

Toothed belt axis units ELGS-TB-KF

FESTO

This product is also available as a modular mechanical system
Toothed belt axis ELGC-TB-KF

Key features

At a glance

Plug and work with the Simplified Motion Series

The simplicity of pneumatics is now combined for the first time with the advantages of electric automation thanks to the Simplified Motion Series. These integrated drives are the perfect solution for all users who are looking for an electric alternative for very simple movement and positioning tasks between two mechanical end positions, but don't want the commissioning process for traditional electric drive systems that can often be quite complex.

Integrated	Simple	Standardised	Connected
The integrated electronics in the drive are at the core of the Simplified Motion Series.	For commissioning, simply set all relevant parameters directly on the drive: <ul style="list-style-type: none"> • Speed and force • Reference end position and cushioning • Manual operation 	Electrical connection via M12 plug design <ul style="list-style-type: none"> • Power (4-pin): power supply for the motor • Logic (8-pin): control signal, sensor signal and power for the integrated electronics 	Use of extended functions via IO-Link: <ul style="list-style-type: none"> • Motion parameters can be set remotely • Copy and backup function for transferring parameters • Read function for extended process parameters

The functions of the Simplified Motion Series

Basic profile for movement between two end positions: with speed control

- These drives are designed for simple movements between two end positions.
- Proximity switches are required in order to implement any intermediate positions.

Extended motion profile for simplified press-fitting and clamping functions: with speed and force control

Key features

At a glance

- Without external servo drive: all the necessary electronic components are combined in the integrated drive
- Two control options integrated as standard: digital I/O and IO-Link
- Complete solution for simple movements between two mechanical end positions
- Protected against external influences by internal guide
- Simplified commissioning: all parameters can be manually set directly on the drive
- No special expertise required for commissioning
- End position feedback similar to that of a conventional proximity switch is integrated as standard
- Clean Look design: easy to clean and less prone to contamination

Modular and flexible with motor, motor mounting kit and servo drive

This product is also available as a modular mechanical system as toothed belt axis ELGC-TB-KF:

When to compact dimensions and optimised installation space are important, e.g. for assembly systems, test and inspection systems, small parts handling, the electronics industry and desktop applications. Either as an individual axis or as a handling system.

- Compact: optimum ratio of installation space to working space
- Unique: "one-size-down" mounting system
- Modular: individual combinations with motor, motor mounting kit and servo drive
- Flexible: wide range of mounting options for optimum machine integration

Typical handling systems

For applications where compact dimensions are essential, the axes ELGC can be combined into very space-saving handling systems that are suitable for assembly systems, test and inspection systems, small parts handling, the electronics industry and desktop applications. The very compact linear axes ELGC, mini slide EGSC and electric cylinder EPCC offer an optimal ratio between installation space and working space. They feature a common system approach and platform architecture and the connections are largely adapterless.

Data sheet

Characteristic load values

The indicated forces and torques refer to the centre of the guide. The point of application of force is the point where the centre of the guide and the longitudinal centre of the slide intersect. These values must not be exceeded during dynamic operation. Special attention must be paid to the deceleration phase.

Distance from the slide surface to the centre of the guide

Max. permissible forces and torques on the slide (strength limits)

Size	45	60
$F_{y\max.}$ [N]	300	600
$F_{z\max.}$ [N]	600	1800
$M_{x\max.}$ [Nm]	5.5	29.1
$M_{y\max.}$ [Nm]	4.7	31.8
$M_{z\max.}$ [Nm]	4.7	31.8

Distance from the slide surface to the centre of the guide

Size	45	60
Dimension x [mm]	42.8	54.6

Max. permissible forces and torques for the bearing calculation, for a service life of 5000 km or 5×10^6 cycles

Size	45	60
$F_{y\max.}$ [N]	880	3641
$F_{z\max.}$ [N]	880	3641
$M_{x\max.}$ [Nm]	5.5	29.1
$M_{y\max.}$ [Nm]	4.7	31.8
$M_{z\max.}$ [Nm]	4.7	31.8

Note

For a guide system to have a service life of 5000 km, the load comparison factor must have a value of $f_v \leq 1$, based on the maximum permissible forces and torques for a service life of 5000 km.

This formula can be used to calculate a guide value.

The engineering software "PositioningDrives" is available for more precise calculations → www.festo.com

If the axis is subjected to two or more of the indicated forces and torques simultaneously, the following equation must be satisfied in addition to the indicated maximum loads:

Calculating the load comparison factor:

$$f_v = \frac{|F_{y1}|}{F_{y2}} + \frac{|F_{z1}|}{F_{z2}} + \frac{|M_{x1}|}{M_{x2}} + \frac{|M_{y1}|}{M_{y2}} + \frac{|M_{z1}|}{M_{z2}} \leq 1$$

F_1/M_1 = dynamic value

F_2/M_2 = maximum value

Data sheet

Calculating the service life

The service life of the guide depends on the load. To be able to make a statement as to the service life of the guide, the graph below plots the load comparison factor f_v against the service life.

These values are only theoretical. You must consult your local Festo contact for a load comparison factor f_v greater than 1.

Load comparison factor f_v as a function of service life l

Example:

A user wants to move an x kg load. Using the formula (→ page 12) gives a value of 1.5 for the load comparison factor f_v . According to the graph, the guide has a service life of approx. 1500 km. Reducing the acceleration reduces the M_y and M_z values. A load comparison factor f_v of 1 now gives a service life of 5000 km.

Comparison of the characteristic load values for 5000 km with dynamic forces and torques of recirculating ball bearing guides

The characteristic load values of bearing guides are standardised to ISO and JIS using dynamic and static forces and torques. These forces and torques are based on an expected service life of the guide system of 100 km according to ISO or 50 km according to JIS.

As the characteristic load values are dependent on the service life, the maximum permissible forces and torques for a 5000 km service life cannot be compared with the dynamic forces and torques of bearing guides to ISO/JIS.

To make it easier to compare the guide capacity of linear axes ELGS with bearing guides, the table below lists the theoretically permissible forces and torques for a calculated service life of 100 km. This corresponds to the dynamic forces and torques to ISO.

These 100 km values have been calculated mathematically and are only to be used for comparing with dynamic forces and torques to ISO. The drives must not be loaded with these characteristic values as this could damage the axes.

Max. permissible forces and torques for a theoretical service life of 100 km (from a guide perspective only)

Size	45	60
$F_{y_{max}}$ [N]	3240	13400
$F_{z_{max}}$ [N]	3240	13400
$M_{x_{max}}$ [Nm]	20	107
$M_{y_{max}}$ [Nm]	17	117
$M_{z_{max}}$ [Nm]	17	117

Service life of the motor

The service life of the motor at nominal power is 20000 h.

Data sheet

Sizing example

Application data:

- Payload: 3 kg
- Mounting position: horizontal
- Stroke: 600 mm
- Max. permitted positioning time: 1 s (one direction)

Step 1: Selection of the possible size from the table → page 8

Mechanical data

Size	45	60
Max. payload [kg]	2.5	4

→ Smallest possible size: ELGS-TB-KF-60

Step 2: Selection of max. speed level v for payload m 

Horizontal

Step 3: Reading off the min. positioning time t for stroke l 

- $l = 200$ mm
- $l = 300$ mm
- $l = 500$ mm
- $l = 600$ mm
- · - · $l = 800$ mm
- $l = 1000$ mm
- $l = 1200$ mm
- · - · $l = 1500$ mm
- $l = 2000$ mm

→ Max. speed level for payload: level 10

→ Min. positioning time for 600 mm at level 10: 0.8 s

Result

The application can be implemented using ELGS-TB-KF-60-600. A minimum positioning time (one direction) of 0.8 s is achieved. Longer positioning times can be selected at any time using a lower speed level.

Data sheet

- ELGS-TB-45
- - - ELGS-TB-60

Data sheet

Maximum permissible support spacing L (without profile mounting) as a function of force F

In order to limit deflection in the case of large strokes, the axis may need to be supported.

The following graphs can be used to determine the maximum permissible support spacing L as a function of force F acting on the axis.

The deflection is $f = 0.5$ mm.

Force F_y
Size 45

Size 60

Force F_z
Size 45

Size 60

2nd moment of area

Size		45	60
I_y	[mm ⁴]	140×10^3	441×10^3
I_z	[mm ⁴]	170×10^3	542×10^3

Recommended deflection limits

Adherence to the following deflection limits is recommended so as not to impair the functional performance of the axes. Greater deformation can result in increased friction, greater wear and reduced service life.

Size	Dynamic deflection (moving load)	Static deflection (stationary load)
45 ... 60	0.05% of the axis length, max. 0.5 mm	0.1% of the axis length

Accessories

Profile mounting EAHF-L2-...-P-S

Material:

Anodised wrought aluminium alloy

RoHS-compliant

- For mounting the axis on the side of the profile

Dimensions and ordering data

For size	B1	B2	B3	D1 Ø H13	D2 Ø H13	H2
45	70.6	12.8	58	5.5	10	6.1
60	85.6	12.8	73	5.5	10	6.1

For size	H4 ±0.1	H5	L1	Weight [g]	Part no.	Type
45	5.5	12.2	19	6	5184133	EAHF-L2-45-P-S
60	5.5	12.2	19	6	5184133	EAHF-L2-45-P-S

Accessories

Profile mounting EAHF-L2-...-P

Material:

Anodised wrought aluminium alloy

RoHS-compliant

- For mounting the axis on the side of the profile.

The profile mounting can be attached to the mounting surface using the drill hole in the centre.

Dimensions and ordering data

For size	B1	B2	B3	D1 Ø H13	D2 Ø H13	D3 Ø	H2

60	5.5	12.2	53	40	35	4835728	EAHF-L2-45-P

Accessories

Profile mounting EAHF-L2-...-P-D...

Material:

Anodised wrought aluminium alloy

RoHS-compliant

- For axis/axis mounting without adapter plate
- Mounting option: base axis with one-size-down assembly axis (→ page 4)

Combination matrix

		[2] Assembly axis ELGC-BS/-TB; ELFC; EGSC-BS		
	Size	32	45	60
[1] Base axis ELGC-BS/-TB, ELFC	45	4759748	–	–
	60	–	4759739	–

[1] Base axis
[2] Assembly axis

Dimensions and ordering data

For combination (size)	B1	B2	D1	H1
60/45	60	47	M5	12.2

Accessories

Adapter kit EHAA-D-L2

Material:

Anodised wrought aluminium alloy

RoHS-compliant

- For axis/axis mounting with adapter plate
- Mounting option: base axis with same size or one-size-down assembly axis
(→ page 4)

Combination matrix

		[2] Assembly axis ELGC-BS/-TB; ELFC; EGSC-BS
