compact design, it can be mounted to all kinds of designs.

The output signal is a load-independent direct current of 4 to 20 mA which is proportional to the temperature.

Parameterization is implemented over the PC using the parameterization software SIPROM T and the modem for SITRANS TH100/TH200. If you already have a "Modem for SITRANS TK" (article number 7NG3190-6KB), you can continue to use this for parameterization of the SITRANS TH100.

## Function

### Mode of operation

The measured signal supplied by a Pt100 resistance thermometer (2, 3 or 4-wire connection) is amplified in the input stage. The voltage, which is proportional to the input variable, is then converted into digital signals by a multiplexer in an analog-to-digital converter. They are converted in the microcontroller in accordance with the sensor characteristic and additional parameters (measuring range, damping, ambient temperature, etc.).

The signal prepared in this way is converted in an analog-to-digital converter into a load-independent direct current of 4 to 20 mA.

An EMC filter protects the input and output circuits against electromagnetic interferences.

Measuring cycle	< 0.7 s
Measuring range	-60 ... +160 °C (-76 ... +320 °F)
Measuring span	25 ... 220 °C (45 ... 396 °F)
Unit	°C or °F
Offset	Programmable: -100 ... +100 °C (-180 ... +180 °F)
Wire resistance	Max. 20 Ω (total from feeder and return conductor)
Noise rejection	50 and 60 Hz

##### Output

Output signal	4 ... 20 mA, 2-wire
Auxiliary power	8.5 ... 36 V DC (30 V for Ex)
Max. load	( $U_{aux} - 8.5$ V)/0.023 A
Overrange	3.6 ... 23 mA, infinitely adjustable (factory setting: 3.84 ... 20.5 mA)
Error signal (in the event of sensor breakage)	3.6 ... 23 mA, infinitely adjustable (factory setting: 3.6 mA or 22.8 mA)
Damping time	0 ... 30 s
Protection	Against reverse polarity
Resolution	12 bit
Accuracy at 23 °C (73.4 °F)	< 0.1% of measuring span
Temperature effect	< 0.13 %/10 °C (0.13 %/18 °F)
Effect of auxiliary power	< 0.02 % of span/V
Effect of load impedance	< 0.055 % of max. span/100 Ω
Long-term drift	<ul style="list-style-type: none"> <li>&lt; 0.025% of the max. span in the first month</li> <li>&lt; 0.035% of the max. span after one year</li> <li>&lt; 0.05% of the max. span after 5 years</li> </ul>

##### Ambient conditions

Ambient temperature range	-40 ... +85 °C (-40 ... +185 °F)
Storage temperature range	-40 ... +85 °C (-40 ... +185 °F)
Relative humidity	98 %, with condensation
Electromagnetic compatibility	According to EN 61326 and NAMUR NE21

##### Design

Weight	42 g
Dimensions	See dimensional drawing
Material	316L stainless steel
Degree of protection according to IEC 60529	
• Enclosure	IP67

##### Software requirements for SIPROM T

PC operating system

Windows ME, 2000 and XP; also Windows 95, 98 and 98SE, but only in connection with RS232 modem

##### Factory setting:

- Pt100 (IEC 751) in the 3-wire connection
- Measuring range: 0 ... 100 °C (32 ... 212 °F)
- Fault current in the event of sensor breakage: 22.8 mA
- Sensor offset: 0 °C (0 °F)
- Damping 0.0 s

### SITRANS TH100 (4 to 20 mA, Pt100)

#### Overview

The SITRANS TH100, which represents an economical alternative by dispensing with galvanic isolation and universal sensor connection, is ideally suited for Pt100 measurements.

For the parameterization, the SIPROM T software is used in combination with the modem for SITRANS TH100/TH200.

Its compact design makes the SITRANS TH100 suitable for retrofitting measuring points or replacing analog transmitters.

The transmitter is available in a non-Ex version and in a version suitable for use in hazardous areas.

#### Benefits

- Transmitter with 2-wire system
- Mounting in connection head, type B or larger or on DIN rail
- Programmable; as a result, the sensor connection, measuring range and much more are programmable
- Intrinsically safe version for use in hazardous areas

#### Application

The SITRANS TH100 transmitter can be used for temperature measurement with Pt100 resistance thermometers in all industries. Its compact size means that it can be installed in connection heads of type B or larger.

The output signal is a load-independent direct current of 4 to 20 mA which is proportional to the temperature.

Parameterization is implemented over the PC using the parameterization software SIPROM T and the modem for SITRANS TH100/TH200. If you already have a "Modem for SITRANS TK" (article number 7NG3190-6KB), you can continue to use this for parameterization of the SITRANS TH100.

Transmitters of the "intrinsically safe" type of protection can be installed within potentially explosive atmospheres. The devices meet the directive 2014/34/EU (ATEX) as well as the FM and CSA requirements.

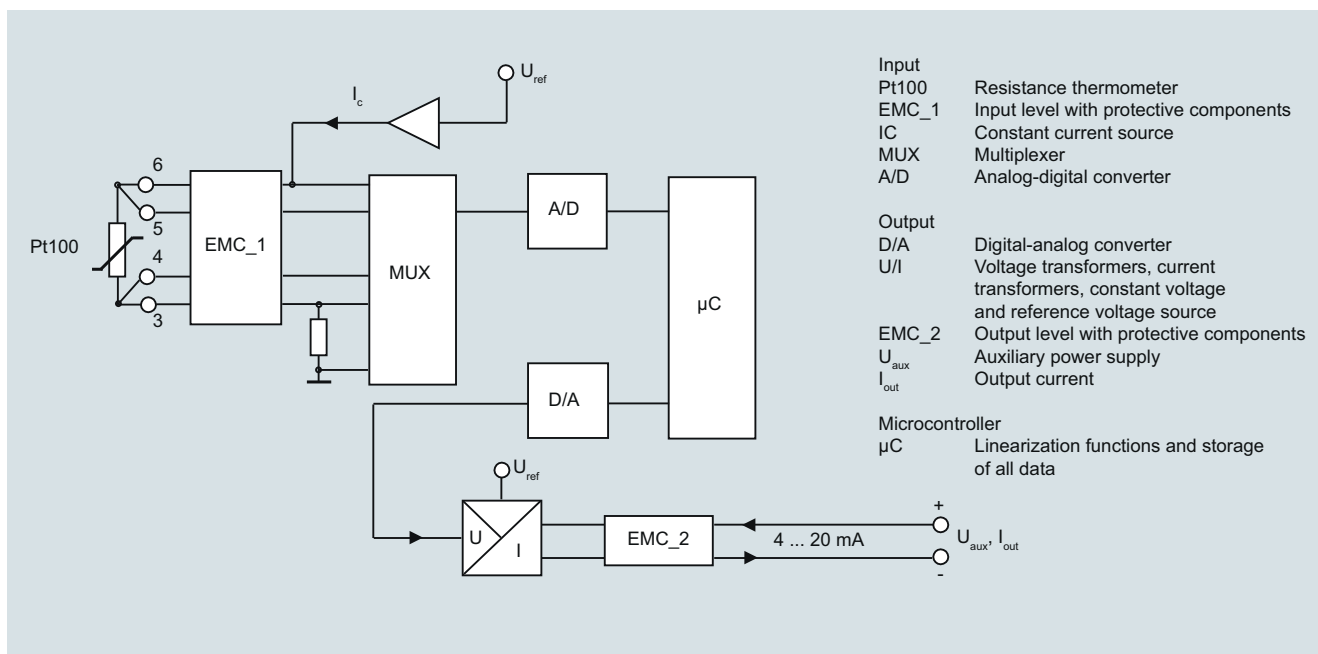

#### Function

##### Mode of operation

The measured signal supplied by a Pt100 resistance thermometer (2, 3 or 4-wire connection) is amplified in the input stage. The voltage, which is proportional to the input variable, is then converted into digital signals by a multiplexer in an analog-to-digital converter. They are converted in the microcontroller in accordance with the sensor characteristic and further parameters (measuring range, damping, ambient temperature, etc.).

The signal prepared in this way is converted in an analog-to-digital converter into a load-independent direct current of 4 to 20 mA.

An EMC filter protects the input and output circuits against electromagnetic interferences.

SITRANS TH100, function block diagram

## Technical specifications

<b>Input</b>	
<u>Resistance thermometer</u>	
Measured variable	Temperature
Input type	Pt100 according to IEC 60751
Characteristic curve	Temperature-linear
Type of connection	2, 3, 4-wire connection
Resolution	14 bit
Measuring accuracy	
• Span <250 °C (450 °F)	< 0.25 °C (0.45 °F)
• Span >250 °C (450 °F)	< 0.1% of measuring span
Repeatability	< 0.1 °C (0.18 °F)
Measuring current	approx. 0.4 mA
Measuring cycle	< 0.7 s
Measuring range	-200 ... +850 °C (-328 ... +1562 °F)
Measuring span	25 ... 1050 °C (77 ... 1922 °F)
Unit	°C or °F
Offset	Programmable: -100 ... +100 °C (-180 ... +180 °F)
Wire resistance	Max. 20 Ω (total from feeder and return conductor)
Noise rejection	50 and 60 Hz
<b>Output</b>	
Output signal	4 ... 20 mA, 2-wire
Auxiliary power	8.5 ... 36 V DC (30 V with Ex ia and ib; 32 V with Ex nL/ic; 35 V with Ex nA)
Max. load	(U <sub>aux</sub> - 8.5 V)/0.023 A
Overrange	3.6 ... 23 mA, infinitely adjustable (default range: 3.84 ... 20.5 mA)
Error signal (following sensor fault) (conforming to NE43)	3.6 ... 23 mA, infinitely adjustable (default range: 3.6 mA or 22.8 mA)
Damping time	0 ... 30 s (default value: 0 s)
Protection	Against reverse polarity

## Temperature measurement

Temperature transmitters

Compact and head transmitters

SITRANS TH200 (4 to 20 mA, universal)

### Overview

#### Ultra flexible - with the universal SITRANS TH200 transmitter

- 2-wire device for 4 to 20 mA
- Mounting in the connection head of the temperature sensor
- Universal input for virtually any type of temperature sensor
- Configurable over PC

### Benefits

- Compact design
- Flexible mounting and center hole allow you to select your preferred type of installation
- Galvanic isolation
- Test sockets for multimeters
- Diagnostics LED (green/red)
- Sensor monitoring open circuits and short-circuits
- Self-monitoring
- Configuration status stored in EEPROM
- SIL2 (with order note C20), SIL2/3 (with C23)
- Expanded diagnostic functions, such as slave pointer, operating hours counter, etc.
- Special characteristic
- Electromagnetic compatibility to EN 61326 and NE21

### Application

SITRANS TH200 transmitters can be used in all industrial sectors. Its compact size means that it can be installed in connection heads of type B or larger. The following sensors/signal sources can be connected over their universal input module:

- Resistance thermometer (2, 3, 4-wire connection)
- Thermocouples
- Resistance-based sensors and DC voltage sources

The output signal is a direct current from 4 to 20 mA in accordance with the sensor characteristic.

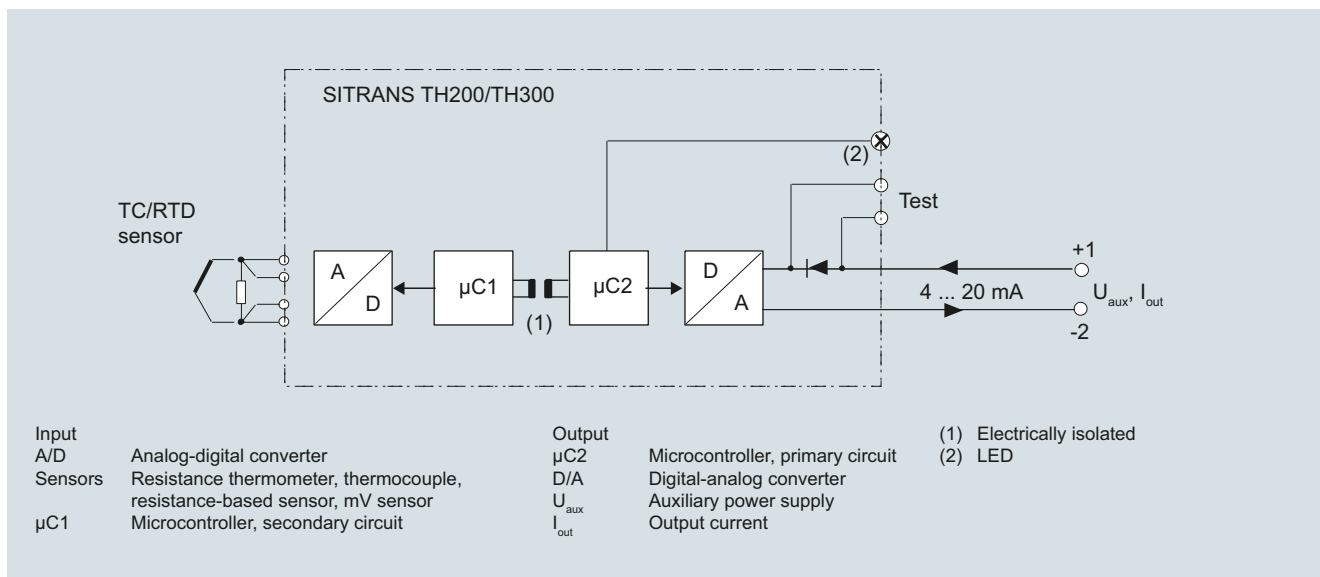

Transmitters of the "intrinsically safe" type of protection can be installed within potentially explosive atmospheres. The devices meet the directive 2014/34/EU (ATEX) as well as the FM and CSA requirements.

### Function

The SITRANS TH200 is configured over a PC. A USB or RS 232 modem is linked to the output terminals for this purpose. The configuration data can now be edited using the SIPROM T software tool. The configuration data are then permanently stored in the non-volatile memory (EEPROM).

Once the sensors and power supply have been correctly connected, the transmitter outputs a temperature-linear output signal and the diagnostics LED displays a green light. In the case of a sensor break, the LED flashes red, an internal device fault is indicated by a steady red light.

The test socket can be used to connect an ammeter at any time for monitoring purposes and plausibility checks. The output current can be read without any interruption, or even without opening the current loop.

SITRANS TH200 function diagram

## Technical specifications

### Input

#### Resistance thermometer

Measured variable	Temperature
Sensor type	Pt25 ... Pt1000
• According to IEC 60751	Pt25 ... Pt1000
• Acc. to JIS C 1604; $\alpha = 0.00392 \text{ K}^{-1}$	Ni25 ... Ni1000
• According to IEC 60751	Via special characteristic (max. 30 points)
• Special type	
Sensor factor	0.25 ... 10 (adaptation of the basic type, e.g. Pt100 to version Pt25 ... 1000)
Units	°C or °F
Connection	
• Standard connection	1 resistance thermometer (RTD) in 2-wire, 3-wire or 4-wire connection
• Averaging	2 identical resistance thermometers in 2-wire connection for generation of average temperature
• Differentiation	2 identical resistance thermometers (RTD) in 2-wire connection (RTD 1 – RTD 2 or RTD 2 – RTD 1)
Connection	
• 2-wire connection	Line resistance can be configured $\leq 100 \Omega$ (loop resistance)
• 3-wire connection	No trim necessary
• 4-wire connection	No trim necessary
Sensor current	$\leq 0.45 \text{ mA}$
Response time	$\leq 250 \text{ ms}$ for 1 sensor with break monitoring
Break monitoring	Always active (cannot be switched off)
Short-circuit monitoring	Can be switched on/off (default value: ON)
Measuring range	Assignable (see "Digital measuring error" table)
Min. measuring span	10 °C (18 °F)
Characteristic curve	Temperature-linear or special characteristic
<b>Resistance-based sensor</b>	
Measured variable	Actual resistance
Sensor type	Resistance-based, potentiometers
Units	$\Omega$
Connection	
• Standard connection	1 resistance-based sensor (R) in 2-wire, 3-wire or 4-wire connection
• Averaging	2 resistance-based sensors in 2-wire connection for averaging
• Differentiation	2 resistance thermometers in 2-wire connection (R1 – R2 or R2 – R1)
Connection	
• 2-wire connection	Line resistance can be configured $\leq 100 \Omega$ (loop resistance)
• 3-wire connection	No trim necessary
• 4-wire connection	No trim necessary
Sensor current	$\leq 0.45 \text{ mA}$
Response time	$\leq 250 \text{ ms}$ for 1 sensor with break monitoring
Break monitoring	Always active (cannot be switched off)
Short-circuit monitoring	Can be switched on/off (default value: OFF)
Measuring range	Assignable max. 0 ... 2200 $\Omega$ (see "Digital measuring error" table)
Min. measuring span	5 $\Omega$ ... 25 $\Omega$ (see "Digital measuring error" table)
Characteristic curve	Resistance-linear or special characteristic

### Thermocouples

Measured variable	Temperature
Sensor type (thermocouples)	Pt30Rh-Pt6Rh acc. to IEC 584
• Type B	W5%-Re acc. to ASTM 988
• Type C	W3%-Re acc. to ASTM 988
• Type D	NiCr-CuNi acc. to IEC 584
• Type E	Fe-CuNi acc. to IEC 584
• Type J	NiCr-Ni acc. to IEC 584
• Type K	Fe-CuNi acc. to DIN 43710
• Type L	NiCrSi-NiSi acc. to IEC 584
• Type N	Pt13Rh-Pt acc. to IEC 584
• Type R	Pt10Rh-Pt acc. to IEC 584
• Type S	Cu-CuNi acc. to IEC 584
• Type T	Cu-CuNi acc. to DIN 43710
• Type U	
Units	°C or °F
Connection	
• Standard connection	1 thermocouple (TC)
• Averaging	2 thermocouples (TC)
• Differentiation	2 thermocouples (TC) (TC1 – TC2 or TC2 – TC1)
Response time	$\leq 250 \text{ ms}$ for 1 sensor with break monitoring
Break monitoring	Can be switched off
Reference junction compensation	
• Internal	With integrated Pt100 resistance thermometer
• External	With external Pt100 IEC 60751 (2-wire or 3-wire connection)
• External fixed	Reference junction temperature can be set as fixed value
Measuring range	Assignable (see "Digital measuring error" table)
Min. measuring span	Min. 40 ... 100 °C (72 ... 180 °F) (see "Digital measuring error" table)
Characteristic curve	Temperature-linear or special characteristic
<b>mV sensor</b>	
Measured variable	DC voltage
Sensor type	DC voltage source (DC voltage source possible over an externally connected resistor)
Units	mV
Response time	$\leq 250 \text{ ms}$ for 1 sensor with break monitoring
Break monitoring	Can be switched off
Measuring range	-10 ... +70 mV -100 ... +1100 mV
Min. measuring span	2 mV or 20 mV
Overload capability of the input	-1.5 ... +3.5 V DC
Input resistance	$\geq 1 \text{ M}\Omega$
Characteristic curve	Voltage-linear or special characteristic

##### Thermocouples

Input	Measuring range °C (°F)	Minimum measuring span		Digital accuracy	
		°C	(°F)	°C	(°F)
Type B	100 ... 1820 (212 ... 3308)	100	(180)	2 <sup>1)</sup>	(3.60) <sup>1)</sup>
Type C (W5)	0 ... 2300 (32 ... 4172)	100	(180)	2	(3.60)
Type D (W3)	0 ... 2300 (32 ... 4172)	100	(180)	1 <sup>2)</sup>	(1.80) <sup>2)</sup>
Type E	-200 ... +1000 (-328 ... +1832)	50	(90)	1	(1.80)
Type J	-200 ... +1200 (-328 ... +2192)	50	(90)	1	(1.80)
Type K	-200 ... +1370 (-328 ... +2498)	50	(90)	1	(1.80)
Type L	-200 ... +900 (-328 ... +1652)	50	(90)	1	(1.80)
Type N	-200 ... +1300 (-328 ... +2372)	50	(90)	1	(1.80)
Type R	-50 ... +1760 (-58 ... +3200)	100	(180)	2	(3.60)
Type S	-50 ... +1760 (-58 ... +3200)	100	(180)	2	(3.60)
Type T	-200 ... +400 (-328 ... +752)	40	(72)	1	(1.80)
Type U	-200 ... +600 (-328 ... +1112)	50	(90)	2	(3.60)

1) The digital accuracy in the range 100 to 300 °C (212 to 572 °F) is 3 °C (5.4 °F).

2) The digital accuracy in the range 1750 to 2300 °C (3182 to 4172 °F) is 2 °C (3.6 °F).

##### mV sensor

Input	Measuring range mV	Minimum measuring span mV	Digital accuracy
			μV
mV sensor	-10 ... +70	2	40
mV sensor	-100 ... +1100	20	400

The digital accuracy is the accuracy after the analog/digital conversion including linearization and calculation of the measured value.

An additional error is generated in the output current 4 to 20 mA as a result of the digital/analog conversion of 0.025 % of the set span (digital-analog error).

The total error under reference conditions at the analog output is the sum from the digital error and the digital-analog error (poss. with the addition of reference junction errors in the case of thermocouple measurements).

### Overview

#### Robust and durable HART - the universal SITRANS TH300 transmitter

- 2-wire device for 4 to 20 mA, HART
- Mounting in the connection head of the temperature sensor
- Universal input for virtually any type of temperature sensor
- Configurable over HART

### Benefits

- Compact design
- Flexible mounting and center hole allow you to select your preferred type of installation
- Galvanic isolation
- Test sockets for multimeters
- Diagnostics LED (green/red)
- Sensor monitoring open circuits and short-circuits
- Self-monitoring
- Configuration status stored in EEPROM
- SIL2 (with order note C20), SIL2/3 (with C23)
- Expanded diagnostic functions, such as slave pointer, operating hours counter, etc.
- Special characteristic
- Electromagnetic compatibility to EN 61326 and NE21

### Application

SITRANS TH300 transmitters can be used in all industrial sectors. Its compact size means that it can be installed in connection heads of type B or larger. The following sensors/signal sources can be connected over their universal input module:

- Resistance thermometer (2, 3, 4-wire connection)
- Thermocouples
- Resistance-based sensors and DC voltage sources

The output signal is a load-independent direct current of 4 to 20 mA corresponding to the sensor characteristic overlaid by the digital HART signal.

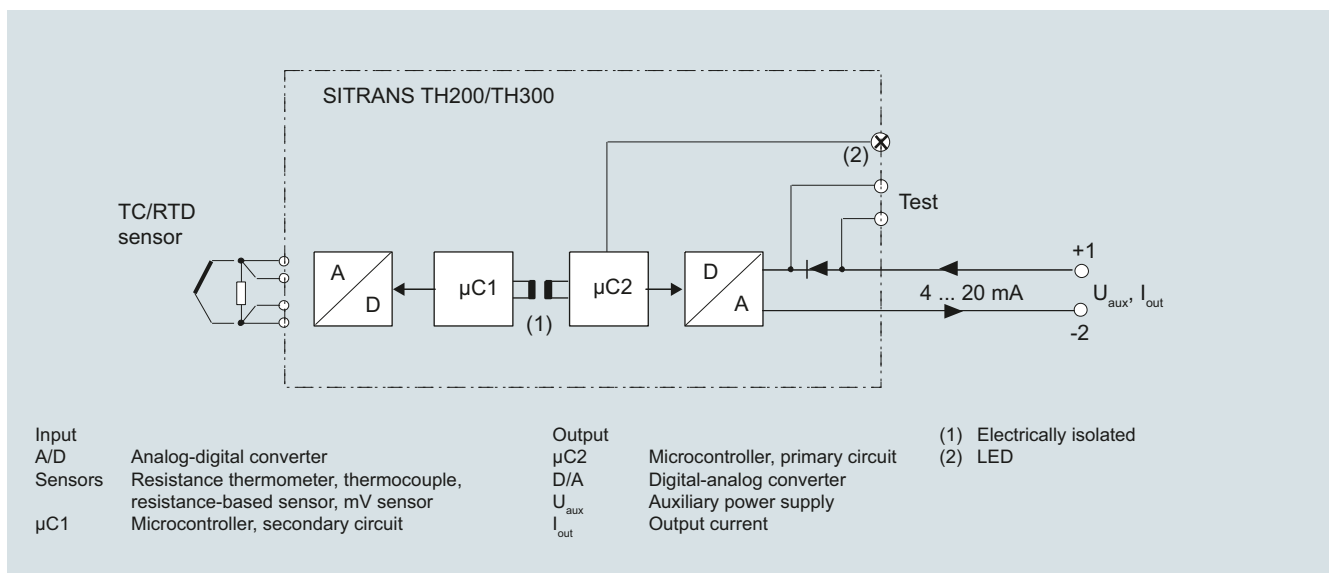

Transmitters of the "intrinsically safe" type of protection can be installed within potentially explosive atmospheres. The devices meet the directive 2014/34/EU (ATEX) as well as the FM and CSA requirements.

### Function

The SITRANS TH300 is configured over HART. This can be done using a handheld communicator or even more conveniently with a HART modem and the SIMATIC PDM parameterization software. The configuration data are then permanently stored in the non-volatile memory (EEPROM).

Once the sensors and power supply have been correctly connected, the transmitter outputs a temperature-linear output signal and the diagnostics LED displays a green light. In the case of a sensor break, the LED flashes red, an internal device fault is indicated by a steady red light.

The test socket can be used to connect an ammeter at any time for monitoring purposes and plausibility checks. The output current can be read without any interruption, or even without opening the current loop.

<sup>1)</sup> The digital accuracy in the range 100 to 300 °C (212 to 572 °F) is 3 °C (5.4 °F).

<sup>2)</sup> The digital accuracy in the range 1750 to 2300 °C (3182 to 4172 °F) is 2 °C (3.6 °F).

##### mV sensor

Input	Measuring range	Minimum measuring span	Digital accuracy
			μV
mV sensor	-10 ... +70	2	40
mV sensor	-100 ... +1100	20	400

The digital accuracy is the accuracy after the analog/digital conversion including linearization and calculation of the measured value.

An additional error is generated in the output current 4 to 20 mA as a result of the digital/analog conversion of 0.025 % of the set span (digital-analog error).

The total error under reference conditions at the analog output is the sum from the digital error and the digital-analog error (poss. with the addition of reference junction errors in the case of thermocouple measurements).

### SITRANS TH400, fieldbus transmitter

#### Overview

#### SITRANS TH400 fieldbus transmitters

##### Versions:

- For FOUNDATION fieldbus
- For PROFIBUS PA

The SITRANS TH400 Head transmitter is a small field bus transmitter for mounting in the connection head of form B. Extensive functionality enables the Head transmitter to be precisely adapted to the plant's requirements. Operation is very simple in spite of the numerous setting options. Thanks to its universal concept it can be used in all industries and is easy to integrate in the context of Totally Integrated Automation applications.

Transmitters of the "intrinsically safe" type of protection can be installed within potentially explosive atmospheres. The devices meet the directive 2014/34/EU (ATEX) as well as the FM and CSA requirements.

Installing SITRANS TH400 in temperature sensors turns them into complete, bus-capable measuring points; compact - and in a single device.

#### Application

- Linearized temperature measurement with resistance thermometers or thermal elements
- Differential, mean-value or redundant temperature measurement with resistance thermometers or thermal elements
- Linear resistance and bipolar millivolt measurements
- Differential, mean-value or redundant resistance and bipolar millivolt measurements

#### Function

##### Features

- Mounting in connection head, type B or larger
- Polarity-neutral bus connection
- 24-bit analog-digital converter for high resolution
- Galvanic isolation
- Intrinsically-safe version for use in potentially explosive areas
- Special characteristic
- Sensor redundancy

##### With PROFIBUS PA communication

- Function blocks: 2 x analog

##### With FOUNDATION Fieldbus communication

- Function blocks: 2 x analog and 1 x PID
- Functionality: Basic or LAS

##### Mode of operation

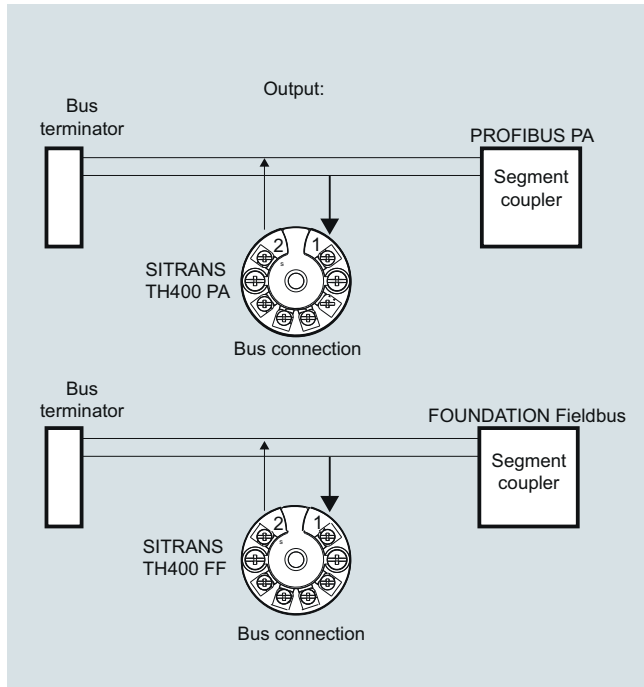

The following function diagram explains the mode of operation of the transmitter.

The only difference between the two versions of the SITRANS TH400 (7NG3214-... and 7NG3215-...) is the type of fieldbus protocol used (PROFIBUS PA or FOUNDATION Fieldbus).

SITRANS TH400, function diagram

### System communication

SITRANS TH400, communications interface

### Technical specifications

#### Input

Analog-to-digital conversion

- Measurement rate < 50 ms
- Resolution 24-bit

#### Resistance thermometer

Pt25 ... Pt1000 acc. to IEC 60751/JIS C 1604

- Measuring range -200 ... +850 °C (-328 ... +1562 °F)

Ni25 ... Ni1000 acc. to DIN 43760

- Measuring range -60 ... +250 °C (-76 ... +482 °F)

Cu10 ... Cu1000,  $\alpha = 0.00427$ 

- Measuring range -50 ... +200 °C (-58 ... +392 °F)

Line resistance per sensor cable Max. 50  $\Omega$ 

Sensor current Nominal 0.2 mA

Sensor fault detection

- Sensor break detection Yes
- Sensor short-circuit detection Yes, < 15  $\Omega$

#### Resistance-based sensor

Measuring range 0  $\Omega$  ... 10 k $\Omega$ Line resistance per sensor cable Max. 50  $\Omega$ 

Sensor current Nominal 0.2 mA

Sensor fault detection

- Sensor break detection Yes
- Sensor short-circuit detection Yes, < 15  $\Omega$

#### Thermocouple

According to IEC 584

- Type B
- Type E
- Type J
- Type K
- Type N
- Type R
- Type S
- Type T

According to DIN 43710

- Type L
- Type U

According to ASTM E988-90

- Type W3
- Type W5

External reference junction compensation

Sensor fault detection

- Sensor break detection Yes
- Sensor short-circuit detection Yes, < 3 mV
- Sensor current in the event of open-circuit monitoring 4  $\mu$ A

#### mV sensor - voltage input

Measuring range -800 ... +800 mV

Input resistance 10 M $\Omega$ 

#### Output

Filter time (programmable) 0 ... 60 s

Update time &lt; 400 ms

#### Measuring accuracy

Accuracy is defined as the higher value of general values and basic values.

#### General values

Type of input

Absolute accuracy

Absolute accuracy	Temperature coefficient
$\leq \pm 0.05$ % of the measured value	$\leq \pm 0.002$ % of the measured value/°C

#### Basic values

Type of input

Basic accuracy

Temperature coefficient

Pt100 and Pt1000	$\leq \pm 0.1$ °C	$\leq \pm 0.002$ °C/°C
Ni100	$\leq \pm 0.15$ °C	$\leq \pm 0.002$ °C/°C
Cu10	$\leq \pm 1.3$ °C	$\leq \pm 0.02$ °C/°C
Resistance-based sensor	$\leq \pm 0.05$ $\Omega$	$\leq \pm 0.002$ $\Omega$ /°C
Voltage source	$\leq \pm 10$ $\mu$ V	$\leq \pm 0.2$ % $\mu$ V/°C
Thermocouple, type: E, J, K, L, N, T, U	$\leq \pm 0.5$ °C	$\leq \pm 0.01$ °C/°C
Thermocouple, type: B, R, S, W3, W5	$\leq \pm 1$ °C	$\leq \pm 0.025$ °C/°C
Reference junction compensation	$\leq \pm 0.5$ °C	

#### Reference conditions

Warming-up time 30 s

Signal-to-noise ratio Min. 60 dB

Calibration condition 20 ... 28 °C (68 ... 82 °F)

## Temperature measurement

Temperature transmitters

Compact and head transmitters

### SITRANS TH320 (HART, universal)

#### Overview

- 2-wire head transmitter with and without HART communications interface
- Mounting in the connection head of the temperature sensor
- Universal input for virtually any type of temperature sensor
- Can be configured via PC, HART 7 or optional local operation

#### Benefits

- Compact design
- Flexible mounting and center hole allow you to select your preferred type of installation
- Galvanic isolation
- Test terminals for ammeter
- Diagnostics LED (green/red)
- Input monitoring  
Wire break and short-circuit
- Self-monitoring
- Configuration status stored in EEPROM
- SIL2/3 (with order note C20)
- Expanded diagnostic functions, such as slave pointer, operating hours counter, etc.
- Special characteristic
- Electromagnetic compatibility according to DIN EN 61326 and NE21

#### Application

SITRANS TH320 transmitters can be used in all sectors. Its compact size means that it can be installed in connection heads of type B or larger. The following sensors/signal sources can be connected over their universal input module:

- Resistance thermometer (2-wire, 3-wire, 4-wire connection)
- Thermocouples
- Linear resistance, potentiometer and DC voltage sources

With HART communications interface:

- The output signal is a load-independent direct current from 4 to 20 mA in accordance with the input characteristic, superimposed by the digital HART signal.

Transmitters of the "intrinsically safe or Zone 2 increased safety" type of protection can be installed in hazardous areas. The device meets the requirements of the EU Directive 2014/34/EU (ATEX), the FM and CSA regulations as well as other national approvals.

## Function

### Without HART communications interface

For the SITRANS TH320 without HART functionality, parameters are assigned with the PC. A special modem and the software tool SIPROM T are available for this purpose.

### With HART communications interface

- The SITRANS TH320 is configured via HART. The configuration can be carried out using a handheld communicator or, more conveniently, with a HART modem and the SIMATIC PDM configuration software. The configuration data is then permanently stored in the non-volatile memory (EEPROM).

After correct connection of input and supply voltage, the transmitter outputs a temperature-linear output signal and the diagnostics LED is green. In case of external errors, e.g. sensor short circuit or interruption, the LED flashes red; an internal error is indicated by a permanent red light.

An ammeter can be connected at any time for checking and plausibility via the test terminals. The output current can be read without any interruption, or even without opening the current loop.

#### SITRANS TH320 (HART, universal)

#### Technical specifications

##### General

Supply voltage <sup>1) 2)</sup>	
• Without explosion protection (non-Ex)	7.5 ... 48 V DC
• with explosion protection (Ex i)	7.5 ... 30 V DC
Additional minimum supply voltage when using test terminals	0.8 V
Maximum power loss	≤ 850 mW
Minimum load resistance at supply voltage > 37 V	$(V_{\text{supply}} - 37 \text{ V})/23 \text{ mA}$
Insulation voltage, test/operation	
• Without explosion protection (non-Ex)	2.5 kV AC/55 V AC
• with explosion protection (Ex i)	2.5 kV AC/42 V AC
Polarity protection	All inputs and outputs
Write protection	Open circuits or software
Warming-up time	< 5 min
Starting time	< 2.75 s
Programming	HART
Signal-to-noise ratio	> 60 dB
Long-term stability	Better than: <ul style="list-style-type: none"> <li>• ± 0.05% of measuring span/year</li> <li>• ± 0.18% of measuring span/5 years</li> </ul>
Response time	4 ... 20 mA: ≤ 55 ms HART: ≤ 75 ms (typically 70 ms)
Programmable damping	0 ... 60 s
Signal dynamic	
• Input	24 bit
• Output	18 bit
Influence of change in supply voltage	< 0.005% of measuring span/V DC

##### Input

##### Resistance thermometer (RTD)

Input type	
• Pt10 ... 10000	<ul style="list-style-type: none"> <li>• IEC 60751</li> <li>• JIS C 1604-8</li> <li>• GOST 6651_2009</li> <li>• Callendar-Van Dusen</li> </ul>
• Ni10 ... 10000	<ul style="list-style-type: none"> <li>• DIN 43760-1987</li> <li>• GOST 6651-2009/OIML R84:2003</li> </ul>
• Cu5 ... 1000	<ul style="list-style-type: none"> <li>• Edison Copper Winding No. 15</li> <li>• GOST 6651-2009/OIML R84:2003</li> </ul>
Type of connection	2-wire, 3-wire or 4-wire
Line resistance per wire	Max. 50 Ω
Input current	< 0.15 mA
Effect of the line resistance (with 3-wire and 4-wire connections)	< 0.002 Ω/Ω
Cable, wire-wire capacity	
• Pt1000, Pt10000 (IEC 60751 and JIS C 1604-8)	Max. 30 nF
• All other input types	Max. 50 nF
Fault detection, programmable	None, short-circuited, defective, short-circuited or defective
	<b>Note</b>
	When the low limit for the configured input type is below the constant detection limit for short-circuited inputs, the detection of short circuits is disabled regardless of the configuration of the fault detection.
Detection limit for short-circuited input	15 Ω
Fault detection time (RTD)	≤ 75 ms (typically 70 ms)
Fault detection time (for 3-wire and 4-wire)	≤ 2 000 ms

• U	DIN 43710
• W3	ASTM E988-96
• W5	ASTM E988-96
• LR	GOST 3044-84
Cold junction compensation (CJC)	Constant, internal or external over Pt100 or Ni100 RTD
• Temperature range internal CJC	-50 ... +100 °C (-58 ... +212 °F)
• Connection external CJC	2-wire or 3-wire
• External CJC, line resistance per wire (for 3-wire and 4-wire connections)	50 Ω
• Effect of the line resistance (with 3-wire and 4-wire connections)	< 0.002 Ω/Ω
• Input current external CJC	< 0.15 mA
• Temperature range external CJC	-50 ... +135 °C (-58 ... +275 °F)
• Cable, wire-wire capacity	Max. 50 nF
• Total line resistance	Max. 10 kΩ
• Fault detection, programmable	None, short-circuited, defective, short-circuited or defective
	<b>Note</b>
	The short-circuited fault detection only applies to the CJC input.
• Fault detection time (TC)	≤ 75 ms (typically 70 ms)
• Fault detection time, external CJC (for 3-wire and 4-wire)	≤ 2 000 ms

##### Linear resistance

Input range	0 ... 100 kΩ
Minimum measuring span	25 Ω
Type of connection	2-wire, 3-wire or 4-wire
Line resistance per wire	Max. 50 Ω
Input current	< 0.15 mA
Effect of the line resistance (with 3-wire and 4-wire connections)	< 0.002 Ω/Ω
Cable, wire-wire capacity	
• R > 400 Ω	Max. 30 nF
• R ≤ 400 Ω	Max. 50 nF
Fault detection, programmable	None, defective
	<b>Potentiometers</b>
Input range	10 ... 100 kΩ
Minimum measuring span	25 Ω
Type of connection	3-wire or 4-wire
Line resistance per wire	Max. 50 Ω
Input current	< 0.15 mA
Effect of the line resistance (with 4-wire and 5-wire connections)	< 0.002 Ω/Ω
Cable, wire-wire capacity	
• R > 400 Ω	Max. 30 nF
• R ≤ 400 Ω	Max. 50 nF

# Temperature measurement

## Temperature transmitters

### Compact and head transmitters

#### SITRANS TH320 (HART, universal)

Fault detection, programmable	None, short-circuited, defective, short-circuited or defective <b>Note</b> When the configured potentiometer size is below the constant detection limit for short-circuited inputs, the detection of short circuits is disabled regardless of the configuration of the fault detection.
Detection limit for short-circuited input	15 Ω
Fault detection time, wiper arm (no short-circuit detection)	≤ 75 ms (typically 70 ms)
Fault detection time, element	≤ 2 000 ms
Fault detection time (for 4-wire and 5-wire)	≤ 2 000 ms
<b>Voltage input</b>	
Measuring range	
• Unipolar	-100 ... 1700 mV
• Bipolar	-800 ... +800 mV
Minimum measuring span	2.5 mV
Input resistance	10 MΩ
Cable, wire-wire capacity	
• Input range: -100 ... 1700 mV	Max. 30 nF
• Input range: -20 ... 100 mV	Max. 50 nF
Fault detection, programmable	None, defective
Fault detection time	≤ 75 ms (typically 70 ms)
<b>Output and HART communication</b>	
Normal range, programmable	3.8 ... 20.5 mA/20.5 ... 3.8 mA
Extended range (output limits), programmable	3.5 ... 23 mA/23 ... 3.5 mA
Programmable input/output limits	
• Fault current	Enable/disable
• Fault current setting	3.5 ... 23 mA
Update time	10 ms
Load (with current output)	≤ (V <sub>Supply</sub> - 7.5)/0.023 Ω
Load stability	< 0.01% of meas. span/100 Ω (measuring span = currently selected range)
Input fault detection, programmable (detection of input short circuits is ignored with TC and voltage inputs)	3.5 ... 23 mA
NAMUR NE43 Upscale	> 21 mA
NAMUR NE43 Downscale	< 3.6 mA
HART protocol versions	HART 7
<b>Measuring accuracy</b>	
Input accuracy	See "Input accuracy" table
Output accuracy	See "Output accuracy" table
<b>Rated conditions</b>	
Ambient temperature	-50 ... +85 °C (-58 ... +185 °F)
Ambient temperature for devices with functional safety	-40 ... +80 °C (-40 ... +176 °F)
Storage temperature	-50 ... +85 °C (-58 ... +185 °F)
Reference temperature for sensor calibration	24 °C ±1.0 °C (75.2 °F ±1.8 °F)
Relative humidity	< 99% (no condensation)
Degree of protection	
• Transmitter enclosure	IP68
• Terminals	IPO0

<b>Design</b>	
Weight	50 g (0.11 lb)
Maximum core cross-section	1 × 1.5 mm <sup>2</sup> (stranded wire)
Tightening torque for clamping screws	0.4 Nm
Vibrations	IEC 60068-2-6
• 2 ... 25 Hz	± 1.6 mm (0.07 inch)

1) Note that the minimum supply voltage must correspond to the value measured at the terminals of the SITRANS TH320. All external voltage drops must be taken into consideration.

2) Protect the device from overvoltage with the help of a suitable power supply or suitable overvoltage protection equipment.

3) Additional available certificates are listed on the Internet at <http://www.siemens.com/processinstrumentation/certificates>
